PREFACE.

THE "History of Montgomery County" is presented to the public as a memorial of the first century of its corporate existence. Material facts have been diligently sought after and patient labor cheerfully bestowed upon the work. Events are chronicled in narrative rather than in controversial form, and truth, gleaned from a thousand sources, has been condensed in order to make it a valuable work of reference for the present and future generations. It has been prepared with care and liberality and a determination to make it as complete and accurate as possible. It is submitted to a generous and intelligent people, in the belief that it will meet their approval.

The labor of the editor has been shared by William J. Buck, who has devoted many years of his life to the collection of material for the history of the county. Although in enfeebled health, his contributions exceed in number those originally contemplated for the work. His chapter upon Bibliography, the first published in the county, is one of the most valuable contributions to the volume. For assistance furnished him in his present labors, he expresses acknowledgments to John Jordan, Jr., and F. D. Stone, of the Historical Society of Pennsylvania; to Samuel L. Smedley, Howard M. Jenkins, and Prof. O. Seidensticker, of Philadelphia; M. Augé, of Norristown; Dr. George W. Holstein, of Bridgeport; Mark H. Richards and B. M. Schmucker, D.D., of Pottstown; William Henry Cresson, of Conshohocken; Hon. William A. Yeakle, of Whitemarsh; S. K. Grimley, of Upper Salford; A. H. Cassel and James Y. Heckler, of Lower Salford, and Charles Mather, of Jenkintown.

The acknowledgments of the editor are due to Prof. Oscar C. S. Carter, for his contribution on Geology and Mineralogy; to Charles Z. Weber, M.D., for the history of the Medical Profession; to P. Y. Eisenberg, M.D., for the chapter upon Botany; to J. P. Hale Jenkins, Esq., for the history of Charitable and Benevolent Associations; to Rev. J. S. Hughes, for the history of Methodism in Montgomery County; to Hon. Jones Detwiler, for the history of Whitpain; to Henry S. Dotterer, for the history of Frederick; to F. G. Hobson, Esq., for the history of Providence, Upper and Lower; to Mrs. Anna M. Holstein and Mrs. Sarah S. Rex, for information concerning the Patrons of Husbandry; to Hon. Isaac F. Yost and Philip Super, Esq., for valuable information and suggestions concerning the early German settlements and church history of the northern townships, and to Professors R. F. Hoffecker and J. K. Gotwals, for assistance in the collection of historical data of common schools. The thanks of the editor are gratefully tendered to Hiram Corson, M.D., Hon. Hiram C. Hoover, William M. Clift, Esq., L. H. Davis, Esq., George W. Holstein, M.D., Rev. Charles Collins, D. M. Casselberry, Esq., J. K. Harley, and George Lower, Esq. To Moses Augé, author of "Biographies of Men of

Montgomery County," the editor and publishers return special acknowledgments for the free use of the work tendered. To the editors and publishers of the local Press of the county our sense of obligation is herein expressed for their aid and encouragement in the work, and for the use of their retained files, when in search of valuable material for township histories. To F. G. Hobson, William J. Buck and Henry S. Dotterer, committee on publication of proceedings and antiquarian display of the County Centennial, acknowledgments are due and credit given for the arrangement and classification of the exhibits, the order of which is preserved in this work.

And finally, to my daughter, I owe the deepest obligations for a careful and intelligent co-operation and cheerful assistance in the revision of both manuscript and proof, and for many suggestions and notations of important historical facts.

MAP OF MONTGOMERY COUNTY, PENNA.

HISTORY

OF

MONTGOMERY COUNTY, PENNSYLVANIA.

CHAPTER I.

TOPOGRAPHY.

MONTGOMERY COUNTY, originally a part of Philadelphia County, was created by act of the General Assembly approved the 10th day of September, 1784.[1] It is bounded on the southeast by the line of the city of Philadelphia, on the northeast by Bucks, on the north and northwest by Lehigh and Berks, and on the west and southwest by Chester and Delaware Counties. It is thirty miles in length from the southeast to the northwest line, and about fifteen miles in breadth from the northeast to the southwest line.

[1] AN ACT *for erecting part of the County of Philadelphia into a separate county.*

SECT. I. WHEREAS a great number of the inhabitants of the county of Philadelphia by their petition have humbly represented to the Assembly of this State the great inconvenience they labor under by reason of their distance from the seat of judicature in the said county: For remedy whereof,

SECT. II. *Be it enacted, and it is hereby enacted by the Representatives of the Freemen of the Commonwealth of Pennsylvania, in General Assembly met, and by the authority of the same,* That all and singular the lands lying within that part of Philadelphia County bounded as hereinafter described, beginning on the line of Byberry township and the township of the manor of Moreland where it intersects the line of Bucks County; thence westward along the northern lines of Byberry, Lower Dublin, and Oxford townships to the line dividing the townships of Cheltenham and Bristol; and thence along the said line dividing Germantown township from the township of Springfield; and thence along said line to the line dividing the township of Springfield aforesaid from the township of Roxbury to the river Schuylkill; thence down the said river to the line dividing the townships of Blockley and Lower Merion; and thence along said line to the line of the county of Chester; thence by the line of Chester County to the line of Berks County; thence by the line of Berks County to the line of Northampton County; thence by part of the line of Northampton County and the line of Bucks County; thence along the said line of Bucks County to the place of beginning; be, and hereby are, erected into a county, named, and hereafter to be called, "Montgomery County."

SECT. III. *And be it further enacted by the authority aforesaid,* That the inhabitants of said county of Montgomery shall, at all times hereafter, have and enjoy all and singular the jurisdictions, powers, rights, liberties, and privileges whatsoever which the inhabitants of any other county in this State do, may, or ought to enjoy by any charter of privileges, or the laws of this State, or by any other ways and means whatsoever.

SECT. IV. *And be it further enacted by the authority aforesaid,* That the inhabitants of each township or district within the said county qualified by law to elect shall meet at some convenient place within their respective townships or districts, at the same time the inhabitants of the several townships of the other counties within this State shall meet for like purposes, and choose inspectors; and at the time appointed by law the freemen of said county of Montgomery shall meet at the house of Hannah Thomson, innkeeper, in the township of Norriton, and there elect representatives; and the freemen of the county of Philadelphia shall meet at the State-House, in the city of Philadelphia, and there elect representatives to serve them in Assembly [one counselor], two fit persons for sheriffs, two fit persons for coroners, and three commissioners, as by the Constitution and laws of this State are directed in respect to other counties, which representatives so chosen shall be members of the General Assembly of the Commonwealth of Pennsylvania, and shall sit and act as such, as fully and as freely as any of the other representatives of this State do, may, can, or ought to do; [and the said counselor, when so chosen, shall sit and act as fully and as freely as any of the other members of the Supreme Executive Council of this State do, may, can, or ought to do.

[SECT. V. *And be it further enacted by the authority aforesaid,* That the county of Montgomery shall, until otherwise altered by the Legislature of the State, be represented in the General Assembly by four members, and the county of Philadelphia shall be represented in the General Assembly by five members.]

SECT. VII. *And be it further enacted by the authority aforesaid,* That the justices of the Supreme Court of this State shall have like powers, jurisdictions, and authorities within the said county of Montgomery as by law they are vested with and entitled unto in the other counties within this State; and are hereby authorized and empowered, from time to time, to deliver the goal of the said county of capital or other offenders, in like manner as they are authorized to do in other counties of this State.

SECT. X. *And be it further enacted by the authority aforesaid,* That it shall and may be lawful to and for Henry Pawling, Jun., Jonathan Roberts, George Smith, Robert Shannon, and Henry Cunnard, of Whitpaine township, all of the aforesaid county, yeomen, or any three of them, to purchase and take assurance to them, and their heirs, in the name of the commonwealth, of a piece of land situated in some convenient place in the neighborhood of Stoney-run, contiguous to the river Schuylkill, in Norriton township, in trust and for the use of the inhabitants of the said county, and thereon to erect and build a court-house and prison sufficient to accommodate the public service of said county.

SECT. XI. *And be it further enacted by the authority aforesaid,* That such part of the money as shall arise from the sale of the old prison and workhouse, and lot of ground thereto belonging, in the city of Philadelphia, as directed by an act of General Assembly of this commonwealth to be sold for the use of the city and county aforesaid, be apportioned for the defraying the charges of purchasing the land, building and erecting the court-house and prison aforesaid, in the ratio or proportion of taxes as paid between the said county of Montgomery and the county of Philadelphia and this city; but in case the same should not be sufficient, it shall and may be lawful to and for the commissioners and assessors of the said county, or a majority of them, to assess and levy, and they are hereby required to assess and levy, in the same manner as is directed by the act for raising county rates and levies, so much money as the said trustees, or any three of them, shall judge necessary for purchasing the said land and finishing the said court-house and prison.

SECT. XII. *Provided, always,* That the sum of money so to be raised does not exceed three thousand pounds current money of this State.

SECT. XIII. *Provided, also, and be it further enacted by the authority aforesaid,* That no action or suit now commenced or depending in the county of Philadelphia against any person living within the bounds of the said county of Montgomery shall be stayed or discontinued, but that the

The lands are agreeably diversified by well-marked ranges of hills, and with beautiful and fertile valleys. In the southeastern portion of the county these elevations are known as the "Gulf Hills," "Barren Hills," and "Chelten Hills." In the centre of the county the "Providence" and "Skippack Hills" are most notable, and in the northern part the "Stone Hills" are prominent, rugged, and somewhat mountainous in their character and appearance. All of these ranges of hills are habitable, and all but the Stone Hills are in a high state of cultivation. The latter are heavily timbered, and when cleared of trees and rocks respond liberally to the husbandmen who possess and till them.

The valley lands of the county have been a source of perpetual wealth to agriculturists, who prize them not only for their surface products, but also for the useful minerals that abound in them. The Schuylkill, Plymouth, and Perkiomen Valleys are the most noted in the county, and present the most beautiful and picturesque scenery. But there is much to admire in following the Wissahickon, Indian, Swamp, and Manatawny Creeks to their sources, draining as they do large areas of rolling country, improved by elegant and commodious residences and farm-houses, with barns and improvements unsurpassed by any agricultural people on the face of the globe.

Montgomery County has an approximate area of four hundred and seventy-three square miles, or about three hundred and three thousand and eighty acres. It is divided into thirty townships and sixty election districts. There are twelve boroughs in the county, all of which will be referred to in subsequent chapters of this work. The Schuylkill River forms the southwestern boundary line between Montgomery and Chester Counties until it reaches the Merion townships; from thence it passes through the country in a southeasterly course until it reaches the Philadelphia line. The county is watered by many streams flowing into the Schuylkill River,—Wissahickon, Plymouth, Sandy Run, Mill, Rock Hill, Gulf, Valley, Indian, Stony, Skippack, Perkiomen, and Manatawny Creeks. The Pennypack and Neshaminy Creeks rise in Montgomery County, and pass through Bucks County to the Delaware River. The water-flow and fall of these streams and their tributaries, which form a network of irrigation, fed by thousands of perennial springs, rising in every part of the county, were early utilized by the settlers, who erected dams, and built on the shores grist-, saw-, fulling-, oil-, paper-, powder-, and rolling-mills, forges, factories, and tanneries. In 1795 there were reported ninety-six grist-mills, sixty-one saw-mills, four forges, six fulling-mills, and ten paper-mills. Many of these grist-mills existed prior to and during the Revolutionary war, doing active service for the contending armies while in occupancy of this section of the country. In the early era of public improvements Montgomery County was well marked by public roads leading from the city of Philadelphia to the interior settlements of the colony and State. The Lancaster road and similar highways leading to Reading and Bethlehem, with many parallel cart-ways, opened up the county settlements at a very early period. These great thoroughfares were soon intersected by public roads running from the Delaware to the Schuylkill Rivers, increasing in number and importance until the region now comprising the county was accessible from all points by well-graded roads leading in the direction of Philadelphia, then the capital of the county and of the State as late as 1799, and the capital city of the nation as late as 1800.

The general conformation of the face of the country in Montgomery County repeats in miniature that which has rendered the natural scenery of New York, Pennsylvania, Maryland, and West Virginia so notable. The ranges of hills run uniformly northeast and southwest, as do the more distant line of the Catskills, Blue Ridge, and Alleghanies. As the Hudson River forces itself through the Narrows, the Delaware at the Water Gap, the Susquehanna between Harrisburg and Port Deposit, the Potomac at Harper's Ferry, so the Schuylkill River in finding its way to the Delaware, in the same direction, cuts its way through rock-hills at Conshohocken and again at Fairmount, Philadelphia. The primitive condition of the area of country now known as Montgomery County was land heavily timbered with oak, hickory, and chestnut. The consumption of wood for fuel prior to the introduction of anthracite and bituminous coal, was very great in Eastern Pennsylvania. Large quantities were used in making charcoal for furnaces; all lime was made by use of wood for fuel; every household had its "wood-pile," while the supply of Philadelphia City constituted a trade of vital

same action or actions already commenced or depending may be prosecuted and judgment thereupon rendered, as if this act had not been made; and that it shall and may be lawful for the justices of the county of Philadelphia to issue any judicial process, to be directed to the sheriff or coroner of Philadelphia County, for carrying on and obtaining the effect of the aforesaid suits, which sheriff and coroner shall and are hereby obliged to yield obedience in executing the said writs, and make due return thereof before the justices of the said court for the said county of Philadelphia, as if the parties were living and residing within the same.

SECT. XXI. AND WHEREAS it is represented, by petition to the General Assembly, that by the lines hereinbefore mentioned a long, narrow neck or point of land, being part of the manor of Moreland, and lying between the townships of Byberry and Lower Dublin, in the county of Philadelphia, would be included in the county of Montgomery, to the great inconvenience and injury of the inhabitants of the said neck of land, who have prayed that they may remain within the county of Philadelphia.

SECT. XXII. *Be it therefore enacted by the authority aforesaid*, That the boundary line of the said county of Montgomery shall be as follows: that is to say, beginning in the line of Bucks County where the same is intersected by the line which divides the townships of Byberry and the manor of Moreland; thence southwesterly along the last-mentioned line to the first corner or turning thereof; and thence on the same southwesterly course to the line of Lower Dublin; and thence westwardly along the northern line of Lower Dublin, and so on, as the lines of the said county of Montgomery are hereinbefore described, to the place of beginning; anything hereinbefore contained to the contrary in anywise notwithstanding.

Passed Sept. 10, 1784.

interest to those owning and residing upon lands within twenty and thirty miles of the great city. Time was, and possibly is within the remembrance of those still living among us, when it was the work of each succeeding year to clear one or more acres of woodland, and the wood sold counted as a part of the yearly profit of the farm. This wealth of primitive forest was the foundation of many substantial fortunes in years past, where, by means of judicious purchases made, the sale of the "wood-leaf" paid for the farm, and opened up an increasing acreage for the growth of grass and cereals. Tradition says this stump or "new land" was a test point in the character of the owner. If he was a provident, industrious man, his "new land" would seasonably blossom with buckwheat; if thriftless, selling his wood to pay taxes and incidental expenses of his attendance upon militia trainings and horse-races, his new land would be left uncultivated and overgrown with briers and brush. Fifty years ago farms denuded of woodland were exceptional, and their marketable value greatly depreciated. The old characteristic farmer of Montgomery County took a commendable pride in maintaining from ten to twenty acres of primitive forest. It was useful in many ways, for fuel, building, and fencing, and, whether deemed ornamental or not, had a rare charm for him. It was these parks of woodlands that preserved to hunters until within the last quarter of a century choice haunts for squirrel and bird; but the close of the first century of the county witnesses the final obliteration of all hunting-grounds lying between the Delaware and the Schuylkill.

The surface soil varies greatly in different parts of the county. In passing inland from tide-water levels, alluvial flats, and submarine formations, rock-faced bluffs are found at Chestnut Hill, four hundred feet above tide-water mark. The northwestern slope of these hills descends to the basin of the Plymouth Valley, through which runs a belt of limestone some two miles in width, with rich beds of hematite iron ore, white and blue marble, limestone, soapstone, and large masses of gray rock, easily quarried, and largely used in heavy masonry. This limestone belt crosses the Schuylkill River between Conshohocken and Swedes' Ford, and extends in a westerly direction to Howeltown, in the Schuylkill Valley. The soil of this locality is very productive, and is considered by many the most valuable in the county for agricultural purposes. Contiguous to the Plymouth Valley are the Sandy Hills, a light, luminous soil, easily worked and productive, but often seriously affected by drought. The rolling lands northwest of the valley, drained by Indian, Skippack, Perkiomen, and Manatawny Creeks and their tributaries, are principally of the red shales and sandstones of the "middle secondary" formation, with many intervening areas of clay soil. The primitive condition of this soil was unproductive as compared with that of the Schuylkill and Plymouth Valleys; but under the skillful husbandry of the modern farmer, and a liberal use of lime, manure, and fertilizers, this vast region of country yields abundant harvests, and supports a prosperous population equal in numbers to the square mile with the more favored limestone or valley lands. The scenery abounding along the Schuylkill, Wissahickon, Perkiomen, and their tributaries is among the most picturesque in the Middle States, while the landscape, from the successive ranges of hills, is extended, and conveys to the observing eye a vision of pastoral peace and plenty. The topography of the county, as shown by accompanying maps,—that of Holme's original survey and the recent one prepared for this work,—shows the progress of two centuries in the matter of public roads and highways, and the subdivisions of the county into townships and boroughs. In 1681 it consisted of manors and large tracts, or proprietary grants, held by comparatively few persons, who lived a frontier life, in almost daily contact with native tribes of Indians. Since then its square miles and broad acres, under the equalizing operation of our laws of descent, have passed through at least six generations, and thousands of purchasers have acquired titles to soil that have always been a prize in the inventory of worldly possessions of those who lived and died on the hills and in the valleys of Montgomery.

The first era of public improvement demanded macadamized highways from tide-water to the interior. These highways still exist, monuments of early engineering, traversing the hills and mountains of the State. The increased tonnage of merchandise on these roads, and the costly character of teams and means of transportation,—the old Conestoga wagon,—soon induced the bridging of all important streams, many of which crossed these highways, as surveyed northwest of Philadelphia, within the lines now constituting Montgomery County. The spirit of public improvement seized on the Schuylkill River, and by a system of dams, locks, and canals connected it with the Susquehanna, by means of which lumber, coal, and all manner of merchandise found its way through the county to Philadelphia. Many travelers sought the "fast packet line," pulled through at a trot, with frequent changes of horses, it being thought a far more luxurious way of reaching the interior than by stage. This system of navigation still exists on the Schuylkill, but is now confined to coal, lumber, lime, and stone. It is no longer a rival for mail, fast freight, or passenger traffic. The use of steam opened up a new era of public improvement. The construction of railroads speedily followed. These modern highways of travel and traffic found easy grades and eligible locations on the shores of streams and over depressions upon the face of the country, sought out by skillful engineers. The topographical face of Montgomery County is traversed by three of the best-constructed and most liberally equipped railroads in the country, with a number of lateral roads connecting

these parallel trunk lines. The Philadelphia and Reading Company drain the Schuylkill Valley, with branch roads in Plymouth, Stony Creek, Perkiomen, Pickering, and Oley Valleys. The North Pennsylvania Railroad, now under the management of the Philadelphia and Reading, crosses the "divide" between the Schuylkill and Delaware Rivers, and extends to Bethlehem, having connections with the Bound Brook, New Hope, and Doylestown Railroads, and with the Lehigh Valley system of railroads. The trunk line of the Pennsylvania Railroad Company passes through Lower Merion township. The Philadelphia and Schuylkill Valley Railroad Company, now leased to the Pennsylvania Company, is constructing a new line of road from their main track at Fifty-first Street, Philadelphia, thence up the Schuylkill Valley, leaving the county at the line opposite Phœnixville. When this road is completed, Montgomery County will be most advantageously traversed with these modern highways.

There are accompaniments to these public improvements of novel and increasing interest to the populous districts of country through which they pass,—the telegraph and, later, the telephone. No system of railroading is now deemed complete without these necessary adjuncts to the safety of public travel, the prompt movement of freights, and the methodical dispatch of business accumulating at centres of production, trade, and transatlantic shipment. These means of direct and rapid communication with all parts of the country, focalizing as they pass through the county and converging at the contiguous seaport city of Philadelphia, gives to the locality important topographical advantages. Lines of rapid transit, capable of transporting large bodies of men and corresponding tonnage of freight, are now essential agencies in travel and in conducting the exchange of commodities of the continent in time of peace as well as in time of war. They are anchored in the capitalized enterprise of the country, and are indispensable to the success of the industrial pursuits in agriculture, manufacture, and commerce. Their adaptation to the necessities and exigencies of war was well illustrated in the late Rebellion. The facility with which troops and supplies were transported to the line of the Susquehanna in the summer of 1863 was of great importance in connection with movements relied upon to check the invasion of Gen. Lee, and in making the great battle of Gettysburg the turning-point of the war. In the event of foreign war, hostile agencies would first be directed to the capture or destruction of our seaport towns and cities. In that event Philadelphia and all the commercial advantages centring there would be a tempting prize to a maritime enemy. In such a contingency, one that may occur, all can readily see the importance that would be attached to the present topographical face of the county, checkered as it is with a network of trunk and lateral lines of railroads. What our common roads were to Gen. Washington and Lord Howe in 1777–78 in the strategical movement of troops from the Brandywine to the Delaware for the defense and capture of the City of Penn, our railroads in an enlarged sense would be in possible warlike movements, involving issues of greater importance than those referred to in the early history of the country.

The surface elevations and topographical structure of Montgomery County has been heretofore made contributory to the growth and development of the region by utilizing its flowing waters for purposes of irrigation and propelling mills and factories. The sanitary requirements of Philadelphia demand a liberal extension of its water-works, and skillful engineers have ascertained, by levels made and in progress, that the upper Perkiomen Valley has an elevation with a volume of water and storage capacity sufficient to meet present and future wants of the great city for a century to come, and furnish a healthful and perpetual supply of pure water.

The true latitude and longitude of Montgomery County appears to have been ascertained with great precision in 1769–70 by David Rittenhouse and his distinguished scientific contemporaries. The astronomical observations which preceded the terrestrial measurements were made, taking the "Norriton Observatory" as a place of beginning. The extraordinary importance attached at the time to the work of these learned men, and the high standard of authority since conceded to them, renders of historical interest some account of their labors and the circumstances connected with the event.

Latitude and Longitude, Norriton Observatory.—Norriton township, created by judicial proceedings, 1730, then becoming a geographical subdivision of Philadelphia, enjoys a world-wide celebrity in having had situated within its boundaries the "Norriton Observatory," at which place astronomical observations were made, and reported as "An Account of the Transit of Venus over the Sun's Disk, observed at Norriton, in the County of Philadelphia and Prov-

RITTENHOUSE OBSERVATORY.

ince of Pennsylvania, June 3, 1769."[1] It was at the point where then stood the "Norriton Observatory," about fifty feet north of the famous old residence, still standing, that David Rittenhouse, assisted by Archibald McKean and Jesse Lukens, met on July 2, 1770, to commence the work of surveying a line

[1] The following gentlemen were appointed by the American Philosophical Society, located at Philadelphia, to make the observations and astronomical calculations: William Smith, D.D., Provost of the College of Philadelphia; John Lukens, Esq., Surveyor-General of Pennsylvania; David Rittenhouse, A.M., of Norriton; and John Sellers, Esq., Representative in Assembly for Chester. Communicated to the society July 20, 1769, by direction and in behalf of the committee, by Dr. Smith.

"GENTLEMEN,—Among the various public-spirited designs that have engaged the attention of this society since its first institution none does them more honor than their early resolution to appoint committees of their own members to make as many observations, in different places, of the rare phenomenon, the transit of Venus over the sun's disk, as they had any probability of being able to defray the expense of, either from their own funds or the public assistance they expected. As the members of the Norriton Committee live at some distance from each other, I am therefore, at their request, now to digest and lay before you in one view the whole of our observations in that place, distinguishing, however, the part of each observer, and going back to the first preparations; for I am persuaded that the dependence which the learned world may place on any particular transit account will be in proportion to the previous and subsequent care which is found to have been taken in a series of accurate and well-conducted observations for ascertaining the going of the time-pieces, and fixing the latitude and longitude of the place of observations, etc. And I am the more desirous to be particular in these points in order to do justice to Mr. Rittenhouse, one of our committee, to whose extraordinary skill and diligence is owing whatever advantage may be derived in these respects to our observation of the transit itself. It is further presumed that astronomers in distant countries will be desirous to have not only the work and results belonging to each particular transit observation, but the materials also, that they may examine and conclude for themselves. And this may be more particularly requisite in a new observatory, such as Norriton, the name of which has perhaps never before been heard of by distant astronomers, and therefore its latitude and longitude are to be once fixed from principles that may be satisfactory on the present as well as on any future occasion.

"Our great discouragement at our first appointment was the want of proper apparatus, especially good telescopes with micrometers. The generosity of our Provincial Assembly soon removed a great part of this discouragement, not only by their vote to purchase one of the best reflecting telescopes, with a Dolland's micrometer, but likewise by their subsequent donation of one hundred pounds for erecting observatories and defraying other incidental expenses. It was foreseen that on the arrival of this telescope, added to such private ones as might be procured in the city, together with fitting up the instruments belonging to the honorable the Proprietaries of the province, viz., the equal-altitude and transit instrument and the large astronomical sector, nothing would be wanting for the city observatory in the State-House Square but a good time-piece, which was easily to be procured. We remained, however, still at a loss how to furnish the Norriton Observatory, but even this difficulty gradually vanished. Early in September, 1768, soon after the nomination of our committee, I received a letter from that worthy and honorable gentleman, Thomas Penn, Esq., one of the Proprietaries of this province, which he wrote at the desire of the Rev. Mr. Makelyne, Astronomer Royal, expressing their desire 'that we would exert ourselves in observing the transit, for which our situation would be so favorable,' and inclosing some copies of Mr. Makelyne's printed directions for that purpose. This gave me an opportunity, which I immediately embraced, of acquainting Mr. Penn what preparation we had already made, and what encouragement the Assembly had given in voting one hundred pounds sterling for the purchase of one reflecting telescope and micrometer for the city observatory; but that we would be at a great loss for a telescope of the like construction for the Norriton Observatory, and requesting him to order a reflector of two or two and a half feet, with Dolland's micrometer, to be got ready as soon as possible in London. It was not long before I had the pleasure of hearing that Mr. Penn had ordered such a telescope, which came to hand about the middle of May, with a most obliging letter, expressing the satisfaction he had in hearing of the spirit shown at Philadelphia for observing this curious phenomenon when it should happen, and concluding as follows: 'I have sent by Capt. Sparks a reflecting telescope, with Dolland's micrometer, exact to your request, which I hope will come safe to hand. After making your observations, I desire you will present it, in my name, to the college. Messrs. Mason and Dixon tell me they never used a better than that which I formerly sent to the Library Company of Philadelphia, with which a good observation may be made, though it has no micrometer.' We were now enabled to furnish the Norriton Observatory as follows, viz.:

"1. A Gregorian reflector, about 2 f. focal length, with a Dolland's micrometer. This telescope has four different magnifying powers, viz.: 55, 95, 130, and 200 times, by means of two tubes, containing eye-glasses that magnify differently, and two small speculums of different focal distances. Made by Nairne; used by Dr. Smith.

"2. A refractor of 42 f., its magnifying power about 140. The glasses were sent from London with the large reflector, and belonged to Harvard College, New England; but as they did not arrive time enough to be sent to that place before the transit, they were fitted up here by Mr. Rittenhouse and used by Mr. Lukens.

"3. Mr. Rittenhouse's refractor, with an object-glass of 36 f. focus, and a convex eye-glass of 3 inches, magnifying about 144 times. Used by himself. Both these refractors, as well as the reflector, were in most exquisite order.

"4. An equal-altitude instrument, its telescope three and a half feet focal length, with two horizontal hairs, and a vertical one in its focus, firmly supported on a stone pedestal, and easily adjusted to a plummet wire 4 feet in length by 2 screws, one moving it in a north and south, the other in an east and west direction.

"5. A transit telescope, fixed in the meridian on an axis with fine steel points, so that the hair in its focus can move in no other direction than along the meridian; in which are two marks, south and north, about 330 yards distance each, to which it can be readily adjusted in a horizontal position by one screw, as it can in a vertical position by another screw.

"6. An excellent time-piece, having for its pendulum a flat steel bar, with a bob weighing about 12 pounds, and vibrating in a final arch. It goes eight days, does not flop when wound up, beats dead seconds, and is kept in motion by a weight of 5 pounds. These last three articles were also Mr. Rittenhouse's property, and made by himself.

"7. An astronomical quadrant, two and a half f. radius, made by Sisson, the property of the East Jersey Proprietors, under the care of the Right Honorable William Earl of Stirling surveyor-general of that province, from whom Mr. Lukens procured the use of it, and sent it up to Mr. Rittenhouse for ascertaining the latitude of the observatory. Thus we were at length completely furnished with every instrument proper for our work. As Mr. Rittenhouse's dwelling at Norriton is about 20 miles northwest of Philadelphia, our other engagements did not permit Mr. Lukens or myself to pay much attention to the necessary preparations. But we knew that we had intrusted them to a gentleman on the spot, who had, joined to a complete skill in mechanics, so extensive an astronomical and mathematical knowledge that the use, management, and even the construction of the necessary apparatus were perfectly familiar to him. Mr. Lukens and myself could not set out till Thursday, June 1st; but on our arrival there we found every preparation so forward that we had little to do but to examine and adjust our respective telescopes to distinct vision. He had fitted up the different instruments, and made a great number of observations to ascertain the going of his time-piece, and so determined the latitude and longitude of the observatory. The laudable pains he had taken in these material articles will best appear from the work itself, which he has committed into my hands, with the following modest introduction, giving me a liberty which his own accuracy, care, and abilities leave no room to exercise:

"'NORRITON, July 18, 1769.

"'DEAR SIR,—The inclosed is the best account I can give of the contacts as I observed them and of what I saw during the interval between them. I should be glad you would contract them, and also the other papers, into a smaller compass, as I would have done myself if I had known how. I beg you would not copy anything merely because I have written it, but leave out what you think superfluous.

"'I am, with great esteem and affection,

"'Yours, etc., DAVID RITTENHOUSE.

"'To Rev. Dr. Smith.'"

Extract from David Rittenhouse's Report of the Transit of Venus, June 3, 1769, *observed at the Norriton Observatory.*—"'Early in November, 1768, I began to erect an observatory, agreeable to the resolutions of the Ameri-

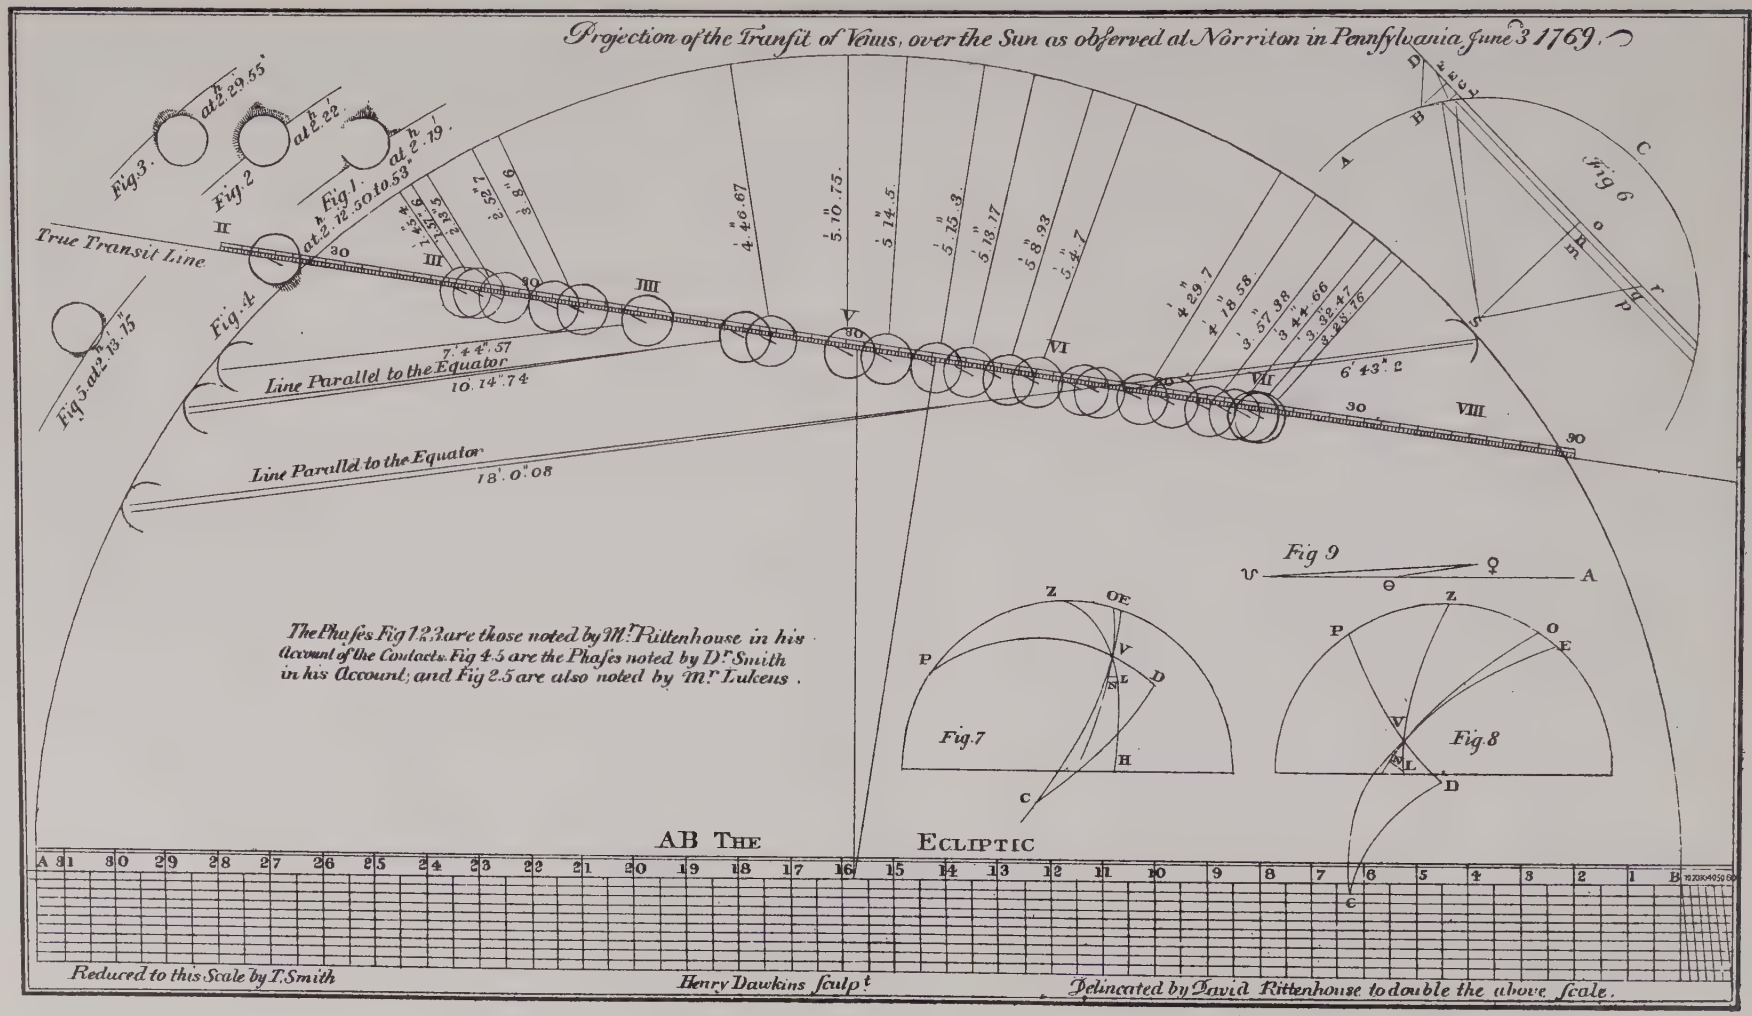
from the observatory to the State-House Square at Philadelphia. Mr. Rittenhouse having ascertained the latitude and longitude at the point with acknowledged precision, and his reputation for exactness in all astronomical observations and calculations being duly credited in scientific and official circles in this

can Philosophical Society, but, through various disappointments from workmen and weather, could not complete it till the middle of April, 1769. I had for some time expected the use of an equal-altitude instrument from Philadelphia; but finding I could not depend on having it, I fell to work and made one of as simple a construction as I could. March 20th the instrument was finished and put up out of doors, the observatory not being yet ready.

"'I had for some weeks before this, however, with my 36 f. refractor, observed eclipses of Jupiter's satellites in such a manner that, though my equal-altitude instrument was not finished, and consequently I could not set my time-piece to the true noon, I should, nevertheless, be able to tell the time of those eclipses afterwards when the instruments should be ready. For this purpose I observed almost every fair evening the time by the clock when the bright star in Orion disappeared behind a fixed obstacle, by applying my eye to a small sight-hole made through a piece of brass fastened to a strong post. From this time to May 20 the clock was altered several times, once taken down and cleaned, removed back to the observatory, and regulated anew. Care was taken, however, to observe equal altitudes of the sun on the days preceding and following any visible eclipse of the 1st satellite, when the weather would permit. May 20, in the morning, the clock was set up for the last time pretty near the mean time. It had no provision for preventing the irregularities arising from heat and cold, nor could I find leisure to apply any contrivance of this sort. This day I likewise put wires instead of hairs in the telescope of the equal-altitude instrument. The ill state of my health would not permit me to sit up at nights to take equal altitudes of the stars. I was, therefore, obliged to content myself with those of the sun only.'

"It has been mentioned before that it was on Thursday afternoon, June 1, that Mr. Lukens and myself arrived at Norriton, with a design to continue with Mr. Rittenhouse till the transit should be over. The prospect before us was very discouraging. That day and several preceding had been generally overcast with clouds and frequent heavy rains, a thing not very common for so long a period at that season of the year in this part of America. But by one of those transitions which we often experience here, on Thursday evening the weather became perfectly clear, and continued the day following, as well as the day of the transit, in such a state of serenity, splendor of sunshine, and purity of atmosphere that not the least appearance of a cloud was to be seen. June 2 and the forenoon of June 3 were spent in making necessary preparations, such as examining and marking the foci of our several telescopes, particularly the reflector, with and without the micrometer. The reflector was also placed on a polar axis, and such supports contrived for resisting the ends of the refractors as might give them a motion as nearly parallel to the equator as such hasty preparations would admit. Several diameters of the sun were taken, and the micrometer examined by such other methods as the shortness of the time would allow. The sun was so intensely bright on the day of the transit that, instead of using the colored glasses sent from England with the reflector, I put on a deeply-smoked glass prepared by Mr. Lukens, which gave a much more beautiful, natural, and well-defined appearance of the sun's disk. The smoked glass was fastened on the eye-tube with a little beeswax, and there was no occasion to change it the whole day, as there was not the least cloud or intermission of the sun's splendor. Mr. Rittenhouse, in his previous projection, had made the first external contact to be June 3, 2 h. 11′ for lat. 40° N., and long. 5h W. of Greenwich, on a supposition of the sun's parallax being 8″. He happened to be very near the truth, for at 2h 10′ 33″, mean time, the first external contact was at Norriton, lat. 40° 9′ 56″ N., and long. 5h 1′ 31″ West. Other calculations made it generally from 6′ to 8′ later for the latitude and longitude. Though this calculation was not given to be entirely depended on, yet it was sufficient to make us keep what, in the sea phrase, would be called a good look-out; and therefore at one o'clock we took off the micrometer, which had been fitted to the reflector with a power of 95, and adjusted it to distinct vision, with the same power to observe the contacts, and during the hour that was to intervene from one to two we resolved to keep an alternate watch through the reflector on that half of the sun's limb where Venus was certainly expected to touch, while the others not thus employed were fixing what more remained to be done, as follows, viz.: First, That each of us might the better exercise our own judgment without being influenced or thrown into any agitation by the others, it was agreed to transact everything by signals, and that one should not know what another was doing. The situation of the telescopes, the two refractors being at some distance without the observatory, and the reflector within, favored this design. Secondly, two persons, Mr. Sellers, one of our committee, and Mr. Archibald McClean, both well accustomed to matters of this kind, were placed at one window of the observatory, to count the clock and take the signal from Mr. Lukens. Two of Mr. Rittenhouse's family, whom he had often employed to count the clock for him in his observations, were placed at another window to take his signal. My telescope was placed near the clock, and I was to count its beats and set down my own time. These preliminaries being settled, we prepared at two o'clock to sit down to our respective telescopes, or, I should rather say, lie down to the refractors, on account of the sun's great height. As there was a large concourse of the inhabitants of the county, and many from the city, we were apprehensive that our scheme for silence would be defeated by some of them speaking when they should see any of the signals for the contacts, and therefore we found it necessary to tell them that the success of our observation would depend on their keeping a profound silence till the contacts were over. And, to do them justice, during the 12′ that ensued there could not have been a more solemn pause of silence and expectation if each individual had been waiting for the sentence that was to give him life or death. So regular and quiet was the whole that, far from hearing a whisper or word spoken, I did not even hear the feet of the counters who passed behind me from the windows to the clock, and was surprised, when I turned from my telescope to the clock, to find them all there before me, counting up their seconds to an even number, as I imagined, from the deep silence, that my associates had yet seen nothing of Venus. As the contacts are among the most essential articles relative to this phenomenon, it is material, before we set down the times, to give a particular account of the manner in which they were observed and the circumstances attending them."

Mr. Rittenhouse's Account of the Contacts.—"At 2h 11′ 39″ per clock, the Rev. Mr. Barton, of Lancaster, who assisted me at the telescope, on receiving my signal, as had been agreed, instantaneously communicated it to the counters at the window by waving a handkerchief, who, walking softly to the clock, counting seconds as they went along, noted down their times separately, agreeing to the same second; and three seconds sooner than this, to the best of my judgment, was the time when the least impression made by Venus on the sun's limb could be seen by my telescope. When the planet had advanced about one-third of its diameter on the sun, as I was steadily viewing its progress, my sight was suddenly attracted by a beam of light which broke through on that side of Venus yet off the sun. Its figure was that of a broad-based pyramid, situated about 40 or 45 degrees on the limb of Venus, from a line passing through her centre and the sun's, and to the left hand of that line as seen through my telescope, which inverted. About the same time the sun's light began to spread round Venus on each side from the points where their limbs intersected each other. As Venus advanced the point of the pyramid still grew lower, its circular base wider, until it met the light which crept round from the points of intersection of the two limbs, so that when half the planet appeared on the sun, the other half yet off the sun was entirely surrounded by a semicircular light, best defined on the side next to the body of Venus, which continually grew brighter till the time of the internal contact. Imagination cannot form anything more beautifully serene and quiet than was the air during the whole time, nor did I ever see the sun's limb more perfectly defined or more free from any tremulous motion, to which his great altitude undoubtedly contributed much. When the internal contact, as it is called, drew nigh, I foresaw that it would be very difficult to fix the time with any certainty, on account of the great breadth and brightness of the light which surrounded that part of Venus yet off the sun. After some consideration I resolved to judge as well as I could of the coincidence of the limbs, and accordingly gave the signal for the internal contact at 2h 28′ 45″ by the clock, and immediately began to count seconds, which any one who has been accustomed to it may do for a minute or two pretty near the truth. In this manner I counted no less than 1′ 32″ before the effect of the atmosphere of Venus on the sun's limb wholly disappeared, leaving that part of the limb as well defined as the rest. From this I concluded that I had given the internal contact too soon, and the times given by the other observers at Norriton confirm me in this opinion."



Projection of the Transit of Venus, over the Sun as observed at Norriton in Pennsylvania, June 3 1769.

country and in Europe, he was selected to report the difference of latitude and longitude between the "Norriton Observatory" and the State-House Square at Philadelphia, and harmonize the work with that of Mason and Dixon's Observatory at the south point of said city.

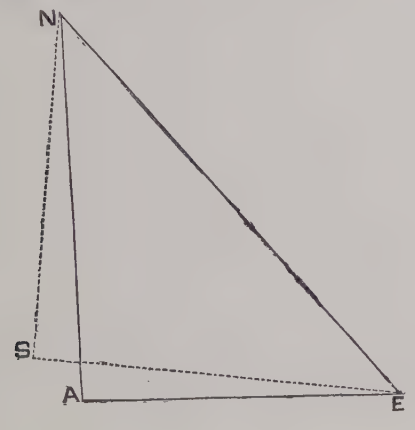
"ACCOUNT OF THE TERRESTRIAL MEASUREMENT OF THE DIFFERENCE OF LONGITUDE AND LATITUDE BETWEEN THE OBSERVATORIES OF NORRITON AND PHILADELPHIA.

"*To the American Philosophical Society, etc.:*

"GENTLEMEN,—Agreeable to the appointment you made (at the request of the Astronomer Royal), Mr. Lukens, Mr. Rittenhouse, and myself, furnished with proper instruments, met at Norriton, early on Monday, July 2d, for the above service, and took to our assistance two able and experienced surveyors, viz.: Mr. Archibald McClean and Mr. Jesse Lukens. The first thing we did was accurately to ascertain the variation of our compass, which we found 3° 8′ by Mr. Rittenhouse's meridian line. We then carefully measured our chain, and adjusted it to the exact standard of 66 feet. In the execution of the work, whenever the instrument was duly set, each course was taken off and entered down separately by three different persons, who likewise kept separate accounts of all the distances, and superintended the stretching of every chain, and the leveling and plumbing it whenever there was any ascent or descent in the road. July 4th we finished the survey, and Mr. McClean, Mr. Jesse Lukens, and myself then agreed to bring out the difference of latitude and departure separately on each course and distance to four or five decimal places; and there was so great an agreement in this part of the work when executed that we had all the same results to a few links, and the whole was at last brought to agree in every figure by comparing the few places where there was any difference, which scarce ever went further than the last decimal place. Mr. McClean and Mr. Lukens took the trouble to bring out their work by multiplying each distance by the natural sine of the course to the radius unity for the departure, and by the co-sine for the latitude. Mine was done by Robertson's tables, and the following results obtained:

Distances.	Northing.	Southing.	Easting.	Westing.
Chains, Links. 1630.79	00.1447	1205.8095 00.1447	891.3616 39.5180	39.5180
	Total Southing	1205.6648	851.8436	Total Easting.

	Chains.	Log.
"Then N A, dif. of lat.	1205.6648	3.0812265
To A E, depart.	851.8436	2.9303599
As rad.	.....	10
To tang. of E N A, the course 35° 14′ 33″.08 of the	.....	9.8491334
And sine of 35° 14′ 33″.08	.....	9.7612048
To rad.	.....	10
As 851.8436	.....	2.9303599
To N E. the distance in a straight line = 1476.2336 chains	.....	3.1691551



But the course of N E being		35° 14′ 33″ E.,
With respect only to N A, the magnetic fourth, add the variation		3° 8′ 0″
Which gives		38° 22′ 33″ E.

for the course of N E with respect to N S, the true meridian.

"So that the true course and distance from Norriton Observatory to Philadelphia Observatory in a straight line, N E, is S. 38° 22′ 33″ E. 1476.2336 chains.

"Then rad.	.....	10
To co-sine of	38° 22′ 33″	9.8942913
As N E.	1476.2336	3.1691551
To N S true diff. of lat.	1157.3013	3.0634464
And rad.	.....	10
To sine of	38° 22′ 33″	9.7929637
As N E.	1476.2336	3.1691551
To S E, true diff. of long.	916.4713	2 9621188

"Thus we have—

"Norriton Observatory from Philadelphia Observatory:

Chains. Feet.

North 1157.30 = 76381.8 = 12′ 35″.7 diff. of lat.

West 916.47 = 60487.02 = 00′ 52″ of time = 13′ diff. of longitude = 9′.95 of a great circle or geographical mile.

"But the observatory in State-House Square, with respect to the fourth part of the city of Philadelphia (to which Messrs. Mason and Dixon refer their observation), is:

Chains. Feet.

N. 40.0685 = 2644.5 = 26″.16 diff. of lat.

W. 28.7695 = 1898.8 = 1″.6 of time.

"Therefore Norriton Observatory, with respect to the southernmost point of Philadelphia, is:

Chains. Feet.

North 1157.30 + 40.0685 = 1197.3685 = 79,026.3 = 13′ 01″.86 diff. of lat.

West 916.47 + 28.7695 = 945.2395 = 62,385.8 = 00′ 53″.6 of time.

"Hence by the above measurement and work we get Norriton Observatory 52″ of time west of the observatory in the State-House Square, which is exactly what we got by that excellent element, the external contact of Mercury with the sun, Nov. 9, 1769. The internal contact gave it something more, owing, no doubt, to the difference that will arise among observers in determining the exact moment when the thread of light is completed; and the mean of all our other observations gives the difference of meridians between Norriton and Philadelphia only 4″ of time more than the terrestrial measurement and the external contact of Mercury gave it, which may be taken as a very great degree of exactness for celestial observations, if we consider that the difference of meridians between the long-established observatories of Greenwich and Paris, as Mr. De La Lande writes, Nov. 18, 1762, was not then determined within 20″ of time; for he says, 'Some called it 9′ 15″, others 9′ 40″, but that he himself commonly used 9′ 20″, though he could not tell from what observations it was deduced.' And it may be needless to add that a short distance is as liable to the differences arising from the use of instruments in celestial observations as a greater one. Nevertheless, if we apply the difference of meridians between Philadelphia and Norriton got by this measurement (viz., 52″ instead of 56″) to the Rev. Mr. Ewing's collection of Jupiter's satellites, rejecting those of the 2d sat., and also the immersions of May 5th, as too near the opposition, we shall get Philadelphia 5h. 0′ 37″ and Norriton 5h. 1′ 29″ west from Greenwich. This result is what ought to arise from a diminution of 4″ of time in the difference of meridians by dividing that difference, and bringing the meridian 2″ more west and the other 2″ more east, and we believe future observations will confirm this as exceeding near the truth."

"The latitude of Norriton comes out by the measurement 25″.09 less north, with respect to the southernmost point of the city of Philadelphia, than Mr. Rittenhouse's observations give it; and if the latitude of that point of the city be taken, as fixed by Messrs. Mason and Dixon, at 39° 56′ 29″.4, then the lat. of Norriton (neglecting fractions of seconds) will be 40° 9′ 31″, instead of 40° 9′ 56″. However, as both were fixed by celestial observations and experienced men,

the small difference ought perhaps to be divided; and if a mean be taken to reconcile it with the terrestrial measurements, the lat. of the south point of Philadelphia would be 39° 56′ 42″, and that of Norriton 40° 9′ 43″. But as Mr. Rittenhouse had only Sisson's two and a half feet quadrant, and Messrs. Mason and Dixon were furnished with a complete astronomical sector, and did their work to fix the lines of two provinces, it may be thought that their determination is most to be relied upon. Nevertheless, the whole difference of 25″ in the celestial arc is so inconsiderable as not to give 40 chains on the surface of the earth. All the results in the above work are got without any sensible error, by plain trigonometry, as the different arcs are so very small. In estimating the length of a degree to deduce the difference of latitude between the two observations, the spheroidal figure of the earth was taken into consideration, and the degree measured by Messrs. Mason and Dixon, in mean latitude 39° 12′,—363,771 feet,—was made the standard, which being lengthened in the ratio of 59.7866 to 59.8035, gave 363,874 for a degree of the meridian in the mean latitude between Philadelphia and Norriton, which is only 103 feet more than the deg. in lat. 39° 12′, and makes but a fraction of a second difference in the latitude, so that it might have been disregarded. With respect to seconds of time in longitude, no sensible difference can be obtained in the small difference of about 11 miles, whether we consider the earth as a sphere or spheroid. In bringing out the 52″ of time diff. of long., a degree of the equator was taken in proportion to Messrs. Mason and Dixon's degree of the merid. in lat. 39″.12, in the ratio of 60 to 59.7866 (agreeable to Mr. Simpson's table), which gave 365,070 for a degree of the equator. By taking a degree of longitude as fixed at the middle point by Mr. Maskelyne in lat. 38° 7′ 35″, and saying as the co-sine of that lat. is to co-sine of mean latitude between Philadelphia and Norriton, so is the length of a degree of long. at the middle point (viz., 284,869.5 feet) to the length of a degree in mean lat. between Norriton and Philadelphia, the result was got 52″.13, being only thirteen hundredth parts of a second more."

Philadelphia, Aug. 17, 1770, William Smith, Norriton Observatory, N. Latitude, 40° 9′ 43″.

NOTE.—The true latitude and longitude of Philadelphia we give from a compilation made by Prof. B. A. Gould for one of the numbers of "The American Ephemeris and Nautical Almanac." The data are determined for the observatories in each case (Independence Hall being here taken):

PHILADELPHIA, N. Latitude, 39° 57′ 7.5″. (MS. communication from Prof. Kendall): Longitude E. from Washington (U. S. Coast Survey):

	m.	s.
By 5 sets Eastern clock-signals . .	7	33.66
By " Western " . .		33.60
Mean	7	33.63

The mean, by comparison with the next East station (Jersey City), is 7 33.64

Hence the longitude in arc is 358° 6′ 35.4″ from Washington, and from Greenwich, 75° 9′ 23.4″.[1]

CHAPTER II.

ORES, MINERALS, AND GEOLOGY OF MONTGOMERY COUNTY.

BY PROFESSOR OSCAR C. S. CARTER, CENTRAL HIGH SCHOOL, PHILADELPHIA.

Gold.—The precious metals have been found throughout Montgomery County, but in such small quantities that their occurrence is more of scientific interest than of any practical value. Gold occurs disseminated throughout the azoic rocks, the oldest rocks with which we are acquainted. It is also found in the sands of rivers or in alluvial deposits which have been formed by the weathering and disintegration of the oldest formations. Southern Montgomery County, from Philadelphia as far north as Conshohocken, is made up almost entirely of strata of the oldest rocks, but only traces of gold have been found,

[1] On July 5, 1773, the Right Honorable the Earl of Dartmouth, who was at that time Colonial Secretary (he had succeeded Lord Hillsborough one year before) in the cabinet of George III., wrote to the Deputy Governor of Pennsylvania (John Penn, the son of Richard Penn, who was the fifth child of William Penn by his second wife, Hannah Callowhill) propounding certain "Heads of Enquiry relative to the present State and Condition" of Pennsylvania. The answers to these inquiries were transmitted to Lord Dartmouth under date of Jan. 30, 1775. In the communication the following occurs: "*The City of Philadelphia*, situated near the Conflux of Delaware and one of its chief Branches, the Schuylkill, is the most considerable Town in the Province, or indeed in North America. The State-House in this City lies in North Latitude, 39° 56′ 53″; its Longitude from the Royal Observatory at Greenwich, computed West, 75° 8′ 45″; or, in time, 5 hours and 35 seconds. This Latitude and Longitude were both fixed by accurate astronomical Observation at the Transit of Venus, 1769." In the Journal of Mason and Dixon, November, 1763, we learn that these surveyors established an observatory in the southern part of Philadelphia, in order to find the starting-point of the parallel which they were to run off. Their point of departure was "the most Southern part of Philadelphia," which they ascertained to be the north wall of a house on Cedar Street, occupied by Thomas Plumstead and Joseph Huddle, and their observatory must have been immediately adjacent to this. The latitude of this point they determined to be 39° 56′ 29″ north. In 1845, when the northeast cornerstone of Maryland could not be found (it had been undermined by a freshet, and was then taken and built into the chimney of a neighboring farm-house), the Legislatures of Maryland, Pennsylvania, and Delaware appointed a joint commission, who employed Col. Graham, of the United States Topographical Engineers, to review Mason and Dixon's work so far as was requisite in order to restore the displaced corner. Col. Graham, in the course of his measurements, determined the latitude of the Cedar Street observatory to be 39° 56′ 37.4″ north. This is 8.3″ more than the latitude given by Mason and Dixon. If we add the distance from Cedar Street to Chestnut Street, 2650 feet, we have for Independence Hall latitude as determined by Mason and Dixon, 39° 56′ 55″; as determined by Col. Graham, 39° 57′ 03″. The slight variation in these calculations is surprising. That reported by Governor Penn may have been based upon data differing from those of the surveys of 1761 and of Mason and Dixon. The greatest variation, however, is only about 1260 feet, or less than the fourth of a mile; the least is only 200 feet.—*Scharf's History of Philadelphia.*

MAP OF MONTGOMERY COUNTY, PENNA.

notwithstanding frequent reports of rich deposits being discovered.

Dr. Charles M. Wetherill found traces of gold on the property of Mr. Yoder, in Franconia township, Montgomery Co. The gold was found in quartz-rock and in iron pyrites. In the sand and gravel thrown out while digging a well he found brilliant scales of gold. From an analysis he found that every hundred pounds of gravel contained a quantity of gold worth twenty-six and one-half cents.

A workman who had washed the sands of the Rhine in his native country for gold found in the gravel of the Delaware River at Bridesburg native gold in scales. The gold was extracted from the sands by mercury and purified. It was estimated that one man could wash from the Delaware sands from twenty-five to sixty cents' worth of gold per day.

From a paper on the "Natural Dissemination of Gold," by Messrs. Dubois and Eckfeldt, the following is taken: "There is a deposit of clay underneath the city of Philadelphia ten miles square, with an average depth of fifteen feet. The inquiry was started whether gold was diffused in this earthy bed. From the cellar of a new market-house in Market Street, near Eleventh Street, we dug out some clay at the depth of fourteen feet, where it could not have been an artificial deposit. The weight of one hundred and thirty grammes was dried and duly treated, and yielded one-eighth of a milligramme of gold, a very decided quantity on a fine assay balance. It was afterwards ascertained that the clay in its natural moisture loses about fifteen per cent. by drying, so that as it lies in the ground the clay contains one part in one million two hundred and twenty-four thousand. This experiment was repeated upon clay taken from a brick-yard in the suburbs of the city with nearly the same result. In order to calculate with some accuracy the value of this body of wealth we cut out blocks of the clay, and found that on an average a cubic foot as it lies in the ground weighs one hundred and twenty pounds, as near as may be, making the specific gravity 1.92. The assay gives seven-tenths of a grain—say three cents' worth—of gold to the cubic foot. Assuming the data already given, we get four thousand one hundred and eighty millions of cubic feet of clay under our streets and houses, in which securely lies one hundred and twenty-six millions of dollars. And if, as is pretty certain, the corporate limits of the city would afford eight times this bulk of clay, we have more gold than has yet (1861) been brought, according to the statistics, from California and Australia. The gravel which underlies this auriferous clay is always richer than the clay above it in gold, hence if the gravel were assayed instead of the clay it would yield still more gold, but be of no practical value."

Silver.—Silver generally occurs associated with lead ores. The rich Leadville deposits of Colorado are found in carbonate of lead, and in most of the richest mining districts of the West the silver is contained in either sulphide of lead or carbonate of lead. In Montgomery County only traces of silver have been found, associated with a sulphide of lead which is known as argentiferous galenite. This lead ore holding silver was found at the Ecton mine, Shannonville, Montgomery Co., about four miles from Norristown. This mine has not been worked since the war.

Several beautiful lead minerals, now quite rare, were found at this mine.

Professor Genth has assayed nearly all the lead ores holding silver in Pennsylvania. According to his assays, the lead ores from the Pequea mines in Lancaster County contain more silver than any in the State. The Lancaster County ores will yield from two hundred and fifty to three hundred ounces of the metal silver per ton of ore.

The Wheatley lead-mines of Chester County have these silver-bearing lead ores, which when assayed yield from ten to forty ounces of silver per ton. At the Wheatley mines silver has been found in its native state,—that is, as the pure metal. It has not been found native in Montgomery County. The Ecton mine, Montgomery County, yields silver in such exceedingly small quantities that it would not pay to extract the metal; when assayed, the ores yield only from five to ten ounces of silver per ton.

Copper.—Copper occurs native and in a variety of ores. The only place in the United States where it has been found native in great quantities is in Northern Michigan, near Lake Superior. The Michigan mines are vertical veins, mostly in trap-rock which intersect the red sandstone. The Cliff mine in that locality has yielded great quantities of native copper. One large mass was quarried out forty feet long, six feet deep, and averaged six inches in thickness. This copper contains mixed with it about three-tenths per cent. of silver. Copper occurs in crystalline azoic rocks, such as gneiss, mica-schist, and in chloritic formations. It is also found in the new red sandstone. In the oldest rocks, such as the schists and gneisses, it does not occur in veins, but in beds which are parallel to the strata in which it is found. It might be regarded as an accessory constituent in those rocks. You may find chalcopyrite and magnetic iron ore disseminated throughout the rock, but always conformable. Such deposits are called lenticular deposits, and are found in Tennessee and North Carolina. These deposits are very deceptive; in one bed you may find a good deposit of copper ore, and in the next bed you may find only a few crystals. Surface indications in these deposits are not reliable; the best way is to sink a shaft and run adits in the direction of the ore. Deposits like these are supposed to have formed at the same time the gneiss-rock which holds them formed.

The two carbonates of copper known under the names of azurite and malachite are surface ores, and

are generally found near the top. These ores are probably altered from other ores of copper by the action of the carbonic acid in the air. Copper ores are often found as true veins in quartz. Such are the extensive deposits found in Montgomery County, which occur in quartz veins which have been deposited in fissures in the shale by means of infiltrating thermal waters. These ores occur in the new red sandstone and shale.

Montgomery County Deposits of Copper.—In the vicinity of Shannonville, Montgomery Co., indications of copper ore were discovered many years ago. As early as the year 1800 it was known that copper ore occurred in this locality. It is not known with certainty who first discovered the ore, or who it was that sunk the first shaft or dug the ore from this neighborhood. On the property known as the Wetherill estate ore was first discovered by some teamsters; it was turned up with the mud by the wheels of the wagons. Stephen Girard became interested in these surface indications, and he had a shaft sunk, with the hope of obtaining rich ore in abundance. His efforts proved fruitless. Some ore was taken out associated with lead ores, but copper was not found in paying quantities. Samuel Wetherill sunk shafts along the Perkiomen Creek near Wetherill's mill, but ore was not yet found in paying quantities. From time to time copper ore had been found in considerable quantities at Shannonville, along the creek which empties into the Perkiomen. Several parties became interested at different times in these deposits. At last the ore was found in such abundance, and the indications were so promising, that the attention of practical miners was directed to this locality. About the year 1829, John and Robert Rowe, who were English miners from the Cornwall mines, became interested in these mines and sunk shafts. They obtained copper ore of a good quality. The mines changed hands several times during the next twenty years. The Ecton mine was managed by the Ecton Consolidated Mining Company, who sunk a shaft two hundred and forty feet deep, and drove a few levels. The Perkiomen mine was managed by the Perkiomen Mining Association, who sunk a shaft over three hundred feet deep, and mined much more successfully and extensively than the Ecton Company. They erected Cornish pumping-engines of great value, and were provided with all the necessary running machinery. These two companies were finally bought out by a new company, known as the Perkiomen Consolidated Mining Company. They purchased the real estate, mines, machinery, and other property of the Perkiomen Mining Association for the sum of one hundred and nine thousand dollars; and they purchased the property of the Ecton Association for one hundred and eleven thousand dollars. This new company carried on mining operations very extensively.

It was a stock company. George Cadwalader, of Philadelphia, was president, and Samuel Wilcox, secretary. The directors were George Cadwalader, Charles Macalester, David Longenecker, of Lancaster, and Samuel F. Tracy and Horatio Allen, of New York. This company was organized in 1852, and they issued fifty thousand shares of stock; the par value of each share was six dollars. At the Perkiomen shaft there was some valuable machinery,—a fifty-inch cylinder Cornish pumping-engine of one hundred horse-power; at the Ecton shaft, a one hundred horse-power high-pressure pumping-engine, twenty and a half inch cylinder. Besides these pumping-engines there was a whim-engine at both of the mines. Powerful crushers were on the mine, and other machinery at the surface, such as tram-roads and wagons, capstans and shears, whims and whim-chains, pulley-stands, etc. The value of the machinery at the surface was thirty thousand two hundred and twelve dollars. The value of the underground machinery—plungers and drawing lifts, main-rods, bobs, ladders, bucket-rods, etc.—was about nine thousand eight hundred and forty-two dollars. The Perkiomen mine was situated on low ground near the creek, while the Ecton mine was situated on high ground about eighteen hundred feet distant. The method of mining was to sink shafts, and then to drive levels in the direction of the ore. When a bed of ore was reached it would be taken out, and this would leave an open chamber of rock known as a stope, which is shown on the map. Levels were generally driven out from the main shaft at distances of ten, twenty, thirty, forty, and fifty fathoms from the surface of the mine, so that there would be no danger of caving in. This would leave a distance of sixty feet between each level.

After the main shaft of the Perkiomen mine had been sunk two hundred and forty feet, and the main shaft of the Ecton mine had reached a depth of three hundred and thirty feet, it was determined to connect these two shafts by a level or tunnel which would be eighteen hundred feet in length. This level was afterwards completed and the mines were connected under ground. The extent of these levels and shafts and the position of the stopes are shown on the map. The various depths of the levels from the surface and the depths of the shafts are marked in fathoms. In the Perkiomen mine, at the ten-fathom level the lode varies from one to fifteen feet in width, and is composed of gossan, quartz, malachite, and heavy spar; at the twenty-fathom level the lode varies from two to fifteen feet in width, and is composed of gossan, quartz, malachite, and heavy spar; at the twenty-fathom level the lode varies from two to fifteen feet in width, and is composed of gossan, quartz, malachite, chalcopyrite, and heavy spar; at the forty-fathom level the lode varies from four to twelve feet in width, and is composed of quartz, chalcopyrite, and heavy spar; at the fifty-fathom level the lode varies from four to nine feet in width, and is composed of quartz, gossan, heavy spar, malachite, and chalcopyrite. But

few lodes or mineral veins were found at the Ecton mine. The miners were Englishmen who had been brought over from the Cornwall mines in England. In 1852 about two hundred men were employed at the mines. The miners were not under a regular salary by the week or month, but a number of them would club together and agree to extend a level or a stope so many feet for a certain sum. This method of working sometimes proved profitable to the men, but occasionally they would be losers by the contract. The men went to work in the mines with candles in their hats, which is a rather primitive mode of illumination.

One great difficulty they had to contend with was the water which accumulated in the shafts and interfered with their mining. The pumping-engines at both shafts were kept at work draining the mines. The farmers in the vicinity, also, were sorely tried, as their wells were drained dry, and no water could be procured unless it was pumped from the mines. Charles M. Wheatley, who was manager in 1851, says "that all persons acquainted with mining operations that have examined the workings at Perkiomen have expressed astonishment at the regularity, size, strength, and productiveness of the veins, and the high percentage of the copper ore obtained from them. The Perkiomen is the first regular copper lode opened in this country, and bears a true resemblance to the Cornish system." Professor H. D. Rogers, former State Geologist, in speaking of the mines, says, "I hesitate not to declare that I entertain a very firm belief that your region is destined to become an important mining district, and that the ores of lead and copper will return remunerative profits upon the exercise of skill and prudence. The remarkable regularity and parallelism of the lodes is an excellent indication of their consistency. Another fact is the exceedingly well-defined character of these mineral lodes, which do not spread and lose themselves or their ores in the adjoining strata, but insulate themselves from the rocks of the country by plainly-marked parallel walls, between which all the metallic ores of the region and associated gangue-stones are found. The veins are true and regular metalliferous lodes. A very important feature is the gradation in passing downwards from the outcrops of these veins. First we have only the vein-stones, the metals being weathered out or dissolved; then at a few fathoms below the surface we find mingled with these vein-stones those metallic ores of lead, copper, and zinc which are readily vaporized by heat; and deeper still the same vein-stones contain the sulphurets and other permanent ores of copper." There were no smelting-furnaces at the mines, and none of the copper ores were smelted in the neighborhood, but were sent to New York and Baltimore for reduction. The ore was first sent to Umpstead's Landing, at Green Tree, and then to Philadelphia by canal-boats, and from there to New York.

The following table, taken from the annual report of the directors, shows the amount, percentage, and value of the ores mined:

ORE SOLD BY PERKIOMEN CONSOLIDATED MINES FROM AUGUST, 1851, TO APRIL, 1852.

Date.	To Whom Sold.	Tons.	Percentage Copper.	Rate per Ton.	Value.

During the year 1853 one hundred and forty-three tons were raised and sold for nine thousand nine hundred and eighty-nine dollars and thirty-nine cents.

The principal copper ores and minerals which have been mined at this locality are chalcopyrite, covellite, cuprite, melaconite, chrysocolla, libethenite, malachite, and azurite. The most abundant ores were chalcopyrite and malachite; of these two ores of copper the sulphide was the more abundant. These ores of copper were mixed with an ore of zinc known as zincblende, or sulphide of zinc, which made the metallurgy of the ores more difficult and expensive. The ores were crushed and freed from zincblende by mechanical means as much as possible before shipment.

The mines were worked until the year 1858, when they were closed,—not enough ore was taken out to meet the running expenses. The shafts had been sunk much deeper, that of the Perkiomen mine being over four hundred and eighty feet in depth, while that of the Ecton was over six hundred feet deep. The mines from the time they were opened until they were closed never paid the amount of money invested in them. Many interested in the mines were heavy losers. It is said that George Cadwalader, of Philadelphia, who was president of the company in 1851, invested one hundred thousand dollars, and many others invested large sums in the enterprise. It seems to be the general opinion that the mines were managed extravagantly and without prudence, and that there were too many needless officers drawing high salaries. In 1865 a quantity of refuse ore was worked at a profit by C. M. Wheatley, of Phœnixville, and Capt. Cocking, of Cornwall, England. The property is now owned by Richard Ricard, of New York, who purchased it for forty thousand dollars. The shafts are now full of water, and the machinery and buildings are in a state of decay.

Copper ore has been found and mined in Upper Salford township. This vein of copper ore is found on Abraham Kober's farm, situated on the Ridge road, about four and a half miles west of Tylersport, and in the vicinity of Sumneytown. The ore was first discovered on the surface in a small outcrop, and these surface indications led to further developments. Excavations were immediately begun, and at a depth of fifteen feet a vein eight inches in thickness was discovered. The farm was afterwards leased by Mr. Samuel Milligan, of Phœnixville, who set a force of men digging deeper, and finally a rich vein of ore was reached, which at the beginning was only an inch in thickness, but which increased in width until a thickness of three feet was reached, when the rock was cleared away for several feet. About four tons of copper ore were taken out. The ore is found associated with quartz, which is characteristic of some copper deposits. It occurs in the new red sandstone belt. The ore appears to be chalcopyrite, or copper pyrites, which is a sulphide of copper and iron, $Cu_2S + Fe_2S_3$, containing when pure 34.6 copper, 30.5 iron, and sulphur 34.9; color, brass-yellow, often iridescent. The other ore is bornite, which varies in color from brown to copper-red, but is mostly tarnished to purplish color. This ore is purer than chalcopyrite, but is also a sulphide of copper and iron, $3Cu_2S + Fe_2S_3$. It contains when pure copper 55.58, iron 16.37, and sulphur 28.05. This is a valuable copper ore. Mr. William F. Dannehower informs me that native copper was also taken from this mine. The mine was finally abandoned, as the process of mining was expensive, and ore in paying quantities was not found after a depth of thirty feet was reached. Mining operations were first begun in Upper Salford in 1878, and the mine was abandoned in 1880. The ore taken from this mine was of a very good quality, but it does not exist in paying quantities.

The next locality in the county where copper was found is about one and a half miles below Norristown, along the line of the new Pennsylvania Schuylkill Valley Railroad. This very small deposit was found in the limestone belt, and was thrown out by a dynamite blast. It is unusual to find copper in limestone deposits. From an examination of the specimens I found them to be chalcopyrite, with very thin coatings of malachite. There is, however, no regular vein in this locality, but the mineral is disseminated through a vein of quartz which runs through bastard marble in the limestone. So far it has been found only in very small quantities.

Tin.—Tin is generally found in rocks of the oldest formations, and very often in the same rocks and gravels in which gold is found. The Cornwall mines in England are the richest and most valuable in the world. But little tin has been found as yet in the United States.

It is interesting to observe that this exceedingly rare metal is found in its native state of purity in the gravel of Franconia township, Montgomery Co. It occurs in the same gravel in which scales of native gold were found. The largest pieces of tin were found adhering to the gravel and forming a rounded mass of a white malleable metal, which was analyzed and found to be pure tin. By panning more spangles of native tin were obtained. Tin was first noticed in the county by Dr. C. M. Wetherill.

These slight traces are the only instances on record of the occurrence of tin in Pennsylvania.

Iron Ores.—The principal ores of iron are magnetic oxide, known as magnetite; red hematite, also called specular ore; brown hematite, known under the name of limonite; spathic iron ore, known as siderite; titanic iron ore, which contains titanium; and chromic iron ore, which contains chromium. Among the ores of iron might be included iron pyrites, a compound of iron and sulphur, which is quite worthless for the manufacture of iron on account of the sulphur it contains.

Magnetic Iron Ore, Fe_3O_4.—The purest and most important ore of iron is magnetite. Pure magnetite is a combination of ferric and ferrous oxides, and is represented by the formula Fe_3O_4. It contains when pure 72.4 per cent. of iron and 27.6 per cent. of oxygen. It is seldom found free from impurities, some of which influence its value as a source of iron. The minerals generally found with magnetite are feldspar, hornblende, quartz, sahlite, and apatite. This ore is strongly magnetic, attracting soft iron and the magnetic needle, and many masses of this ore are true native magnets, and from this interesting fact the ore derives its name. It occurs in crystals, the usual form being the octahedron; it also occurs in dodecahedral crystals. The hardness is 5.5, and the specific gravity about 5. The color is iron-black, and the lustre metallic.

The magnetic ores are found in the oldest rocks in the Huronian and Laurentian formations. The ore occurs in beds, which are often parallel, and they generally coincide with the inclination and direction of the crystalline strata between which they lie. They are generally found in beds of gneiss, schist, or in other granitic rocks that have been metamorphosed by heat. These ores are supposed to have reached their positions between layers of granitic rocks while they were in a melted state, their intrusion being due to a force which ruptured the earth's crust in the direction of the strata and pressed the liquid ore and other fused mineral matters into the open fissures. The way these ores are mined when the dip is not steep is to leave numerous solid pillars of ore standing to prop up the rock and act as a support, and then remove by blasting the ore which intervenes. Another supposition in regard to these ores is that they were once hematite ores, and have taken up an extra supply of oxygen and been altered by heat into magnetite. Beds of magnetic ore are searched for

by means of the magnetic compass. Whenever the compass is in the vicinity of a bed of magnetite the needle exhibits a strong disturbance. This, together with a geological clue and an inspection of the dip and direction of the adjoining gneiss, are necessary data for finding the outcrop of the ore.

This ore is largely developed through Canada westward to Lake Huron. Extensive beds occur in New York, and a locality at Lake Champlain furnishes many puddling-furnaces in this State with large blocks of crystallized magnetite. It is found in some of the New England States, and in the mountainous districts of Pennsylvania and New Jersey. The world-renowned Swedish ore, which is so pure, is massive magnetite. No very important deposits of magnetic ore are found in Montgomery County. Fine octahedral crystals are found at the soapstone-quarries near Lafayette, and on the opposite side of the river, near the abandoned soapstone-quarry, I have noticed quite perfect crystals of the same form. In many of the creeks and brooks of the county, and in the Schuylkill River sometimes, is found a black sand which is composed mainly of fine particles of magnetite. Crystals are found at Chestnut Hill. Although no large beds are found in the county, yet at Boyertown, which is but a few miles from the county line, several mines of magnetic ore are worked. These mines have been worked for many years, both by shaft and slope; some of the veins are over twenty feet in thickness. The ore contains a high percentage of sulphur, and is roasted before using; many blast-furnaces in the county use the Boyertown ore. There are mines of magnetic ore at Lebanon, Reading, and on an island in the river near Reading. These mines contain important and valuable deposits of magnetite.

Magnetic ore is indispensable in puddling operations to burn the carbon out of the pig-iron. The large blocks of crystallized magnetite are arranged by the puddlers, who term the process "building the furnace." The Lake Champlain ore is used by many puddling-furnaces in this county. It is more difficult to melt than the hematites, but is purer and richer in iron. The following analyses were made by Dr. Koenig, of the University of Pennsylvania, and show the composition of Lake Champlain magnetic ore:

New Bed Mine.

Magnetic oxide of iron	98.20	contains 71.11 per cent. of iron.
Phosphate of lime	.104	contains .0208 phosphorus.
Titanium oxide	.46	
Silica, chlorite, etc.	1.04	
	99.804	

Old Bed Mine, 1700 *feet below New Bed Mine.*

Magnetic oxide of iron	97.00	contains 70.24 per cent. of iron.
Phosphate of lime	.383	contains .076 phosphorus.
Titanium oxide	.250	
Silica, chlorite, etc.	2.45	
	100.083	

The following analyses are of Boyertown magnetic ore, furnished by the Pottstown Iron Company, phosphorus and sulphur not estimated:

	(1)	(2)
Iron	46.36	40.159
Silica	11.90	9.09
Alumina	5.22	15.173
Lime	8.37	7.529
Magnesia	1.18	Trace.

Brown Hematite, $2Fe_2O_3,3H_2O$. — This widespread ore of iron occurs massive, and often occurs in botryoidal, stalactitic, fibrous, and radiating masses. The color varies from dark-brown to ochre-yellow; very often specimens have a black, lustrous appearance on the surface and are perfectly smooth, and sometimes they show a silky lustre; this is noticeable in the fibrous varieties, which are often called fibrous hematite. The massive varieties have an earthy or clayey lustre. This ore contains when pure 85.6 per cent. of Fe_2O_3 (oxide of iron) and 14.4 per cent. of water; this would be equivalent to about 59.92 per cent. of metallic iron. Whenever brown hematite is heated in a glass tube it will give off water, which will form in drops on the side of the tube. This fact distinguishes it from magnetic iron ore and red hematite, neither of which contain any water. Another peculiarity of this ore is it always contains phosphoric acid and manganese, besides the clay and sand which generally accompany it. It is much softer than the other iron ores; its hardness is 5 to 5.5, specific gravity 3.6 to 4. The stalactitic and botryoidal forms which it frequently assumes are characteristic, and serve to distinguish it from other ores of iron. It melts more readily in a blast-furnace than either of the preceding ores. Brown hematite is also known under the name of limonite. Brown ochre and yellow ochre are varieties of this ore; they are clayey and ochreous. Bog-iron ore occurs in swamps, bogs, and in low grounds. It is a porous, earthy ore, of a brownish-black color. It is supposed that this ore was deposited from water which was charged with iron in solution, and when exposed to oxidation by air and the reducing action of decomposing organic matter, it was thrown down in layers and formed bog-iron ore. When brown hematite occurs stalactitic it forms what is commonly known as pipe-ore; the ore looks like a collection of little pipes, which sometimes are hollow; sometimes it forms hollow spherical masses, commonly known as pot or bomb-shell ore. These hollow bombs often contain water or masses of soft clay. The interior often presents a varnish-like appearance which is quite lustrous; this is due to a fine coating of oxide of manganese which covers the ore. This ore generally occurs in pieces, which have to be separated from the clay and quartz by washing. Brown hematite is a common ore in Montgomery County, and many thousand tons of this ore have been taken out. The ore occurs in the limestone belt from Edge Hill westward to the Chester County line. It is found in extensive deposits of clay. It is said the first ore ever dug in this valley east of the Schuylkill was near Spring Mill, on the farm of J. Kirkner; this was in the year 1828.

From Hitner's mine, near Marble Hall, immense

quantities of ore have been taken. In the year 1853 about twelve thousand tons were taken from this mine.

It is estimated that from the time iron ore was first mined in the county up to the year 1858, over sixty thousand tons of brown hematite ore were taken from the ore-pits which are situated in the limestone belt on the east side of the Schuylkill. The iron-ore belt begins in the neighborhood of Edge Hill and Oreland. In this vicinity there are quite a number of iron-ore pits, which furnish large quantities of ore; many of the pits have been exhausted, but new ones are constantly started. The ore from this locality is a highly silicious brown hematite; the silica varies from 10 to 30 per cent., and the average percentage of silica in these ores is about 24 per cent., which is high. These ores contain phosphorus; the percentage of this injurious impurity varies in different ores, but the average Edge Hill ore contains from .18 to .3 per cent. phosphorus. The percentage of metallic iron in the ores of Edge Hill and vicinity varies from 35 to 50 per cent. The following analysis will give an idea of the composition of the Edge Hill ores. This brown hematite is known as the Harvey ore, taken from Oreland:

Silica	27.16
Iron	43.91
Alumina	.40
Phosphorus	.25
Lime and magnesia	Traces.

The extensive blast-furnace at Edge Hill uses this ore; they enrich on magnetic ore from Spain, which contains only .025 per cent. of phosphorus, and they also use a foreign hematite of great purity. This Edge Hill ore contains so much silica that a limestone must be used to flux the ore, which is as free as possible from silica. The next important deposits of hematite are in the vicinity of Marble Hall, and are owned by Daniel O. Hitner. The pits in this neighborhood have been worked for a great many years, and have furnished thousands of tons of ore. The mines at the present time are furnishing an excellent quality of ore, which is screened before using at Mr. Fulton's blast-furnace, in Conshohocken. This ore does not seem to contain as much phosphorus as the ore from the extreme eastern part of the iron-ore belt. It is highly silicious, like the Edge Hill ores, and contains a high percentage of iron. The following analysis is of ore from Hitner's pit, above Marble Hall:

Silica	20.00
Iron	45.00
Phosphorus	.10
Lime and magnesia	Traces.

The next neighborhood in the limestone valley where brown hematite is dug is at Tracey's iron-ore pit. This locality is about one mile east of Conshohocken. The ore was first dug there in 1860, and from that time until the present a great deal of ore has been taken out. There is one large open pit where the ore was formerly dug, which shows the rude way in which the ore was mined in former times. Shafts are now sunk vertically, and when a deposit of ore is found the opening is made in the direction in which the ore extends. The shaft is five feet square generally, and sometimes extends down in a vertical direction for one hundred feet, and then levels are driven in the direction of the ore. The ore, clay, etc., are drawn from the bottom of the shaft in buckets, which are attached to a windlass. There are two or three shafts at this deposit, one of which is ninety feet deep. They strike water at a depth of about one hundred feet. This deposit yields about two thousand five hundred tons of ore per year. Hallman's mine adjoins Tracey's and has not been worked quite as extensively. It also is worked by shafts, one of which is over eighty-seven feet deep. They strike water sooner at this mine. As high as sixteen hundred tons of ore per year have been taken from this mine. Neither of these two deposits are being worked extensively at present. The ores are brown hematites of good quality, which are screened before using.

Red hematite is found here also, but not in such large quantities. In an adjoining field a new bed of ore has been opened, and is worked by Mr. Hitner. The next deposit of iron ore is between Potts' Landing and Harmanville. On Mr. Freedley's property, near Potts' Landing, a new mine was opened in August, 1883. The ore is found a few feet from the surface in the clay; about two hundred and fifty tons of ore have been dug from this deposit during August and September. The ore is brown hematite, and is shipped to the Pottstown blast-furnaces. It is mixed with clay to a considerable extent, and has to be screened before using. An iron-ore mine was opened on the property of William Wills, situated near Ridge Road Station, on the Plymouth Railroad. Ore was dug here in 1872, and the mines were bought by the Phœnix Iron Company, who went to considerable expense in erecting machinery and engines. It seems that the project was not a paying one, and finally the machinery and engines were abandoned. In 1880 the mines were again worked. This ends the principal localities where ore is dug east of the Schuylkill River. West of the Schuylkill River, in Upper Merion township, are extensive deposits of brown hematite, which were worked years ago. Between Henderson Station and Gulf Mills there are many abandoned ore-pits, which show the direction of the iron-ore belt. A short distance from Henderson's marble-quarries ore was mined quite extensively. Engines, washers, and screens were used, as the ore was mixed with a large amount of clay. It was screened and washed before it was sent to the blast-furnaces. Many of these pits are neglected, and some are exhausted. The amount of hematite ore dug in Upper Merion township at the present time is very small when compared with what was dug in former years. Throughout the Montgomery County limestone valley we find extensive deposits of clay, and it is in

these deposits of clay that the brown hematite ore occurs. In fact, nearly all the beds which have been worked thus far occur in this clay. The deposits in the neighborhood of Marble Hall, Potts' Landing, and Gulf Mills are found in clay. Another noticeable fact is that both the clays and iron ores are generally found in the vicinity of the quartzose mica-schists or the slates. These rocks contain quartz, mica, and oxide of iron. They are especially rich in oxide of iron (hematite), often containing as high as nine per cent. It is supposed that the iron-ore deposits and clay-beds have resulted from the decomposition of these mica-schists and mica-slates. This is extremely probable, because these hydro-mica schists and slates contain not only oxide of iron, but also hydro-mica, which contains the very elements clay is composed of, namely, silica, alumina, and potash. These schists and slates are generally of a grayish tint, and of a somewhat silky lustre; sometimes they are colored red by ferric oxide. They have an unctuous, soapy feel; on exposure to weather they soon decompose, and are converted into a soft, unctuous clay.

All of these slates contain free silica or sand, hence when these mica-slates decompose they yield clay, brown hematite, or oxide of iron, and free silica, or sand. Another fact which goes far to prove that this is the true origin of the ores and clays, is that near many of the clay deposits we find a pure white sand, composed of very fine grains, although sometimes the sand has a faint brown or red tint. This sand bears no resemblance whatever to the new red sandstone, as it is often perfectly white, and is made up of exceedingly fine particles of silica, containing no admixture of feldspar. This is exactly the same kind of sand or free silica which these mica-slates contain, and it is extremely probable that these deposits of fine white sand found near the clay have resulted from the rotting and decomposing of the slates. This fine sand cannot be melted, and it is mined and shipped to the iron-works, where it is used when a substance that will stand a high heat without melting is required; its principal use is to line puddling-furnaces and heating-furnaces. I noticed a deposit of the sand back of Potts' marble-quarries; it is near the mica-slates, and is shipped to the furnaces at Conshohocken. A deposit is also found at Lynch's clay-beds on the Ridge road. I have been informed that, on Mr. Freedley's property, near Potts' Landing, in the vicinity of the mica-slates, a bed of this sand was worked. It will be noticed that these deposits are in the vicinity of mica-slates.

Red Hematite, Fe_2O_3.—This important ore of iron is named from its red color. When pure it is ferric oxide, Fe_2O_3, and contains seventy per cent. of iron and thirty per cent. of oxygen. It crystallizes in the hexagonal system, and the crystals are often thin and tabular. It also occurs massive, granular, foliated, micaceous, and sometimes botryoidal and stalactitic. It is of about the same hardness as magnetite, 5.5 to 6.5, and its specific gravity is from 4.5 to 5.3. There are several varieties of red hematite.

Specular iron is a variety of red hematite which has a highly brilliant lustre, showing the spiegel or mirror; color, dark steel-gray or iron-black; composition, Fe_2O_3; lustre, metallic. Notwithstanding the steel-gray color of this ore, when it is reduced to a powder the color of it is red. When specular iron has a foliated structure it is called micaceous iron. The finest specimens of crystallized specular ore come from the island of Elba. Red ochre and red chalk containing clay are varieties of red hematite. The fossil ores are the most interesting of red hematites. There are extensive deposits of fossil ore in Tioga, Bradford, Blair, Huntingdon, Juniata, and other counties in Pennsylvania. This ore is red, and is made of masses of little shells or bivalves, which are plainly visible, and the middle bed of this ore contains remains of fishes, which are visible in the ore. This bed is known as the fish-bed, and the ore is ground and used for paint.

These shells are supposed to have lived in a mud which contained an abundance of iron in some form, and when they died the organic matter decomposed and set up a galvanic action, which precipitated the iron on the shells. The organic matter may have reduced and precipitated the iron from solution. This ore occurs in layers, and is mined like a coal-bed. The deposits are generally thin, varying from a few inches to three feet or more in thickness, and run in a zigzag style for over one hundred miles. These ores contain sulphur and rather a high percentage of phosphorus. Red hematite occurs both in the crystalline and stratified rocks, and is of all ages. The most extensive beds, however, occur in the oldest rocks, while the clayey varieties occur in stratified rocks. It is found in the new red and also the old red sandstone, and is found also in the limestone belt near Conshohocken. In Montgomery County red hematite has been found in several localities in the iron-ore belt. At Edge Hill, where the iron-ore belt begins in Montgomery County, a variety containing titanium oxide has been found. It has also been found at the Perkiomen copper-mine, near Shannonville, Montgomery Co.; the variety found here is micaceous. On the road from Jarrettown to Camp Hill, in Upper Dublin township, I found several large blocks of an impure micaceous hematite mixed with an iron-black stratified rock. The ore has never been found here in large quantities, but these surface indications warrant further investigation. At Tracey's mine, near Conshohocken, which is described under brown hematite, I noticed considerable red hematite interspersed with brown hematite, which had been thrown out. Mr. Hallman, whose mine adjoins this one, informed me that quite a considerable quantity had been taken from his mine. The samples secured were massive and compact, and of a bright red color all over. The red sandstone which covers the northern and central

portions of Montgomery County owes its color to the presence of red hematite. The red soils which are prevalent in many localities in the county contain a small amount of red hematite, which gives them their color, although in many cases, where the soil is derived from red shale, the percentage of hematite is considerable. The red shales of the county contain quite a high percentage of red hematite. Along the Stony Creek Railroad from Norristown to Lansdale are found beds of red shale, alternating with sandstone. At Belfry and Acorn Stations particularly the district is very shaly. I secured a sample of shale on this road near Norristown, and found on analysis that it yielded ten per cent. of red hematite. In case of any scarcity of ore perhaps these shales could be utilized. Red ochre has been found in the iron-ore pits which are south of Henderson's marble-quarry, in Upper Merion township, and red hematite associated with brown hematite is also noticed there.

Impurities.—The impurities in iron ores are those substances which tend to deteriorate or render unfit for use the iron made from the ore. The impurities often found in iron ores are phosphorus, sulphur, titanium oxide, copper, and zinc, all of which are injurious constituents. Phosphorus is the worst impurity we have to deal with and the most difficult to eliminate. A high percentage of phosphorus in iron produces cold-shortness, and makes both iron and steel exceedingly brittle. A pencil of cold-short iron containing one per cent. of phosphorus is so brittle that it will readily snap in pieces when dropped on a piece of metal. In the manufacture of steel, ores free from phosphorus must be used, as .030 of one per cent. phosphorus is the maximum amount allowed in a good steel. It is on this account that such large quantities of ore are shipped to this country from Spain, Africa, and Sweden,—these foreign ores containing but little phosphorus. Sulphur produces red-shortness in iron when heated to a red heat, and the iron has a tendency to crumble when passed through the rollers. Much of the sulphur in ores can be gotten rid of by roasting, and much is eliminated in the blast-furnace by the use of a basic slag like lime. Titanium oxide generally goes into the slag; five or six per cent. of this impurity makes a very tough blue slag. It is apparently of no value to iron ores, notwithstanding the fact that for a while there was great excitement about titanium steel made from ores containing titanium oxide. The titanium oxide does not alloy with the iron but goes into the slag, as the oxide is not reduced to titanium very readily. There seems to be a difference of opinion about copper as an impurity. The Bessemer Steel-Works at Bethlehem prefer a magnetic ore from Lebanon which contains a considerable percentage of copper; but the Midvale Steel-Works at Nicetown prefer foreign ores free from copper. It is known that arsenic, antimony, and tin make iron cold-short and brittle; they act like phosphorus and are very injurious impurities.

Sometimes iron ores contain vanadium and tungsten. These elements go into the slag and color it; they are not injurious, but make slags of a high fusing-point. Clay and sand are not regarded as impurities, as they go into the slag. The following analyses of Montgomery County ores, kindly furnished by the Pottstown Iron Company, and the analysis of African ore made by myself, are given for comparison:

	African Ore.	Wilson Ore, Edge Hill.	Sweeney and Jacoby Ore, Flourtown.	Harvey Ore, Edge Hill.	McGuire Ore, near Edge Hill.
Iron	58.24	44.62	40.582	50.11	41.319

Sulphur	0.265	.....	.....	.....	.....
Manganese	1.69	.....	.....	0.946	.....

Graphite.—Graphite, or plumbago, is one of the numerous forms of carbon. It is sometimes called black-lead, but this name is apt to mislead, as no lead enters into its composition. It is sometimes found crystallized in flat hexagonal tables, but usually occurs in black scales or flakes. Sometimes it occurs as a fine powder, which in the earth looks very much like black mud. It is very soft, and the scales can be readily cut with a knife. It has a soft, soapy feel, very much like soapstone; color, iron-black to dark steel-gray; lustre, metallic. Fire has very little effect on it, as it is infusible. It is rarely found pure, and when found thus consists entirely of pure carbon. When mined it generally occurs mechanically mixed with mica-schist, quartz, clay, oxide of iron, and other earthy impurities. These impurities can be separated from graphite by washing. As graphite is very light and the earthy impurities heavy, the graphite floats away in the water, leaving the impurities behind. No mention is made in the most recent geological survey of Montgomery County of the occurrence of this valuable mineral in the county. I have found several localities in the county where there are indications of this mineral; I have also found two extensive deposits of it. In an abandoned iron-ore pit near Henderson's Station, near the Chester Valley Railroad, there occurs a deposit of graphite.

In that locality the graphite is found as an impalpable powder, which in rainy weather comes oozing out from the sides of the pit, resembling very much a deposit of black mud. One side of the pit for a distance of seventy-five feet is stained black by the graphite. Wishing to know whether the deposit extended beyond the pit or whether it was simply a pocket, I determined to dig about twenty feet distant from the pit where there was no exposure. On clearing away the soil to a depth of about two feet the graphite was exposed, thus showing that the deposit

extended for some distance, and was very near the surface. I made an analysis of a surface sample which was mostly made up of earthy impurities; it is probable if a sample were secured at a much greater depth that it would contain more graphite. The analysis gave the following result: Carbon, 7.50 per cent., the residue consisted of mica, oxide of iron, silica, and clay. Graphite in this form can be readily washed. Workmen from the neighboring quarries have used this material as a mineral paint in their houses, not knowing the nature of it. Another deposit occurs in a field near Henderson Station, at about the junction of the small strip of Potsdam sandstone marked on the map and the limestone. This deposit is not visible, as it is covered with from four to six feet of soil; it seems to cover almost the entire field.

On digging in different parts of the field, graphite would always be found at a depth of a few feet. This deposit seems to be of the nature of a bed, and is mixed with sand, oxide of iron, and mica; it occurs as a fine powder, and has a very soapy feel. The surface deposit of this bed is not pure. It is not known to what depth the bed extends; it does not seem to extend beyond this field. At Henderson's marble-quarry, about two and a half miles from Bridgeport, there is a beautiful vein of highly crystalline black marble, susceptible of a high polish. This vein is on the south side of the quarry, and is said to be very pure, analyzing ninety-eight per cent. of carbonate of lime. It is very interesting to observe that this marble is colored black by graphite. I found, on dissolving the marble in hydrochloric acid, that very small specks of graphite were left as a residue. All the black marble in this vicinity owes its color to graphite. I found traces of graphite between Bridgeport and King of Prussia, in the small belt of Potsdam sandstone marked on the geological map. On James Coulston's farm, near Chestnut Hill, in an iron-ore pit, graphite occurs. Several tons of it were thrown out. It is an impure variety, occurring in small scales and mixed with earthy impurities.

The purest graphite is used in the manufacture of graphite pencils, commonly called lead-pencils. When it is in the form of a very fine powder, free from grit, it is mixed with oil, and makes a most excellent lubricator. Being very soft, its hardness only 2, there is no friction worth mentioning with the machinery. Hessian crucibles were formerly used in melting steel, but would soon melt away; now graphite crucibles are made from clay and graphite. They will stand several heats or fusions and very high temperatures without melting. Graphite is also used in the manufacture of stove-polish and shoe-blacking. Rich deposits of this mineral are valuable.

Coal.—In the triassic formation, commonly known as the new red sandstone, small veins of coal from one to two inches in thickness have been found in several localities in Montgomery County. No large workable veins have been discovered; only these exceedingly small deposits are found in the new red sandstone, although in Virginia, near Richmond, and in the Deep River Region in North Carolina, in the same formation of new red sandstone that we find in Montgomery County, there are thick beds of good mineral coal. The triassic coals are exceedingly interesting from a geological stand-point, because they occur in more recent formations than the coals of the carboniferous period, and are of an earlier age. In Norristown, on Elm Street, near the Stony Creek Railroad, a vein of coal was found about one inch thick in the new red sandstone; the vein extended only a few feet, and was not very wide. It was found during the grading of the street, about twelve feet below the surface. I secured samples of this coal for Professor Genth, of the University of Pennsylvania, and found in the sandstone the stem of a fossil plant. This coal was of a deep black color, with a somewhat pitchy appearance, was very brittle, with conchoidal fracture, and seemed to burn very well.

At Gwynedd, in Montgomery County, in the same formation, is found a bed of carbonaceous shale colored black by traces of coal which it contains, and it is also said to contain vegetable remains. Col. Bean mentions a vein of coal found in Lower Providence township, Montgomery Co., about one-half of a mile west of the Trooper. This vein, like the others, was found in the new red sandstone; it was from two to three inches in thickness and from eighteen to twenty inches in length. During the summer of 1883 hands working upon the new tunnel near Phœnixville discovered a two-inch vein of coal in the sandstone. These triassic coals yield volatile matters, which burn with a non-luminous flame, but they have not the slightest tendency to form a coherent coke. They contain sometimes as high as seventy-four per cent. of fixed carbon, eighteen per cent. of volatile matter, and about two per cent. of ash.

Lignite.—Lignite, or brown coal, as it is sometimes called, has not been perfectly formed; the lamellar or woody structure can be seen distinctly. In composition it is more like wood than true coal. It yields a powdery coke in the form of the original lumps. It is brittle, burns easily, and often contains from thirty to forty per cent. of water. It is of recent geological origin, and was evidently not formed like true coal. Dr. Leidy mentions it as being found on Plymouth Creek near Norristown.

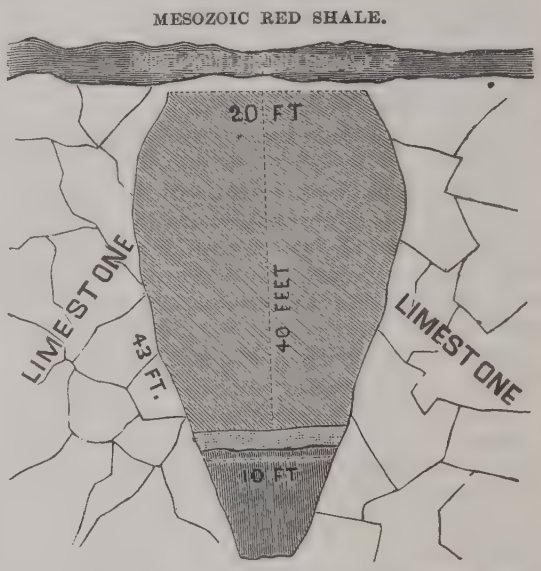
Fossils and Organic Remains.—Fossils are found in stratified rocks, such as sandstones, limestones, and slates. These rocks were evidently in a soft state at one time, like the sand, mud, and gravel which form many of our river-beds, and they were also covered with water. Corals, crinoids, shells, and other organisms lived in these seas, and when they died their remains became imbedded in the soft mud and sand which formed the bottom of these seas and oceans. In the course of time, under the influence of press-

ure and other forces, the mud and sand were converted into stratified rocks, and it is in these rocks, which have at one time been ancient ocean-beds, that we find fossils. The highest mountains have been at one time the ocean's bottom, for even their peaks contain fossils. On the Himalayas at the height of nearly three miles organic remains are found.

In Montgomery County there are very extensive deposits of igneous rocks, such as granites, gneisses, mica-schists, and syenites, and in rocks of this nature fossils are not found, because they are igneous rocks; and their structure shows that they have at one time been subjected to an intense heat, and it may be they were in a molten state, so that any traces of organic life that might have existed would be destroyed. The red shale and sandstone formations are the only strata in which organic remains are found in this county. This rock covers the upper and middle portions of the county, and although but few fossils have been found, yet these remains are very interesting and instructive. The reptilian relics found in Montgomery County are the teeth and bones of large lizard-like animals which lived in the ancient seas. These remains have been found at the Phœnixville tunnel, Montgomery County. Specimens of coprolite have also been found imbedded in the same rock. The vertebral bones of these large lizard-like reptiles are slightly concave, or hollowed out, at their articulating surfaces. Mr. Lea has named this reptile the *Clepsisaurus Pennsylvanicus.*

Remains of fishes have been found in this tunnel which belong to the order known as ganoids. These are fishes which have a cartilaginous skeleton, and are covered with enameled scales or with bony plates. The sturgeons and gar-pikes are living representatives of this order. Batrachian remains, such as bones and teeth, are found in this locality. But few fossil plants have been found in the new red sandstone in this county. Specimens of coniferous wood, either petrified or having the nature of coal, and still retaining the woody structure, have been found. This is termed lignite, and is mentioned by Dr. Leidy as being found on Plymouth Creek near Norristown. When the small coal vein was found at Norristown, on Elm Street, near the Stony Creek Railroad, I secured a piece of sandstone from the bottom of the vein, which bore the imprint of a fossil plant. Near Gwynedd is found a bed of carbonaceous shale which is said to contain vegetable remains. The oldest fossil yet discovered in Pennsylvania is the *Scolithus linearis.* This fossil is found in the Potsdam sandstone at Edge Hill, and in the vicinity of Willow Grove and Rubicam Station. "It consists of a straight, cylindrical, stem-like impression in the sandstone, usually smooth, but sometimes grooved transversely to its axis. Its diameter varies from one-eighth to a half an inch, and its length from a few inches to two or three feet. Its position in the rock is perpendicular to the bedding, and from this fact many think that the impression was produced by the boring of a marine worm. The end of the fossil terminates in a head, which is always found at the upper surface of the sandstone enclosing it. The impression looks like a large pin. These fossils are very abundant in the Potsdam sandstone in Montgomery County."

Bone Cave of Port Kennedy.—The following account of the cave is taken from the *American Journal of Science and Arts*, vol. i. 1871, p. 235:



"Before the discovery of remains in the Port Kennedy Cave nearly the whole of the walls had been removed in quarrying. A tooth of a mastodon having been found by one of the workmen, Dr. Quick, of Phœnixville, showed it to Mr. Charles Wheatley, and these two gentlemen immediately visited the cave and commenced the search for remains. They found one end of the cave still remaining, and having the form in transverse section shown by the figure. The width at the top is about twenty feet; below it gradually expands to thirty feet, and then there is a rapid contraction downward until, at a depth of about forty feet, it is ten feet wide. The whole of the space above this level is filled with the *débris* of the adjoining mesozoic red shale, with occasional angular fragments of auroral limestone, without any trace of organic remains. Where the cave narrows to ten feet the floor is composed entirely of a black clay eighteen inches thick, filled with leaves, stems, and seed-vessels of post-tertiary plants. Scattered all through this mass of vegetable remains, and also in a red tough clay underneath for six to eight inches in depth, are found the fossils. The vertebrate remains are as follows (taken from the proceedings of the American Philosophical Society for April 7, 1871, where Professor Cope describes the remains so far identified):

"*Mammalia.—Megalonyx loxodon*, Cope; *M. Wheatleyi*, C.; *M. dissimilis*, Leidy; *M. sphenodon*, C.; *M.*

tortulus, C.; *Mylodon* (?) *Harlani*, Owen; *Sciurus calycinus*, C.; *Jaculus* (?) *Hudsonius*, Zimm.; *Hesperomys*, Waterhouse; *Arvicola speothen*, C.; *A. tetradelta*, C.; *A. didelta*, C.; *A. involuta*, C.; *A. sigmoides*, C.; *A. hiatidens*, C.; *Erethizon cloacinum*, C.; *Lepus sylvaticus*, Bachm.; *Praotherium palatinum*, C.; *Scalops*; *Verpertilio* (?); *Mastodon Americanus*, Cuv.; *Tapirus Americanus*, Auct.; *T. Haysii*, Leidy; *Equus*; *Bos*; *Ursus pristinus*, Leidy; *Canis* (?); *Felis*.

"*Aves.—Meleagris*; *Scolopax*.

"*Reptilia.—Crotalus* (?); *Coluber* (?); *Tropidonotus* (?); *Cistudo* (?); *Emys* (?).

"*Batrachia.—Rana* (?).

"Dr. Horn has examined the insects, and gives a preliminary list of the coleoptera, as follows (orthoptera were also found):

"*Carabidæ.—Cychrus Wheatleyi*; *C. minor*; *Cymindis aurora*; *Chlœnius punctatissimus*; *Pterostichus lævigatus*; *Pt. longipennis*; *Dicœlus alutaceus*.

"*Scarabœidæ.—Aphodius scutellaris*; *A. micans*; *Phanœus antiquus*; *Copris punctulatus*.

"*Histeridæ.—Saprimis* (?) *ebeninus*.

"The remains of mylodon, ursus, and tapirus have been mostly obtained from the tough red clay directly under the plant-bed, but the remains of rodents, snakes, tortoises, birds, plants, and insects are mostly confined to the plant-bed."

Minerals.—Minerals and fossils seldom occur together, because many minerals are the result of fusion which would burn out any traces of organic remains, but occasionally remains of plants are preserved in rocks which contain minerals; for example, mica-schist sometimes contains a mineral called macle and the fossils orthis and spiriferes, but in this case the mica-schist is not an ancient igneous rock, but is of sedimentary origin, and has been formed of rocks of recent origin which contain fossils. Many minerals in nature have crystallized out of water which held them in solution at a high temperature. Of recent years science has so imitated nature that many minerals are made artificially by fusion, and by the action of water at a high temperature. Marble has been made from limestone experimentally. A Frenchman, operating with the aid of water at a temperature of from one hundred and thirty to three hundred degrees centigrade, succeeded in producing in a crystallized state the principal minerals found in metallic veins, among others quartz, spathic iron, carbonates of manganese and zinc, heavy spar, sulphide of antimony, mispickel, and red silver. He also produced some of the copper minerals found at Shannonville in the same way. Facts like these show how nature has formed these metallic veins. In France, during the last century, nearly all the mineral species have been reproduced artificially by various methods. When fusion was resorted to the apparatus was simple, consisting of a furnace, heated by a blow-pipe, supplied with illuminating gas, and driven by a blast. The substances to be fused were put in platinum crucibles encased in fire-clay. Not only were minerals formed, but also lavas and trap-rocks. All attempts to make rocks containing quartz, feldspar, and mica, or hornblende (such as granite and syenite), by fusion, proved unsuccessful.

Montgomery County contains a variety of minerals. But few specimens are found in the new red sandstone, except in the localities where metallic veins of copper are found. Here we not only find copper minerals but ores of zinc and lead. The copper-mines near Shannonville have yielded many mineral species, such as copper, mispickel, iron pyrites, covellite, cuprite, melaconite, hematite, quartz, chrysocolla, breunnerite, libethenite, malachite, copper pyrites, azurite, wulfenite, galenite, zincblende, calamine, pyromorphite, anglesite, cerussite. These species were found when the mines were in operation, and even at the present time many of them can be secured. At the copper-mine in Upper Salford township native copper and several copper minerals are found. At Henderson's marble-quarry, near Bridgeport, graphite and crystals of dolomite which are finely striated are found, and occasionally small pieces of malachite. At Conshohocken, quartz, flint, chalcedony, chloritoid, and cacoxenite are found; at Bullock's quarry, fibrolite, calcite, and occasionally a small seam of iron pyrites are found. At O'Brien's quarry beautiful crystals of calcite, sometimes nearly transparent, are found. At the iron-ore mines near Conshohocken the hematite is sometimes coated with a manganese mineral called pyrolusite. Edge Hill furnishes specimens of hematite, braunite, pyrolusite, turgite, and gœthite. The soapstone-quarries at Lafayette have yielded many mineral species. The following copper minerals have been found there, bornite and chalcopyrite. Iron minerals found there are magnetite, pyrrhotite, and titanium iron ore. The silicates found there are asbestos, hornblende, garnet, zoisite, albite, talc, serpentine, staurolite, jefferisite, enstatite. The sulphates found there are epsomite and calcanthite. Phosphate of lime (apatite) and carbonate of lime and magnesia (dolomite) are found.

On the other side of the river, at the abandoned soapstone-quarry, talc, asbestos, and very fine octahedral crystals of magnetite are found. At Hitner's marble-quarry calcite, strontianite, dolomite, heavy spar, and iron pyrites are found.

Quartz.—Quartz is known under the names of silica, silex, sand, silicic acid, flint, etc. It crystallizes in the hexagonal system, mostly in the form of hexagonal prisms, terminated with hexagonal pyramids. It is one of the hardest of minerals, the point of a knife-blade or edge of a file making no impression on it. The highest heat of a furnace will not melt it; the common acids have no action on it. It readily scratches glass. Its hardness is 7. Quartz occurs of various colors,—white, brown, yellow, blue, gray, green, black, violet, and often colorless. These colors are generally due to some mineral

oxide which the quartz has taken up. The lustre is vitreous, the fracture is conchoidal and uneven. The composition of quartz when pure is silicic acid = Sio_2. The mineral quartz occurs in many varieties. Rock crystal, smoky quartz, milky quartz, aventurine quartz, ferruginous quartz, and amethyst are the crystallized varieties. Chalcedony, carnelian, prase, agate, flint, hornstone, jasper, and opal are the varieties of quartz which do not exhibit a crystalline structure. The colorless variety known as rock crystal is found in many localities. I have noticed very fine crystals on Eastburn's Hill, Bridgeport. They have been found in abundance here, but the best specimens have been secured. Very large crystals, having a pyramid on each end, have been found at King of Prussia, and from this place to the Schuylkill River very fine crystals are found. I have noticed a peculiar variety of quartz crystals in Shainline's marble-quarry, near Bridgeport. The crystals are three-quarters of an inch long, and taper from the base to the apex of the crystal. Quartz crystals are found in the limestone-quarries near by. Aventurine quartz has been found in Conshohocken. Ferruginous quartz, colored brown, red, or yellow by oxide of iron, I have noticed in the vicinity of Bridgeport. Chalcedony has often been found as a coating on other rocks near Conshohocken and Bridgeport. The arrowheads found in many localities are generally composed of jasper. There is a valuable deposit of sand near Valley Forge, which is used as a lining or covering for the bottom of the heating-furnaces in the pipe-mill, Reading, Pa. Most linings would not stand the heat of these furnaces, but this sand is infusible. I was requested to examine it, and found on analysis that it is composed of fine grains of very pure quartz, free from iron, and not a trace of feldspar or any material that would flux with it was found.

Quartz is one of the most abundant minerals in nature, and the most common constituent of rocks. The granites and gneisses, which are composed of quartz, feldspar, and mica, often contain as high as forty per cent. of quartz. The mica-schists, garnetiferous schists, syenites, and granitic rocks, which comprise the southern end of Montgomery County, from Philadelphia to the limestone belt, are made up to a great extent of quartz. Mica-schist contains from forty to seventy per cent. of quartz, and sometimes a still higher percentage of quartz is found in certain varieties; the other constituent is mica. The large belt of new red sandstone which is found north of the Montgomery County line stone belt, extending from the Delaware River as far westward as Valley Forge, is made up almost entirely of quartz colored red by oxide of iron. While existing in rocks abundantly as quartz, it also makes, on an average, a third of many other minerals; that is, it is chemically combined with other substances making various common minerals. These minerals are known as silicates. Of recent years quartz has a new use in the arts: when found pure and white and free from impurities it is mined and made into sand-paper, and is used as a polisher of metals softer than steel. It has been mined at Bridgeport and Valley Forge for this purpose. The purest rock crystals are made into lenses. Amethysts of fine quality are used in jewelry.

Building Stones of the County.—The best and most desirable building stones are those which are compact and yet can be readily cut into any desired shape. The stone must not be soluble in water, or must not be acted on or altered by the impurities which are found in the atmosphere. Building stones which meet the above requirements are exceedingly lasting. The most durable building stones now employed are granite, gneiss, basalt, porphyry, serpentine and compact sandstones. All of these rocks are highly silicious, and but little acted on by the weather. The hardness of the first four of these rocks is so great that it is difficult to dress them, but even this obstacle does not prevent their general use. Besides the silicious building stones we have the calcareous stones, which are carbonate of lime principally. The different colored varieties of marble and limestone come under this class; they are much softer than the silicious stones. Of late years granite is much used, especially for public buildings; the Masonic Temple and the new post-office building at Philadelphia are built of a variety of granite. The granites have been employed for too short a time as a building stone to measure approximately its rate of weathering. The feldspar in granite begins to weather first, while the quartz and mica are not so readily attacked. It has been found that a polished surface of granite will weather more rapidly than a rough one, but the decay of a polished granite surface is not apparent after exposure for twenty years or more; there is no doubt but that the polish will finally disappear and the surface roughen when the weather begins to act on the crystals of feldspar. The polished columns and surfaces of granite, syenite, etc., in the new Public Buildings at Philadelphia will furnish points of observation for the future study of the weathering qualities of these stones.

We have extensive beds of syenite and granitic rocks in Montgomery County, which have been little used as yet for building stones. They are very hard and compact, and are not the fine-grade building stone. The new red sandstone, which covers the greater portion of Montgomery County, is much used as a building stone, and nearly all the stone houses in the upper portion of the county are built of this rock. The finest silicious sandstones are more durable than granite. The best varieties are those which are nearly a pure, fine, silicious sand, as free as possible from iron or lime. Sandstones are composed of grains of sand, which are bound together by a cement. This cement, or matrix, may be clay, lime, oxide of iron, feldspar, or even gelatinous silica. The grains of sand in sandstone are not affected by weathering, but

it is the weathering of the cement which binds the grains that causes sandstones to crumble. If the cement be at all soluble in water then the weathering commences. When a sandstone is composed of thin layers or planes of stratification, then it is very apt to split up along these planes under the action of the weather. This fact is well known to builders, who are always careful to lay the stone on its bed. The Potsdam sandstone, which is found in Moreland, Upper Dublin, Springfield, White Marsh, and Plymouth townships, is a fine-grained white or gray sandstone, with scales of a light-colored mica. It occurs in narrow belts, and is composed of thin layers as mentioned above. This fact unfits it for a good building stone, and it is used but very little. It is the new red sandstone which is in such general use as a building stone in this county, particularly in the country. Quarries of this stone are worked in nearly every township in the northern and central portions of the county. In some localities the stone is white, and makes a beautiful building stone. This white stone is extensively quarried on Main Street, near the eastern limits of Norristown. The red and the white sandstones are found in these quarries; the lower strata are white and the upper red, with an occasional layer of red shale. The white contains a pink feldspar and scales of a pearly mica, and is free from iron. This stone makes a very handsome building stone, and is much used. Although it contains the constituents of granite, it is not granite, but sandstone with a matrix of feldspar. Stone of the same nature is found in Bridgeport. In the northern part of Upper Dublin township there is a sandstone containing a feldspar, which weathers rapidly and soon disintegrates. One of the best stones for bridge-building and foundations and heavy masonry of all kinds is extensively quarried at Conshohocken, on both sides of the river. The West Conshohocken quarries were worked sixteen years ago, and now they daily average over one hundred tons of rock for shipment. The rock is blasted out in huge pieces, which are cut by steam drills, and afterwards dressed. The shipment of stone from this quarry on Sept. 6, 1883, was one hundred and seventy-seven tons. Boyd, Stintson & O'Brien's quarry, in East Conshohocken, yields the same kind of stone, and is a continuation of the strata. This rock is a tough quartzose mica-schist, composed of quartz and mica mostly, and extends from the county line, in the southern portion of Upper Merion township, across the Schuylkill in a narrow belt and extends into White Marsh township. The handsome new railroad bridge across the Wissahickon was built of this Conshohocken stone. The blasting at these quarries is done by dynamite.

The most important building stone Montgomery County furnishes is marble. The many valuable marble-quarries in the county are described under limestone in the geology. Hitner's, Potts', Henderson's, and Derr's marble-quarries are the principal ones in the county, and they furnish not only the county with marble but also Philadelphia. Nearly all the marble used in Philadelphia, with the exception of the imported, is brought from these quarries. It is used principally in building. The handsome county court-house at Norristown is built of Montgomery County marble, and many handsome private residences are built of like marble. Notwithstanding the general use of marble as a building stone, it is more acted on by the weather than any stone in general use in large cities. When marble is used for building purposes it has, at first, a fine polished surface; exposure of two years in a large city suffices to remove this polish, and to give the surface a rough granular character. The grains which have been bruised in polishing are first attacked, and soon drop out of the stone. If the marble be not cared for it soon becomes covered with a dirty crust, beneath which the stone seems to be a mass of loose, crumbling calcite granules. When this crust is broken the decay is rapid. The crust varies from the thickness of writing paper to a millimetre, and is of a dirty gray or brownish-black color. When examined under the microscope it is found to consist of particles of coal and soot, grains of quartz sand, fragments of red brick or tile, and organic fibres, which are held together by an amorphous cement of sulphate of lime. This decay and disintegration of marble in large cities is due to several causes. The most active destroyer is rain-water containing carbonic acid gas, which dissolves marble. Rain-water always contains carbonic acid, and in large cities, where combustion produces an extra amount of this gas, rain-water will have an extra amount in solution. When rain falls on marble it begins to dissolve very slowly, and the grains of marble lose their cohesion. Marble exposed to rain always weathers more rapidly than marble that is sheltered. Another very active destroying agent is the sulphuric acid that is always present in the air of cities where much coal is burned. All coal contains sulphur, mostly in the form of iron pyrites, and when it is burnt it is converted finally on oxidation into sulphuric acid. This acid is extremely corrosive. Sulphuric acid is present in the air in a considerable quantity in large cities, where thousands of chimneys and furnaces send forth their smoke. It acts on marble by dissolving it and forming sulphate of lime, which is the cement which binds the dirty outer crust together. Marble in the country, free from this destroyer, lasts much longer. The marble columns of the Philadelphia Mint had become so corroded and rotten that they were recently replaced by granite columns. The marble columns of the Custom-House show plainly the action of the weather. It is very evident that white marble in large cities is utterly unsuited for out-of-door use, and its employment for works of art which are meant to stand in the open air ought to be strenuously re-

sisted. The tombstones in our graveyards are constructed of white saccharoid Italian marble. They are generally destroyed in less than a century, and very often the inscription becomes illegible inside of forty years. A walk through the cemeteries will show many examples. Granite and syenite are much used of late years.

Soils.—Soil is formed by the decomposition and erosion of the underlying rocky strata. It is always mixed more or less with vegetable mould and decomposing woody fibre which have resulted from the crops. When rocks under the soil are exposed, so that air, as well as moisture, has free access to them, they become changed, and begin to decompose and crumble to sand or clayey earth, and begin to form soil. Gneiss and mica-schist are very durable rocks, and yet much of the gneiss and mica-schist has undergone alteration, so that in some localities it has rotted down and decomposed so as to form soil of earth or gravel to the depth of one hundred feet, and in the tropical regions soils of much greater depth have been formed by the wearing away of rocky masses. It must not be supposed that this erosion is the work of a few years; centuries rather have elapsed before these rocky masses have been worn down and decomposed. Granite is an enduring rock, and granite hills, it might be supposed, would last forever, and yet when the oxygen and moisture commence their work, and the heat of summer and the frost of winter lend a helping hand, the erosion begins, and the hillsides and plains below derive their soil from the constituents of the granite.

Sandstone rock, in which the grains are cemented together by clay or some other binding material, also gradually wears away, and the grains of sand do their part in forming soils. The enormous beds and cliffs of limestone also suffer erosion and form a soil unsurpassed for fertility. Limestone is readily worn away by water containing free carbonic acid gas, in which limestone is slightly soluble; pure water has no action on limestone, but when rain-water derives carbonic acid gas from the atmosphere and other sources, then its action on limestone begins, and it will begin its dissolution, however slow it may be. It must not be supposed that air and moisture are the only agents at work on the rocks to form soils. Frost and ice are actively engaged year after year in splitting and breaking up rocks. When the crevices in a rock become filled with water and the water freezes, the tendency is to split the rock into fragments which in course of time form soil; porous rocks, such as sandstones, loose shales and schists, which readily absorb water, are often broken apart when the water congeals, so that fresh surfaces are exposed to weathering.

Heat also in a quiet way does its work in forming soil,—it hastens any chemical change which the rock may undergo, tending to its decomposition. During the day the rocks are exposed to the rays of the sun and become heated and expand; towards evening when it becomes cool they contract, and this alternate expansion and contraction has a tendency to loosen the grains of rock, and often splits off an outer layer when the rock has become weathered and softened. All of the above agencies are active in forming soils; the action may be slow, yet it is none the less sure. Thus we see how soils are formed, and how they derive their mineral constituents from the rocks. The vegetable matter of soils is derived from the decay of plant life which the soil has nourished. On the Western prairies the grass grows luxuriantly and then rots, and the next spring a new crop grows. This growth and decay has been going on for years, and every year furnishes the soil a supply of vegetable matter, until in many places the soil is twenty feet deep and of great richness and fertility. The vegetable matter in soil generally colors it black, which is due to the carbon it contains. The soil of the prairies is of a dark color. The Eastern soils which are cultivated yearly are being exhausted of vegetable mould, and its place is supplied by barnyard manure.

Why are some soils fertile and others barren? All grains and vegetables require for their growth certain mineral elements in the soil; when these elements are absent the plants cannot grow, but will wither and die; but when the soil contains an abundance of these mineral substances, and in a soluble form so that the plants can feed on them, then the soil is fertile and will yield abundant crops. What mineral constituents of soils are necessary to plants? All plants cultivated as food require for their healthy growth the alkalies, potash and ammonia, and the alkaline earths, lime and magnesia, each in a certain proportion. In addition to these, cereals or grains cannot attain a healthy growth unless silica is present in a soluble form suitable for assimilation. But of all the elements furnished to plants by the soil, and offering nourishment of the richest kind, phosphate of lime and the alkaline phosphates generally are the most important. A field in which phosphate of lime or the alkaline phosphates form no part of the soil is totally incapable of raising grains, peas, or beans. Wheat especially cannot flourish without phosphates in the soil. We find these phosphates in the kernels of wheat and in the hulls surrounding the kernels. Nearly all vegetables contain phosphates to a greater or less degree, and scarcely any plants are wholly without them; and those parts of plants which experience has taught us are the most nutritious contain the largest proportion of phosphates; for example, seeds, grain, and especially the varieties of breadcorn, peas, beans, and lentils. And if we incinerate these and analyze the ashes we can dissolve the alkaline phosphates with water, and there will remain in the ashes the insoluble phosphates of lime and magnesia which are essential to the plant. The phosphates are as necessary to man as to the plants, and a deficiency of them in the blood is accompanied al-

ways with some form of debility or nervous prostration. They are much used in medicine. If we analyze the ashes of blood we will find phosphate of soda and potash present, and also the insoluble phosphates of lime and magnesia, the very salts we find in wheat, etc. Hence we are brought to the conclusion that no seed suitable to become food for man or animals can be formed in any plant without the presence and co-operation of the phosphates, and man derives his supply of this nourishing element from plants he uses for food. The cereals require the alkalies, potash and ammonia, and in addition the silicates of potash and soda; these silicates are derived from the rock which in a fine state of subdivision forms the soil. When the rock decomposes it yields these silicates of potash and soda, which are soluble in water and which are taken up by the plant.

Some soils contain silicates which are decomposed so easily that in every two years enough silicate or potash is set free to furnish nourishment for the leaves and straw of a crop of wheat. In Hungary there are extensive districts where wheat and tobacco are grown alternately on the same soil for centuries, and both of these plants rob the soil of immense quantities of potash, tobacco particularly; about twenty-five per cent. of the ashes of tobacco are composed of potash. But districts like this are the exception. In Virginia the tobacco-growing soils are exhausted, because tobacco cannot grow in a soil unless there is a plentiful supply of potash, and all the potash of these soils has been withdrawn. Silica, so necessary to wheat, is not required by potatoes or turnips, since these crops do not abstract a particle of silica. From what source does the soil derive its supply of potash for the nourishment of plant-life? and what rocks contain potash? The soil derives its supply of potash from minerals, such as feldspars and micas principally, and from many other silicates. The rocks containing potash are granite, gneiss, syenite, mica-schist, trap rock, mica-slate, and many others; in fact, nearly all micaceous and feldspathic rocks contain this important element. The feldspars contain potash, soda, and lime, combined with alumina and silicic acid.

There are several varieties of feldspar,—orthoclase, in which potash predominates; albite, in which soda predominates; anorthite, having a base of lime; and oligoclase and Labradorite, having bases of soda and lime. The above bases are always combined with silica and alumina, and form what are known as silicates. The variety known as orthoclase contains often as high as fifteen per cent. of potash; a pure orthoclase will yield silica, 64.20; alumina, 18.40; potash, 16.95. Thus we see that these feldspars contain the very elements that the crops feed on; but these elements are in an insoluble form, and are bound up in combination in such a form that the plant cannot feed on them unless they are decomposed and rendered soluble in water. On long exposure to air, moisture, and heat these rocks become rotten and crumble and decompose; silicate of potash is formed, which the rain-water dissolves, and the roots of the plants absorb as food. Silicate of alumina is also formed which will not dissolve, and forms the familiar substance known as clay. The feldspars have a pearly lustre, are scratched by quartz, and cleave very readily; this property distinguishes them from quartz.

The other mineral mentioned as containing potash is mica. There are several varieties of mica, and in composition they are silicates of alumina and potash; sometimes part of the alumina is replaced by magnesia, iron, or soda. Certain rocks, such as granite, gneiss, syenite, etc., have been mentioned as containing potash. This becomes evident when we consider that granite and gneiss are composed of quartz, feldspar, and mica; syenite, of quartz, feldspar, and hornblende; and mica-schist is composed of quartz, mica, and a small proportion of feldspar. These rocks contain the very minerals that are necessary to form good soil. The soil derives its supply of phosphates from the rocks also. The Philadelphia and the Montgomery County granites and mica-schists contain from one-tenth to four-tenths per cent. of phosphoric acid. The syenites, gneisses, trap rocks, and even the new red sandstone contain small quantities of phosphates. In order to get a correct understanding of the soils of Montgomery County we must study the rocks that underlie the soil and from which the soil has been formed; we must know whether the minerals composing the rock are such as contain plant-food. From this study we can get a most intelligent idea of the fertility of a soil. Montgomery County has a great variety of rocky strata, and hence a variety of soils. The limestone soils are generally the most fertile and productive. More wheat to the acre is raised on the limestone soils than on any other, and corn seems to attain a greater size.

Many of the sandstone soils are productive, but this is probably due to the fact that they often contain feldspar and sometimes mica. These rocks often contain little white specks, which seem to be loose and crumbling, and are decomposed feldspar. When the soil is made up of pure sand it is not fertile, as the plants cannot live on silica alone. When the underlying rock is red shale the soil does not amount to much, and small crops are raised. Quite a number of the townships abound with this red shale, which often contains as high as seven per cent of iron. A red shale along the Stony Creek, which I analyzed, yielded seven per cent. of iron. The red color of this shale is due to the oxide of iron it contains. When superphosphate is applied to a red shale soil, or one containing much oxide of iron, a great deal of the phosphoric acid is wasted; it combines with the iron, forming phosphate of iron, which is insoluble and not readily decomposed, so that it is of no use to the plant. The red shale generally accompanies the sandstone, and

the red soils are often derived from shale, although sometimes from sandstone. It must not be inferred that the soils in the sandstone district are not fertile, as they generally yield good crops.

Some townships contain four different kinds of soil. The following is a list of townships and the beds of rock that underlie them. The rocky strata mentioned first is the most abundant, and the others are mentioned according to the extent of the deposit in the township. The townships not mentioned below are included in the sandstone district.

Lower Merion.—Mica-schist, garnet-schist, syenite and granitic rocks.

Upper Merion.—Limestone, sandstone, and slates.

Springfield.—Limestone, mica-schist and gneisses, syenite and granitic rocks, and sandstone.

Cheltenham.—Garnet- and mica-schist, syenite and granitic rocks, and sandstone.

Abington.—Mica- and garnet-schist, syenite and granitic rocks, sandstone and limestone.

Moreland.—Syenite and granitic rocks, sandstone and mica-schist.

Plymouth.—Limestone and new red sandstone.

White Marsh.—Limestone, sandstone, syenite and granitic rocks, mica-schist.

Upper Dublin.—Sandstone, limestone, syenite and granitic rocks.

Horsham.—Red sandstone.

Gwynedd.—Red sandstone and shale.

Whitpain.—Red sandstone.

Lower Providence.—Red sandstone.

Norriton.—Red sandstone.

Worcester.—Red sandstone.

Clay and Kaolin Deposits.—The composition of kaolin is a hydrous silicate of alumina. It contains forty-five per cent. of silica, forty per cent. of alumina, and fifteen per cent. of water; when pure it is as infusible as sand. It is very plastic, and can be kneaded into almost any shape when mixed with water. It is seldom found pure; it generally contains feldspar, mica, oxide of iron, or calcite, and any one of these impurities will make the clay melt. The best kinds of clay contain scarcely any of these substances which tend to make the clay less refractory. The tests for a good refractory clay are: It must not effervesce when moistened with acid, as this shows the presence of carbonates which make it fusible; it must not contain more than two per cent. of iron; it must be as free as possible from feldspar, which contains potash and makes it fusible. As a rule, the less alkali you find the more refractory the clay, and six-tenths of one per cent. of potash is the maximum amount allowed in a good refractory fire-clay. The best way, however, to test a fire-clay is to make a brick of it, and put it in a shaft-furnace supplied with a blast and fed with anthracite coal. In a furnace like this steel will melt. After the brick has been in the furnace about one hour take it out and examine it; if it has melted or crumbled or fused much on the edges it is not the kind of clay suitable for making fire-bricks. After a successful test of this kind an analysis is not necessary.

The clay-beds of Montgomery County are found in the limestone belt, generally in the vicinity of the mica-slates and schists, and it is in these deposits of clay that we find the extensive deposits of brown hematite ore. The principal clay-beds are found in Upper Merion, Plymouth, White Marsh, and Springfield townships. The clay in all of these townships is found in the limestone. There seems to be a depression in the limestone, which may have been the former bed of a stream, and the clay is found resting on the limestone and filling up this depression or bed. Most of the clay, however, has been derived from the mica-slates and schists, and the beds are parallel to the limestone, and occupy the position of those rocks from which they have been derived. These are the old clays, while the clay which is found occupying the depressions of the limestone and is not parallel to it is said to be a more recent clay. The most important bed of kaolin now worked in Montgomery County is found at Lynch's Kaolin Pit, situated in Plymouth township, on the Ridge pike, about two and a half miles from the borough of Conshohocken. This pit was opened in 1877, and Mr. Lynch informs me that over seven thousand tons of kaolin and clay have been mined; the average yield at present is about fifteen hundred tons per year. This deposit is of local importance, as it supplies clay for the terra-cotta works at Spring Mill, owned by Mr. Morehead, and also the works owned by Mr. Scharff. At these works terra-cotta pipes of all sizes are made. Various clay ornaments and chimneys are manufactured here. There are several different kinds of clay at this pit: First a beautiful white kaolin, which is free from iron and is quite coherent; this variety is used for making pottery and also for lining blast-furnaces and puddling-furnaces, where it has to stand a very high temperature without melting. This kaolin contains exceedingly minute scales of mica, which are scarcely visible to the eye. The next clay is the red clay used in the manufacture of terra-cotta and also for lining and fixing puddling-furnaces. This clay contains a little oxide of iron. The next variety is a blue clay, and is known as the new clay, and makes most excellent fire-bricks. It is more coherent and plastic than any of the others. Formerly the clay used for making the large cylindrical pots in which glass is melted was imported from Germany, but recently this blue clay was tried, and served the purpose very well, standing the high temperature without crumbling or fusing. This clay is now used by J. M. Albertson & Sons at the Star Glass-Works, Norristown. The extent of this deposit is not known; the bed is about seventy feet in thickness and extends over the entire field. The clay is shipped to Philadelphia, Norristown, Pottstown, and Conshohocken. Near the clay is found a bed of fine white sand.

Limestone Valley of Montgomery County.—The great limestone belt of Montgomery County, which has furnished such immense quantities of marble and lime, commences in Abington township, about a mile and a half north of Abington; at this point it is quite a narrow belt, but it widens as it extends westward, entering the northern corner of Cheltenham township, and becoming a broad belt of limestone as it extends through White Marsh, Plymouth, and Upper Merion townships. In Montgomery County it extends as far south as Conshohocken and Spring Mill, and it extends to within a short distance of the towns of Barren Hill and Edge Hill. It extends along the Schuylkill River from Conshohocken to Norristown, and crosses the river, extending into Chester County, and forming the beautiful Chester Valley. But this limestone belt does not end here, it passes entirely through Chester County, and extends into Lancaster County as far as the source of the Big Beaver Creek. The total length of this immense limestone belt from near Abington, Montgomery Co., its eastern extremity, to the Big Beaver Creek, in Lancaster County, its western extremity, is fifty-eight miles. The widest portion of the belt is three miles, while the average width of limestone is two and a half miles. In Chester County, at Downingtown, the belt is not so wide, being only three-fourths of a mile in width. The greatest width of the limestone in Lancaster County is not much more than half a mile. The general structure of this first main belt of limestone is that of a long slender basin or synclinal trough, the southern side of which is much steeper than the northern. From the neighborhood of the Gulf Mills, a little west of the Schuylkill, to its western end this oblique symmetry prevails with scarcely any interruption.

The strata of the north side of the valley, or from the synclinal axis northward, dip at an average inclination of about 45° southward, or more strictly S. 20° E. But this inclination is not constant east of the Schuylkill River. There are two well-defined synclinal basins, flanked by the Potsdam sandstone. West of the river a synclinal basin extends to the northwestward between Bridgeport and Henderson Station, and is also flanked on both sides by the Potsdam sandstone. The south side of the limestone belt between Spring Mill and its eastern extremity is bounded by the Potsdam sandstone. But from Spring Mill west to the Chester County line the South Valley Hill quartzose mica-schists form the remainder of the southern boundary in Montgomery County. The limestone belt is bounded on the north by the Potsdam sandstone and by the new red sandstone. Folds of Potsdam sandstone extend in a diagonal direction across the main belt of limestone at Oreland, Cold Point, and Henderson. Here we find the Potsdam sandstone extending into the limestone. According to Professor Rogers, "The southern steeply upturned outcrop has been more metamorphosed by heat than the northern, and this alteration is greater when they are in a nearly vertical position or inverted. It is chiefly within these limits that the blue and yellow limestone has been altered by heat and changed into crystalline and granular marble of different colors. Nearly all the marble-quarries opened are included within this steeply upturned or overturned outcrop. It is likewise along this convulsed and metamorphosed side of the trough that nearly all of the largest, deepest, and richest deposits of brown hematite have been met with." The color of the limestone varies in different localities,—pale grayish-blue, white, pale straw-yellow, and bluish-white. The marble is of various colors,—white, black, and often mottled. The thickness of the limestone belt is not known. Professor Hall says, "The probability is that it is not far from two thousand feet thick, but it may be much less." I have noticed that from Potts' Landing to Conshohocken the prevailing color of the limestone is blue, and from Potts' to Norristown we have a variety of colors,—gray, white, yellow, and blue. Gray is the prevailing color. Between these two points there are two small veins of mica-schist which are very narrow. The limestone directly in contact with these I have found has been metamorphosed into a white marble.

The color of limestones is generally due to organic matter which they contain, although not always; the black marbles are colored by graphite or carbonaceous matter; the yellow or brown limestones generally contain iron as oxide or carbonate. Very often in the same quarry will be found several veins, each vein having a different color. The limestones of Montgomery County are highly magnesian; many veins contain enough carbonate of magnesia to form what is known as dolomite. Dolomite contains about 45 per cent. of carbonate of magnesia and 55 per cent. of carbonate of lime when pure, although the percentage of lime and magnesia may be less and still be dolomite. Dolomites are harder and tougher than limestone, and usually present a finer grain; a true dolomite will not effervesce with acetic or hydrochloric acid in the cold, while limestone, composed of carbonate of lime only, will effervesce at once with either of these acids. The hardness of limestone is about 2, while that of dolomite is about 3.5. The more magnesia carbonate enters into combination with carbonate of lime the more the nature changes; it will not effervesce so freely. From an examination of a large number of limestones from quarries in the county, I find that the more carbonate of magnesia enters into their composition the less readily will they effervesce with hydrochloric acid in the cold; and when the percentage of carbonate of magnesia is small they will effervesce quite freely with hydrochloric acid. This might be an approximate method of determining whether a limestone be highly magnesian. Most of the county limestones are highly magnesian, containing from 10 to 35 per cent. of carbonate of magnesia, although many veins contain very little, if any, magnesia, and are mostly carbonate

of lime. The limestones of Port Kennedy are highly magnesian, containing as high as 42 per cent. carbonate of magnesia. Another sample yielded 38.40 per cent. of carbonate of magnesia. The first sample might be called a dolomite. The limestone near Conshohocken does not contain so much carbonate of magnesia. A sample from O'Brien's quarry yielded 17 per cent. carbonate of magnesia. The limestones from Norristown to Potts' Landing along the river are highly silicious, at least some veins are more so than in the vicinity of Conshohocken. No rule, however, can be laid down about this, for very often in the same quarry one vein will contain 3 per cent. of silica and the next vein 9 per cent. of silica. The variation is so great that it is a source of much trouble and inconvenience when the limestone is used as a flux in the blast-furnace. When so used it is advantageous to secure limestone as free from silica as possible, because the object of the limestone is to combine with the silica and clay in the iron ore and form a slag, and if the limestone used contain a high percentage of silica it will necessitate the use of an extra amount of limestone. Marble is simply limestone which is changed in structure and rendered crystalline and granular; by this metamorphosis the organic matter of the limestone is burnt out and it becomes white, and changes from a morphous to a crystalline form.

If limestone be broken into small pieces and examined under the microscope the fragments will be found to be of irregular shape, and are not crystalline; but when marble is examined it will be found to consist of a mass of crystals or grains, very often like loaf-sugar. Marble and limestone are both carbonate of lime, but marble generally has less of foreign impurities, such as silica, iron, and alumina. Nearly all the marble-quarries hitherto opened in Montgomery County are included within or near the southern edge of the limestone belt. The largest marble-quarries in Montgomery County are at Marble Hall. Marble was first quarried at this place one hundred years ago, and immense quantities have been shipped all over the country. It has furnished Philadelphia with a considerable quantity for building and architectural purposes. The quarry is about four hundred feet long and nearly three hundred feet in depth. The beautiful white marble used to build the great monument at Washington was obtained from this quarry. It came from a vein about five feet in thickness near the bottom of the quarry. The present owner of these quarries is Mr. Daniel O. Hitner. This quarry is especially interesting, as it contains the only layer of statuary marble found in the county. It was found at a depth of one hundred and twenty feet, and is only six inches wide. It is of a yellowish-white color. Nearly all marble dealers import the fine white statuary marble used for headstones, etc., from Italy. This marble is very fine-grained and white, and can be readily cut and carved into ornamental figures. Our Montgomery County marble is too coarse-grained for this fine work. In the vicinity of Spring Mill there is a marble-quarry, next in position to the westward. This is owned by Mr. Channing Potts, and has been worked for many years, and has furnished an immense amount of marble. White, blue, and mottled marble have been mined from this quarry. The next quarry to the westward where marble is obtained is west of the Schuylkill, near Henderson Station, in Upper Merion township. This quarry is now worked by Daniel O. Hitner, and was opened about 1869. It is now in active operation, and is being extended. Both the gray and the blue varieties of marble are mined here.

About two hundred yards from this quarry, on the opposite side of the road, there is Henderson's quarry. This is the next marble-quarry in order to the westward. It was opened about the year 1808. There are three kinds of marble mined here,—the blue and the gray varieties and a very interesting bed of black marble. This black marble occupies the south side of the quarry, and is susceptible of a very fine polish. It is very coarse-grained and crystalline. On analysis I found the black color is due to graphite. When the marble is dissolved in muriatic acid these small specks of graphite can be readily seen. The amount of silica present in this marble is very small. It is quite pure, and when burned in a kiln turns white, the graphite being burned out. The black marble of the limestone belt seems to be confined to this quarry and vicinity, where graphite is found. At the beginning of the belt in Abington township the limestone is very slaty and highly silicious, and where the surface has decomposed it looks like a white sand. As you proceed westward this is no longer noticed. Between the Schuylkill River and the eastern end of the limestone belt a great many limestone-quarries have been opened and are in active operation, supplying an excellent quality of lime for building purposes. These quarries are located principally in Plymouth, White Marsh, and Springfield townships, and are owned by L. K. Graver & Co., George Corson & Brother, George Hagy & Brother, Daniel Williams, Joseph Smith, Thomas Phipps, C. A. Cox, Frank Ramsey, David Marple, Charles Marple, and D. M. Leedom.

About one mile north from Conshohocken there is O'Brien's limestone and marble quarry. It was opened about fifty years ago, and is within a short distance of the stone-quarry. This limestone does not contain as much magnesia as many others. Mr. Fulton says the stone seldom contains under seventy per cent. of carbonate of lime. The silica varies from three to nine per cent., and the phosphorus generally runs below .01. On analysis the stone yields:

Carbonate of lime	75.00	= Lime, 42.00.
Carbonate of magnesia	17.00	= Magnesia, 8.09.
Ferric oxide and alumina	3.00	
Phosphorus	.01	
Silicic acid	5.00	
Sulphur	Trace.	
	100.01	

This stone has been much used as a flux in the blast-furnaces of Conshohocken and vicinity.

At Norristown is Mogee's quarry, situated between a small belt of Potsdam sandstone and the new red sandstone. This is the end of the limestone belt east of the Schuylkill.

At Swedesburg are the most extensive quarries and limekilns in Montgomery County. They are owned by William Rambo. They have been operated for many years, and the stone is highly magnesian. Thomas Rambo and Nathan Rambo own valuable quarries near by. McInnes' limestone-quarry, near Bridgeport, is highly magnesian, and yields three varieties of stone. Derr's marble-quarries, near the Chester County line, furnished the marble of the Norristown court-house. They are extensively worked. The following analyses of Montgomery County limestones were kindly furnished by the Pottstown Iron Company and the Phœnix Iron Company:

Port Kennedy Limestone, Phœnix Iron Co.'s Quarries.	Port Kennedy.	Port Kennedy.	Potts' Landing Limestone.	Norristown Limestone, William Mogee's Quarries.	Norristown Limestone.
	(1)	(2)		(1)	(2)
Carbonate of lime	49.64	53.21	66.50	49.25	51.73
Carbonate of magnesia	42.00	38.40	30.00	41.72	42.84
Alumina	.38	4.30	0.18	0.92	0.23
Ferric oxide	1.02				
Silica	6.57	4.22	2.40	4.22	1.50

The county limestones contain so much magnesia that at Ambler Station chemical-works manufacture Epsom salts and all other magnesia compounds from our county limestone.

Trap Rock and Trap Dikes of Montgomery County.—Trap is an igneous rock that came to the surface in a melted state through a fissure or opening from a place where the rock was liquid. When the opening becomes filled with the rock it is called a dike; these dikes vary in width from a few inches to many feet, or they may form immense masses of rock, like the Palisades along the Hudson River. Sometimes the trap, when cooling from a molten state, has assumed a columnar structure instead of being in sharp, irregular masses. The Giant's Causeway, Ireland, and Fingal's Cave, island of Staffa, are examples of trap rock crystallizing in columns. Very often, when the fissure became full of liquid rock, it would overflow, and the rock would run out over the surface of the adjoining country; this accounts for the many bowlders of trap rock that are found some distance from the trap dike of Montgomery County. Trap dikes are of various lengths; sometimes they extend across the country for several miles in a straight line, and very often the dikes are curved. Trap is commonly known under the name of mundock; this term is applied to it at several localities throughout the county. In appearance it is a dark-colored rock, quite heavy, and exceedingly tough and difficult to break, and when broken splits into pieces of an irregular shape, very often rounded and curved. It may be broken by a hammer or by another piece of trap; ordinary rock will not break it. It is composed of two minerals, feldspar and augite. The feldspar is the variety known as Labradorite, which is the lime and soda feldspar. Augite is a mineral resembling hornblende, and in composition is a silicate of lime, magnesia, iron, and alumina; it is of a black color. A great many lavas from volcanoes, and many other igneous rocks, although not of the same structure as trap, are similar in composition. Trap is a rock that weathers very slowly; the elements seem to have but little action on it, yet many of the trap bowlders of the county are coated with a brown covering about one-sixteenth of an inch in thickness, which it has taken many years' exposure to form. The brown color of this coating is probably due to oxide of iron. When this coating is broken off and a fresh fracture surface exposed, it is found to be granular and rather brilliant in appearance.

Montgomery County has a trap dike running through the limestone belt for several miles. This extensive trap dike commences in Springfield township at Flourtown, in the limestone belt, and extends westward in a straight line through White Marsh township; it follows the southern end of the limestone belt through to Conshohocken, where it crosses the river, and can be seen in its bed. It outcrops again in West Conshohocken below the stone-quarries, and extends through Upper Merion township, where it can be traced without interruption to the Chester County line, being a short distance above the Gulf Creek. From the Chester County line to the Schuylkill at West Conshohocken there is no difficulty whatever in finding excellent exposures of trap, especially along the river at West Conshohocken, where there is an abutment of trap and numerous weathered bowlders along the railroad. Between Conshohocken and Marble Hall the dike can be traced easily. It passes directly through Conshohocken, and crosses five of the county roads before it reaches Marble Hall; between these two points there are many loose bowlders of this rock. From Marble Hall to the Wissahickon Creek the dike cannot be seen, as it is covered with a deposit of clay; but there is a fine exposure on the Wissahickon Creek, where it cuts through the dike, and the creek is turned from its course at one point by contact with the dike.

From Flourtown to Marble Hall the trap runs through limestone and clay; from Marble Hall to Conshohocken it is found between the southern portion of the limestone belt and the mica-slates; from Conshohocken through Mechanicsville to the Chester County line it extends through the mica-slates of the South Valley Hill. The dike crosses the Bethlehem

turnpike near the meeting-house. It also crosses the Perkiomen turnpike and the Norristown or Ridge turnpike. This dike does not end in Chester County, but extends on into Delaware County, ending near a road leading from the Lancaster turnpike to the King of Prussia village. This is the largest trap dike in the county. Where it crosses the Perkiomen turnpike, between Marble Hall and Barren Hill, this dike is thirty feet in width. Numerous bowlders and exposures of trap are found between Camp Hill and Jarrettown, and these probably mark the continuation of the dike. According to the most recent survey, "there are exposures of trap in several localities northeast of Flourtown, but it has not been traced continuously." During the summer of 1883 I found almost a continuous line of trap bowlders and exposures between Jarrettown and Camp Hill, which is about one and a quarter miles from Flourtown. The school-house at Jarrettown, Upper Dublin township, is situated on what is known as Mundock Ridge. Trap rocks are scattered around in great abundance on this ridge. They are of various sizes, from quite small blocks up to large bowlders which are three and four feet in thickness. On the road through the ridge which leads to Camp Hill, especially in the woods near the school-house, there are many bowlders of immense size. In many places between Jarrettown and Camp Hill the fields are enclosed by walls which are made of trap bowlders of irregular size. Some of these blocks are weathered, but most of them have fresh black surfaces exposed, and are not browned by the weather.

Between these two points trap bowlders are found along the road. Sometimes for a short distance no blocks are found; for instance, at the north base of Camp Hill, and for a short distance beyond, we find no bowlders; but on the south side of the hill, where this road joins the road leading to Edge Hill, I found several large trap rocks. These exposures do not end at Jarrettown, but are found farther on along the road leading to Horshamville. I have since been informed that trap exposures are found at Horshamville, which is about two and a half miles northeast of Jarrettown. All of these exposures between Flourtown and Horshamville indicate that the dike, after leaving the limestone, enters the new red sandstone, and probably extends in a northeasterly direction as far as Horshamville, and it may be that the dike does not end here. Future investigation will prove whether the course indicated after the dike leaves Flourtown is the true one, but I believe that it is. The length of the trap dike from Flourtown to Mechanicsville is about eight miles, and if it be true that the dike continues as far as Horshamville, the entire length would be about fifteen miles. There are several smaller dikes in the county, but none of these compare in size to the dike of the limestone belt. In Marlborough township near Sumneytown there is a small trap dike.

In Pottsgrove township a short distance from Pottstown is the natural curiosity known as the "Ringing Rocks." These rocks are widely known throughout the county, and are visited frequently by curiosity-seekers. Some of the rocks are small, while many are the size of a hogshead or larger. These bowlders are scattered around the surface for a considerable area; some are weathered, and many have fresh surfaces exposed. When these rocks are struck with a hammer or a piece of metal they give forth a musical sound. Different tones are produced by striking different rocks; the sound seems to vary with the size of the rock. Hence the name Ringing Rocks. These rocks are sonorous, and when they are struck with a piece of metal the rock is set in vibration, and these vibrations are communicated to the air, and sound waves are formed. These rocks are trap rocks of the same kind as those which form the large dike. The popular idea is that this locality is the only one where these Ringing Rocks will produce sound. But any of the trap bowlders, no matter where found, when they rest on a good foundation (for example, another piece of trap), will produce musical tones. Those near Jarrettown give good tones when struck with a hammer.

There are two or three small trap dikes near Pottstown, which extend through the new red sandstone, and the bowlders belonging to one of these dikes comprise the Ringing Rocks. There are several varieties of trap rock; those of the county are known under the name of *dolerite*. This rock is defined as a granular mixture of a bluish-black or gray color, having a density of about 3, and containing Labradorite and augite, and sometimes a small amount of magnetic iron ore. This rock is studied sometimes under the microscope. In order to do this the rock is ground on an emery-wheel until a thin slice is obtained, and when this thin section of rock is examined under the microscope the minerals composing the rock can be seen and identified. The augite occurs often in crystals of a bright black color, and the magnetic iron occurs in the form of irregular grains or crystals, arranged sometimes in regular rows or disposed in files. The Labradorite is also found in crystals.

A sample of trap rock found near the "Bird-in-Hand" tavern, on the road from Gulf Mills to Bryn Mawr, which is near the end of the dike, was analyzed by F. A. Genth, Jr., of the University of Pennsylvania, who found

	Per cent.
Loss by ignition	2.15
Silicic acid	51.56
Titanic acid	1.63
Phosphoric acid	0.13
Alumina	17.38
Ferric oxide	6.57
Ferrous oxide	3.85
Magnesia	3.42
Lime	10.19
Lithia	Trace.
Soda	2.19
Potash	1.46
	100.53

This analysis gives a good idea of the general composition of trap.

Serpentine and Soapstone Deposits.—Serpentine is a mineral which does not crystallize, but occurs massive in large rocks or beds. The rock is usually some shade of green, and is quite soft, being readily cut by a knife. It makes a very ornamental building stone, and many public buildings and handsome private residences are built of this rock. Serpentine is a magnesian rock; in composition it is a combination of silicate and hydrate of magnesia, containing from forty to forty-four per cent. of silica, thirty-three to forty-three per cent. of magnesia, ten to fifteen per cent. of water, one to ten per cent. of ferrous and ferric oxides, and from one to six per cent. of alumina, and sometimes a little chromium or nickel oxide. This rock is susceptible of a high polish, and presents a most beautiful appearance when finely polished. One peculiarity of serpentine is it yields up nothing nourishing or sustaining to plant life or vegetation, and nothing except moss and lichens seem to flourish on its surface. Near West Chester are the Serpentine Barrens, so called on account of their unproductiveness; these barrens are in the main composed of serpentine. In our own county in Lower Merion and Springfield townships, where the serpentine beds are found, we notice loose blocks of serpentine of enormous dimensions, and these are covered only by lichens and cryptogamous plants, which are low forms of vegetation. Nothing else seems to flourish on these rocks.

In New Caledonia and among the Alps the natives apply the name Dead Mountains to hills of serpentine, because they can raise but little on them, and they are almost devoid of vegetation. Precious serpentine is of a rich oil-green color, and is much used for inlaid work. Verd antique is a clouded serpentine, used for ornamental purposes and tables.

Soapstone.—Soapstone is also a magnesian rock, which contains about sixty-two per cent. of silica, thirty-two to thirty-three per cent. of magnesia, and about five per cent. of water. It has a very soapy or greasy feel, hence the name soapstone. It is of various colors; white, green, and gray of various shades are the most common. It is very soft, and can be readily cut or carved. Soapstone is also known under the name of steatite. There is a mineral of a green color which separates into scales like mica and which occurs in soapstone; this mineral is called talc. It is of the same composition as soapstone, and is exceedingly soft; its hardness is 1, being the first member of the scale of hardness. Soapstone occurs associated with serpentine; very often it is found in the same belt or bed. Many serpentine beds in this State contain soapstone, and most always we find talc associated with serpentine. The deposits of serpentine in Montgomery County have yielded an abundance of soapstone and many specimens of talc.

There are two extensive belts of serpentine in Montgomery County. The longest belt commences on the northern brow of Chestnut Hill, between the two turnpikes, and extends westward across the Wissahickon Creek. It passes through Springfield township; there is an exposure just north of Manatawna. This belt crosses the Schuylkill River between Lafayette and Princeton Stations. It extends through Lower Merion township to Bryn Mawr, which is at the county line. This deposit is a straight line of outcrop of steatite or serpentine from Chestnut Hill to Bryn Mawr. Along the eastern and central parts of its course the southern side of the belt consists chiefly of a talcose steatite, the northern side containing much serpentine in lumps dispersed through the steatite, but towards the western side this separation seems to disappear. The serpentine belt is plainly seen from Chestnut Hill to Wissahickon Creek, where enormous blocks cover the surface of the bed. Near the Schuylkill the large blocks of serpentine and soapstone are again seen, and they choke the bed of the ravine next north of the soapstone-quarry. On the west side of the Schuylkill this serpentine and steatite rock is still visible in large blocks a little above the soapstone of that bank of the river. Near Merion Square the exposure is prominent, the surface being strewn with large masses. These rocks may be distinguished from others by the enormous size of the loose blocks, and by the coating of lichens and mosses which flourish on them. The rock is visible in the Pennsylvania Railroad cut south of Bryn Mawr. It is not certain whether this belt from Chestnut Hill to Bryn Mawr is continuous; if this be proved, then the entire length of this serpentine belt would be six miles. It is found entirely within the mica-schist belt of rocks. The next serpentine belt is found near the Schuylkill River, about one-third of a mile north of Lafayette; it extends east to the brook which flows into the Schuylkill at Lafayette. This belt begins in White Marsh township, and extends westward across the Schuylkill, through Lower Merion township, to the Gulf road about one-third of a mile north of Bryn Mawr. This deposit occurs along the northern edge of the mica-schists, and runs almost parallel to the first belt described; they are only about a mile apart. It is not known whether this belt is continuous, but if it be continuous the length of it would be about four miles. Another outcrop of serpentine is found south of Gulf Mills, within half a mile from Morgan's Corner. This deposit is found between the slates of the South Valley Hill and the syenite. This exposure has only a length of a few hundred feet, but it is at least three hundred feet wide. It is thought to belong to the belt of serpentines which extend through Delaware County and part of Chester County.

The serpentine belt of Bryn Mawr, after leaving Lower Merion township, extends through Delaware County in a curve towards the city of Chester, on the Delaware River. About a mile east of Roxborough,

near the mouth of Cresheim Creek, there is a small bed of serpentine, which seems to be confined to this locality only, as it has not been observed anywhere else in the neighborhood. There is a quarry near the Schuylkill River, and an abandoned quarry near Merion Square. The soapstone-quarry at Lafayette is owned by Mr. Prince. A great variety of minerals is found here. The soapstone is very soft, and is readily quarried in blocks, which are used for fire-stones in furnaces, and for jambs for fireplaces; it will stand a high temperature. There is a mineral found in soapstone called pyrophyllite, which when heated will curl like a worm, and sometimes crack the stone. Before marble came into use in the county for door-steps soapstone was used, but was too soft.

Mesozoic, or New Red Sandstone.—The familiar red sandstone rocks cover the northern and central portions of the county. They extend from Trenton to Norristown and Valley Forge, and the sandstone and red shale can be traced along the Schuylkill River from Norristown to Pottstown. All that portion of the county north of the limestone belt and north of the Potsdam sandstone and syenite is covered with new red sandstone and shale. The mesozoic formation is composed of reddish-brown shale, sandstone, and in some localities of conglomerate. The shales and sandstones are generally of red color, which is due to the red oxide of iron which they contain. There are quite a variety of sandstones in the county belonging to this formation. In some localities we find sandstone mixed with much clay. Elsewhere is found rock composed mostly of grains of sand, scarcely any clay or oxide of iron with it. At Norristown, Bridgeport, and other localities is found white sandstone, containing feldspar and mica, with not enough oxide of iron to color it red; it makes an excellent building stone. The red sandstone is more abundant than those which contain feldspar.

At Morgan's Mills and Fort Washington conglomerate is found. A ride over the Stony Creek Railroad from Norristown to Lansdale will show an unusually shaly district, mentioned under soils. The rocks of the red sandstone formation are supposed to have been deposited in an inland sea which once covered this region, in the same way that gravel, sand, and mud are now forming rocks. This was the age of reptiles, and their footprints are preserved to this day. Immense frog-like creatures and bird-like reptiles, whose remains were found in this rock at the Phœnixville tunnel (see Fossils, etc.), are supposed to have flourished during this age. Trap dikes traverse this formation, and occasionally small veins of coal and lignite are found. Red soils result from the rocks of this formation. The copper deposits at Shannonville and Upper Salford are found in the new red sandstone.

Potsdam Sandstone.—Professor Rogers called this rock the primal sandstone; it is often called the Edge Hill rock. It received the name Potsdam from its great development at Potsdam, N. Y. The principal exposures of this rock in the county are found flanking the limestone valley on the north, between Valley Forge and the eastern extremity of the limestone basin east of Fitzwatertown. It encircles the eastern end of the limestone belt, and extends westward as a narrow belt south of the limestone to Spring Mill. At Henderson's Station, Bridgeport, Hickorytown, Cold Point, and Oreland folds of this sandstone are found penetrating the limestone. The historic hills of Valley Forge are Potsdam sandstone. The formation is well developed at Edge Hill, Rubicam Station, and Willow Grove; near the latter place there is a picturesque spot known as "The Rocks." They are cliffs of hard conglomerate with pebbles of blue quartz. This is supposed to represent the beach of an ancient sea, and the pebbles are among the first ever made. This Cambrian sea contained no fishes, but only the lowest forms of animal life. Any organic remains or fossils which may have belonged to this formation are either obliterated or so flattened that they cannot be recognized. One fossil found in abundance near Willow Grove is the *Scolithus linearis* (see Fossils).

The Potsdam sandstone does not much resemble the new red sandstone; it is more slaty, and readily broken up into layers, and contains scales of mica, which sometimes make it flexible. It is generally made up of a fine-grained quartz, and contains fine scales of mica, which give it a slaty structure. It is generally of a white or gray color, although sometimes red. Occasional beds of conglomerate are met with. Very often this sandstone contains ripple-marks due to water; from this fact it is supposed that this sandstone was formed at the edge of an ancient sea.

Bryn Mawr Gravel.—Upon the tops of some of the high hills north of Philadelphia, near Chestnut Hill and Bryn Mawr, there are curious patches of an ancient gravel, which has been studied by Professor H. C. Lewis, who names it the "Bryn Mawr Gravel." It is found at elevations of from three hundred and twenty-five to four hundred and fifty feet above the Schuylkill. It is supposed that these deposits of gravel are the remains of an ancient ocean beach and the remnants of a once continuous formation, and that erosion has swept away everything except these few isolated patches. The gravel consists of rounded or sharp pebbles of quartzite or grains of sand cemented by iron. Sometimes the gravel is covered with a brownish-black iron glaze. The pebbles are very hard. At Bryn Mawr the gravel is seen in the railroad cut below the station. It is about four hundred and thirty feet high and nine miles distant from the river. The gravel is ten feet deep, and rests upon the gneiss-rock, which is decomposed. Near Chestnut Hill, on the City Line road, at its highest elevation, four hundred and twenty-five feet above the river, there is another deposit of gravel and conglomerate,

with numerous sharp fragments of quartzite. A similar gravel is found on some of the high hills of New Jersey and Delaware, and it continues through the Southern States in the same relative position. Professor Lewis assigns it to the tertiary age. It is the oldest surface formation in Pennsylvania.

South Valley Hill Mica-Schists and Slates.—These rocks form a ridge which flanks the Chester Valley limestone on the south, hence the name. In Montgomery County these slates are found in the southern part of Upper Merion township. They cross the Schuylkill at Conshohocken, and extend into White Marsh township. Near the Gulf Mills the hill divides into two spurs. This is the rock of the Conshohocken stone-quarries, which is always in demand for bridge-building and heavy masonry. This rock is a quartzose mica-schist, and contains seven per cent. or more of oxide of iron. It is slaty in appearance, and generally of a grayish tint and silky lustre. The deposits of clay in the county are found in the vicinity of the slates, and it is supposed that some of the clay-beds are derived from the decomposition of the mica in the slates. This seems probable, as beds of fine white sand sometimes accompany the clay; this sand is the quartz of the schists and slates. The deposits of iron ore in the county are found near the mica-slates in the clay. It is thought that some of the brown hematite ores are derived from the slates, as they contain over seven per cent. of oxide of iron, and when they decompose and form clay the oxide of iron is deposited. The rocks of this formation rest on the limestone, and are of more recent age, according to Professor Hall, who assigns them to Hudson River age.

Syenite and Granitic Rocks (Laurentian).—The hard crystalline rocks of this group in Montgomery County extend from Moreland township, at the Bucks County line, westward across the Schuylkill River to the Delaware County line. In Moreland and Upper Dublin townships the new red sandstone forms the northern boundary. Between Chestnut Hill and the Delaware County line the mica-schists form the southern boundary, and from the Schuylkill to the Delaware County line the limestone and mica-schists of the South Valley Hill form the northern boundary. East of the Schuylkill the Potsdam forms the northern boundary to the vicinity of Willow Grove. These syenite rocks are exceedingly tough and hard, and but little acted on by the weather. Hills of softer rock were in the course of time worn down to the surface, but the syenite ridges remain as monuments of the past. The hills known as Spring Mill Heights are syenite. The cuts exposed by the Pennsylvania Railroad in passing through the Schuylkill Valley offer an excellent opportunity for studying the syenite belt from Spring Mill to the serpentine rock. It was the hardest rock along the line to cut through. The Schuylkill River between West Conshohocken and Spring Mill is turned from its course by the resistance offered by the hard syenite rocks. It is the oldest rock in Montgomery County, and contains no fossils.

Syenite is composed of quartz, feldspar, and hornblende. It is composed of the same minerals as granite, only it contains hornblende instead of mica. It makes an excellent building stone. The quartz in this belt of syenite is characteristic, as it is of bluish tint. It is sometimes difficult to determine whether the other rocks of this belt are granites or granitic gneisses. The feldspar is both pinkish and white, and certain bands of this rock contain so much feldspar as to have a structure like porphyry.

Philadelphia, Manayunk, and Chestnut Hill Mica-Schists and Gneisses.—The rocks exposed along the Schuylkill River from its mouth to a short distance above Lafayette Station on the Norristown Branch of the Reading Railroad have been divided into three groups by Professor Hall: First, the Philadelphia group; second, the Manayunk group; and third, the Chestnut Hill group. The Philadelphia group underlies the other two, and the Chestnut Hill group is the highest. These rocks extend eastward as far as Trenton, and westward into Delaware County. These Schuylkill rocks are not visible in New Jersey, as they sink beneath the surface; but they come to the surface again on Staten Island and in New York. According to Professor Lesley, these three groups of rock are between ten thousand and twenty thousand feet in thickness. They are known as the azoic rocks, and are the oldest rocks of which we have any knowledge; most of the other rocks have been formed from them, as they are the foundation rocks of the old continents. They were formed when the lowest forms of animal life were introduced on our globe, and were the beds of the old oceans. Any trace of animal life that may have existed in these rocks has become obliterated by the heat and pressure to which they were subjected. Many of the minerals of the county are found in these formations. These rocks are mica-schists and gneisses. Gneiss, like granite, is composed of quartz, feldspar, and mica; but the gneiss is arranged in parallel layers, while granite is not. Mica-schist is a crystalline assemblage of mica and quartz, and sometimes feldspar, arranged in layers. The Philadelphia group extends from the Delaware River on the south to the vicinity of Falls of Schuylkill. The rocks of this group are different variety of gneisses and mica-schists. The Manayunk group extends from the vicinity of the Falls of Schuylkill to a point half-way between Manayunk and Lafayette Station; it is exposed along the Schuylkill. The rocks of this belt are schists and gneisses, and are very much weathered, the feldspar especially is often white and chalky in appearance from decomposition; this is noticeable at Wissahickon Station. The Chestnut Hill group extends from the vicinity of Chestnut Hill to the county line at Bryn Mawr.

Along the Schuylkill the rocks are exposed from a point between Manayunk and Lafayette to the syenite formation. The schists and gneisses of this group contain an abundance of garnets. It is in this group that serpentine and soapstone occur. The division of these Schuylkill rocks into groups is somewhat geographical and is not definite. It is often difficult to determine whether the rock is a gneiss or schist.

Early Accounts of Lime.[1]—Among the extensive manufactures of Montgomery County can be mentioned lime, the history of which we are not aware of having been attempted by any other writer. The quantity now used for agricultural, building, and manufacturing purposes has become immense. The annual production here in 1875 was estimated at fully two millions of bushels, and has probably reached now to nearly one-third more. The census of 1840 gave the value of lime manufacture in this county at $236,162, and for Plymouth township, $45,218; White Marsh, $51,458; Upper Dublin, $20,275; Upper Merion, $74,772; and in Abington township, $11,800. In 1858 the writer personally visited seventy-five limekilns in the township of Plymouth, said to contain the average capacity of fifteen hundred bushels each. This would alone make by one burning considerably over one hundred thousand bushels, and the number of kilns there has since been increased.

The earliest mention we have been enabled to find of limestone, and of lime being made therefrom to be used for building purposes, is in a letter written by Robert Turner, of Philadelphia, dated 3d of 6th month, 1685, addressed to William Penn in England, from which we learn that "Samuel Carpenter is our limeburner on his wharf. Brave limestone found here, as the workmen say, being proved." The next mention found is in another letter to Penn, written by Nicholas More, dated "Green Spring, the 13th of September, 1686," wherein he states that "Madam Farmer has found out as good limestone on the Schuylkill as any in the world, and is building with it; she offers to sell ten thousand bushels at sixpence the bushel upon her plantation, where there are several considerable hills, and near to your Manor of Springfield." The aforesaid was evidently the wife of Jasper Farmer, who had arrived here in November, 1685, and had taken up in the present White Marsh township a tract of five thousand acres of land, but died soon thereafter. His son, Edward Farmer, subsequently became the owner of about three-fourths of this purchase.

For building purposes the Swedes and other early settlers first used lime prepared from oyster shells, of which we find mention made by several writers. Thomas Budd, in his account of Pennsylvania, printed in 1685, says, "We make lime of oyster shells, which by the sea and bay-side are so plentiful that we may load ships with them." He further informs us that there is no limestone "as we yet know of," from which we are led to infer that Samuel Carpenter and Madam Farmer, as has been mentioned, must have been among the earliest to convert limestone into lime. Even prior to the summer of 1685 considerable building had been done in Philadelphia and its vicinity, which required no small amount of the article as prepared from oyster shells.

William Penn, in a letter to the Marquis of Halifax, dated 9th of 12th month, 1683, mentions that "about one hundred and fifty very tolerable houses for wooden ones" had been erected in Philadelphia. In his "Further Account of Pennsylvania," written in December, 1685, he states that the number had been increased to three hundred and fifty-seven houses, "divers of them large, well built, with good cellars, three stories, and some with balconies." He also mentions in the same of "divers brickeries going on, and some brick houses going up." Robert Turner, in a letter from Philadelphia, 3d of 6th month, 1685, states that "we are now laying the foundation of a plain brick meeting-house, sixty by forty feet," and that "Pastorius, the German Friend, with his people, are preparing to make brick next year." These statements show the necessity of lime, for which purpose no inconsiderable quantities must have been required, and that the discovery of limestone so near the city created at once a demand from its superior quality, ranking, as has since been proven, among the best found in the country.

John Goodson wrote from Philadelphia, 24th of 6th month, 1690, "that six carters have teams daily employed to carry and fetch timber, bricks, stone, and lime for building, which goeth on to admiration. We have rocks of limestone, where many hundreds, yea thousands of bushels of lime are made in one year for this town." John Holme, one of the judges of the Philadelphia County Court, in his poem on "The Flourishing State of Pennsylvania," written in 1696, mentions therein that a few years previously lime had been burned from oyster shells, but since a "great store" of limestone had been discovered in the ground, from which "now is made good stone lime," which was not only superior but cheaper than the former article. He had arrived here from England in 1686, and died in 1701.

At a meeting of the Provincial Council, held May 19, 1698, a road was ordered to be laid out from White Marsh, for the purpose of hauling lime from the kilns there to the city, and to meet the Plymouth road near Cresheim, or the upper part of Germantown. In 1703, Nicholas Saul and others, at "Sandy Run," in the "Manor of Springfield," petition that they had formerly received the grant of a road from the limekilns to Philadelphia on the Germantown road, which the court now ordered should be speedily opened. This is evidently the road proposed by the Council aforesaid, and the present highway leading from the village of White Marsh through Chestnut Hill. In 1713 the road was opened from the afore-

[1] By Wm. J. Buck.

said kilns to Skippack, over which also considerable lime was hauled. The Plymouth highway was laid out as "a cart road" in the spring of 1687. This is the road leading from Plymouth to Philadelphia, and now known as the Germantown and Perkiomen turnpike, which was laid on its bed and finished in 1804. It is likely that this was the first road opened for the transportation of lime to the city. What is now known as the Limekiln road was laid out from Germantown to Upper Dublin in 1693, and probably also first opened for the purpose of obtaining lime from the vicinity of the present Fitzwatertown. The road from the latter place to Abington meeting-house was confirmed in 1724, and opened the following year. From the petition it is ascertained that Thomas Fitzwater carried on there the business of lime-burning in 1705.

Gabriel Thomas, who arrived here in 1683, in his account of Pennsylvania, published at London in 1698, mentions that here "there is also very good limestone in great abundance plenty and cheap, of great use in buildings, also in manuring lands." The Manor of Mount Joy, containing seven thousand eight hundred acres, was granted by Penn to his daughter Letitia the 24th of 8th month, 1701. This tract was partly situated in Upper Merion, and we have the authority of Oldmixon's "British Empire in America," published in 1708, that it abounded in limestone, which had been made use of for some time. Edward Farmer, whose settlement in White Marsh was known in 1708 as "Farmer's Town," supplied lime at various times from there for the buildings at Springettsbury, erected by Thomas and Richard Penn, between the years 1732 to the time of his death, in 1745. Francis Rawle, who had settled in Plymouth about 1685, in his "Ways and Means," printed by S. Keimer, of Philadelphia, in 1725, and written the previous year, states on page 54 that of "limestone we have great plenty, of which stone lime is made, which gives the opportunity to the inhabitants to build good stone and brick houses in town and country."

The lime used in building the State-House, from 1729 to 1735, was hauled from the kilns of Ryner Tyson, in Abington township, fourteen miles north of the city. Those kilns and quarries have ever since been in the family, and the business of lime-burning is still carried on by the descendants. The county commissioners in March, 1804, invite proposals for "hauling by the bushel a quantity of lime from Plymouth to Pottstown sufficient to complete the bridge" over the Manatawny, a distance of about twenty-three miles. In 1810, if not earlier, the lime-burners of the county formed themselves into an association, of which Alexander Crawford was president, and John Fitzwater secretary, meeting for several years, in January, at the house of Philip Sellers, White Marsh. In February, 1824, they met at the house of Andrew Hart, Plymouth. The members at this time were George Tippen, Samuel Davis, John Shepherd, Daniel Fisher, Benjamin Marple, Eleazer Michener, Enoch Marple, John Hellings, George Egbert, George Lare, Henry Johnson, Abraham Marple, William Sands, Joseph Harmer, and Daniel Davis. It appears they soon after dissolved, their proceedings being deemed unlawful, but we presume no more so than any other combination of a similar character. Among their objects was to fix the price of lime and the wood they either purchased or received in exchange.

On so a great a business as the production of lime it is to be regretted that there are so few statistics. It would be interesting to possess a list of the several manufacturers, the number of kilns operated, and the amount respectively made. The quantity sent off by water must be considerable, especially to the States of New Jersey, Delaware, and Maryland, as also by railroad to adjoining counties, Philadelphia, and other places, for building, manufacturing, and agricultural purposes. The townships of Montgomery that possess limestone are Abington, Upper Dublin, Springfield, White Marsh, Plymouth, and Upper Merion. The limestone surface here may probably comprise about fifteen square miles. Plymouth, no doubt, is now the greatest producer; next Upper Merion, followed by White Marsh and Upper Dublin. Norristown, Swedesburg, and Port Kennedy are extensive shipping-points of this material. The lime of Montgomery County for all building purposes possesses a high reputation, and is regarded among the very best produced.

CHAPTER III.

THE ABORIGINES.

THREE hundred and ninety-one years have elapsed since the commercial nations of the earth first learned of the existence of the North American Indians. From whence they came remains an archæological problem. Their numbers[1] were the subject of con-

[1] Robert Proud, historian, estimated the number of fighting men of eighteen given tribes at 27,900, and total number, 139,500.

Besides, in an historical account, printed in Philadelphia, of the expedition against the Ohio Indians in 1764, under command of Col. Bouquet, there is a list of the Indian nations of Canada and Louisiana, said to be from good authority, and that the account may be depended on, so far as a matter of this kind can be brought near the truth, in which it is asserted that there are 56,580 fighting men of such Indians as the French were connected with in Canada and Louisiana. Assuming this number to be one-fifth of the population, they would have had at that date 282,000.

According to the latest data in the possession of the Interior Department at Washington the number of Indians in the United States is 262,000. It is claimed that with regard to all Indian tribes receiving supplies from the government reasonably accurate statistics have been obtained, as in making issues of goods to the Indians the individual receipt of each head of a family is required. The accounts division of

jecture until after the Revolutionary war, when they became objects of governmental solicitude and care. As a race, they have displayed rare physical powers of endurance, they have shown indomitable courage and remarkable sagacity. The exceptional among them have been gifted with keen perceptive faculties, creating and preserving tribal relations among themselves for centuries, recognizing the obligations of truth, virtue, and honor, the omnipotent power of a "Great Spirit,"[1] and a great "future hunting-ground."

the Indian Office therefore possesses a register of the names of all heads of families to whom goods, supplies, or annuities are issued by the government. In most of the States there are remaining small communities of Indians, like the Six Nations in New York, the Eastern Cherokees in North Carolina, the Miamis in Indiana, etc. Having tribal property they maintain a tribal organization. The Indian Office exercises a sort of guardianship over them in the protection of their lands, management of their funds, limiting the contracts they may make and the fees they may pay to attorneys, deciding questions of membership in the tribe, etc.; but they are self-supporting, and receive no goods or supplies from the government. The same may be said of the "five civilized tribes" of the Indian Territory, and of the Indians of the Pacific coast, although some of the latter receive about five per cent. of their subsistence from the Department. They are not dependent upon the government for the supply of their daily wants, and consequently the Indian Department is not able to obtain from them such minute and detailed reports as are required from the semi-savage tribes. In some cases the government is therefore in possession of better statistics from the "wild" tribes than from such as are partially civilized, or at least self-supporting.

Leaving the five civilized tribes of the Indian Territory out of the question, these statistics show that the Indians are not now, and for several years past have not been, decreasing in numbers. The births reported in all the tribes last year aggregated 2998; the number of deaths was 2478. An examination of the reports from all the agencies in detail shows many instances of decrease, but the general result is as stated. It is not claimed that these figures are either complete or exact, but they are beyond reasonable doubt sufficient to establish the fact that the Indian race, as a whole, in spite of disadvantageous circumstances, is not dying out. The mortuary customs of most of the tribes render it improbable that many deaths should escape the knowledge of the agent. As regards the death of a relative or friend the Indian is not a stoic; mourning for the deceased, whether slain in battle or dying from natural causes, is usually loud and long continued, and accompanied with ceremonies likely to make every person within the sound of beating tom-toms and wailing voices aware of the loss the tribe has sustained. Over births no such demonstrations are made, so that the error in the figures given is probably that of reporting too small an increase in the tribal numbers.

It is easy to find reports from particular tribes showing a decided decrease during the past year. The Six Nations, New York, lost 235 by death, while there were only 187 births. There are 5116 Indians on the several reservations in New York,—the Senecas, Oneidas, Cayugas, Onondagas, Tonawandas, and Tuscaroras. These Indians are second-rate farmers, as are the Pottawatomies, Kickapoos, and Munsees of Kansas, who also lost in numbers last year, the deaths among them exceeding the births by 30 per cent.; and the same is true of Indians similarly situated in Michigan,—the Chippewas, Ottawas, and Pottawatomies of the Mackinac agency. In each of these remnants of tribes there was about the same per cent. of loss. These Indians nearly all wear civilized dress, and they are surrounded by whites.

In the Indian Territory, however, nearly all the tribes are increasing. The agent of the Cheyennes and Arapahoes reports 324 births, 110 deaths among 6769 Indians; the Kiowa, Comanche, and Wishita agency reports 149 births, 96 deaths. Reports from the twenty-one other tribes in the Indian Territory indicate a small per cent. of increase in all except two. The ever unfortunate Poncas and the Senecas suffered a further loss in numbers last year.

Outside of the Territory, without going into detail, it may be said generally that the Indians of the Northern plains, the great Sioux tribes and the Crows, are about stationary. There is perhaps a small increase, but reports are not full enough to show more than that there is no decided change. Citizens of the Southwest will particularly regret to know that the Utes and the Mescalero Apaches are annually increasing in numbers. The fishermen along the borders of Puget Sound, the Puyallup, Quillehute, Cœur d'Alene, O'Kanagans, etc., are slowly increasing, while the S'kokomish and Quinaielt Indians of the same region report a decided loss last year.

The generalization indicated by these reports is not a pleasant one. It will be noticed that the uncivilized Indians, or at least those living away from the direct influences of the white race, are increasing, while those living in the midst of prosperous white settlements are gradually dying out. The five civilized tribes of the Indian Territory, and especially the Cherokees, who are themselves prosperous, hold the theory that Indians cannot thrive when immediately surrounded by communities of white men; that, being unable to compete with their neighbors, the Indians become hopelessly discouraged. The figures given above appear to confirm this doctrine. Fuller and more accurate statistics may, however, modify or reverse the conclusions based upon the official reports we have quoted, which afford the best data now obtainable.

[1] The following letter of Conrad Weiser, written to a friend, on the subject of the Indians' belief in a Supreme Being, is of more than usual interest:

"Esteemed Friend,—I write this, in compliance with thy request, to give thee an account of what I have observed among the Indians in relation to their belief and confidence in a Divine Being, according to the observations I have made from 1714, in the time of my youth, to this day (about the year 1746). If, by the word religion, people mean an assent to certain creeds, or the observance of a set of religious duties, as appointed prayers, singing, preaching, baptism, &c., or even heathenish worship, then, it may be said, the Five Nations and their neighbors have no religion. But if, by religion, we mean an attraction to the soul to God, whence proceeds a confidence in, and hunger after, the knowledge of him, then his people must be allowed to have some religion among them, notwithstanding their sometimes savage deportment. For we find among them some tracts of a confidence in God alone, and even, sometimes, though but seldom, a vocal calling upon him. I shall give one or two instances of this that fell under my own observation. In the year 1737, I was sent, the first time, to Onondaga, at the desire of the Governor of Virginia. I departed in the latter end of February, very unexpectedly, for a journey of five hundred English miles, through a wilderness where there was neither road nor path, and at such a time of the year when creatures (animals) could not be met with for food. There were with me a Dutchman and three Indians. After we had gone one hundred and fifty miles on our journey we came to a narrow valley, about half a mile broad and thirty long, both sides of which were encompassed with high mountains, on which the snow laid about three feet deep, in it ran a stream of water also about three feet deep, which was so crooked that it kept a continued winding course from one side of the valley to the other. In order to avoid wading so often through the water, we endeavored to pass along the slope of the mountain, the snow being three feet deep, and so hard frozen on the top that we could walk upon it; but we were obliged to make holes in the snow with our hatchets that our feet might not slip down the mountain, and thus we crept on. It happened that the old Indian's foot slipt, and the root of a tree, by which he held, breaking, he slid down the mountain as from the roof of a house; but, happily, he was stopped in his fall by the string which fastened his pack hitching on the stump of a small tree. The other two Indians could not go to his aid, but our Dutch follow-traveller did, yet not without visible danger of his own life. I, also, could not put a foot forward till I was helped. After this we took the first opportunity to descend into the valley, which was not till we had labored hard for half an hour with hands and feet. Having observed a tree lying directly off from where the Indian fell, when we were got into the valley again, we went back about one hundred paces, where we saw that if the Indian had slipt four or five paces further he would have fallen over a rock, one hundred feet perpendicular, upon craggy pieces of rock below. The Indian was astonished and turned quite pale; then, with outstretched arms and great earnestness he spoke these words: 'I thank the great Lord and governor of this world, in that he has had mercy upon me, and has been willing that I should live longer.' Which words I at that time put down in my journal. This happened on the 25th of March, 1737. In the 9th of April following, while we were yet on our journey, I found myself extremely weak through the fatigue of so long a journey, with the cold and hunger which I had suffered. There having fallen a fresh snow, about twenty inches deep, and we being yet three days' journey

They have been, and still are, a subject of interesting study, and as the last of their tribes melt away before or are absorbed in the superior civilization that has dispossessed them of a continent, interest in their origin, antiquity, habits, and customs seems unabated. Parkman, Campanius, Acrelius, Heckewelder, Penn, Gordon, Proud, and many others have written upon these red men of the forest and their occupancy of the country we now dwell upon. It is certainly true they have nowhere left a deep or lasting impression upon the face of the country occupied by them. To them the earth seems to have had no higher utilities than a vast hunting-ground. The future archæologist may yet find evidence of their origin and earlier conditions of life than those ascertained by writers of our age; to preserve all knowledge thus far acquired of them and, if possible, incite and facilitate further research concerning the remarkable race should induce writers of every century to carry forward their history. The time is not far distant when the remnant of this singular people will accept the inevitable and yield their wild and savage natures to the constant overtures of Christian civilization, when the descendants of chiefs and warriors will open mind and heart and take rank with educators of their generation. Their own race may yet furnish their archæologists and true historians.

We have reached a period in our history when Indian training-schools are no longer experimental. The school at Carlisle, Pa., in successful operation with two hundred youthful inmates of both sexes, is in pleasing contrast with the former policy of the government, which maintained a military post at the same place for the training of "regulars" to slaughter the race on the plains of the West. It may well be that from the number of these people now in course of preparation for intellectual pursuits and a higher life there will come some one or more who will fulfill

from Onondaga, in a frightful wilderness, my spirit failed, my body trembled and shook; I thought I should fall down and die. I stept aside and sat down under a tree, expecting there to die. My companions soon missed me. The Indians came back and found me sitting there. They remained awhile silent; at last the old Indian said: 'My dear companion, thou hast hitherto encouraged us, wilt thou now quite give up? Remember that evil days are better than good days, for when we suffer much, we do not sin; sin will be driven out of us by suffering; but good days will cause men to sin, and God cannot extend his mercy to them, but, contrawise, when it goeth evil with us, God hath compassion upon us.' These words made me ashamed; I rose up and traveled as well as I could. The next day I went another journey to Onondaga in company with Joseph Spanhenberg and two others. It happened that an Indian came to us in the evening who had neither shoes, stockings, shirt, gun, knife, nor hatchet; in a word, he had nothing but an old torn blanket and some rags. Upon inquiring whither he was going, he answered, to Onondaga. I knew him, and asked him how he could undertake a journey of three hundred miles so naked and unprovided, having no provisions nor any arms to kill creatures for his subsistence? He answered, he had been among enemies, and had been obliged to save himself by flight, and so had lost all. This was true in part, for he had disposed of some of his things among the Irish for strong liquors. Upon further talk, he told me very cheerfully, that 'God fed everything which had life, even the rattlesnake itself, though it was a bad creature, and that God would also provide in such a manner that he should get alive to Onondaga. He knew for certain that he should go thither; that it was visible God was with the Indians in the wilderness, because they always cast their care upon him; but that, contrary to this, the Europeans always carried bread with them.' He was an Onondaga Indian; his name was Onontagketa. The next day we traveled in company, and the day following I provided him with a hatchet, knife, flint, and tinder, also shoes and stockings, and sent him before me to give notice to the Council at Onondaga that I was coming, which he truly performed, being got thither three days before us. Two years ago I was sent by the Governor to Shamokin on account of the unhappy death of John Armstrong, the Indian trader (1744). After I had performed my errand, there was a feast prepared, to which the Governor's messengers were invited. There were about one hundred persons present, to whom, after we had in great silence devoured a fat bear, the eldest of the chiefs made a speech, in which he said, 'That by a great misfortune three of their brethren, the white men, had been killed by an Indian; that nevertheless the sun was not yet set (meaning there was no war); it had only been somewhat darkened by a small cloud, which was now done away. He that had done evil was like to be punished, and the land to remain in peace; therefore he exhorted his people to thankfulness to God, and thereupon he began to sing with an awful solemnity, but without expressing any words. The others accompanied him with their voices. After they had done the same Indian, with great earnestness or fervor, spoke these words: 'Thanks, thanks, be to thee, thou great Lord of the world, in that thou hast again caused the sun to shine, and hath dispersed the dark cloud: the Indians are thine.' One more instance may be mentioned on this subject, which has come under my own observation and personal knowledge. In the summer of the year 1760 a number of religious Indians paid a visit to the Quakers in Philadelphia on a religious account. They were mostly of the Minusing tribe, and came from a town called Mahackloosing or Wyalusing, on or near the East Branch of the Susquehanna River, in Pennsylvania, about two hundred miles northwestward from the city. Their chief man, whom the rest of the company styled their minister, was named Papunehung or Papounan, and their interpreter, Job Chilloway, an Indian. On their arrival they waited on Governor Hamilton, to pay him their respects, and to deliver three prisoners whom they had redeemed, having themselves absolutely refused to join with the other Indians in the savage war which raged about that time, though their visit was principally on a different account. They had a public conference with the Governor in the State-House on the occasion, in the presence of many citizens, wherein Papounan expressed the design of their visit was principally to the Quakers, on a religious account; that they desired to do justice, to love God, and to live in peace, requesting at the same time that none of his company should be permitted to have any spirituous liquors, etc. He refused the presents offered by the Governor, and gave him the reasons, further saying, 'I think on God, who made us; I want to be instructed in His worship and service. I am a great lover of peace, and have never been concerned in war affairs. I have a sincere remembrance of the old friendship between the Indians and your forefathers, and shall ever observe it.' After mentioning some other things, and expressing himself further on the view or design of their visit on a religious account, he said, 'Though what he had mentioned respecting religious affairs might appear trivial to some who thought different from him, yet he was fixed in his mind respecting them; that their young men agreed with him, and wanted to love God, and to desist from their former bad course of life,' further declaring, 'I am glad to have an opportunity of mentioning these several affairs in the presence of such a large auditory of young and old people. The great God observes all that passes in our hearts, and hears all that we say one to another,' etc. The notes, etc., on the occasion were taken from the interpreter by Secretary Peters. He then finished with a solemn act of public thanksgiving and prayer to God, with great devotion and energy, in the Indian language (not being able to speak nor understand English). The unusualness, force, and sound of the Indian language on such an occasion, with the manifest great sincerity, fervor, and concern of the speaker, seemed to strike the whole auditory in an uncommon manner, as well as the Indians themselves, who all the while behaved with a gravity and deportment becoming the occasion, and appeared to unite heartily with him in his devotion."

Christian nations have always been zealous in missionary work, and very early in the history of this country pious and devoted men, often more enthusiastic than learned in their calling, came over from European countries under special instructions to convert the heathen Indians. The Swedes were notable for their efforts to "Christianize the savages."

the hope of Humboldt, who says, "I do not participate in the rejecting spirit which has but too often thrown popular traditions into obscurity, but I am, on the contrary, firmly persuaded that by greater diligence and perseverance many of the historical problems which relate to the maritime expeditions of the Middle Ages, to the striking identity in religious traditions, manner of dividing time, and works of art in America and Eastern Asia, to the migrations of the Mexican nations, to the ancient centres of dawning civilization in Aztlan, Quivira, and Upper Louisiana, as well as the elevated plateaux of Cundinamarca and Peru, will one day be cleared up by discoveries of facts with which we have hitherto been entirely unacquainted." Professor W. D. Whitney is not so prophetic as Humboldt, but in evident sympathy with him, and perhaps more practical: "What we have to do at present is simply to learn all we can of the Indian languages themselves, to settle their internal relations, elicit their laws of growth, reconstruct their older forms, and ascend toward their original condition as far as the material within our reach and the state in which it is presented will allow; if our studies shall at length put us in a position to deal with the question of their Asiatic derivation, we will rejoice at it. I do not myself expect that valuable light will ever be shed upon the subject of linguistic evidence; others may be more sanguine, but all must at any rate agree that, as things are, the subject is in no position to be taken up and discussed with profit." Nevertheless, Professor Whitney insists that greater diligence should be devoted to the study of our antiquities. "Our national duty and honor," he contends, "are peculiarly concerned in this matter of the study of aboriginal American languages as the most fertile and important branch of American archæology. Europeans accuse us, with too much reason, of indifference and inefficiency with regard to preserving memorials of the races whom we have dispossessed and are dispossessing, and to promoting a thorough comprehension of their history. Indian scholars and associations which devote themselves to gathering together and making public linguistic and other archæological materials for construction of the proper ethnology of the continent are far rarer than they should be among us."

A recent author[1] has brought to notice in condensed form a number of references to the possible origin of the Indian races on this continent, which fully illustrates the speculative theories indulged in by commentators upon the subject. The Indian tribes who

[1] Bancroft, in his first edition, permits himself enough dalliance with the hypothesis of a Calmuck or Mongolian immigration as to attempt to show that it was not impossible, perhaps not improbable. Grotius, De Laet, etc., speculated with less information perhaps than our historian, and with more prejudices, but not more widely from the purpose. Some writers have assumed that the Phœnicians and Carthaginians, because they made adventurous voyages and passed outside the Straits of Hercules, must have come to America. Plato's myth of the Atlantides has been made to do service in buoying up a sunken continent out of the oozy depths of the ocean and the mermaiden grottoes of fantastic legend. Mexico and Peru, as has been infallibly shown time and again, must have got their monuments from Egypt or from India,—Carnac, Luxor, Elephanta are reproduced at Palenque and Uxmal, at Cholula and Cuzco. Aristotle is quoted to show that the ancients must have had a knowledge of an intercourse with America. Slight similarities of costume, face, and habits have been seized upon as eagerly as Penn seized upon the fact that the Indians counted time by moons (as if Penn himself did not do the same thing!) to establish relationship for our barbarians with the children of Israel, with the fugitive Canaanites, etc. The sons of Prince Madoc of course have not been neglected. White Indians in North Carolina spoke the purest sort of a Cymric dialect, and some of the Shawanese are reported to have been seen carrying around Welsh Bibles in the same belt along with their tomakawks and scalping-knives. Menassah Ben Israel concludes, upon the same sort of data as those which convinced Penn, that the lost tribes emerged between California and the Mississippi, but Spizelius and those who followed him in the last century were content to ascribe the origin of our Indians to a country less distant than the Levant. China, Tartary, Siberia, and Kamtschatka, with the Aleutian archipelago, afforded a natural route for immigration, though no attempt is made to explain how the hordes of savages were able to make their way through the frozen wastes of Alaska and British America. The fact that Leif, son of the Northman, Eric the Red, did discover America in the year 1000 A.D. has make work for the pseudo-ethnologists as well as the poets in the scratchings on the Dighton rocks in Massachusetts, and the old mill at Newport, R. I., and has even led to the factitious discovery of supposed inscriptions upon the face of the masses of Seneca sandstone at the falls of the Potomac. The Norsemen themselves encouraged the belief that on the Atlantic coast, between Virginia and Florida, a white nation existed, who clothed themselves in long, snowy robes, carried banners on lofty poles, and chanted songs and hymns. These were supposed to be the Irish immigrants, who replied in pure Gaelic when Raleigh's seamen accosted them, and spared Owen Chapelain's life in 1669 because he spoke to them in Welsh. Alexander von Humboldt has condescended to listen to some of these fables, and to repeat them in his Cosmos. The Chinese or Japanese settlement of our continent, by vessels coming over the Pacific Ocean, has found many advocates. Spanish legends are adduced to confirm this view. M. de Guignes, in a memoir read before the French Academy of Inscriptions, contends that the Chinese penetrated to America A.D. 458, and adduces the description and chart of Fou Sang in proof. In our own day that ripe Philadelphia scholar, Charles G. Leland, has republished the story of the so-called island of Fou-Sang and its inhabitants. De Guignes holds that the Chinese were familiar with the Straits of Magellan, and that the Coreans had a settlement on Terra del Fuego. Another Chinese immigration is assigned to A.D. 1270, the time of the Tartar invasion of the "Central Flowery Kingdom." But there are other speculations still on this subject. Thomas Morton, in his "New Canaan" (A.D. 1637), argues for the Latin origin of the Indians, because he heard them use Latin words, and make allusions to the god Pan. Williamson thinks that the race unquestionably springs from a Hindoo or a Cingalese source. Thorowgood, Adair, and Boudinot agree with Penn and Rabbi ben Menasseh. Roger Williams also said, "Some taste of affinity with the Hebrew I have found." Cotton Mather thought that "probably the Devil, seducing the first inhabitants of America into it, therein aimed at the having of them and their posterity out of the sound of the silver trumpets of the gospel, then to be heard throughout the Roman empire. If the Devil had any expectation that by the peopling of America he should utterly deprive any Europeans of the two benefits, literature and religion, which dawned upon the miserable world (one just before, the other just after the first famed navigation hither), 'tis to be hoped he will be disappointed of that expectation." As for the source of the Indians, Mather fancied them Scythians, because they answered Julius Cæsar's description of "*difficilius invenire quam interficere.*" But the fact of idle and comical opinions on this subject does not destroy the interest in these speculations, nor the utility of continuing our investigations, on a rational basis, into American archæology.

[The Algonkins, the Lenni Lenapes in Pennsylvania, were also variously called *Wapanacki* (European corruptions: *Openaki*, *Openagi*, *Abenaquis*, *Apenakis*). The Delaware regions appear to have been their principal seat, though affiliated and derivative nations of their stock were found from Hudson's Bay to Florida, and from Lake Superior to East Tennessee. Forty tribes acknowledged the Lenapes as grandfather or parent stock. Their traditions, which are not always authentic, relate

dwelt among the primitive forests of Pennsylvania, as well as those of Delaware, New Jersey, and a part of Maryland, called themselves the Lenni Lenape, or the original people. This general name comprehended numerous distinct tribes, all speaking dialects of a common language (the Algonkin), and uniting around the same great council-fire. Their grand council-house, to use their own expressive figure, extended from the eastern bank of the Hudson on the northeast to the Potomac on the southwest. Many of the tribes were directly descended from the common stock; others, having sought their sympathy and protection, had been allotted a section of their territory. The surrounding tribes not of this confederacy, nor acknowledging allegiance to it, agreed in awarding to them the honor of being the *grandfathers;* that is, the oldest residents in this region. There was an obscure tradition among the Lenni Lenape that in ages past their ancestors had emigrated eastward from the Mississippi, conquering or expelling on their route that great and apparently more civilized nation whose monuments, in the shape of mounds, are so profusely scattered over the great Western valley, and of which several also remain in Pennsylvania along the western slope of the Alleghany Mountains. The Lenni Lenape nation was divided into three principal divisions,—the Unamis, or Turtle tribes; the Unalachtgos, or Turkeys; and the Monseys, or Wolf tribes. The two former occupied the country along the coast between the sea and the Kittatinny or Blue Mountain, their settlement extending as far east as the Hudson and as far west as the Potomac. These were generally known among the whites as the Delaware Indians. The Monseys, or Wolf tribes, the most active and warlike of the whole, occupied the mountainous country between the Kittatinny Mountain and the sources of the Susquehanna and Delaware Rivers, kindling their council-fire at the Minisink flats on the Delaware above the Water Gap. A part of the tribe also dwelt on the Susquehanna, and they had also a village and a peach-orchard in the Forks of the Delaware, where Nazareth is now situated. These three principal divisions were divided into various subordinate clans, who assumed names suited to their character or situation.

The Shawanos, or Shawanees, a restless and ferocious tribe, having been threatened with extermination by a more powerful tribe at the South, sought protection among the friendly nations of the North, whose language was observed to bear a remarkable affinity with their own. A majority of them settled along the Ohio, from the Wabash to near Pittsburgh. A portion was received under the protection of the Lenni Lenapes, and permitted to settle near the Forks of the Delaware and on the flats below Philadelphia. But they soon became troublesome neighbors, and were removed by the Delawares (or possibly by the

that the tribe once upon a time dwelt in the far distant wilds of the West, whence they moved eastward towards sunrise by slow stages, often passing a year in a single camp, but eventually reaching the bank of the *Namesi Sipu*, the River of Fish (Mississippi), where they found the Mengwes or Iroquois, migrating like themselves, but who had descended from the northwest. The Lenape scouts reported the country east of the river to be held by a people called the *Allegewi* (whence the name Allegheny River and Mountains), who were numerous, tall, stout, some of them giants, all dwelling in intrenched or fortified towns. The Lenape were denied leave to settle among the Allegewi, but obtained permission to pass through their country. When they were half over the river, however, the Allegewi attacked and drove them back with great loss. The Lenape now formed an alliance with the Mengwe; the two nations united forces, crossed the river, attacked the Allegewi, and after a long and desperate war defeated them and expelled them from their country, they fleeing southward. The conquered country was apportioned between the conquerors, the Mengwes choosing the northern part, along the lakes, the Lenapes choosing the more southern section, binding on both sides of the Ohio. Moving eastward still, they came finally to the Delaware River and the ocean, and thence spread beyond the Hudson on the north and beyond the Potomac on the south. This legend, however, is full of inconsistencies and incompatibilities, and hardly answers to what was known of the condition and location of the great Algonkin race at the time of the first settlement of the whites among them. As to their origin as members of the human family, they have divers legends. They claim to have come out of a cave in the earth, like the woodchuck and the chipmuck; to have sprung from a snail that was transformed into a human being and taught to hunt by a kind Manitou, after which it was received into the lodge of the beaver and married the beaver's favorite daughter. In another myth a woman is discovered hovering in mid-air above the watery waste of chaos. She has fallen or been expelled from heaven, and there is no earth to offer her a resting-place. The tortoise, however, rose from the depths and put his broad, shield-like back at her service, and she descended upon it and made it her abode, for its dome-like oval resembled the first emergence of dry land from the waters of the deluge. The tortoise slept upon the deep, and round the margin of his shell the barnacles gathered, the scum of the sea collected, and the floating fragments of the shredded sea-weed accumulated until the dry land grew apace, and by and by there was all that broad expanse of island which now constitutes North America. The woman, weary of watching, worn out with sighs for her lonesomeness, dropped off into a tranquil slumber, and in that sleep she dreamed of a spirit who came to her from her lost home above the skies, and of that dream the fruits were sons and daughters, from whom have descended the human race. Another legend personifies the Great Spirit under the form of a gigantic bird that descended upon the face of the waters, and brooded there until the earth arose. Then the Spirit, exercising its creative power, made the plants and animals, and lastly man, who was formed out of the integuments of the dog, and endowed with a magic arrow that was to be preserved with great care, for it was at once a blessing and a safeguard. But the man carelessly lost the arrow, whereupon the Spirit soared away upon its bird-like wings and was no longer seen, and man had henceforth to hunt and struggle for his livelihood. Manabozho, relates the general Algonkin tradition, created the different tribes of red men out of the carcasses of different animals, the beaver, the eagle, the wolf, the serpent, the tortoise, etc. Manabozho, Messou, Michaboo, or Nanabush is a demi-god who works the metamorphoses of nature. He is the king of all the beasts; his father was the west wind, his mother the moon's great-grandfather, and sometimes he appears in the form of a wolf or a bird, but his usual shape is that of the Gigantic Hare. Often Manabozho masquerades in the figure of a man of great endowments and majestic stature, when he is a magician after the order of Prospero; but when he takes the form of some impish elf, then he is more tricksy than Ariel, and more full of hobgoblin devices than Puck. "His powers of transformation are without limit; his curiosity and malice are insatiable;" he has inspired a thousand legends; he is the central figure in the fairy realm of the Indian, which, indeed, is not very fully nor genially peopled. Manabozho is the restorer of the world, submerged by a deluge which the serpent-manitous have caused. Manabozho climbs a tree, saves himself, and sends a loon to dive for mud from which he can make a new world. The loon fails to reach the bottom; the muskrat, which next attempts the feat, returns lifeless to the surface, but with a little sand in the bottom of its paw, from which the Great Hare is able to recreate the world. In other legends the otter and beaver dive in vain, but the muskrat succeeds, losing his life in the attempt.]—*Scharf's History of Philadelphia.*

Six Nations) to the Susquehanna Valley, where they had a village at the Shawnee flats, below Wilkesbarre, on the west side of the river. During the Revolution and the war of 1812 their name became conspicuous in the history of the Northern frontier. The Lenni Lenape tribes consisted, at the first settlement of Pennsylvania, of the Assunpink, or Stony Creek Indians; the Rankokas (Lamikas or Chichequaas); Andastakas, at Christiana Creek, near Wilmington; Neshaminies, in Bucks County; Shackamaxons, about Kensington; Mantas, or Frogs, near Burlington; the Tuteloes and Nanticokes, in Maryland and Virginia (the latter afterwards removed up the Susquehanna); the Monseys, or Minisinks, near the Forks of the Delaware; the Mandes and the Narriticongs, near the Raritan; the Capitanasses, the Gacheos, the Monseys, and the Pomptons, in New Jersey. A few scattered clans or warlike hordes of the Mingoes were living here and there among the Lenapes. Another great Indian confederacy claims attention, whose acts have an important bearing upon the history of Pennsylvania. This confederacy was originally known in the annals of New York as the Five Nations, and subsequently, after they had been joined by the Tuscaroras, as the Six Nations. As confederates they called themselves Aquanuschioni, or United People. By the Lenapes they were called Mengue, or Mingoes, and by the French the Iroquois. The original Five Nations were the Onondagas, the Cayugas, the Oneidas, the Senecas, and the Mohawks. In 1712 the Tuscaroras, being expelled from the interior of North Carolina and Virginia, were adopted as a sixth tribe. The language of all the tribes of the confederacy, except the Tuscaroras, was radically the same, and different from that of the Lenni Lenape. Their dominion stretched from the borders of Vermont to Lake Erie, and from Lake Ontario to the head-waters of the Allegheny, Susquehanna, and Delaware Rivers. This territory they styled their *long house*. The grand council-fire was held in the Onondaga Valley. The Senecas guarded the western door of the house, the Mohawks the eastern, and the Cayugas the southern, or that which opened upon the Susquehanna. The Mohawk nation was the first in rank, and to it appertained the office of principal war chief; to the Onondagas, who guarded the grand council-fire, appertained in like manner the office of principal civil chief, or chief sachem. The Senecas, in numbers and military energy, were the most powerful.

The peculiar location of the Iroquois gave them an immense advantage. On the great channels of water conveyance, to which their territories are contiguous, they were enabled in all directions to carry war and devastation to the neighboring or to the more distant nations. Nature had endowed them with a height, strength, and symmetry of person which distinguished them at a glance among the individuals of other tribes. They were as brave as they were strong, but ferocious and cruel when excited in savage warfare; crafty, treacherous, and over-reaching when these qualities best suited their purpose. The proceedings of their grand council were marked with great decorum and solemnity. In eloquence, in dignity, and profound policy their speakers might well bear comparison with the statesmen of civilized assemblies. By an early alliance with the Dutch on the Hudson they secured the use of fire-arms, and were thus enabled not only to repel the encroachments of the French, but also to exterminate or reduce to a state of vassalage many Indian nations. From these they exacted an annual tribute or acknowledgment of fealty, permitting them, however, on that condition to occupy their former hunting-grounds. "The humiliation of tributary nations was, however, tempered with a paternal regard for their interests in all negotiations with the whites, and care was taken that no trespasses should be committed on their rights, and that they should be justly dealt with." To this condition of vassalage the Lenni Lenape or Delaware nation had been reduced by the Iroquois, as the latter asserted, by conquest. The Lenapes, however, smarting under the humiliation, invented for the whites a cunning tale in explanation, which they succeeded in imposing upon the worthy and venerable Mr. Heckewelder, the Moravian missionary. Their story was that by treaty and by voluntary consent they had agreed to act as mediators and peace-makers among the other great nations, and to this end they had consented to lay aside entirely the implements of war, and to hold and to keep bright the chain of peace. This, among individual tribes, was the usual province of women. The Delawares therefore alleged that they were *figuratively* termed women on this account; but the Iroquois evidently called them women in quite another sense. "They always alleged that the Delawares were conquered by their arms, and were compelled to this humiliating concession as the only means of averting impending destruction." In the course of time, however, the Delawares were enabled to throw off the galling yoke, and at Tioga, in the year 1756, Teedyuscung extorted from the Iroquois chiefs an acknowledgment of their independence. This peculiar relation between the Indian nation that occupied, and that which claimed a paramount jurisdiction over, the soil of Pennsylvania tended greatly to embarrass and complicate the negotiations of the Proprietary government for the purchase of lands, and its influence was seen and felt both in the civil and military history of Pennsylvania until after the close of the Revolution.

George Alsop, in his tract called "A Character of the Province of Maryland" (London, 1666), devotes a chapter to "A Relation of the Customs, Manners, Absurdities, and Religion of the Susquehannock Indians in and near Maryland." These were the Mengwes of Campanius, and the Susquesahannoughs

of Capt. Smith. Alsop says they are regarded as "the most Noble and Heroick Nation of Indians that dwell upon the confines of America; also are so allowed and lookt upon by the rest of the Indians, by a submission and tributary acknowledgment, being a people cast into the mould of a most large and warlike deportment, the men being for the most part seven foot high in altitude and in magnitude and bulk suitable to so high a pitch; their voyce large and hollow, as ascending out of a Cave, their gate and behavior straight, steady, and majestick, treading on the Earth with as much pride, contempt, and disdain to so sordid a Centre as can be imagined from a creature derived from the same mould and Earth." They go naked summer and winter, says Alsop, "only where shame leads them by a natural instinct to be reservedly modest, there they become cover'd. The formality of Jezabel's artificial Glory is much courted and followed by these Indians, only in matter of colours (I conceive) they differ." They paint their faces in alternate streaks of different colors, and Alsop thinks, with other early writers, that their skins are naturally white but changed to red and cinnamon-brown by the use of pigments. Their hair is "black, long, and harsh," and they do not permit it to grow anywhere except upon the head. The Susquehannas tattooed their arms and breasts with their different totems, "the picture of the Devil, Bears, Tigers, and Panthers. They are great warriors, always at war, and keep their neighbors in subjection." Their governernment is complex and hard to make out; "all that ever I could observe in them as to this matter is, that he that is most cruelly Valorous is accounted the most Noble," which is a very good approximation of the fact that the war-chief derives his rank or influence from his deeds. Our author adds that when they determine to go upon some Design that will and doth require a consideration, some six of them get into a Corner and sit in Juncto, and if thought fit their business is made popular and immediately put in action; if not, they make a full stop to it, and are silently reserv'd. On the war-path they paint and adorn their persons, first well greased; their arms, the hatchet and fusil, or bow and arrows. Their war parties are small; they march out from their fort singing and whooping; if they take prisoners they treat them well, but dress them and anoint them so that they may be ready for the stake and torture when their captors return home. Alsop gives a full account of the process of torture, and declares that prisoners are hacked to pieces and eaten by the warriors. The religion of the Susquehannas Alsop regarded as an absurd and degrading superstition, they being devil-worshipers; but he admits that, "with a kind of wilde imaginary conjecture, they suppose from their groundless conceits that the World had a Maker." They sacrifice a child to the devil every four years, and their medicine-men have great influence among them. Their dead are buried sitting, face due west, and all their weapons, etc., around them. The houses of the Susquehannas "are low and long, built with the bark of trees arch-wise, standing thick and confusedly together." The hunters go on long winter hunts; the women are the menials and drudges, and yet they are commended for their beauty of form, and their husbands are said to be very constant to them. "Their marriages," says Alsop, in conclusion, "are short and authentique; for after 'tis resolv'd upon by both parties, the Woman sends her intended Husband a kettle of boil'd Venison, or Bear, and he returns in lieu thereof Beaver or Otter Skins, and so their Nuptial Rites are concluded without other Ceremony."

The Rev. John Campanius, Swedish chaplain of Governor Printz, and who resided on Tinicum Island, near the mouth of the Schuylkill, from 1642 to 1648, gives us in his "Nya Swerige" an excellent account of the Indians, which contains information we have been unable to find in any other work. What adds to the interest of his description is, that he wrote it from his own actual observations, and that, too, at a period dating back nearly to the first landing of the Europeans in this part of the country. His arrival here was forty years previous to the first landing of Penn, or two years before the founder of the colony was born. On account of the rarity of Mr. Campanius' work and its appropriateness, we give place to the following extract:

"Their way of living was very simple. With arrows, pointed with sharp stones, they killed the deer and other creatures. They made axes from stones, which they fastened to a stick, to kill the trees where they intended to plant. They cultivated the ground with a sort of hoe made from the shoulder-blade of a deer or a tortoise-shell, sharpened with stones and fastened to a stick. They made pots of clay, mixed with powdered mussel-shells burned in fire, to prepare their food in. By friction they made fire from two pieces of hard wood. The trees they burnt down and cut into pieces for firewood. On journeys they carried fire a great ways in spunk, or sponges found growing on the trees. They burned down great trees, and shaped them into canoes by fire and the help of sharp stones. Men and women were dressed in skins; the women made themselves under-garments of wild hemp, of which also they made twine to knit the feathers of turkeys, eagles, etc., into blankets. The earth, the woods, and the rivers were the provision stores of the Indians; for they eat all kinds of wild animals and productions of the earth, fowls, birds, fishes, and fruits, which they find within their reach. They shoot deer, fowls, and birds with the bow and arrow; they take the fishes in the same manner; when the waters are high the fish run up the creeks and return at ebb-tide, so that the Indians can easily shoot them at low water and drag them ashore."

"They eat, generally, but twice a day, morning and afternoon; the earth serves them for tables and chairs. They sometimes broil their meat and their

fish, other times dry them in the sun, or in the smoke, and thus eat them. They make bread out of the maize or Indian corn, which they prepare in a manner peculiar to themselves: they crush the grain between two great stones, or on a large piece of wood; they moisten it with water, and make it into small cakes, which they wrap up in corn-leaves, and thus bake them in the ashes. In this manner they make their bread. The Swedes made use of it when they first came. They can fast, when necessity compels them, for many days. When traveling, or lying in wait for their enemies, they take with them a kind of bread made of Indian corn and tobacco juice, to allay their hunger and quench their thirst in case they have nothing else at hand. The drink, before the Christians came into this country, was nothing but water, but now they are very fond of strong liquors. Both men and women smoke tobacco, which grows in their country in great abundance. They have, besides corn, beans, and pumpkins, a sort of *original dogs* with short pointed ears.

"The American Indians had no towns or fixed places of habitation. They mostly wandered about from one place to another, and generally went to those places where they could find the most likely means of support. In spring and summer they preferred the banks of rivers, where they found plenty of fish; but in winter they went up into the country, where they found abundance of venison. When they travel, they carry their game with them wherever they go, and fix it on poles, under which they dwell. When they want fire they strike it out of a piece of dry wood, of which they find plenty; and in that manner they are never at a loss for fire to warm themselves, or to cook their meat. Their principal articles of furniture are a kettle, in which they boil their meat, and some dishes or plates of bark and cedar-wood, out of which they eat; for drinking they use commonly the shell of the calabash.

"When a Christian goes to visit them in their dwellings, they immediately spread on the ground pieces of cloth and fine mats or skins; then they produce the best they have, as bread, deer, elk, or bear's meat, fresh fish and bear's fat, to serve in lieu of butter, which they generally broil upon the coals. These attentions must not be despised, but must be received with thankfulness, otherwise their friendship will turn to hatred. When an Indian visits his friend, a Christian, he must always uncover his table at the lower end, for the Indian will have his liberty; and he will immediately jump upon the table, and sit on it with his legs crossed, for they are not accustomed to sit upon chairs; he then asks for whatever he would like to eat of. When the Swèdes first arrived the Indians were in the habit of eating the flesh of their enemies. Once on an occasion they invited a Swede to go with them to their habitation in the woods, where they treated him with the best the house afforded. Their entertainment was sumptuous; there was broiled, boiled, and even hashed meat, all of which the Swede partook with them, but it seems it did not well agree with him. The Indians, however, did not let him know what he had been eating; but it was told him some time after by some other Indians, who let him know that he had fed on the flesh of an Indian of a neighboring tribe with whom they were at war."

The earliest purchase by Penn of any part of what now constitutes Montgomery County was made the 25th of June, 1683, of Wingebone, for all his right to lands lying on the west side of the Schuylkill, beginning at the lower falls of the same, and so on up and backwards of said stream as far as his right goes. The next purchase was made the 14th of July of the same year, from Secane and Idquoquehan and others, for all the land lying between the Manayunk or Schuylkill River and Macopanackhan or Chester River, and up as far as the Conshohocken Hill, which is opposite the present borough of that name. On the same day another purchase was made of Neneshickan, Malebore, Neshanocke, and Oscreneon for the lands lying between the Schuylkill and Pennepack streams, and extending as far northwest as Conshohocken, but now better known as Edge Hill. On the 3d of June, 1684, all the right of Maughhongsink to the land along the Perkiomen Creek was duly sold and conveyed. On the 7th of the same month and year, Mettamicont relinquished all his right to lands on both sides of the Pennepack. July 30, 1685, Shakhoppa, Secane, Malebore, and Tangoras conveyed all their right to lands situated between Chester and Pennepack Creeks, and extending up into the country, in a northwest direction from the sources of those streams, two full days' journey. This almost takes in the whole of the county, excepting only that portion lying east of the Pennepack Creek. July 5, 1697, another purchase was made from Tamany, Weheeland, Wehequeekhon, Yaqueekhon, and Quenamockquid for all their right to lands lying between the Pennepack and Neshaminy Creeks, and extending in a northwest direction from the Delaware as far as a horse could travel in two days. Thus was finally extinguished by purchase all the right and title of the Indians to any portion of the soil now embraced within the limits of Montgomery County.

An Indian council was held by previous appointment at the house of Edward Farmer, where is now the village of White Marsh, on the 19th of May, 1712. The Governor, Charles Gookin, was present, with the sheriff, John Budd, Conrad Richard Walker, and others. A delegation of eleven Delaware Indians was present, Sassunan being the principal chief, accompanied by Ealochelan and Scholichy, the latter being speaker. Edward Farmer, who was quite familiar with the Indian language, performed the duties of interpreter. Scholichy, in his address to the Governor, mentioned that as the Delawares had been made tributary to the Mingoes, or Five Nations, many

years ago, they had thought proper to call on him previous to their seeing those tribes, and that they had brought their tribute along, which was duly presented to the Governor, and consisted of thirty-two belts of wampum,[1] of various figures, and a long Indian pipe called the calumet, made of stone, the shaft of which was adorned with feathers resembling wings, besides other ornaments. Their business was amicably adjusted to the entire satisfaction of all parties. On this occasion the Governor and his friends, thirteen in number, came from Philadelphia on horseback.

Of their true character, tribal relations, habits of daily life and customs, William Penn has given us graphic pictures. His colonial enterprise necessarily comprehended contact with the race possessing the territory granted to him by his royal benefactor; his intercourse with them was studied to the extent of acquiring a knowledge of their language, hence his observations are of more than usual interest.

DELAWARE INDIAN.

"The natives are proper and shapely, very swift, their language lofty. They speak little, but fervently and with elegancy. I have never seen more naturall sagacity, considering them without y^e^ help—I was going to say y^e^ spoyle—of tradition. The worst is that they are y^e^ wors for y^e^ Christians who have propagated their views and yielded them tradition for y^e^ wors & not for y^e^ better things, they believe a Deity and Immortality without y^e^ help of metaphysicks & some of them admirably sober, though y^e^ Dutch & Sweed and English have by Brandy and Rum almost Debaucht y^m^ all and when Drunk ye most wretched of spectacles, often burning & sometimes murdering one another, at which times y^e^ Christians are not without danger as well as fear. Tho' for gain they will run the hazard both of y^t^ and y^e^ Law, they make their worshipp to consist of two parts, sacrifices w^h^ they offer

[1] Wampum passed as current money between the early whites and Indians. There were two kinds of it, the white and purple. They were both worked into the form of beads, generally each about half an inch long, and one-eighth broad, with a hole drilled through them so as to be strung on leather or hempen strings. The white was made out of the great conch or sea-shell, and the purple out of the inside of the mussel-shell. These beads, we shall call them, after being strung, were next woven by the Indian women into belts, sometimes broader than a person's hand, and about two feet long. It was these that were given and received at their various treaties as seals of friendship; in matters of less importance only a single string was given. Two pieces of white wampum were considered to equal in value one of the purple. The calumet was a large smoking-pipe, made out of some soft stone, commonly of a dark-red color, well polished, and shaped somewhat in the form of a hatchet, and ornamented with large feathers of several colors. It was used in all their treaties with the whites, and it was considered by them as a flag of truce between contending parties, which it would be a high crime to violate. In fact, the calumet by them was considered as sacred and as serious an obligation as an oath among the Christians.

The value of Indian lands at that time to the savages may be gathered from the price paid in 1677 for twenty miles square on the Delaware between Timber and Oldman's Creeks, to wit.: 30 match-coats (made of hairy wool with the rough side out), 20 guns, 30 kettles, 1 great kettle, 30 pair of hose, 20 fathoms of duffels (Duffield blanket cloth, of which match-coats were made), 30 petticoats, 30 narrow hoes, 30 bars of lead, 15 small barrels of powder, 70 knives, 30 Indian axes, 70 combs, 60 pair of tobacco tongs, 60 pair of scissors, 60 tinshaw looking-glasses, 120 awl-blades, 120 fish-hooks, 2 grasps of red paint, 120 needles, 60 tobacco-boxes, 120 pipes, 200 bells, 100 jews-harps, and 6 anchors of rum. The value of these articles probably did not exceed three hundred pounds sterling. But, on the other hand, the Indian titles were really worth nothing, except so far as they served as a security against Indian hostility. It has been said that there is not an acre of land in the eastern part of Pennsylvania the deeds of which cannot be traced up to an Indian title, but that in effect would be no title at all. Mr. Lawrence Lewis, in his learned and luminous "Essay on Original Land Titles in Philadelphia," denies this absolutely, and says that it is "impossible to trace with any accuracy" the titles to land in Philadelphia derived from the Indians. Nor is it necessary to trace a title which is of no value. The Indians could not sell land to individuals and give valid title for it in any of the colonies; they could sell if they chose, but only to the government. Upon this subject the lawyers are explicit. All good titles in the thirteen original colonies are derived from land-grants, made or accepted not by the Indians, but by the British crown. Thus Chalmers (Political Annals, 677) says, "The law of nations sternly disregarded the possession of the aborigines, because they had not been admitted into the society of nations." At the Declaration of Independence (see Dallas' Reports, ii. 470) every acre of land in this country was held, mediately or immediately, by grants from the crown. All our institutions (Wheaton, viii. 588) recognize the absolute title of the crown, subject only to the Indian right of occupancy, and recognize the absolute title of the crown to extinguish that right. An Indian conveyance alone could give no title to an individual. (The references here given are quoted from the accurate Frothingham's "Rise of the Republic.")

of their first fruits with marvellous fervency and labour of holy sweating as if in a bath, the other is their Canticoes, as they call them, w^{ch} is performed by round Dances, sometimes words, then songs, then shouts, two being in ye midle y^{t} begin and direct y^{e} chorus; this they performe with equal fervency but great appearances of joy. In this I admire them, nobody shall want w^{t} another has, yett they have propriety (property) but freely communicable, they want or care for little, no Bills of Exchange nor Bills of Lading, no Chancery suits nor Exchequer Acct, have they to perplex themselves with, they are soon satisfied, and their pleasure feeds them,—I mean hunting and fishing."

This letter is made much more full in the one to the Free Society of Traders, written in August of the same year. The natives, Penn says, are generally tall, straight in their person, "well built, and of singular proportion [*i.e.*, of symmetry]; they tread strong and clever, and mostly walk with a lofty chin.[1] Of complexion black, but by design, as the gipsies in England. They grease themselves with bear's fat clarified, and using no defence against sun and weather, their skins must needs be swarthy. Their eye is livid and black, not unlike a straight-looked Jew. The thick lips and flat nose, so frequent with the East Indians and black, are not common to them; for I have seen as comely European-like faces among them, of both sexes, as on your side the sea; and truly an Italian complexion hath not more of the white; and the noses of several of them have as much of the Roman. Their language is lofty, yet narrow; but, like the Hebrew, in signification full. Like shorthand in writing, one word serveth in the place of three, and the rest are supplied by the understanding of the hearer; imperfect in their tenses, wanting in their moods, participles, adverbs, conjunctions, and interjections. I have made it my business to understand it, that I might not want an interpreter on any occasion; and I must say that I know not a language spoken in Europe that hath words of more sweetness or greatness, in accent and emphasis, than theirs; for instance, Octockekon, Rancocas, Oricton, Shak, Marian, Poquesian, all which are names of places, and have grandeur in them. Of words of sweetness, *anna* is mother; *issimus*, a brother; *neteap*, friend; *usqueoret*, very good; *pane*, bread; *metsa*, eat; *mattu*, no; *hatta*, to have; *payo*, to come; Sepassen, Passijon, the names of places; Tamane, Secane, Menanse, Secatareus are the names of persons. If one ask them for anything they have not, they will answer, *matta ne hatta*, which, to translate, is 'not I have,' instead of 'I have not.'

"Of their customs and manners there is much to be said. I will begin with children. So soon as they are born they wash them in water, and while very young and in cold weather to choose, they plunge them in the rivers to harden and embolden them. Having wrapt them in a clout, they lay them on a strait thin board a little more than the length and breadth of the child, and swaddle it fast upon the board to make it straight; wherefore all Indians have flat heads; and thus they carry them at their backs. The children will go [walk] very young, at nine months commonly. They wear only a small clout around their waist till they are big. If boys, they go a-fishing till ripe for the woods, which is about fifteen. There they hunt; and having given some proofs of their manhood by a good return of skins, they marry; else it is a shame to think of a wife. The girls stay with their mothers, and help to hoe the ground, plant corn, and carry burthens; and they do well to use them to that, while young, which they must do when they are old; for the wives are the true servants of the husbands; otherwise the men are very affectionate to them. When the young women are fit for marriage they wear something upon their heads for an advertisement, but so as their faces are hardly to be seen but when they please. The age they marry at, if women, is about thirteen and fourteen; if men, seventeen and eighteen. They are rarely older. Their houses are mats or barks of trees, set on poles in the fashion of an English barn, but out of the power of the winds, for they are hardly higher than a man. They lie on reeds or grass. In travel they lodge in the woods about a great fire, with the mantle of duffils they wear by day wrapt about them and a few boughs stuck round them. Their diet is maize or Indian corn divers ways prepared, sometimes roasted in the ashes, sometimes beaten and boiled with water, which they call *homine*. They also make cakes not unpleasant to eat. They have likewise several sorts of beans and peas that are good nourishment, and the woods and rivers are their larder. If an European comes to see them, or calls for lodging at their house or wigwam, they give him the best place and first cut. If they come to visit us they salute us with an *Itah!* which is as much as to say, 'Good be to you!' and set them down, which is mostly on the ground, close to their heels, their legs upright; it may be they speak not a word, but observe all passages [all that passes]. If

[1] Penn had noticed a singularity in the Indians' gait, yet did not detect what it was; yet it is so obvious that a few years back, in Kentucky, where the people still walk like the Indians, even a school-boy would recognize a person from the East by differences in his way of walking from the way of those to the manner born. The Indian steps with a perfectly straight foot and without turning his toes out, so that if the sun were upon his back the shadow of his shanks would entirely cover his feet. This tread is the antithesis of that of the sailor, who walks with his toes very much turned out, and the European and the Eastern man walks like him. In both cases convenience and propriety are suited: the sailor, by his mode of locomotion, is enabled to tread more firmly and safely upon an uncertain deck that is always uneasy; the Indian, by his mode, is able to walk more safely the narrow forest path, and to step also with greater stealth and softness in pursuit of his enemy and his game where leaves to rustle and twigs to break are numerous. But the difference is that the sailor "rolls" in his gait and his shoulders swing from side to side, while the Indian's walk makes him carry himself singularly straight, his shoulders never diverging from a perpendicular. This little circumstance added materially to the outward appearance of gravity in the savage's general demeanor.

you give them anything to eat or drink, well, for they will not ask; and, be it little or much, if it be with kindness, they are well pleased; else they go away sullen, but say nothing. They are great concealers of their own resentments, brought to it, I believe, by the revenge that hath been practiced among them. In either of these they are not exceeded by the Italians. A tragical instance fell out since I came into the country. A king's daughter, thinking herself slighted by her husband in suffering another woman to lie down between them, rose up, went out, plucked a root out the ground, and ate it, upon which she immediately died; and for which, last week, he made an offering to her kindred for atonement and liberty of marriage, as two others did to the kindred of their wives, who died a natural death; for till widowers have done so they must not marry again. Some of the young women are said to take undue liberty before marriage for a portion; but when married, chaste. When with child they know their husbands no more till delivered; and during their month they touch no meat, they eat but with a stick, lest they should defile it; nor do their husbands frequent them till that time be expired.

"But in liberality they excel; nothing is too good for their friend; give them a fine gun, coat, or other thing, it may pass through twenty hands before it sticks; light of heart, strong affections, but soon spent. The most merry creatures that live, feast and dance perpetually; they never have much, nor want much; wealth circulateth like the blood; all poets partake; and though none shall want what another hath, yet exact observers of property. Some kings have sold, others presented me with several parcels of land; the pay or presents I made them were not hoarded by the particular owners; but the neighboring kings and their clans being present when the goods were brought out, the parties chiefly concerned consulted what and to whom they should give them. To every king then, by the hands of a person for that work appointed, is a proportion sent, so sorted and folded, and with that gravity that is admirable. Then that king subdivideth it in like manner among his dependants, they hardly leaving themselves an equal share with one of their subjects; and be it on such occasions as festivals, or at their common meals, the kings distribute, and to themselves last. They care for little, because they want but little; and the reason is, a little contents them. In this they are sufficiently revenged on us; if they are ignorant of our pleasures, they are also free from our pains. . . . Since the Europeans came into these parts they are grown great lovers of strong liquors, rum especially, and for it they exchange the richest of their skins and furs. If they are heated with liquors they are restless till they have enough to sleep,—that is their cry, *Some more and I will go to sleep;* but when drunk one of the most wretched spectacles in the world!

"In sickness, impatient to be cured; and for it give anything, especially for their children, to whom they are extremely natural. They drink at these times a *tisan*, or decoction of some roots in spring-water; and if they eat any flesh it must be of the female of any creature. If they die they bury them with their apparel, be they man or woman, and the nearest of kin fling in something precious with them as a token of their love. Their mourning is blacking of their faces, which they continue for a year. They are choice of the graves of their dead, for, lest they should be lost by time and fall to common use, they pick off the grass that grows upon them, and heap up the fallen earth with great care and exactness. These poor people are under a dark night in things relating to religion; to be sure the tradition of it; yet they believe a God and immortality without the help of metaphysics, for they say, 'There is a Great King that made them, who dwells in a glorious country to the southward of them, and that the souls of the good shall go thither where they shall live again.' Their worship consists of two parts, sacrifice and cantico. Their sacrifice is their first fruits; the first and fattest buck they kill goeth to the fire, where he is all burnt, with a mournful ditty of him that performeth the ceremony, but with such marvellous fervency and labor of body that he will even sweat to a foam. The other part is their cantico, performed by round dances, sometimes words, sometimes songs, then shouts, two being in the middle that begin, and by singing and drumming on a board direct the chorus. Their postures in the dance are very antick and differing, but all keep measure. This is done with equal earnestness and labor, but great appearance of joy. In the fall, when the corn cometh in, they begin to feast one another. There have been two great festivals already, to which all come that will. I was at one myself; their entertainment was a great seat by a spring under some shady trees, and twenty bucks, with hot cakes of new corn, both wheat and beans, which they make up in a square form in the leaves of the stem and bake them in the ashes, and after that they fall to dance. But they that go must carry a small present in their money; it may be sixpence, which is made of the bone of a fish; the black is with them as gold, the white silver; they call it all wampum.

"Their government is Kings, which they call Sachama, and these by succession, but always on the mother's side.[1] For instance, the children of

[1] Notwithstanding this mode of succession of their kings, yet for extraordinary reasons it was sometimes altered, of which appears an instance in S. Smith's "History of New Jersey," in the case of the old king Ockanickon, who died at Burlington, in that province, about the year 1681. Before his death he altered the succession, and instead of Sheoppy and Swampis, who, in regular order, were to have succeeded him, he, for reasons in his speech there given, appointed his brother's son, Fahkurfoe, to succeed him, giving him some excellent advice on the occasion. This king, as there related, soon after this made a good and pious exit, and his remains were interred in the Quakers' burying-ground at that place, being attended to the grave with solemnity by the Indians, in their manner, and with great respect by many of the English settlers, to whom he had been a true friend.

him who is now king will not succeed, but his brother by the mother, or the children of his sister, whose sons (and after them the children of her daughters) will reign, for woman inherits. The reason they render for this way of descent is, that their issue may not be spurious. Every King hath his Council, and that consists of all the old and wise men of his nation, which, perhaps, is two hundred people. Nothing of moment is undertaken, be it war, peace, selling of land, or traffick, without advising with them, and, which is more, with the young men too. It is admirable to consider how powerful the Kings are, and yet how they move by the breath of their people. I have had occasion to be in council with them upon treaties of land, and to adjust the terms of trade. Their order is thus: The king sits in the middle of an half moon, and hath his council, the old and wise, on each hand; behind them, or at a little distance, sit the younger fry in the same figure. Having consulted and resolved their business, the King ordered one of them to speak to me; he stood up, came to me, and, in the name of his King, saluted me; then took me by the hand and told me, 'He was ordered by his King to speak to me, and that now it was not he, but the King that spoke; because what he should say was the King's mind.' He first prayed me 'to excuse them, that they had not complied with me the last time, he feared there might be some fault in the Interpreter, being neither Indian nor English; besides, it was the Indian custom to deliberate and take up much time in council before they resolve, and that if the young people and owners of the land had been as ready as he, I had not met with so much delay.' Having thus introduced his matter, he fell to the bounds of the land they had agreed to dispose of and the price, which now is little and dear, that which would have bought twenty miles not buying now two. During the time that this man spoke not a man of them was observed to whisper or smile, the old grave, the young reverent in their deportment. They speak little but fervently, and with elegance. I have never seen more natural sagacity, considering them without the help (I was going to say the spoil) of tradition, and he will deserve the name of wise that outwits them in any treaty about a thing they understand. When the purchase was agreed great promises passed between us, 'of kindness and good neighborhood, and that the Indians and English must live in love as long as the sun gave light,' which done, another made a speech to the Indians in the name of all the Sachemakers or Kings, first to tell what was done, next to charge and command them 'to love the Christians, and particularly live in peace with me and the people under my government; that many governors had been in the river, but that no Governor had come himself to live and stay here before, and having now such an one, that had treated them well, they should never do him or his any wrong,' at every sentence of which they shouted and said Amen in their way. The justice they have is pecuniary. In case of any wrong or evil fact, be it murder itself, they atone by feasts and presents of their wampum, which is proportioned to the quality of the offence, or the person injured, or of the sex they are of. For in case they kill a woman they pay double, and the reason they render is, 'that she breedeth children, which men cannot do.' It is rare they fall out if sober, and if drunk they forgive it, saying, 'It was the drink, and not the man, that abused them.'

"We have agreed that in all differences between us six of each side shall end the matter. Do not abuse them, but let them have justice and you win them. The worst is that they are the worse for the Christians, who have propagated their vices and yielded their traditions for ill and not for good things. But as low an ebb as these people are at, and as inglorious as their own condition looks, the Christians have not outlived their sight, with all their pretensions to an higher manifestation. What good, then, might not a good people graft where there is so distinct a knowledge left between good and evil? I beseech God to incline the hearts of all that come into these parts, to outlive the knowledge of the natives, by a fixed obedience to their greater knowledge of the will of God, for it were miserable indeed for us to fall under the just censure of the poor Indians' conscience, while we make profession of things so far transcending.

"For their original, I am ready to believe them of the Jewish race; I mean, of the stock of the ten tribes, and that for the following reasons: First, they were to go to a 'land not planted nor known'; which, to be sure, Asia and Africa were, if not Europe, and He that intended that extraordinary judgment upon them might make the passage not uneasy to them, as it is not impossible in itself, from the easternmost parts of Asia to the westernmost of America. In the next place, I find them of the like countenance, and their children of so lively resemblance that a man would think himself in Duke's Place, or Berry Street, in London, when he seeth them. But this is not all: they agree in rites; they reckon by moons; they offer their first fruits; they have a kind of feast of tabernacles; they are said to lay their altar upon twelve stones; their mourning a year; customs of women, with many other things that do not now occur."

The researches of John Gilmary Shea, Francis Parkman, and others who have given a special and intelligent attention to the subject, have established the fact that the tribe called Minquas or Minquosy by the Dutch (in the Latin of De Laet, *Machoeretini*), Mengwes by the Swedes (the English corruption of which was Mingoes), Susquehannocks or Susquehannoughs (Sasquesahannogh is the rendering by Capt. John Smith) by the Marylanders, and Andastés or Gandastogues (corrupted in Pennsylvania into Conestogas) was a branch of the Iroquois nation, settled

above tide on the Susquehanna and Potomac Rivers. This ambitious race of savages, inspired with a conquering instinct which put them on a par with the ancient Romans, not only consolidated its strength at home by a political and military confederacy, but extended its power and influence abroad by the establishment of military colonies, just as republican Rome was in the habit of doing. One of these colonies constituted the tribe of the Tuscaroras, occupying part of North Carolina and Georgia, upon the flanks of the Cherokee nation. Another was the Nottaways, south of the James River, in Virginia. A third colony was the tribe of the Nanticokes, afterwards (in Pennsylvania) known as the Conoys, who held the Delaware and Eastern Shore of Maryland peninsula from the Brandywine southward. They were joined on the north by the Minquas or Susquehannas, whose "fort" was on the Susquehanna River at or near the mouth of Conestoga Creek. The Huron Iroquois of Canada were of this same nation, which thus occupied a belt of territory from north to south extending from Lake Simcoe to the southern limits of North Carolina, all in the country of the Algonkins, yet as distinctly separate from them by difference of language, character, and habit as a vein of trap rock in a body of gneiss or granite. The Andastés (to call them by their own tribal name, *Andasta* meaning a cabin-pole, and the tribe wishing to imply by it that they were house-builders rather than dwellers in lodges), like the Lenapes, claimed a Western origin, and they were the most warlike race upon the continent, proud and haughty as the Romans whom they so closely resembled, and, like them, enabled to conquer by their compact military and civil organization. Other tribes were split into small bands, between which there was only a feeble and defective concert and unity of action. The Iroquois, on the other hand, were a nation, and wherever we find them we discover that they lived and acted together in co-operative union. In Pennsylvania, for example, in all the land purchases made by Dutch, Swedes, and English, we find the Minquas acting as one tribe, dealing as one people and one name, whereas with the Lenapes each petty chief seemed to do what was best in his own sight. Tamine or Tamanend was probably the great chief of the Lenapes in the time of Penn, and his supreme authority was manifest in the councils, but when it came to selling land he was no more than on a level with the twenty or thirty sachems who signed their marks to the deeds of conveyance for the various tracts.

Their industrial arts were of the most primitive character. Their tools and implements were made of stone, many of which are models of proportion, design, and neatness of finish. Campanius says,—

"They make their bows with the limb of a tree, of about a man's length, and their bow-strings out of the sinews of animals; they make their arrows out of a reed a yard and a half long, and at one end they fix in a piece of hard wood of about a quarter's length, at the end of which they make a hole to fix in the head of the arrow, which is made of black flint-stone, or of hard bone or horn, or the teeth of large

DELAWARE INDIAN FAMILY.
[From Campanius' "New Sweden."]

fishes or animals, which they fasten in with fish glue in such a manner that the water cannot penetrate; at the other end of the arrow they put feathers. They can also tan and prepare the skins of animals, which they paint afterwards in their own way. They make much use of painted feathers, with which they adorn their skins and bed-covers, binding them with a kind of network, which is very handsome, and fastens the feathers very well. With these they make light and warm clothing and covering for themselves; with the leaves of Indian corn and reeds they make purses, mats, and baskets, and everything else that they want. . . . They make very handsome and strong mats of fine roots, which they paint with all kinds of figures;

they hang their walls with these mats, and make excellent bed-clothes out of them. The women spin thread and yarn out of nettles, hemp, and some plants unknown to us. Governor Printz had a complete set of clothes, with coat, breeches, and belt, made by these barbarians with their wampum, which was curiously wrought with figures of all kinds of animals. . . . They make tobacco-pipes out of reeds

about a man's length; the bowl is made of horn, and to contain a great quantity of tobacco. They generally present these pipes to their good friends when they come to visit them at their houses and wish them to stay some time longer; then the friends cannot go away without having first smoked out of the pipe. They make them, otherwise, of red, yellow, and blue clay, of which there is a great quantity in the country; also of white, gray, green, brown, black, and blue stones, which are so soft that they can be cut with a knife. . . . Their boats are made of the bark of cedar and birch trees, bound together and lashed very strongly. They carry them along wherever they go, and when they come to some creek that they want to get over they launch them and go whither they please. They also used to make boats out of cedar trees, which they burnt inside and scraped off the coals with sharp stones, bones, or muscle shells."

Charles Thompson,[1] who enjoyed the confidence of the Indians, and whose good offices in effecting purchases of land were often invoked, and who frequently spent days and weeks among them unattended, refers to their want of knowledge in the metallic arts. He says,—

"They were perfect strangers to the use of iron. The instruments with which they dug up the ground were of wood, or a stone fastened to a handle of wood. Their hatchets for cutting were of stone, sharpened to an edge by rubbing, and fastened to a wooden handle. Their arrows were pointed with flint or bones. What clothing they wore was of the skins of animals took in hunting, and their ornaments were principally of feathers. They all painted or daubed their face with red. The men suffered only a tuft of hair to grow on the crown of their head; the rest, whether

[1] He was in fact adopted by them. He took minutes of the conference proceedings in short-hand, and these were so accurate as to be preferred by the commissioners to the official record, and so just to the Indians as to win their profound gratitude. They adopted him into the Lenape nation, and gave him the name of *Wegh-wu-law-wo-end*, "the man who tells the truth."

on their head or faces, they prevented from growing by constantly plucking it out by the roots, so that they always appeared as if they were bald and beardless.

"Many were in the practice of marking their faces, arms, and breast by pricking the skin with thorns and rubbing the parts with a fine powder made of coal (charcoal), which, penetrating the punctures, left an indelible stain or mark, which remained as long as they lived. The punctures were made in figures according to their several fancies. The only part of the body which they covered was from the waist half-way down the thighs, and their feet they guarded with a kind of shoe made of hides of buffaloes or deerskin, laced tight over the instep and up to the ankles with thongs. It was and still continues to be a common practice among the men to slit their ears, putting something into the hole to prevent its closing, and then by hanging weights to the lower part to stretch it out, so that it hangs down the cheek like a large ring. They had no knowledge of the use of silver or gold, though some of these metals were found among the Southern Indians. Instead of money they used a kind of beads made of conch-shell, manufactured in a curious manner. These beads were made, some of the white, some of the black or colored parts of the shell. They were formed into cylinders about one-quarter of an inch long and a quarter of an inch in diameter. They were round and highly polished and perforated lengthwise with a small hole, by which they strung them together and wove them into belts, some of which, by a proper arrangement of the beads of different colors, were figured like carpeting with different figures, according to the various uses for which they were designed. These were made use of in their treaties and intercourse with each other, and served to assist their memory and preserve the remembrance of transactions. When different tribes or nations made peace or alliance with each other they exchanged belts of one sort; when they excited each other to war they used another sort. Hence they were distinguished by the name of peace belts or war belts. Every message sent from one tribe to another was accompanied with a string of these beads or a belt, and the string or belt was smaller or greater according to the weight and importance of the subject. These beads were their riches. They were worn as bracelets on the arms and like chains around the neck by way of ornaments."

When and how the Indians acquired the art of producing fire by friction, prior to the use of flint and steel, remains a great mystery. This element was absolutely essential to their existence in the northern latitudes, and must of necessity have been in use by them. Nature may have supplied them by volcanic eruptions, and once in their possession they may have retained perpetual fires. The discovery of heat, generated by friction, may have been accidental in fallen forest trees moved or swayed by the wind.

"Gen. George Crook has described a fire-stick used by the Indians of the Sierra Nevada and Cascade ranges. 'The fire-stick,' he says, 'consists of two pieces. The horizontal stick is generally from one foot to a foot and a half long, a couple or three inches wide, and about one inch thick, of some soft, dry wood, frequently the sap of the juniper. The upright stick is usually some two feet long and from a quarter to half an inch in diameter, with the lower end round or elliptical, and of the hardest material they can find. In the sage-brush country it is made of "greasewood." When they make fire they lay the first piece in a horizontal position with the flat side down, and place the round end of the upright near the edge of the other stick; then taking the upright between the hands they give it a swift rotary motion, and as constant use wears a hole in the lower stick, they cut a nick in its outer edge down to a level with the bottom of the hole. The motion of the upright works the ignited powder out of this nick, and it is there caught and applied to a piece of spunk or some other highly combustible substance, and from this the fire is started.'"

Of their tribal relations and intercourse Mr. Thompson seems to have been a close observer:

"Almost every nation being divided into tribes, and these tribes subdivided into families, who from relationship or friendship united together and formed towns or clans; these several tribes, families, and towns have commonly each a particular name and chief, or head man, receive messages, and hold conferences with strangers and foreigners, and hence they are frequently considered by strangers and foreigners as distinct and separate nations. Notwithstanding this, it is found upon closer examination and further inquiry that the nation is composed of several of these tribes, united together under a kind of federal government, with laws and customs by which they are ruled. Their governments, it is true, are very lax, except as to peace and war, each individual having in his own hand the power of revenging injuries, and when murder is committed the next relation having power to take revenge, by putting to death the murderer, unless he can convince the chiefs and head men that he had just cause, and by their means can pacify the family by a present, and thereby put an end to the feud. The matters which merely regard a town or family are settled by the chiefs and head men of the town; those which regard the tribe, by a meeting of the chiefs from the several towns; and those that regard the nation, such as the making war or concluding peace with the neighboring nations, are determined on in a national council, composed of the chiefs and head warriors from every tribe. Every tribe has a chief or head man, and there is one who presides over the nation. In every town they have a council-house, where the chief assembles the old men and advises what is best. In every tribe there is a place, which is commonly the town in which the

chief resides, where the head men of the towns meet to consult on the business that concerns them; and in every matter there is a grand council, or what they call a council-fire, where the heads of the tribes and chief warriors convene to determine on peace or war. In these several councils the greatest order and decorum is observed. In a council of a town all the men of the town may attend, the chief opens the business, and either gives his opinion of what is best or takes the advice of such of the old men as are heads of families, or most remarkable for prudence and knowledge. None of the young men are allowed or presume to speak, but the whole assembly at the end of every sentence or speech, if they approve it, express their approbation by a kind of hum or noise in unison with the speaker. The same order is observed in the meetings or councils of the tribes and in the national councils."

Like all barbarous nations, the North American Indians were superstitious. Parkman says, "The sorcerer, by charms, magic songs, magic feats, and the beating of his drum, had power over the spirits and those occult influences inherent in animals and inanimate things. He could call to him the souls of his enemies. They appeared before him in the shape of stones. He chopped and bruised them with his hatchet; blood and flesh issued forth; and the intended victim, however distant, languished and died. Like the sorcerer of the Middle Ages, he made images of those he wished to destroy, and muttering incantations, punctured them with an awl, whereupon the persons represented sickened and pined away."

Subjects of fear as they were under the sorcerer's arts and magic when in health, and pliant patients in the hands of the conjurer when stricken with disease, yet their ruling passion seems to have been that of hate and revenge in the redress of insults and injuries. To gratify this passion of their savage souls time, distance, suffering, peril were but food to feed upon; disappointment and delay only served to increase their thirst for blood when in pursuit of vengeance. "The stealthy blow, the reeking scalp torn from the prostrate victim, the yell of triumph when the deed was done—this was compensation for all. Nor did death suffice; the enemy, public or private, must be tortured, and nothing but his agony and his groans could satiate the wolfish thirst of the savage for blood. His warfare was conducted by stealth and strategy and surprise; he imitated the panther, not the lion, in his assaults, and he lay by his victim and mangled him like the tiger. Sometimes he ate his victim if he was renowned, that all of the valor and virtue of the slain might not be lost, but some of it pass into the slayer's own person. If conquered or wounded to death his stoicism was indomitable; his enemy might see his back in flight, but never behold him flinch under torture; when his finger-nails were plucked out one by one, and the raw skull from which his scalp was torn seared with live coals, and red-hot gun-barrels thrust into the abdominal cavity after he had been disemboweled, he would still sing his death-song and gather breath to hurl a last yell of defiance at his enemy as he expired."

It seems, however, that limitations were imposed upon this passion, at least among themselves, by rules or customs of restraint. Offenses were chiefly against the person, as there were but few property rights to be sinned against among them. Every crime could be condoned. This was possible in case of murder. If murderer and victim belonged to the same clan, it was looked upon as a family quarrel, to be settled by the immediate kin. As a rule, public opinion compelled the acceptance of the atonement in lieu of bloodshed. If the murderer and victim were of different clans, the whole tribe went to work to prevent a feud from arising and leading to more bloodshed. Every effort was made to get the victim's clan to accept the atonement offering. Thirty presents was the price of a man's life, forty for a woman. If the victim belonged to a foreign tribe, the danger of war led to council meetings, formal embassies, and extensive making of actual and symbolical presents.

That the Indians should place a higher estimate upon the life of a woman than the man is in strange contrast with their general character,—perhaps it was because of her greater value to them as a drudge or laborer.

A wild and singular people were the Indians who met our forefathers on the shores of the Delaware and Schuylkill Rivers. Evidences of friendship and comity towards our race they certainly manifested, as also a consciousness of our superior condi-

tion; but, withal, their adult people, rulers and ruled, never yielded to the temptations of wealth, the greater power or higher enjoyments of life as seen in the line of civilization, before which they protestingly retreated, league by league, to the Ohio and Mississippi. For almost four centuries they have stolidly looked on the amazing progress and development of the continent over which they roamed as its proud possessors. Eye-witnesses to the plain and simple forms of government estab-

lished in their very midst upon lands purchased from them, in daily contact with a number of different languages, all far superior to theirs, they remained unaffected; not even war, with all its potentialities, with all its destructive agencies, and in which they were used as factors by their cunning and adroit allies, could wake them from their barbarous inertia. One hope still remains; it is for the youth of the race, who can be educated. Through these there may be a final redemption of the tribes now on the Pacific Slope.

NOTE.—About the year 1710 a Swedish missionary preached a sermon at an Indian treaty held at Conestogoe, in Pennsylvania, in which sermon he set forth original sin, the necessity of a mediator, and endeavored by certain arguments to induce the Indians to embrace the Christian religion. After he had ended his discourse one of the Indian chiefs made a speech in reply to the sermon, and the discourses on both sides were made known by interpreters. The missionary, upon his return to Sweden, published his sermon and the Indian's answer. Having written them in Latin, he dedicated them to the University of Upsal, and requested them to furnish him with arguments to confute such strong reasoning of the Indians. The Indian speech, translated from the Latin, is as follows:

"Since the subject of his (the missionary's) errand is to persuade us to embrace a new doctrine, perhaps it may not be amiss, before we offer him the reasons why we cannot comply with his request, to acquaint him with the grounds and principles of that religion which he would have us abandon. Our forefathers were under a strong persuasion, as we are, that those who act well in this life shall be rewarded in the next, according to the degree of their virtue; and, on the other hand, that those who behave wickedly here will undergo such punishments hereafter as are proportionate to the crimes they were guilty of. This hath been constantly and invariably received and acknowledged for a truth through every successive generation of our ancestors. It could not have taken its rise from fable, for human fiction, however artfully and plausibly contrived, can never gain credit long among any people where free inquiry is allowed, which was never denied by our ancestors, who, on the contrary, thought it the sacred, inviolable, natural right of every man to examine and judge for himself. Therefore we think it evident that our notion concerning future rewards and punishments was either revealed immediately from heaven to some of our forefathers, and from them descended to us, or that it was implanted in each of us at our creation by the Creator of all things. Whatever the methods might have been whereby God hath been pleased to make known to us His will, it is still in our sense a divine revelation. Now we desire to propose to him some few questions. Does he believe that our forefathers, men eminent for their piety, constant and warm in the pursuit of virtue, hoping thereby to merit everlasting happiness, were all damned? Does he think that we, who are their zealous imitators in good works, and influenced by the same motives as they were, earnestly endeavoring with the greatest circumspection to tread the paths of integrity, are in a state of damnation? If these be his sentiments they are surely as impious as they are bold and daring. In the next place, we beg that he would explain himself more particularly concerning the *revelation* he talks of. If he admits no other than what is contained in his *written book*, the contrary is evident from what has been shown before. But if he says God has revealed Himself to us, but not sufficient for our salvation, then we ask to what purpose should he have revealed Himself to us in anywise? It is clear that a revelation insufficient to save cannot put us in a better condition than we should be in without any revelation at all. We cannot conceive that God should point out to us the end we ought to aim at without opening to us the way to arrive at that end. But, supposing our understandings to be so far illuminated as to know it to be our duty to please God, who yet hath left us under an incapacity of doing it, will this missionary, therefore, conclude that we shall be eternally damned? Will he take upon him to pronounce damnation against us for not doing those things which he himself acknowledges were impossible by us to be done? It is our opinion that every man is possessed of sufficient knowledge for his salvation. The Almighty, for anything we know, may have communicated the knowledge of Himself to a different race of people in a different manner. Some say they have the will of God in writing: be it so; their revelation has no advantage above ours, since both must be equally sufficient to save, otherwise the end of the revelation would be frustrated. Besides, if they both be true they must be the same in substance, and the difference can only lie in the mode of communication. He tells us there are many precepts in his *written revelation* which we are entirely ignorant of. But these written commands can only be designed for those who have the *writings;* they cannot possibly regard us. Had the Almighty thought so much knowledge necessary for our salvation His goodness would not long have deferred the communication of it to us; and to say that in a manner so necessary he could not at one and the same time equally reveal Himself to all mankind is nothing less than an absolute denial of His omnipotence. Without doubt He can make his will manifest without the help of any *book* or the assistance of any *bookish man* whatever. We shall in the next place consider the arguments which arise from a consideration of providence. If we are the work of God (which I presume will not be denied), it follows from thence that we are under the care and protection of God; for it cannot be supposed that the Deity should abandon his own creatures and be utterly regardless of their welfare. Then to say that the Almighty hath permitted us to remain in a fatal error through so many ages is to represent Him as a tyrant. How is it consistent with His justice to force life upon a race of mortals without their consent and then *damn them eternally*, without ever opening to them the door of salvation? Our conceptions of the gracious God are more noble, and we think that those who teach otherwise do little less than blaspheme. Again, it is through the care and goodness of the Almighty that from the beginning of time, through many generations to this day, our name has been preserved, unblotted out by enemies, unreduced to nothing. By that same care we now enjoy our lives, are served with the necessary means of preserving those lives. But all these things are trifling compared with our salvation. Therefore, since God hath been so careful of us in matters of little consequence, it would be absurd to affirm that He has neglected us in cases of the greatest importance. Admit that He hath forsaken us, yet it could not have been without a just cause. Let us suppose that an henious crime was committed by one of our ancestors, like to that which we are told happened among another race of people. In such case God would certainly punish the criminal, but would never involve us, who are innocent, in his guilt. Those who think otherwise must make the Almighty a very whimsical, ill-natured being. Once more, are the *Christians* more virtuous, or, rather, are they not more vicious than we are? If so, how came it to pass that they are the objects of God's beneficence, while we are neglected? Does the Deity confer His favors without reason, and with so much partiality? In a word, we find the Christians much more depraved in their morals than ourselves, and we judge of their doctrine by the *badness of their lives.*"

CHAPTER IV.

EARLY VOYAGERS AND TRADERS—FIRST SETTLEMENTS ON THE DELAWARE AND SCHUYLKILL RIVERS.

THE events connected with and resulting from the discovery of the South and North Rivers[1] by Henry Hudson, from 1609 to 1638, are so interwoven with the settlements of the Swedes on the shores of the Delaware and Schuylkill Rivers, as to render some account of the advent of the Dutch or Netherlanders a necessary prelude to the annals of the later settlers.

[1] Delaware and Hudson.

The writer has consulted numerous authorities upon the remarkable events of the period referred to, and has used them freely when deemed essential to a concise narrative of facts.[1]

There is no subject associated with the history of our ancestry more replete with continuing interest than that which relates to the experience and achievements of the early voyagers, traders, and settlers who landed upon the shores of the Delaware River. The splendid bay which joins river to ocean invited them to safe anchorage after their long and adventurous passage over a trackless and comparatively unknown "waste of waters" between two continents. The Delaware River and its confluents were unexplored to them, beyond what they could learn from the savages who met them many miles south of tide-water levels. The period of these early settlements, about 1620, was marked by great maritime activity, induced by the discovery of the North American continent by Christopher Columbus and the many and remarkable voyagers who subsequently crossed the Atlantic Ocean on exploring expeditions, first and ostensibly to extend the dominion of their "Gracious Sovereigns," and second to gratify their professional ambition in opening up new avenues of trade and the accumulation of wealth.[2] The return of these early voyagers and their flattering reports of climate, bays and harbors, rivers, soil, surface products, and minerals, with imaginary possibilities and the wild and savage character of the native people, all tended to increase public interest in the New World and attract adventurous spirits to its shores.[3]

This condition of things was suggestive to capitalized ambition, and led to the formation of corporations or companies for the encouragement of transatlantic commerce and the establishment of permanent colonies at or near convenient points of shipment on navigable rivers.

In 1609, Henry Hudson, an English navigator of great experience and remarkable energy, then in the service of the Dutch East India Company, explored the coast from the Chesapeake Bay to Maine. The Delaware River was first explored by this bold mariner. His first officer, Robert Jewett (or Juet), kept a journal of the ship's experience, from which it appears that on Aug. 28, 1609 (new style), they entered the mouth of the river. It was on the strength of this discovery, and that of the Hudson River by the same officer, that the Dutch based their claim to the lands between the North and South Rivers, as the Hudson and Delaware Rivers were then called, as well as that which was contiguous to their shores.

The accounts of this voyage and the discoveries made are said to be accurate, circumstantial, and satisfactory to all historians.[4] The Dutch did not

[1] Bancroft, Hist. United States; Proud, Hist. Pennsylvania; Colonial Archives; Sherman Day, Hist. Pennsylvania; Davis, Hist. Bucks County; Brodhead, Hist. New York; Mrs. Martha J. Lamb, Hist. New York; Scharf and Westcott, Hist. of Philadelphia.

[2] There is no ground for reasonable doubt that John and Sebastian Cabot, natives of Venice, probably sailors almost from birth, but doing business in Bristol, England, at the time of their commission under King Henry VII., were the first navigators, at least of historic times, to discover the actual coast-line of the North American continent, along which they sailed from Newfoundland to the parallel of Gibraltar, that is to say, to about the latitude of Cape Hatteras. John Cabot, the senior of these sailors and traders, excited by the news of the great discovery made by Christopher Columbus, and with the certainty thus warranted of reaching land by sailing westward, obtained a commission under the great seal of England from King Henry VII., dated March 5, 1496, authorizing the navigator and his three sons, or either of them, their heirs or their deputies, to sail into the Eastern, Western, or Northern seas, with a fleet of five ships, at their own expense, in search of unknown lands, islands, or provinces; to plant the banner of England on these when found, and possess and occupy them as vassals of the English crown. The provision that the explorers should voyage at their own expense was characteristic of the thrifty monarch, but the commission of a king at that day was the only safeguard the navigator had to protect him from suspicions of piracy, and the exclusive right of frequenting and trading to the new countries when found was a privilege for which nations were soon to contend.

[3] "Every great European event affected the fortunes of America. Did a State prosper, it sought an increase of wealth by plantations in the West; was a sect persecuted, it escaped to the New World. The Reformation, followed by collisions between English Dissenters and the Anglican hierarchy, colonized New England; the Reformation, emancipating the Low Countries, led to settlements on the Hudson. The Netherlands divide with England the glory of having planted the first colonies in the United States; they also divide the glory of having set the example of public freedom. If England gave our fathers the idea of a popular representation, the United Provinces were their model of a Federal Union."

[4] We know surprisingly little of Henry Hudson. He is said to have been the personal friend of Capt. John Smith, the founder of Virginia, and it is probable that he was of the family of that Henry Hudson who, in 1554, was one of the original incorporators of the English Muscovy Company. This man's son, Christopher, supposed to have been the father of the great navigator, was as early as 1560 and up to 1601 the factor and agent on the spot of the London Company trading to Russia, and it seems likely that the younger Hudson, from his familiarity with Arctic navigation, and his daring pertinacity in attempting to invade the ice-bound northern wastes, may have served his apprenticeship as a navigator in trading, on behalf the Muscovy Company, from Bristol to Russia, as was then often done through the North Channel, and round the Hebrides, Orkneys, Shetlands, and North Cape to the White Sea and Archangel. At any rate when Hudson makes his first picturesque appearance before us, in the summer of 1607, in the Church of St. Ethelburge, Bishopsgate Street, London, where he and his crew are present to partake of the Holy Sacrament together, it is preparatory to a voyage in the service of the newly-organized "London Company," in Jewett's own words, "for to discover a passage by the North Pole to Japan and China." The navigator was at that time a middle-aged man, experienced and trusted. He had already explored the northeast and the north, and the region between the Chesapeake and Maine. There was no room for hope but to the north of Newfoundland. Proceeding by way of Iceland, where "the famous Hecla" was casting out fire, passing Greenland and Frobisher's Straits, he sailed on the 2d of August, 1610, into the straits which bear his name, and into which no one had gone before him. As he came out from the passage upon the wide gulf, he believed that he beheld "a sea to the westward," so that the short way to the Pacific was found. How great was his disappointment

HENRY HUDSON.

avail themselves at once of the great advantages of trade and commerce opened up by the wonderful discoveries of Hudson, who had penetrated the North or Hudson River as far as Albany, visiting the river tribes of Indians and ascertaining the vast resources of valuable furs and skins purchasable from the savages at merely nominal prices.[1] Hudson's report of the South or Delaware River was that from observations made. He found the land "to trend away towards the northwest, with a great bay and rivers, but the bay was shoal." It is evident that Hudson did not find the Delaware River as inviting in a navigable point of view as the North or Hudson River, and therefore it was that the Dutch first settled upon the latter river. In 1611 two enterprising men, Hendricks Christiaensen, of Cleves, Holland, a West India trader, and Adrian Block, of Amsterdam, in company with Schipper Rysar, chartered and equipped a ship and made a successful voyage to and up the Hudson River, exchanging commodities with the Indian tribes, and returning with a profitable cargo of furs and skins. They were also successful in securing two young Indians, said to be the sons of chiefs, whom they christened Valentine and Orson. These savages, not less than the possibilities of large trade in the rude products of their tribes, excited popular interest in the new country. These enterprising traders, joined by a number of merchants, memorialized the Provincial States of Holland and West Friesland by the importance of discoveries made, and it was judged of sufficient consequence to be formally communicated to the cities of Amsterdam, Rotterdam, Hoorn, and Enckhuysen.[2] On the 27th of March, 1614, the States-General ordained "that private adventurers might enjoy an exclusive privilege for four successive voyages to any passage, haven, or country they should thereafter find." With such encouragement, a company of merchants in the same year sent five small vessels, of which the "Fortune," of Amsterdam, had Christiaensen for its commander; the "Tiger," of the same port, Adrian Block; the "Fortune," of Hoorn, Cornelis Jacobsen Mey, to extend the discoveries of Hudson, as well as the trade with the natives. Upon the return of this merchant fleet the officers made report to the States-General, in conformity with the terms of the "ordinance" under which they sailed. This report embraced a detailed account of their exploring efforts on the coast, and entrance to harbors and rivers. Appended to the same were maps representing the topographical face of the country for some miles inland. Armed with this report and "figurative map" these navigators, supported and accompanied by the wealthy merchants in whose service they were really employed, proceeded to the Hague to obtain further concessions from the "twelve mighty Lords of the States-General," presided over by John von Olden Barneveldt, the advocate of Holland. They presented an admirable case, basing their claim for a further and enlarged extension of privileges upon the perils and hardships endured, misfortunes suffered, and advantages likely to accrue to the merchants of the Netherlands. Barneveldt and his associates were favorably impressed with the flattering report, and promptly granted to the united company of merchants and their adventurous Dutch captains a three years' monopoly of trade with the territory between Virginia and New France, from forty to forty-five degrees of latitude. This grant was in the nature of a charter, executed on the 11th day of October, 1614, and named the extensive region of country embraced in it as the New Netherlands.

While these early monopolists were paying court to the Netherland government, and adroitly laying plans for large acquisitions of lands which they claimed to have discovered between Virginia and the New England coast, Capt. Cornelis Hendricksen manned and equipped the "Unrest," or "Restless," a yacht of sixteen tons, built by Capt. Block, to take the place of the "Tiger," burnt at Manhattan Island, and proceeded to explore the Delaware Bay and River. He is reported to have landed at several places, made soundings, and prepared extensive charts of the shore line, and noting the entrance of many of the confluent streams emptying into this navigable highway. As evidence of the thoroughness of the manner in which Hendricksen did his work on the Delaware, it is related that, while leaving the "Restless" at anchor at the mouth of Christiana Creek, he extended his

when he found himself in a labyrinth without end. Still confident of ultimate success, the determined mariner resolved on wintering in the bay, that he might perfect his discovery in the spring. His crew murmured at the sufferings of a winter for which no preparations had been made. At length the late and anxiously-expected spring burst forth; but it opened in vain for Hudson. Provisions were exhausted; he divided the last bread among his men and prepared for them a bill of return, and "he wept as he gave it them." Believing himself almost on the point of succeeding, where Spaniards and English and Danes and Dutch had failed, he left his anchoring-place to steer for Europe. For two days the ship was encompassed by fields of ice, and the discontent of the crew broke forth into mutiny. Hudson was seized, and, with his only son and seven others, four of whom were sick, were thrown into the shallop. Seeing his commander thus exposed, Philip Staffe, the carpenter, demanded and gained leave to share his fate, and just as the ship made its way out of the ice, on a midsummer day, in a latitude where the sun in that season hardly goes down and evening twilight mingles with the dawn, the shallop was cut loose. What became of Hudson? Did he die miserably of starvation? Did he reach land to perish from the fury of the natives? Was he crushed between ribs of ice? The returning ship encountered storms, by which she was probably overwhelmed. The gloomy waste of waters which bears his name is his tomb and his monument.

[1] Hudson relates that he was taken to a house well constructed of oak-bark, circular in form, and arched in the roof, the granary of the beans and maize of the last year's harvest, while outside enough of them lay drying to load three ships. Two mats were spread out as seats for the strangers; food was immediately served in neat red bowls; men who were sent at once with bows and arrows for game soon returned with pigeons; a fat dog, too, was killed, and haste made to prepare a feast. When Hudson refused to wait, they supposed him to be afraid of their weapons, and taking their arrows they broke them in pieces and threw them into the fire. Of all lands on which I ever set my foot, says Hudson, this is the best for tillage.

[2] Brodhead, i. p. 46. N. Y. Hist. Coll., 2d series, ii. 355.

observations inland for some distance, where he came in contact with a small party of Minqua Indians, and rescued three white men, Netherlanders, who had some months prior strayed away from the fort or trading-station at Castle Island, on the Hudson River. These men had lost their way in the forest and had reached the Mohawk Valley. Crossing from thence to the Delaware, they fell in with savages who proved friendly, and, by a providence of life deemed most fortunate by them, met their friends on the shore of Christiana Creek. Having prepared himself to make an advantageous report, he returned to Holland, and on the 16th of August, 1616, appeared before the States-General, declaring "he had discovered a bay and three rivers, situated between thirty-eight and forty degrees, and did there trade with the Indians, said trade consisting of sables, furs, robes, and other skins. He hath found the said country full of trees, to wit: oak, hickory, and pines, which trees were in some places covered with vines. He hath seen in said country bucks and doe, turkeys and partridges. He hath found the climate of said country very temperate, judging it to be as temperate as Holland." On this report Hendricksen claimed further and extensive privileges and immunities. In this he was disappointed. The authorities refused him upon the ground that a change in their policy was expedient, looking to the permanent colonization of the country he claimed to have explored. This policy comprehended the organization of a "West Indies Company." The growth, utility, and experience of this company for many subsequent years, resulting from the political agitation of the Netherlands, affords an interesting theme for comment, and is nowhere more graphically described than in the recently-published "History of New York," by Mrs. Martha J. Lamb.

The spirit of religious persecution which prevailed in the seventeenth century was also a factor in the work of colonization. The Puritan exiles, led by John Robinson, William Brewster, and others, who had been living in the Netherlands in the enjoyment of their religious tenets, were looked upon as a migratory people, and by a certain class of political economists thought available as colonists for the purpose of founding a flourishing settlement at some point on the Atlantic coast. To these people the New World was painted in glowing colors by the Dutch navigators and capitalists, while they in turn were willing to make unusual sacrifices for the enjoyment of religious liberty. Here were conditions of society and policy which seemed to synchronize and promise the most desirable results to all parties concerned. These exiles had made overtures to the Virginia Colony and the Plymouth Company, but in both instances failed to effect arrangements deemed necessary for their permanent welfare as a colony, and therefore applied to the Netherlands through the Amsterdam merchants to settle at some point in the New World under the protection of the States-General. John Robinson prepared the memorial. He proposed to take four hundred families with him, provided they were assured of protection. "They desired to go to the New Netherlands, to plant there the true Christian religion, to convert the savages of those countries to the true knowledge and understanding of the Christian faith, and through the grace of the Lord, and to the glory of the Netherlands' government, to colonize and establish a new empire under the order and command of the Prince of Orange and the High Mighty Lords States-General." The company of merchants heartily co-operated with Robinson in his comprehensive purpose, pledging large sums of money to secure transportation for the four hundred families, and all the necessary supplies of stock, implements, seeds, provisions, etc., and when plans were well matured they sent their most influential men to submit the memorial to the Hague, with their endorsement of the project. The Prince of Orange referred the project to the States-General, who, after great consideration, refused to sanction the enterprise or grant them the protection deemed necessary by Robinson and his coadjutors for the success and permanency of the new colony in the wilds of America. It was this refusal of the Dutch to transplant the "Pilgrims" on the Hudson and Delaware Rivers that aroused the reserved energies of their restless souls, and led to their subsequent departure in the "Speedwell" and "Mayflower" for Plymouth Rock.[1]

About this time religious controversy was renewed with great vigor. The Calvinists and Puritans were arrayed against the Arminians, who were in control of the States and patronage of the country. The work of the Reformation was producing its just fruits, and the freedom of religious thought prevailed. In 1619, after a bitter contest, the Calvinists triumphed, and soon after signalized their success by chartering the West India Company, granting to it extraordinary powers for the encouragement of maritime commerce and the extension of colonial dominion. This charter is dated June 3, 1621, and gave to the West India Company for the period of twenty-four years the exclusive monopoly of trade and navigation to the coasts of Africa, between the Cape of Good Hope and the Tropic of Cancer, and to the coasts of America and the West Indies, between the Straits of Magellan and Newfoundland. The company was invested with enormous powers. In the language of Brodhead, it might make in the name of the States-General

[1] John Robinson's farewell blessing:

"I charge you before God and His blessed angels that you follow me no further than you have seen me follow the Lord Jesus Christ. The Lord has more truth yet to break forth out of His holy word. I cannot sufficiently bewail the condition of the Reformed Churches, who are to come to a period in religion, and will go at present no further than the instruments of their reformation. Luther and Calvin were great and shining lights in their times, yet they penetrated not into the whole counsel of God. I beseech you, remember it,—'tis an article of your church covenant,—that you be ready to receive whatever truth shall be made known to you from the written word of God."

"contracts and alliances with the princes and natives of the countries comprehended within the limits of its charter, build forts, appoint and discharge governors, soldiers, and public officers, administer justice, and promote trade. It was bound to advance the peopling of these fruitful and unsettled parts, and do all that the service of those countries and the profit and increase of trade shall require." The States-General had a sort of general supervision, with the privilege of confirming the appointment of superior officers, but no other powers over it. The government of the company was vested in five boards of managers,—one at Amsterdam, managing four-ninths of the whole; one at Middleburg, in Zealand, managing two-ninths; one at Dordrecht, on the Maese, managing one-ninth; one in North Holland, one-ninth; and one in Friesland and Groningen, one-ninth. The general executive power for all purposes, the power to declare war only being reserved for the approval of the States, was confided to a board of nineteen delegates, of whom eight were to come from the Amsterdam chamber, and the rest from the other chambers in proportion to their shares, except that the States-General had one delegate. The States were pledged to defend the company against all comers, to advance to it a million guilders in money, and give it for its assistance sixteen ships of war of three hundred tons each, and four yachts of eighty tons, fully equipped. This fleet was to be maintained, manned, and supported by the company, which besides was to provide an equal number of vessels on its own part, the whole to be under the command of an admiral selected by the States-General. Any inhabitant of the Netherlands or of other countries might become a stockholder during 1621, but after that year the subscription books were to be closed, and no new members admitted. Colonization was one object of this great monopoly, but what its chiefs looked to principally for profit was a vast system of legalized piracy against the commerce of Spain and Portugal in Africa and America. The company was not finally organized under the charter until June, 1623, when the subscription books were closed.

In the interval between the lapse of the old United Company and the completion of the charter of the new monopoly, several ships were sent on trading ventures of a more or less private character to the North and South Rivers in the New Netherlands, among them vessels which had visited those regions before. King James I. having granted the charter of the Plymouth Company, complaints began to be heard about Dutch intrusions. Sir Samuel Argall, who is represented in the spurious Plantagenet pamphlet as having forced a Dutch governor in Manhattan to yield allegiance to the British king in 1613, is found in 1621 as complaining, in a memorial signed by him, Sir Ferdinando Georges, the Earl of Arundel, and Capt. John Mason, against the "Dutch intruders," who are represented as having only settled on the Hudson in 1620. This was claimed by the Plymouth Company as proof of the British king's title to the whole country, *jure primæ occupationis*. This led to a protest, in December, 1621, by the British government, through Sir Dudley Carleton, ambassador at the Hague. The States professed ignorance, and promised to make inquiry, and with that answer, after some fretfulness, the British minister was forced to content himself. In fact, the States-General, engrossed in preparations for the war with Spain, simply delayed matters until the West India Company was organized, when all such questions were referred to it for settlement. It thus became an issue between British Plymouth Company and Dutch West India Company, and the latter was the stronger of the two, both in men and argument.

The ships of that company, even before the final ratification of the amended charter, were trading in all the Atlantic waters between Buzzard's Bay (within twenty miles of Plymouth) and the Delaware River, and a plan of colonization was already matured. A number of Walloons (Belgian Protestants of supposed Waelsche or Celtic origin), refugees in Holland from Spanish persecution, had applied to the British minister Carleton for leave to emigrate to Virginia. The terms offered them do not seem to have been satisfactory. The Holland Provincials heard of the negotiations, and suggested to the Amsterdam chamber of the West India Company that these would be good immigrants with whom to begin the permanent settlement of the New Netherlands. The suggestion was seized upon, and provision made to carry the Walloons over in the company's ship then about to sail, the "New Netherlands," Capt. Cornelis Jacobsen Mey, he who had first sailed into South River, and who was going out now as first resident director or governor of the colonies. Some thirty families, chiefly Walloons, were accordingly taken on board, and in the beginning of March, 1623, the "New Netherlands" sailed from the Texel, Capt. Mey in command, the next highest officer being Adriaen Joris, of Thienpoint. The course of the ship (and of nearly all vessels making the American voyage at that day) was southward from the British Channel to the Canaries, thence across the Atlantic with the trade-winds to Guiana and the Caribbees, then northwest between the Bermudas and Bahamas until the coast of Virginia came in sight. Mey's vessel reached the North River safely and in time to drive off a French vessel which sought to set up the arms of France on Manhattan Island. The Frenchman was foiled in the same way on the Zuydt River. Mey distributed his colonists as far as he could. The greater part of the Walloons were sent up to Albany, several families went to the Dutch factory on the Connecticut; four couples, who had married during the voyage out, several sailors, and some other men were sent to the South River, now also called Prince Hendrick's River. Mey appears

either to have accompanied them here or visited them soon after their arrival. He selected a site for their settlement, planting the Walloons on Verhulsten Island, near the present city of Trenton, N. J., and hastened the construction of a log fort or stockade for his sailors and soldiers at the mouth of the Timmer Kill, on the New Jersey bank of the Delaware, not far from where Gloucester now stands. This fort was called "Nassau." Its exact site is not determined, nor can we decide the original Indian name of the spot, having such a variety to choose from.[1] This South River colony was soon given up. The men and women of the Walloons grew homesick and returned to New York, certainly within a year or so, the garrison also abandoning the fort to the Indians, who occasionally lodged there during several years, probably while waiting for trading vessels. Such a vessel was sent round to the South River at least once a year from Manhattan Island. Thus, it is supposed in 1625, the first settlement on the Delaware came to naught.[2] Fort Nassau, to conclude its history, seems to have been alternately occupied and abandoned by the Dutch until 1650 or 1651, when it was destroyed by the Dutch themselves, as being too high up the river and too much out of the way. The post was then transferred to the new Fort Casimir. In 1633, De Vries found none but Indians there, but it seems to have been restored some time during the same year by Governor Van Twiller, who was accused of incurring extravagant expense in connection with its construction. Arent Corssen was then commissary; he had a clerk, and the Governor ordered him to select the site for another structure of the same sort on the river. In 1635 an English party attempted but failed to capture this fort. They were thought to be Lord Baltimore's people, but were more likely New Englanders or Virginians. The Swedes repeatedly denied that there was any fort of the Dutch on the Delaware in 1638; but the Dutch accounts of expenditure for the maintenance of Fort Nassau charged against that year in the West India Company's books disprove this. There was certainly enough of a garrison in the fort to report at once and protest against the Swedish settlement at Christiana in April, 1638. In 1642 the garrison comprised twenty men, and the fort was continually occupied from this time forth until the Dutch destroyed it.

In 1624, Peter Minuet (the name is also spelled Minuit, Minnewit, or Minnewe) came out and succeeded Mey as director of the New Netherlands colonies. He held this position until 1632, when he was recalled, and Van Twiller became Governor in his stead. Minuet, as will be seen further on, was a sagacious and enterprising man, but he had to pursue a conservative policy as director of the New Netherlands, for the welfare of the colony was neglected sadly by the West India Company. But few immigrants and colonists came out, the garrisons were not strengthened, nor was much effort made to extend either the boundaries or the trade of the colony. Some negro slaves indeed were landed on Manhattan Island at least as early as 1628, but their labor was not esteemed. The chief business done was in trading with the Indians for peltries and furs. In fact the West India Company was so puffed with the arrogance that proceeds from great successes and sudden wealth, that the directors despised the small and plodding colonial ways and the slow and meagre profits derived from such sources. It had won brilliant victories at sea. It had taken in two years one hundred and four Spanish prizes. It had paid dividends of fifty per cent. It had captured the Panama plate fleet. It frequently sent to sea single squadrons of seventy armed vessels. It had captured Bahia in 1624, and Pernambuco in 1630, and it aspired to the conquest of Brazil. These brilliant performances cast the puny interests of the New Netherlands traders into the shade, and the company did not care to be bothered with the discharge of duties which were nevertheless particularly assigned to it in the charter. So obvious was this departure from the original purposes of the company that so early even as 1624 we find that William Usselincx, the founder of the company, had abandoned it in disgust, and was seeking to persuade King Gustavus Adolphus of Sweden to establish a Swedish West India Company, such as would be operated more in accordance with his original plan.

There were still some very shrewd heads among the members of the Amsterdam chamber, men who while quite willing to take all the gold and silver and precious stones they could get, yet were fully acquainted with the more abiding virtues of land. Of these were John De Laet, the historian, Killiaan Van Rensselaer, the diamond-cutter, Michael Pauw, Peter Evertsen Hulft, Jonas Witsen, Hendrick Hamel, Samuel Godyn, and Samuel Blommaert, all rich, all well informed, all interested in the support and development of the colonies on the North and South Rivers, especially if these could be effected in a way further to enrich themselves. The secretary of Minuet and the colony, Isaac De Rasieres, a keen observer and skillful diplomatist, was devoted to the interests of

[1] Hermaomessing, Tachaacho, Armewamix, Arwames, Tekoke, Armenvereus, etc. The year in which the fort was built is also disputed, but the circumstances mentioned in the text make it probable that its construction was undertaken very shortly after Capt. Mey's arrival out.

[2] It is not possible to state satisfactorily in what year the settlement was given up nor why. The deposition of Peter Lawrenson before Governor Dongan, of New York, in March, 1685, says that he came into this colony in 1628, and in 1630 (actually 1631), by order of the West India Company, he, with some others, was sent in a sloop to the Delaware, where the company had a trading-house, with ten or twelve servants belonging to it, which the deponent himself did see settled there. . . . "And the deponent further saith that upon an island near the falls of that river and near the west side thereof, the said company *some three or four years before* had a trading-house, where there were three or four families of Walloons. The place of their settlement he saw; and that they had been seated there he was informed by some of the said Walloons themselves when they were returned from thence." It is in this indefinite way that the beginnings of all history are written.

Godyn, Van Rensselaer, and Blommaert, and he probably kept them apprised of all that was going on in the New Netherlands. While Minuet, with reduced forces, was compelled through fear of Indians to concentrate his people at Manhattan, abandoning all exposed places, the Amsterdam directors, after consulting with De Rasieres, whom Minuet had sent home, procured a meeting of the Executive "College" of nineteen, and secured from it a Charter of Freedoms and Exemptions, which the States-General confirmed on June 7, 1629. This was a complete feudal constitution, adopted years before Lord Baltimore's charter. It created a landed aristocracy, and handed the State over pretty much to their control. The plan for the colonization of the territory was its subdivision into separate and independent settlements or estates, each to be under the control of a patroon, or feudal lord, who was to settle it at his own expense in exchange for many peculiar privileges. The charter provided that any member of the West India Company (to none others were these privileges open) who should within four years plant a colony of fifty adults in any part of New Netherland (except the island of Manhattan, which the company, having bought it from the Indians, reserved to itself) should be acknowledged as a "patroon" or feudal chief of the territory he might thus colonize. The land selected for each colony might extend sixteen miles in length if confined to one side of a navigable river, or eight miles on each side if both banks were occupied; but they might run as far into the country as the situation of the occupiers should permit. More immigrants entitled the patroon to proportionately more land. The colonists under the patroons were exempted from all taxes for ten years; they acquired their estates in fee-simple, with power of disposing by will; they were magistrates within their own bounds, and each patroon had the exclusive privilege of fishing, fowling, and grinding corn within his own domain; they could also trade anywhere along the American coast, and to Holland by paying five per cent. duty to the company at its reservation of Manhattan. The company reserved the fur trade to itself, and none of the colonists were to engage in any manufactures.

A review of events and circumstances incident to the settlement of Eastern Pennsylvania without reference to the speculative greed of men whose opportunities misled them would be incomplete. Ordinary foresight and sagacity induced the belief in the minds of these first voyagers that settlements would speedily follow the line of commerce, and lands eligibly located would soon have market value. Ambitious capitalists, such as Samuel Godyn and Samuel Blommaert, prompted by so keen and observing a resident as Isaac De Rasieres, whose official position gave him peculiar advantages in advising his friends, were not slow in concerting measures to advance their interest in large land enterprises. As early as 1629 they retained two purchasing agents to buy lands from the Indians on the south side of the Delaware Bay. Their purchase embraced a tract thirty-two miles in length, extending a distance of two miles into the country from the shore line, the patent thereof being duly registered and confirmed June 1, 1630. Similar purchases were made on and near the Hudson River by William Van Rensselaer, Michael Pauw, and John De Laet. These extensive operations were viewed with disfavor, and led to general and unfriendly criticism, and naturally excited quarrels among the speculators and their retainers. To avoid scandal and exposure there seems to have been what was deemed an equitable division of advantages. In a word, there had been over-reaching and sharp practice. Explanations and restitution were discreetly made. Fortunately for Godyn and Blommaert, who were obliged to improve their land on the Delaware Bay, under the terms of confirmation of their purchase, they fell in with David Pietersen De Vries, who had just returned from the East Indies. He was a man of uncouth exterior, but of good heart, and from experience had become observant, not alone in nautical matters, but in all worldly affairs, and was on terms of great personal intimacy with Godyn. His services were deemed so important to the success of the enterprise that he was admitted to equal advantages,—*i.e.*, his experience was deemed equivalent to the capital of those associated in the enterprise.

De Vries became a patroon Oct. 16, 1630, and at once set to work to promote the designs of his associates. The ship "Walvis," or "Whale," of eighteen guns, and a yacht were immediately equipped. They carried out emigrants, cattle, food, and whaling implements, De Vries having heard that whales abounded in the Bay of South River (Godyn's Bay, or Newport May Bay, as it now also began to be called), and expecting to establish profitable fisheries there. The expedition sailed from the Texel in December under the command of Pieter Heyes, of Edam. De Vries did not go out at this time, and the voyage was not profitable. De Vries accuses Heyes of incapacity and cowardice, saying he would not sail through the West Indies in an eighteen-gun ship. Still, Heyes did a large business for his employers. He reached South River in the spring of 1631, and established his colony on the Horekill, "a fine navigable stream, filled with islands, abounding in good oysters," and surrounded by fertile soil. The place was near the present site of Lewes, Del. Here a palisaded brick house was erected, and the colony of more than thirty souls was called Swaannendael, the Valley of Swans. The Dutch title was inscribed upon a pillar, on a plate of tin, surmounted by the arms of Holland. The fort, named "Oplandt," was given in the command of Gilliss Hossett, Van Rensselaer's agent in buying lands around Albany. Heyes, after he had settled matters at Swaannendael, crossed to the Jersey shore and bought from ten chiefs there, on behalf

of Godyn, Blommaert, and their associates, a tract of land extending from Cape May twelve miles northward along the bay and twelve miles inland. This purchase was registered at Manhattan June 3, 1631. The whale fishery having come to naught, in September Heyes sailed for home to report to his employers.

De Vries now determined to go out to the South River himself, and preparations were made for him to take charge of another ship and yacht. Just as he was about to sail from the Texel, May 24, 1632, Governor Minuet arrived from New Amsterdam with intelligence of the massacre of the colony at Swaannendael. This was cold news for De Vries and his associates. The patroon sailed, however, and after a long and checkered voyage arrived off Swaannendael early in December. The site of the little settlement told a fearful tale; the house itself nearly ruined, the stockade burnt, and the adjacent land strewed with the skulls and bones of the colonists, the remains of cattle, etc. The valley was silent and desolate.

DAVID PIETERSEN DE VRIES.

De Vries returned on board his yacht and fired a gun to attract attention of the savages. After some mutual mistrust, communication was opened with them, and De Vries was told a cock-and-bull story of a chief having ignorantly removed the coat of arms from the pillar and been murdered by the colonists for doing it, whereupon his tribe, in revenge, massacred the colonists. De Vries knew too much about the Dutch cruelty and harshness to the Indians to believe any such story. He had before him all the evidences of the white man's cruelty and the savage's wild revenge. The fatal deed was irreparable, and De Vries, keeping his own counsel, did what he could to restore confidence and peace by making presents to the Indians of "duffles, bullets, hatchets, and Nuremberg toys," so as to get them to hunt beaver for him, instead of lying in ambush to murder more colonists. The result was a treaty of peace, the first ever made in Delaware waters.

On Jan. 1, 1633, the navigation being open, De Vries proceeded up the bay and river in his yacht. At Fort Nassau he heard of the murder of the crew of an English sloop, and met some Indians wearing the Englishmen's jackets. These Indians also made a show of offering peace, but De Vries dealt with them very cautiously, as they greatly outnumbered his men.

On January 10th, De Vries cast anchor at the bar of Jacques Eylandt, precisely opposite the present city of Philadelphia, somewhere over against Willow Street, near the site of what is now known as Windmill Island.[1] Thence he went down river again, anchoring half a mile above Minquas Kill, on the lookout for whales. He was finally twice frozen up, and in some danger from Indians, numerous war parties of whom he saw, there being some intestine feud among the adjacent tribes. Released from the ice, he reached Swaannendael on February 20th, and on March 6th sailed for Virginia, returning to South River only to break up the colony at Swaannendael and go home. Once more the Delaware River and Bay were abandoned to the Indians, and once more the attempt at settlement by white men had failed. There were no further efforts made to settle on South River until the Swedes came in 1638, but, as has been stated, there must have been a more or less intermittent occupancy at Fort Nassau, and possibly there may have been a permanent garrison from the beginning of Van Twiller's director-generalship.[2]

NOTE.—If the story of New Albion is other than an historical myth, the English were among the earliest adventurers and settlers on the Delaware. Between 1623 and 1634, for several dates are mentioned, Charles I. granted an extensive territory to Sir Edmund Plowden, which embraced Long Island, all of New Jersey, Delaware, and parts of Maryland, Virginia, and Pennsylvania, who formed a company of noble-

[1] The bar of Jacques Eylandt embraces the spot where the city of Camden is now built.

[2] The 21st of June, 1634, is the alleged date of the probably spurious Sir Edward Plowden or Ployden's charter for impossible territory somewhere between the Potomac and Newark Bay.

Rev. Edward D. Neill, president of Macalester College, Minn., who has given considerable attention to Maryland history, though from a rather sectarian stand-point, contributed two papers on Plowden to the fifth volume of the *Pennsylvania Magazine*, conducted by the Historical Society of that State. He assumes Plowden's existence, and that he was the lineal descendant of Edmund Plowden, the commentator on English law, who earned Coke's encomiums and who died in 1584. Plowden, according to Neill, did obtain a grant in 1632, through King Charles I.'s request to the viceroy of Ireland for a certain "Isle Plowden" and forty leagues of the mainland, called "New Albion." The island lay between 39° and 40° latitude. Capt. Young, commissioned by the king in September, 1633, sent out an exploring expedition in 1634, which ascended the Delaware as far as the Falls. If this expedition ever sailed, it must have been the one mentioned by De Vries as having been massacred by the Indians. There is no proof that Plowden sent out this party or had aught to do with it. Evelyn, who commanded it, was in the service of Clayborne's London partners. Plowden, says Mr. Neill, was living at his seat at Wanstead in Hampshire in 1635, unhappy, beating his wife, quarreling with his neighbors, and changing his religion. His wife and his clergyman's wife both had him arrested for assault and battery, and his wife procured a divorce from him. In 1641, Evelyn wrote a pamphlet descriptive of New Albion, dedicated to Plowden's wife. The next year Plowden was on the Chesapeake. This was ten years after he is said to have procured this rich grant. No one can explain why he did not look after such an estate sooner. Plowden lived most of his time in Virginia, but was in Maryland, on Delaware Bay, at New York, and in New England. He was abroad just seven years, say his chroniclers, and then went home to return no more to "New Albion." It is conjectured that his seven years' residence was on account of being transported, and that his New Albion claim was trumped up after the time of his sentence was served out. Plowden is reputed to have died in 1665. Mr. Neill further says that in 1635–40, Plowden was a prisoner in the Fleet Prison, London, for refusing to pay his wife's alimony. Mr. Neill must see that the dates of Plowden's adventures are as irreconcilable as his adventures.

men and gentlemen under the title of "The Albion Knights." The Delaware was the chosen ground to settle, and the company pledged itself to introduce three thousand trained men into the colony. Colonists were actually introduced, and made their homes on the Delaware; but neither the number nor exact location can be told. Plowden was lord proprietor and captain-general, while one Beauchamp Plantagenet was made agent of this company of knightly settlers. The earl and Plantagenet were here seven years, and became well acquainted with the country and Indian tribes. A government was framed, and the machinery of civil administration put in operation, but its duration is unknown. A history of the colony was published in 1648, which contained the letter of one "Master Robert Evelin," addressed to Lady Plowden after his return to England. He was four years on the Delaware, and in his letter he states that "Captain Claybourn, fourteen years there trading," sustains what he says of the country. Evelyn evidently sailed up the river to the falls, for he mentions the streams which empty into it, names the tribes which live along it, with their strength, with some description of the country and the productions. Six leagues below the falls he speaks of "two fair, woody islands, very pleasant and fit for parks, one of one thousand acres, the other of fourteen hundred or thereabouts." These were probably Burlington and Newbold's Islands. Near the falls, he says, "is an isle fit for a city; all the materials there to build, and above the river fair and navigable, as the Indians informed me, for I went but ten miles higher." The "isle fit for a city" refers, doubtless, to Morris Island, or the one abreast of Morrisville. It is barely possible that he fell into the popular error of some explorers of the period, that the Delaware branched at the falls, and that the two branches formed a large island above. He says that a ship of one hundred and forty tons can ascend to the falls, and that "ten leagues higher are lead mines in stony hills." At the falls he locates the Indian town of Kildorpy, with clear fields to plant and sow, and near it are sweet, large meadows of clover or honeysuckle." The letter speaks of the abundant store of fish in the river, of water-fowl that swim upon its surface, and the game, fruit, and nuts to be found in the woods that line its banks, and of the magnificent forest-trees. Evelyn must have traveled well into the interior, and through portions of Bucks County. He speaks of the new town of the Susquehannocks as a "rare, healthy, and rich place, and with a crystal, broad river." This must refer to the Susquehanna River and the tribe from which it takes its name.

What became of Plowden's colony would be an interesting inquiry if we had the leisure to pursue it or the data necessary to solve it. The late William Rawle, of Philadelphia, who gave the subject a careful and intelligent investigation, believed that some of those who welcomed Penn to the shores of the Delaware were the survivors of the Albion Knights. History offers no Œdipus to unravel the mystery.—*Davis, History of Bucks County.*

CHAPTER V.

THE FIRST SWEDISH SETTLEMENTS.

THE ineffectual efforts of the Dutch to secure a permanent lodgment on the Delaware south of the Schuylkill River left their large landed interests in an unprofitable and precarious condition. It is not seriously pretended by commentators that the Dutch pioneers had any higher motives than those prompted by commercial advantages and the hope of obtaining wealth. It seems reasonably clear that a trading-post was still maintained by them on the Delaware, known as Fort Nassau, but not permanently occupied. It was doubtless an outpost, and for some years after the colony at Swaannendael was broken up was visited by them at seasonable periods of trade and exchange with the Indians. That they were vigilant in their watch upon the Delaware is proven by the fact that they sent an armed force to dislodge a small party of English who, under George Holmes, had taken possession of Fort Nassau. These adventurers, thirteen in number, were taken prisoners by the Dutch and sent to Virginia, from whence they came, as their captors believed, although it is said by some writers that they came to the fort from the New England colonies. Samuel Godyn died in the year 1634. His heirs and legal representatives in adjusting his estate provoked contentions with those who had been engaged in land speculations, which led to discoveries bordering upon scandal. The West India Company came to the rescue of the litigants, and purchased from Godyn's heirs and associates all the territory owned by them on both sides of the Delaware River for the sum of fifteen thousand six hundred guilders.

The wide-spread publicity which resulted from the operations of the enterprising Hollanders in establishing trade with the Indians and possessing themselves of large landed estates in the New World naturally stimulated the ambitious princes of Europe to efforts for the extension of their power and dominion

SWEDISH BLOCK-HOUSE.
[Used for Public Worship in 1677.]

on the North American continent. Efforts to establish colonies were always made by royal authority under liberal grants and chartered privileges. Large sums of money in many instances were expended in equipping these expeditions, and in capitalizing and controlling them and the commerce resulting from them. These investments were made upon the expectation of a fair return, and when financial reverses and disappointments occurred changes in the management ensued. Salaried officers were turned out at the home office or recalled from abroad, who became important factors in the formation of new projects, and all the more useful by reason of their experience. Such a person was William Usselincx,[1] a Hollander, born at Antwerp, in Brabant, who as early as 1624 presented himself to King Gustaf Adolph of Sweden, and laid before him a proposition for a trading company to be established in Sweden, and to extend its operations to Asia, Africa, and Magellan's Land (Terra Magellanica), with the assurance that this would be a great source of revenue to the king-

dom. Full power was given him to carry out this important project, and thereupon a contract of trade was drawn up, to which the company was to agree and subscribe. Usselincx published explanations of this contract, wherein he also particularly directed attention to the country on the Delaware, its fertility, convenience, and all its imaginable resources.

To strengthen the matter a charter was secured to the company, and especially to Usselincx, who was to receive a royalty of one thousandth upon all articles bought or sold by the company. The powerful king, whose zeal for the honor of God was not less ardent than for the welfare of his subjects, availed himself of the opportunity to extend the doctrines of Christ among the heathen, as well as to establish his own power in other parts of the world.[1] To this end he sent forth letters patent, dated at Stockholm, on the 2d of July, 1626, wherein all, both high and low, were invited to contribute something to the company, according to their means. The work was completed in the Diet of the following year, 1627, when the estates of the realm gave their assent and confirmed the measure. Those who took part in this company were his Majesty's mother, the Queen Dowager, Christina, the princess, John Casimir, the Royal Council, the most distinguished of the nobility, the highest officers of the army, the bishops and other clergymen, together with the burgomasters and aldermen of the cities, as well as a large number of the people generally. The time fixed for paying in the subscriptions was the 1st of May of the following year (1628). For the management and working of the plan there were appointed an admiral, vice-admiral, chaplain, underchaplain, assistants and commissaries, also a body of soldiers, duly officered. But when these arrangements were in full progress and duly provided for the German war and the king's death occurred, which caused this important work to be laid aside. The Trading Company was dissolved, its subscriptions nullified, and the whole project seemed about to die with the king. But just as it appeared to be at its end it received new life. Another Hollander, by the name of Peter Menewe, sometimes called Menuet,[2] made his appearance in Sweden. He had been in the service of Holland in America, where he became involved in difficulties with the officers of the West India Company, in consequence of which he was recalled home and dismissed from their service. But he was not discouraged by this, and went over to Sweden, where he renewed the representations which Usselincx had formerly made in regard to the excellence of the country, and the advantages that Sweden might derive from it.

Queen Christina,[3] who succeeded her royal father in the government, was glad to have the project thus renewed. The royal chancellor, Count Axel Oxenstierna, understood well how to put it in operation. He took the West India Trading Company into his own hands as its president, and encouraged other noblemen to take shares in it. King Charles I. of England had already, in the year 1634, upon representations made to him by John Oxenstierna, at that time Swedish ambassador in London, renounced in favor of the Swedes all claims and pretensions of the English to that country growing out of their rights as its first discoverers. Hence everything seemed to be settled upon a firm foundation, and all earnestness was employed in the prosecution of the plans for a colony. As a good beginning the first colony was sent off,[4] and Peter Menewe was placed over it, as being best acquainted in those regions.

They set sail from Göttenburg in a ship of war called the "Key of Calmar," followed by a smaller vessel bearing the name of "Bird Griffin," both laden with people, provisions, ammunition, and merchandise suitable for traffic and gifts to the Indians. These ships successfully reached their place of destination. The high expectations which the emigrants had of that new land were well met by the first news which they had of it. They made their first landing on the bay or entrance to the river Poutaxat, which they called the river of New Sweden, and the place where they landed they called Paradise Point. A purchase of land was immediately made from the Indians, and it was determined that all the land on the western side of the river, from the point called Cape Inlopen, or Henlopen, up to the fall called Santickan,[5] and all the country inland, as much as was

[1] The plans of Gustavus were both deep and patriotic. "The year 1624," says the historian Geijer, "was one of the few years that the king was able to devote to the internal development of the realm." He looked at the subject of colonization in America, says Rev. Dr. W. M. Reynolds in the introduction to his translation of Acrelius, "with the eye of a statesman who understood the wants not only of his own country but of the world, and was able with prophetic glance to penetrate into the distant ages of the future." He proposed there to found a free State, where the laborer should reap the fruit of his toil, where the rights of conscience should be inviolate, and which should be open to the whole Protestant world, then engaged in a struggle for existence with all the papal powers of Europe. All should be secure in their persons, their property, and their rights of conscience. It should be an asylum for the persecuted of all nations, a place of security for the honor of the wives and daughters of those who were flying from bloody battle-fields and from homes made desolate by the fire and sword of the persecutor. No slaves should burden the soil; "for," said Gustavus,—and we realize the profound truth of his political economy after an experience of two centuries, at the end of which slavery expired amid the death-throes of our civil war,—"slaves cost a great deal, labor with reluctance, and soon perish from hard usage. But the Swedish nation is industrious and intelligent, and hereby we shall gain more by a free people with wives and children."—*Scharf's History of Philadelphia.*

[2] An autograph letter found in the royal archives in Stockholm gives the name as commonly written in English, Minuit.

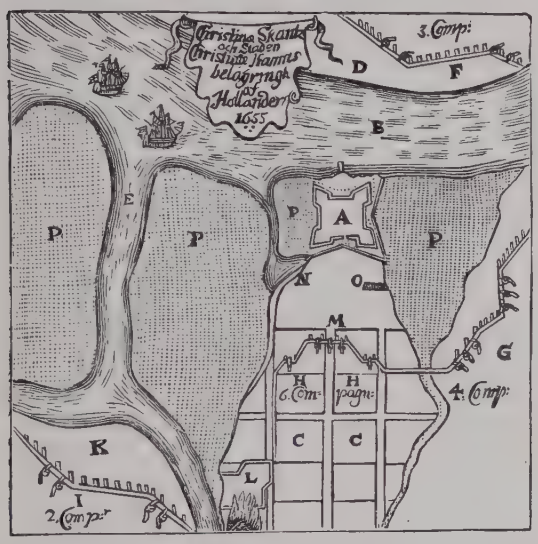
[3] Christina succeeded her father, the great Gustaf Adolph, in 1632, when only six years of age, and the kingdom remained under a regency until she was eighteen, in 1644. Consequently she was only eleven years of age in 1637, when the American colony was established.

[4] In August, 1637, although it did not reach the Delaware until 1638. See Odhner, "Sveriges Inre Historia,' p. 302. He reached the Delaware in the middle of April.

[5] Trenton Falls, which Campanius (p. 49 of Translation) calls "the Falls of Assinpink." On Visscher's map of Pennsylvania, given in Duponceau's Translation of Campanius, to face p. 78, we find "Sanhiccan's" given as the most northern point.

ceded, should belong to the Swedish crown forever. Posts were driven in the ground as landmarks, which were still seen in their places sixty years afterwards. A deed was drawn up for the land thus purchased. This was written in Dutch, for no Swede was yet able to interpret the language of the heathen. The Indians subscribed their hands and marks. The writing was sent home to Sweden to be preserved in the royal archives. Mans Kling was the surveyor. He laid out the land, and made a map of the whole river, with its tributaries, islands, and points, which is still to be found in the royal archives in Sweden. Their clergyman was Reones Torkillus, of East Gothland.

The first abode of the newly-arrived emigrants was at a place called, by the Indians, Hopokahacking. There, in the year 1638, Peter Menuet built a fortress which he named Fort Christina, after the reigning



PLAN OF THE TOWN AND FORT OF CHRISTINA, BESIEGED BY THE DUTCH IN 1655.

queen of Sweden. The place, situated upon the west side of the river, was probably chosen so as to be out of the way of the Hollanders, who claimed the eastern side,—a measure of prudence until the arrival of a greater force from Sweden. The fort was built upon an eligible site, not far from the mouth of the creek, so as to secure them in the navigable waters of the Miniquas, which was afterwards called Christina Kihl or Creek. The country was wild and uninhabited by the Hollanders. They had two or three forts on the river,—Fort Nassau, where Gloucester now stands, and another at Horekihl, down on the bay. But both of these were entirely destroyed by the Americans, and their occupants driven away. The following extract from the "History of the New Netherlands," which Adrian van der Donck published in the year 1655, with the license and privilege as well of the States-General as of the West India Company, will serve as proof of what we have said: "The place is called Horekihl,[1] but why so called we know not. But this is certain, that some years back, before the English and Swedes came hither, it was taken up and settled as a colony by Hollanders, the arms of the States being at the same time set up in brass. These arms having been pulled down by the villainy of the Indians, the commissary there resident demanded that the head of the traitor should be delivered to him. The Indians, unable to escape in any other way, brought him the head, which was accepted as a sufficient atonement of their offense. But some time afterwards, when we were at work in the fields, and unsuspicious of danger, the Indians came as friends, surrounded the Hollanders with overwhelming numbers, fell upon them, and completely exterminated them. Thus was the colony destroyed, though sealed with blood and dearly enough purchased."

Notwithstanding all this, the Hollanders believed that they had the best right to the Delaware River, yea, a better right than the Indians themselves. It was their object to secure at least all the land lying between said river and their city of New Amsterdam, where was their stronghold, and which country they once called "The New Netherlands." But as their forces were still weak, they always kept one or another of their people upon the east side of the river to watch those who might visit the country. As soon, therefore, as Menuet landed with his Swedish company notice of the fact was given to the Director-General of the Hollanders in New Amsterdam. He waited for some time until he could ascertain Menuet's purpose, but when it appeared that he was erecting a fortress for the Swedes he sent him the following protest:[2]

[1] Horekill (variously written Horeskill, Hoarkill, Whorekill) is no doubt a corruption of Hoornkill, so called from Hoorn, a city in Holland, from which Captain Mey sailed upon his expedition to America when he discovered or made his first visit to the Delaware. The derivation of the name suggested by Van Sweringen, in his "Account of the Settling of the Swedes and Dutch at the Delaware" (contained in vol. iii., pp. 342–347, of "Documents Relating to the Colonial History of New York," etc.), is of a piece with the rest of his narrative, and entitled to no consideration. Horekill was about two leagues from Cape Henlopen, and is probably the stream now called Lewes Creek, in the State of Delaware. See also the note to p. 21 of Ferris' "Original Settlements on the Dalaware."

[2] New York Office in the General Index to the Dutch Records, Lib. A. The Swedish annalists who have given any account of this Swedish colony in America have represented the first emigration as taking place in the time of King Gustaf Adolph, about the year 1627. This was the opinion of Th. Camp. of Holm. (See his "Nya Swerige" (New Sweden), pages 57, 58, 72, 73, which others have followed.) (See the "Dissert. de Plant. Ecclesiæ Swec. in America," p. 5.) But this was only a conjecture suggested by the great preparations which were made at that time, but which were suddenly broken off. It would undoubtedly have been all the better if the work had been taken hold of at that time with all earnestness. But this protest is proof to the contrary, and shows that the first arrival must have taken place some time in the year preceding the building of the fortress (that is to say, in 1638).

"THURSDAY, May 6, 1638.

"I, William Kieft, Director-General of the New Netherlands, residing upon the island Manhattan, in the Fort Amsterdam, under the government belonging to the High and Mighty States-General of the United Netherlands and the West India Company, chartered by the Council Chamber of Amsterdam, make known to you, Peter Menuet, who style yourself Commander in the service of her Royal Majesty, the Queen of Sweden; that the whole South River of the New Netherlands, both above and below, hath already, for many years, been our property, occupied by our forts, and sealed with our blood; which was also done when you were in the service of the New Netherlands, and you are, therefore, well aware of this. But whereas you have now come among our forts to build a fortress to our injury and damage, which we shall never permit; as we are also assured that Her Royal Majesty of Sweden has never given you authority to build forts upon our rivers and coasts, nor to settle people on the land, nor to traffic in peltries, nor to undertake anything to our injury: We do, therefore, protest against all the disorder and injury, and all the evil consequences of bloodshed, uproar, and wrong which our Trading Company may thus suffer: and that we shall protect our rights in such manner as we may find most advisable." Then follows the usual conclusion. In the history of the New Netherlands already cited, Adrian van der Donck likewise relates how protest was made against the building of Fort Christina, but there also he gives evidence of the weakness of the Hollanders in the river on the first arrival of the Swedes, and that their strength consisted almost entirely in great words. "On the river," he says, "lies, first, Maniqua's Kihl, where the Swedes have built Fort Christina, where the largest ships can load and unload at the shore. There is another place on the river called Schulkihl, which is also navigable. That, also, was formerly under the control of the Hollanders, but is now mostly under the government of the Swedes. In that River (Delaware) there are various islands and other places formerly belonging to the Hollanders, whose name they still bear, which sufficiently shows that the river belongs to the Hollanders, and not to the Swedes. Their very commencement will convict them. Before the year 1638, one Minnewits, who had formerly acted as Director for the Trading Company at Manhattans, came into the river in the ship 'Key of Colmar,' and the yacht called the 'Bird Griffin.' He gave out to the Hollander, Mr. Van der Nederhorst, the agent of the West India Company in the South River, that he was on a voyage to the West India Isles, and that he was staying there to take in wood and water. Whereupon, said Hollander allowed him to go free. But some time after, some of our people going thither, found him still there, and he had planted a garden, and the plants were growing in it. In astonishment we asked the reasons for such procedure, and if he intended to stay there? To which he answered evasively, alleging various excuses for his conduct. The third time they found them settled and building a fort. Then we saw their purpose. As soon as he was informed of it, Director Kieft protested against it, but in vain."

Thus Peter Menuet made a good beginning for the settlement of the Swedish colony in America. He guarded his little fort for over three years, and the Hollanders neither attempted nor were able to overthrow it. After some years of faithful service he died at Christina. In his place followed Peter Hollendare, a native Swede, who did not remain at the head of its affairs more than a year and a half. He returned home to Sweden, and was a major at Skepsholm, in Stockholm, in the year 1655.

The second emigration took place under Lieut.-Col. John Printz, who went out with the appointment of Governor of New Sweden. He had a grant of four hundred rix-dollars for his traveling expenses, and twelve hundred dollars silver as his annual salary. The company was invested with the exclusive privilege of importing tobacco into Sweden, although that article even then was regarded as unnecessary and injurious, although indispensable since the establishment of the bad habit of its use.[1] Upon the same occasion was also sent out Magister John Campanius Holm,[2] who was also called by their excellencies, the Royal Council and Admiral Claes Fleming, to become the government chaplain, and watch over the Swedish congregation. The ship on which they sailed was called the "Fama." It went from Stockholm to Götheborg, and there took its freight. Along with this went two other ships of the line, the "Swan" and the "Charitas," laden with people and the necessaries of life. Under Governor Printz, ships came to the colony in three distinct voyages. The first ship was the "Black Cat," with ammunition and merchandise for the Indians. Next the ship "Swan," on a second voyage, with emigrants, in the year 1647. Afterwards two other ships, called the "Key" and the "Lamp." During these times the clergymen, Mr. Lawrence Charles Lockenius and Mr. Israel Holgh, were sent out to the colony. The instructions for the Governor were as follows:

"Instructions, according to which Her Royal Majesty, our Most Gracious Queen, will have the Lieutenant-Colonel, now also the appointed Governor over New Sweden, the noble and well-born John Printz, to regulate himself as well during his voyage as upon his arrival in that country. Given at Stockholm, the 15th of August, 1642.

"Inasmuch as some of the subjects of Her Royal Majesty and of the Crown of Sweden have, for some time past, undertaken to sail to the coast of the West Indies, and have already succeeded in conquering and purchasing a considerable tract of land, and in promoting commerce, with the especial object of extending the jurisdiction and greatness of Her Royal Majesty and of the Swedish crown, and have called the country New Sweden; wherefore and inasmuch as Her Royal Majesty approves and finds this, their undertaking and voyaging, not only laudable in itself, but reasonable, and likely, in the course of time, to benefit and strengthen Her Royal Majesty and the Swedish throne: So has Her Royal Majesty, for the promotion of that work and for the assistance of those who participate therein, furnished them for the making of that important voyage, and also for the confirming and strengthening of that important work thus begun in New Sweden, for said voyage, two ships, named the 'Fama' and the 'Swan,' as well as some other means necessary thereto, under a certain Governor, whom Her Majesty has provided with sufficient and necessary powers, having thereunto appointed and legitimated Lieutenant-Colonel John Printz, whom she has accordingly seen good to instruct upon the points following:

"2. The ships above named having proceeded to Götheborg, John Printz, the Governor of New Sweden, shall now, without any delay, take his departure to said place, so arranging his journey by land that he may reach there by the first opportunity. Going down to Götheborg, he shall assist in ordering and arranging everything in the best manner possible, and especially in accordance with the best regulations that the members of the company can have made; and as concerns his own person and that of his attendants, he shall so arrange his affairs that he may immediately, in the month of September next following, set sail from this country and proceed to sea.

"3. But either before or at the time the ships are about to set sail from Götheborg, the Governor shall consult with the skippers and officers of the ships, considering and deciding, according to the state of the wind and other circumstances, whether he shall direct his course to the north of Scotland or through the channel between France and England.

"4. Under way and on the journey, he must see to it that the officers and people of the ships perform their duties at sea truly and faithfully; and in all important and serious matters he can always avail himself of the aid and counsel of the persons aforesaid who usually form the council of a ship; he shall also have every important occurrence carefully noted, causing a correct log, or journal, thereof to be kept, of which also he shall, by every opportunity, send hither a correct copy.

[1] Placat on tobacco for the year 1641.

[2] It was long a favorite usage in Sweden to designate clergymen by the name of the place or province in which they were born, so that Holm may here be equivalent to "a native of Stockholm."

"5. The Governor, God willing, having arrived in New Sweden, he must, for his better information, bear in mind that the boundaries of the country of which our subjects have taken possession extend, in virtue of the articles of the contract entered into with the wild inhabitants of the country, as its rightful lords, from the sea-coast at Cape Hinlopen,[1] upwards along the west side of Godin's Bay,[2] and so up the Great South River,[3] onwards to Mingue's Kil,[4] where Fort Christina is built, and thence still farther along the South river, and up to a place which the wild inhabitants call Sankikans,[5] where the farthest boundaries of New Sweden are to be found. This tract or district of country extends in length about thirty German miles, but in breadth, and into the interior, it is, in and by the contract, conditioned that Her Royal Majesty's subjects, and the participants in this Company of navigators, may hereafter occupy as much land as they may desire.

"6. Recently, and in the year last past, viz., 1641, several English families, probably amounting to sixty persons in all, have settled, and begun to build and cultivate the land elsewhere, namely, upon the east side of the above mentioned South river, on a little stream named Ferken's Kil;[6] so also have the above-named subjects of Her Majesty, and participants in the Company, purchased for themselves of the wild inhabitants of the country, the whole eastern side of the river, from the mouth of the aforesaid great river at Cape May up to a stream named Warraticen's Kil,[7] which tract extends about twelve German miles, including also the said Ferken's Kil, with the intention of thus drawing to themselves the English aforesaid. This purchase the Governor shall always, with all his power, keep intact, and thus bring these families under the jurisdiction and government of Her Royal Majesty and the Swedish Crown; especially as we are informed that they themselves are not disposed thereto; and should they be induced, as a free people, voluntarily to submit themselves to a government which can maintain and protect them, it is believed that they might shortly amount to some hundred strong. But however that may be, the Governor is to seek to bring these English under the government of the Swedish Crown, inasmuch as Her Royal Majesty finds it to be thus better for herself and the Crown as partners in this undertaking; and they might also, with good reason, be driven out and away from said place; therefore, Her Royal Majesty aforesaid will most graciously leave it to the discretion of Governor Printz so to consider and act in the premises as can be done with propriety and success.[8]

"7. There is no doubt that the Holland West India Company will seek to appropriate to themselves the place aforesaid, and the large tract of land upon which the English have settled, and the whole of the above-named east side of the Great South River, and that so much the rather as their fort or fortification of Nassau, which they have manned with about twenty men, is not very far therefrom, upon the same eastern side of the river, just as they also make pretensions to the whole western side of the aforesaid South River, and consequently to all that of which our subjects aforesaid have taken possession, which they have seized, relying upon their Fort Nassau, whereby they would take possession of the whole South River, and of the whole country situated on both sides of the same river. It is for this that they have protested against the beginning which her before-mentioned Majesty's subjects have made in settling and building, and, so far as they could, have always opposed and sought to prevent our people from going up the South River and past their Fort Nassau. Therefore shall the Governor take measures for meeting the agents and participants of said Holland West India Company in a proper manner, and with mildness, but firmly remonstrate and make known to them the upright intentions of Her Royal Majesty and her subjects in the premises, that nothing herein has been sought, or is now sought, other than a free opening for commerce; that Her Royal Majesty's subjects have, in a just and regular manner, purchased of the proper owners and possessors of the country that district of which they have taken possession, and which they have begun to cultivate, and that they cannot, therefore, without injustice oppose Her Royal Majesty or her subjects, or seek to disturb them in their possessions without doing them great injury. But should the same Holland Company, contrary to all better hopes, allow themselves to undertake any hostility, or make any attack, then, in such case, it will only be proper to be prepared with the best means that circumstances will allow, and to seek to repel force by force; therefore, as this, like everything else, is best judged of and decided on the ground, so does Her Royal Majesty place it in the Governor's discretion to meet such vexations in the first instance with kind admonitions, but if these are not effective, then with severity, according to the best of his understanding, so as to arrange everything to the best advantage and honor alike of Her Royal Majesty and the members of the Company. But if no such troubles arise, which it is hoped will be the case, and Her Royal Majesty and her subjects remain undisturbed in that which they have rightfully brought into their possession, then shall the Governor hold good friendship and neighborhood with the aforesaid Hollanders at Fort Nassau, and with those who dwell upon the north river at Mankatan's[9] or New Amsterdam, as also with the English, who dwell in the country of Virginia, and make no inroads upon any of them, nor interfere with that of which they are in the actual possession. Especially, since the adjacent English in Virginia have already commenced to offer Her Royal Majesty's subjects in New Sweden all kinds of useful assistance, and to let them procure upon reasonable payment such cattle and seed-corn as they may desire; therefore shall the Governor continually seek to give free and undisturbed course to the correspondence and commerce thus begun with the English to the use and benefit of Her Royal Majesty's subjects aforesaid.

"8. Those Hollanders who have emigrated to New Sweden, and settled there under the protection of her royal Majesty and the Swedish crown, over whom Jost von dem Boyandh[10] has command, the Governor shall treat according to the contents of the charter and privileges[11] conferred by her royal Majesty, of the principles whereof the Governor has been advised; but in other respects he shall show them all good will and kindness, yet so that he shall hold them also to the same, that they upon their side comply with the requisitions of their charter, which they have received. And inasmuch as notice has already been given them that they have settled too near to Fort Christina, and as houses are said to be built at the distance of almost three miles from that place, they should therefore leave that place and betake themselves to a somewhat greater distance from the said fort. So also does her royal Majesty leave it to the good pleasure and prudence of the Governor, when on the ground, duly to consider the deportment of said Hollanders and the situation of the place of which they have taken possession, and, according to his judgment, either let them remain there quietly or make such a disposition and settlement of the matter as he shall find most suitable and advantageous to her royal Majesty and the participants in said company of navigation.

"9. The wild nations[12] bordering upon all other sides the Governor shall understand to treat with all humanity and respect, that no violence or wrong be done to them by her royal Majesty or her subjects aforesaid; but he shall rather, at every opportunity, exert himself that the same wild people may gradually be instructed in the truths and

---

[1] Cape Henlopen; we follow the orthography of the text.

[3] The river Delaware.

[4] Now Christiana Creek.

[5] Trenton Falls, ninety miles from the mouth of Delaware Bay.

[6] Written also "Varken's Kil," *i.e.*, "Hog's Creek," which is now called Salem Creek. The Indians called it Oitsessingh, or Wootsessungsing.

[7] Raccoon Creek. The "Naraticongs" are mentioned as an Indian tribe north of the Raritan. (See O'Callaghan, i. 49.)

[8] It is not known whence these English settlers came, or the precise time of their coming. According to the text above it was in 1641. Ferris, in his "History of the Original Settlements on the Delaware" (Wilmington, 1846), p. 55, on what authority he does not tell us, says that it was in 1640, and adds, "Some have supposed they were squatters from New Haven; some, adventurers from Maryland; and others, the pioneers of Sir Edmund Ployden." In all probability they were the same party of people from New Haven who, in the spring of 1642, settled on the Schuylkill.

[9] Usually called "Manhattan's," also "Manhattoe," from an Indian tribe of that name. See O'Callaghan's "History of New Amsterdam," i. p. 47.

[10] O'Callaghan, in his "History of New Netherland," i. p. 366–367, calls this person Joost de Bogaert, and (in his note on p. 367) says that "In the translation in the new series of N. Y. Hist. Soc. Trans., p. 411, the name is misspelled." The spelling, however, is that of Acrelius, which we give above.

[11] "Octroy och privilegio."

[12] The Lenni Lenape, called by the elder Campanius "Renni Rennappe"; by the English, Delawares. The Delawares were subdivided into the tribes of the Assinpinks, in the north; the Andastakas, on Christiana Creek, Del.; the Rankokas, or Chichequaas, and the Mingoes, the Neshaminies, in Bucks Co., Pa.; the Schackamaxons, the Mantas, and the Minnesinks, above the forks of the Delaware.

worship of the Christian religion, and in other ways brought to civilization and good government, and in this manner properly guided. Especially shall he seek to gain their confidence and impress upon their minds that neither he, the Governor, nor his people and subordinates are come into those parts to do them any wrong or injury, but much more for the purpose of furnishing them with such things as they may need for the ordinary wants of life, and so also for such things as are found among them which they themselves cannot make for their own use, or buy or exchange. Therefore shall the Governor also see thereto that the people of her royal Majesty, or of the company who are engaged in trading in those parts, allow the wild people to obtain such things as they need at a price somewhat more moderate than they are getting them of the Hollanders at Fort Nassau or the adjacent English, so that said wild people may be withdrawn from them and be so much the more won to our people.

"10. In regard to the Governor's place of residence, Her Royal Majesty leaves it to him to provide and choose the same according as he finds the case to be in the place, or it can be continued where it now is, and the residence arranged and ordered in the most convenient manner possible; in like manner shall the Governor also provide a suitable place for a fortress either at Cape Hinlopen, or the island called 'James' Island,'[1] or wherever else a good site for the same may be found; wherein he has especially to keep in view these considerations above all others, namely, that by such a fortification it should be possible to close up the South River, having it commanded by the same fortress, and that there should also be found there, without great difficulty, a suitable harbor wherein the ships of Her Royal Majesty and her subjects could be in security, and, if need so were, continue to lie there over winter.

"11. And if the Governor does not find it necessary at once and hastily to fortify another new place, but can for the present properly defend himself by Fort Christina, then shall he so much the more zealously at once arrange and urge forward agriculture and the improvement of the land, setting and urging the people thereto with zeal and energy, exerting himself above all other things that so much seed-corn may be committed to the ground that the people may derive from it their necessary food.

"12. Next to this, he shall pay the necessary attention to the culture of tobacco[2] and appoint thereto a certain number of laborers, so arranging that the produce may be large, more and more being set out and cultivated from time to time, so that he can send over a good quantity of tobacco on all ships coming hither.

"13. That better arrangements may be made for the production of cattle, both great and small, the Governor shall at once exert himself to obtain a good breed of cattle of all kinds, and especially of that which is sent out from this country, and also seek to obtain a supply from the neighboring English, dividing everything with those who will use and employ it in agriculture in exchange for seed, and with such prudence as he shall find most serviceable to the members of the company.

"14. Among and above all other things, he shall direct his attention to sheep, to obtain them of good kinds, and as soon as may be seek to arrange as many sheep-folds as he conveniently can, so that presently a considerable supply of wool of good quality may be sent over to this country.

"15. The peltry trade with the natives he shall also, as far as possible, seek to sustain in a good state,[3] exercise a careful inspection of all engaged in it, prevent all frauds in established commissions, and take care that Her Royal Majesty and her subjects, and the members of the company, may have reason to expect good return for their cargoes. In like manner he shall provide that no other persons whatever be permitted to traffic with the natives in peltries; but this trade shall be carried on only by persons thereto appointed in the name of the whole company, and its ways.

"16. Whatever else it may at present be necessary to do in that country will be best committed to the hands of the Governor in the country, according to the time and circumstance of the place, more especially as the same land of New Sweden is situated in the same climate with Portugal;[4] so, apparently, it is to be expected that salt-works might be arranged on the sea-coasts. But if the salt could not be perfectly evaporated by the heat of the sun, yet, at the least, the salt water might be brought to such a grade that it might afterwards be perfectly condensed by means of fire, without great labor or expense, which the Governor must consider, and make such experiment, and if possible put it into operation and make effective.

"17. And as almost everywhere in the forests wild grape-vines and grapes are found, and the climate seems to be favorable to the production of wine, so shall the Governor also direct his thoughts to the timely introduction of this culture, and what might herein be devised and effected.

"18. He can also have careful search made everywhere as to whether metals or minerals are to be found in the country, and if any are discovered, send hither correct information, and then await further orders from this place.

"19. Out of the abundant forests the Governor shall examine and consider how and in what manner profit may be derived from the country, especially what kind of advantages may be expected from oak-trees and walnut-trees, and whether a good quality of them might be sent over here as ballast. So, also, it might be examined whether oil might not be advantageously pressed out of the walnuts.

"20. The Governor shall likewise take into consideration and correctly inform himself how and where fisheries might be most profitably established, especially as it is said that at a certain season of the year the whale-fishery can be advantageously prosecuted in the aforesaid Godin's Bay[5] and adjacently; he shall, therefore, have an eye upon this, and send over hither all needed information as to what can be done in this and other matters connected with the country, and what further hopes may be entertained in reference thereto.

"21. The Governor shall also carefully inquire and inform himself in regard to the food and convenience for keeping a great number of silk-worms, wherewith a manufacture might be established, and if he discovers that something useful might thus be accomplished, he shall take measures for the same.

"22. Whatever else could be done in connection with the successful cultivation of the land, but cannot be introduced just for the present, this Her Royal Majesty will graciously have entrusted to the fidelity, foresight, and zeal of the Governor, with the earnest command and admonition that he seek in all matters to uphold the service and dignity of Her Royal Majesty and the Crown of Sweden, as also to promote the advantage and interest of the members of the company in the conservation of the same land of New Sweden, its culture in every way possible, and the increase of its profitable commerce.

"23. But far above all this, as to what belongs to the political government and administration of justice, everything of this kind must be conducted under the name of Her Royal Majesty and the Crown of Sweden, for no less reason than the country enjoys the protection of Her Royal Majesty and of the crown, and that the interest of the crown is in the highest degree involved in the protection of that country, its cultivation and active trade and commerce. To give the Governor specific information herein cannot so well and effectually be done at so great a distance; it must, therefore, be left to his own discretion and good sense that he, upon the ground, provide, arrange, and execute whatever conduces to bring matters into good order and a proper constitution, according as he finds the necessities of the time and place to require. At first, and until matters can be brought into a better form, the Governor may use his own seal, but in a somewhat larger form, in briefs, contracts, correspondence, and other written documents of a public character.

"24. He shall decide all matters of controversy which may arise according to Swedish law and right, custom, and usage; but in all other matters also, so far as possible, he shall adopt and employ the laudable customs, habits, and usages of this most praiseworthy realm.

"25. He shall also have power, through the necessary and proper means of compulsion, to bring to obedience and a quiet life the turbulent and disorderly, who will not live quietly and peacefully, and especially gross offenders, who may possibly be found; he may punish not only with imprisonment and the like duly proportioned means of correction, but also, according to their misdeeds or crimes, with the loss of life itself, yet not in any other than the usual manner, and after the proper hearing and consideration of the case, with the most respectable people and the most prudent associate judges who can be found in the country as his counsellors.

---

[1] "Jaque's Eyland" was in the neighborhood of Fort Nassau, probably between that and where Philadelphia now is.

[2] "Toback" is the Swedish spelling; in modern Swedish it is "tobak."

[3] In the original, "i godt *esse*."

[4] Portugal is situated between 37° and 42° N. latitude, and New Sweden was between 38° and 41° of the same latitude.

[5] The Dutch under De Vries, in 1630, tried to prosecute the whale-fishery in the Delaware, but found it unprofitable. (See New York Hist. Collect., New Series, vol. i p. 250.)

"26. Above all things, shall the Governor consider and see to it that a true and due worship, becoming honor, laud, and praise be paid to the Most High God in all things, and to that end all proper care shall be taken that divine service be zealously performed according to the unaltered Augsburg Confession, the Council of Upsala, and the ceremonies of the Swedish Church; and all persons, especially the young, shall be duly instructed in the articles of their Christian faith; and all good church discipline shall in like manner be duly exercised and received. But so far as relates to the Holland colonists that live and settle under the government of Her Royal Majesty and the Swedish crown, the Governor shall not disturb them in the indulgence granted them as to the exercise of the Reformed religion according to the aforesaid royal charter.

"27. In all else which cannot here be set down in writing, the Governor shall conduct himself as is suitable and becoming to a faithful patriot, and take into due consideration whatever is correspondent to his office, according to the best of his understanding and with the greatest zeal and care, also regulating himself in accordance with that which may be here communicated to him by word of mouth; and there is herewith given him a special list of the people who accompany him and of the means and equipment of his office.

"28. Finally, Her Royal Majesty is also well satisfied that the said office of his government shall continue and exist for three years, after the lapse of which he, the said John Printz, shall be free to return hither again, after the necessary arrangements have been made in regard to his successor, or some substitute in the said service. Should he, the said John Printz, have a desire to continue longer in this charge he shall have the preference over others therefor, provided that the advantage and service of Her Majesty and the crown, and of the company, so demand. Given as above.

"Paehr Brahe, Herman Wrangel,
"Claes Flemming, Axel Oxenstierna,
"Grabriel Bengtsson Oxenstierna,[1] And. Gyllenklou."[2]

The voyage to New Sweden was at that time quite long. The watery way to the West was not yet well discovered, and therefore, for fear of the sand-banks off Newfoundland, they kept their course to the east and south as far as to what were then called the Brazates.[3] The ships which went under the command of Governor Printz sailed along the coast of Portugal and down the coast of Africa until they found the eastern passage, then directly over to America, leaving the Canaries high up to the north. They landed at Antigua, then continued their voyage northward, past Virginia and Maryland, to Cape Henlopen. Yet, in view of the astonishingly long route which they took, the voyage was quick enough in six months' time, from Stockholm on Aug. 16, 1642, to the new fort of Christina, in New Sweden, on Feb. 15, 1643.

The Swedes who emigrated to America belonged partly to a trading company provided with a charter, who for their services, according to their condition or agreement, were to receive pay and monthly wages; a part of them also were at their own impulse to try their fortune. For these it was free to settle and live in the country as long as they pleased, or to leave it, and they were, therefore, by way of distinction from the others, called freemen. At first also malefactors and vicious people were sent over, who were used as slaves to labor upon the fortifications. They were kept in chains, and not allowed to have intercourse with the other settlers; moreover, a separate place of abode was assigned to them. The neighboring people and country were dissatisfied that such wretches should come into the colony. It was also, in fact, very objectionable in regard to the heathen, who might be greatly offended by it. Whence it happened that when such persons came over in Governor Printz's time, it was not permitted that one of them should set foot on shore, but they had all to be carried back again, whereupon a great part of them died during the voyage, or perished in some other way. Afterwards it was forbidden at home in Sweden, under a penalty, to take for the American voyage any persons of bad fame, nor was there ever any lack of good people for the colony.

Governor Printz was now in a position to put the government upon a safe footing, to maintain the rights of the Swedes, and to put down the attempts of the Hollanders. They had lately, before his arrival, patched their little Fort Nassau. On this account he selected the island of Tenackong as his residence, which is sometimes also called Tutaeaenung and Tenicko, about three Swedish miles from Fort Christina. The convenient situation of the place suggested its selection, as also the location of Fort Nassau,[4] which lay some miles over against it, to which he could thus command the passage by water. The new fort, which was erected and provided with considerable armament, was called New Götheborg. His place of residence, which he adorned with orchards, gardens, a pleasure-house, etc., he named "Printz Hall." A handsome wooden church was also built at the same place, which Magister Campanius consecrated on the last great prayer-day which was celebrated in New Sweden, on the 4th of September, 1646. Upon that place, also, all the most prominent freemen had their residences and plantations.

The Hollanders intruded upon the Swedes in their traffic with the Indians, and Printz therefore sought to keep them under. In the name of the High and Mighty States-General and of the West India Company, under which all their transactions were carried on, they had never bought so much as a foot's breadth of land; but from time to time sent in some particular persons, who treated with the heathen on their own account, and thus tried to find out what course

[1] These five names are historical. They formed at that time the Swedish Council of State, who carried on the government immediately after the death of Gustaf Adolph the Great, and during the minority of his daughter Christiana, who was not quite six years old at the time of her father's death (November, 1632), and consequently in her seventeenth year at the date of this document. She ascended the throne as actual sovereign on her eighteenth birthday, viz., Dec. 6, 1644. The Swedish colony in America was undoubtedly the work of the great Chancellor Axel Oxenstierna, though first suggested by Gustaf Adolph.

[2] Gyllenklou was secretary of the Council.

[3] The Azores.

[4] Fort Nassau was built near the mouth of Timber Creek, below Gloucester Point, in New Jersey. It is said to have been built by Cornelius Mey in 1623; but when visited by De Vries, ten years afterwards (Jan. 5, 1633), it was in the possession of the Indians, among whom he was afraid to land. We have no evidence that the fort was reoccupied by the Dutch before the establishment of the Swedish colony in 1638. (See Voyages of De Vries in New York Hist. Col., New Series, vol. i. p. 253.)

the Swedes would pursue in consequence. In the year 1646 came one Thomas Broen with a permit from Peter Stuyvesant, the Holland Director at New Amsterdam, to settle himself at Mantas Huck, on the other side of the bay, directly opposite Tenakongh. This permit he showed to Governor Printz, and desired his aid in the building of his abode. The Governor promised this upon condition that he would place himself under the Swedish government. But when he saw beneath this the trick of the Hollanders, he himself bought of the Indians the land from Mantas Huck to Narraticon's or Raccoon's Kihl, and raised upon it a post to which the Swedish coat of arms was affixed, whereby the plan of the Hollanders was frustrated for the time.

Andries Hudde, appointed commandant *ad interim* at Fort Nassau, on the 12th of October, 1645, protested in writing against Printz's land purchase of the 8th of September, 1646, and gave information of the same to the director, Peter Stuyvesant, namely, that Governor Printz sought to procure for himself all the land east of the river; that, if he could make himself master of both sides, it was probable that he would export annually thirty or forty thousand beaver-skins. Now, as the Holland Company's treasury was entirely empty, and the Hollanders saw that they had no time to lose, they resorted to another plan. Some freemen —Simon Ruth, Cornelius Marizen, Peter Hermansson, Andries Hudde, Alexander Boyer, and David Davids—united together and purchased of the Indians a piece of land, extending from Ancocus Kihl to Tenakongh Island, another place higher up on the river than where the Governor had his residence, and also took a title therefor; but with the reservation that if the company wished to purchase it for themselves they might do so by refunding their purchase-money to them. Governor Printz protested against this as an unbecoming proceeding, which protest also Hudde sent over to New Amsterdam. Peter Stuyvesant, in his answer, complains of their inability to maintain their rights, and promises money to buy all the land from Narraticon's Kihl to the bay, which, however, was never done.

Governor Printz had blocked up the passage of the Hollanders to Fort Nassau by water, but they devised another method of evading his superior power. They entered into a treaty with the Indians for the land which lies between Maniqua's or Minqua's Kihl and the river, as far down as Bombe's Huck or Bambo Hook, and concluded the purchase on the 19th of July, 1651. That agreement was the only one which had yet been made in the name of the States-General and the West India Company. But by that they bought the land which the Minquesses had already, in Menewe's time, sold to the Swedes, and it is therefore unreasonable to believe that the true owners of the land subscribed that bill of sale. Shortly after this Fort Casimir was built at Sandhuk. Governor Printz at once protested against it; but either he had not the means of hindering it, or had not time for it, and so the matter rested. To remedy the injury which the Hollanders inflicted by Fort Casimir, Governor Printz erected upon the place called Wootsessung Sing another Swedish fort, which he called Elfsborg, one Swedish mile[1] below Sandhuk and two miles below Christina, but on the eastern shore, from which that district of country was in former times, and even now is called Elsingborg. From this was fired a Swedish salute upon the arrival of Swedish ships. But its principal object was to search the Holland ships which came before it, and (which stuck very hard in their maw) to make them lower their flag. The fort was afterwards abandoned by the Swedes and destroyed, as it was almost impossible to live there on account of the gnats (myggor),[2] whence it was for some time called Myggenborg. Besides these there were Fort Korsholm, at Passayunk, where the commander, Sven Schute, had his residence. Manäyungh, on the Skorkihl or Skulkihl,[3] was a fine little fort of logs, having sand and stones filled in between the wood-work, and surrounded by palisades, four Swedish (twenty-seven English) miles from Christina eastwardly. Mecoponacka (Upland) was two Swedish miles from Christina and one mile from Götheborg, upon the river shore, on the same plan, with some houses and a fort. Other places were equally well known, though not fortified. Chinsessing, a place upon the Schuylkill, where five families of freemen dwelt together in houses two stories high, built of white-nut-tree (hickory), which was at that time regarded as the best for building houses, but in later times was altogether disapproved of for such purposes. Karakung had a water-mill, which the Governor had built for the people, it being the first in the country. Chamassung was also called Finland, a district where the Fins dwelt by the waterside, and Neaman's Kihl, one and a quarter miles from Christina. Manathaan, or Cooper's Island, was an island opposite Fort Christina, so called from a cooper who dwelt there with two Hollanders, and made casks or wooden vessels and small boats. Techoherassi was Olof Stillé's place. Gripsholm, Nya Wasa, etc., which are marked upon the oldest maps, were places laid out and occupied, but did not get established under the Swedish administration.

The land on the west side of the river, which the Swedes had purchased of the heathen, first in Menewe's time and afterwards under Governor Printz, or had acquired a right to by agreement, stretched from Cape Henlopen to the Falls of the Delaware, and thence westward to the great fall in the river Susquehanna, near the mouth of the Conewaga Creek.

[1] A Swedish mile is 6.648 English miles, or 11,700 yards.

[2] No doubt mosquitoes, which are sometimes very troublesome in that part of New Jersey. Compare the English midge.

[3] Now Schuylkill, according to the Dutch orthography.

These Indians were called by Europeans in general Delawares, but within a circle of eighteen miles around the Swedes there were ten or eleven separate tribes, each having its own sackkewan[1] or king. Among these were especially the Minesinkos, the Mynkusses or Mineguesses, upon the so-called Maniquas or Minqua's Kihl (Christina), with whom the Swedes formed a special friendship. These extended twelve Swedish miles[2] into the interior of the country, on to the Conestoga and the Susquehanna, where they had a fort, which was a square surrounded by palisades, with some iron pieces, on a hill, and some houses within it. But some of them were with the Swedes every day, who also once or twice in a year made a journey up into the country among the Minequesses with their wares for sale.

The Swedes maintained friendly relations with the Indian tribes, and made extensive purchases of lands from them, extending to the Susquehanna River. Acrelius says, "The old Indians still tell of the treaties which their forefathers made with the Swedes, as also how far they were disposed to admit them into their country." Of this it may serve as evidence to introduce the following extract from the minutes of the treaty made in Lancaster:

"The Court-House in Lancaster,
"June 26, 1744, P.M.

"Present,—Hon. George Thomas, Kt., Lieutenant-Governor of Pennsylvania, etc., the Hon. Commissioners of Virginia, the Hon. Commissioners of Maryland, the deputies of the Six Nations of Indians, Conrad Weiser, interpreter.

"Canastego, the Indians' spokesman, spoke as follows:

"'Brother, the Governor of Maryland: When you spoke of the affair of the land yesterday, you went back to old times, and told us you had been in possession of the province of Maryland above one hundred years. But what is one hundred years in comparison to the length of time since our claim began, since we came up out of this ground? For we must tell you that long before one hundred years our ancestors came forth out of this very ground, and their children have remained here ever since. You came out of the ground in a country that lies beyond seas; there you may have a just claim, but here you must allow us to be your elder brethren, and the lands to belong to us long before you knew anything of them. It is true that about one hundred years ago a German ship came hither and brought with them various articles, such as awls, knives, hatchets, guns, and many other things, which they gave us. And when they had taught us to use these things, and we saw what kind of a people they were, we were so well pleased with them that we tied their ships to the bushes on the shore, and afterwards, liking them still better, and the more the longer they stayed with us, thinking that the bushes were too weak, we changed the place of the rope, and fastened it to the trees, and as the trees might be overthrown by a storm, or fall down of themselves (so strong was our friendship for them), we again changed the place of the rope and bound it to a very strong rock. [Here the interpreter said, They mean the land of Onondaga.] There we fastened it very securely, and rolled wampum around it. For still greater security we stood upon the wampum and sat upon it to fasten it, and to prevent all injury, and we took the greatest care to keep it uninjured for all time. As long as that stood the newly-arrived Germans recognized our right to the country, and from time to time urged us to give them portions of our land, and that they might enter into a union and treaty with us, and become one people with us.'"

That this is more correctly said of the Swedes than of the Hollanders can be inferred from this, that the Hollanders never made such a purchase from them as to include their whole country, which the Swedes did. Yet the English are rather disposed to explain this in favor of the Hollanders. The savages regarded both the Swedes and Hollanders, being Europeans, as one people, and looked upon their quarrels as disagreements between different families.

Purchases of land from the wild tribes were made in this way: Both parties set their names and marks under the purchase contract;[3] two witnesses also were taken by the Christians. When these made their oath that they were informed as to the transaction, and had seen the payment made, then the purchase was valid. If the kings or chiefs of the Indians signed such an agreement in the presence of a number of their people, then it was legitimate on their side. In former times they were quite truthful, although oaths were not customary among them. But it was not so in later times, after they had more intercourse with Christians. Payments were made in awls, needles, scissors, knives, axes, guns, powder and balls, together with blankets of frieze or felt, which they wrap around them. One blanket sufficed for their dress. These wares they secured for themselves for their skins of beavers, raccoons, sables, gray foxes, wild-cats, lynxes, bears, and deer.

Governor John Printz was the most rigorous and enterprising official that ruled on the Delaware River, and was perhaps the most zealous of all his countrymen for the success and permanency of the New Sweden. He resisted the encroachments of the English on the one hand and the Hollanders on the other, while he co-operated with his own people in extending their settlements up the Schuylkill Valley and westward towards the Susquehanna. He was ap-

[1] Commonly written "sachem" by English writers.

[2] Ninety-three English miles.

[3] Conrad Weiser, born in Germany, 1696, and come to this country in his fourteenth year, and present at Lancaster, as above stated, is the ancestor of the Rev. C. Z. Weiser, now residing at Greenville, Montgomery Co., Pa. He was greatly beloved by the Indians, and possessed their confidence in all matters connected with the transfer of lands to the settlers. William M. Reynolds, D.D., the translator of Acrelius, referring to him says, "He stayed at one time in the Ephrata cloister, among the monks called Beiselians, Dunkards, or Dumplars, a kind of Anabaptists. During that time he also let his beard grow, according to the law of the order. He was for many years an interpreter between the Indians and the English in their councils. The former had the same confidence in him as one of their own race. They have given him the name of Tarachawagon. When a sale of land is made the Indians subscribe on the one side and the English commissioners upon the other. Then the interpreter must write his name, Tarachawagon, first under those of the Indians, and then 'Conrad Weiser' under the English, as a sign that each has an equal share in him. So it also went with his beard. At the meeting in Lancaster, in 1744 (June), when they came together, and before they began to consult, they first took half of his beard off (all Indians hate beards, possibly because they do not or cannot grow any themselves) of him, as their own right. Next it was among their principal representations to the meeting, and especially to the Governor of Pennsylvania, that he should take off the other part of Tarachawagon's beard, since he would otherwise scare their little children when he came among them. To give their speech the greater weight, they here delivered a string of wampum, as is the custom. The Governor, before his departure, assured them that he would take off the other part of Weiser's beard, and that he had already given an order for this. In confirmation of his sincerity and good faith he also gave them a string of wampum, which was received with their usual exclamation of joy, 'Yo-hah, yo-hah!'"

pointed Governor at the instance of Axel Oxenstierna, the most confidential adviser of the fallen Gustaf Adolph, and who was the central power during the regency of Christina, as well as the author of elaborate instructions. He held the Dutch in check, closed the mouth of the Schuylkill against them, and secured the Indian trade of that river for the Swedish West India Company. The thrift and business enterprise of the Swedish colonists in commanding the resources of the outlying country is evidenced by the extent of their shipment to the home government. In one year "thirty thousand skins" were brought in by the Indians, who procured them from the country between the Schuylkill and Susquehanna. The policy of Governor Printz in closing navigable rivers to his rivals was sagacious, and merited for him the confidence of his followers. Having secured the trade of the Schuylkill, he determined to break up a Dutch trading-post on the Delaware River at a place called Santhickan, where Trenton is now located. At this point the Holland commander established himself and planted the arms of the States-General on the shore of the river, and where large collections of skins were bartered for by the Dutch traders. Printz ordered this national insignia to be displaced, and dispatched a lieutenant and squad of men to carry out the order. The event took place on the 8th of September, 1646. The officer in charge of the expedition carried out his instructions to the letter, and when he was asked by the Hollanders in charge of the post, "How dare you do such a thing?" replied, "If the very standard of the States-General stood there I would treat it in the same manner." Printz is said to have been the first person to build a water-mill in New Swedeland. The site selected was on Water-Mill Stream, now Cobb's Creek. This was a great convenience to the Swedes, and Indian squaws came for many miles in every direction to have their corn ground for domestic use. The successful administration of Governor Printz cast a shadow upon the Dutch commissary, Jan Jansson Ilpendam, who had charge of affairs on the east shore of the Delaware. Ilpendam was recalled, and one Andries Hudde was installed in his place. This change increased rather than allayed the frequency of contentions between the rival colonists. Hudde was directed by his superior officer to replant the arms of the States-General, which he did. Printz dispatched Lieut. Huygens to pull it down. Hudde was on the alert, and placed the offending officer in arrest, sending a messenger to Printz that he would punish him for his intended act of rashness. Printz replied that he would retaliate, and insisted upon his company's right to extend their trade and dominion; finally, he treated Hudde's messenger with indignity, hastening his departure from his presence with threats of violence. This episode ended the official correspondence between them, and Printz assumed an unfriendly attitude. He guarded the line of the Schuylkill with care, "persecuted or expelled every Dutchman in New Sweden who would not take the oath of allegiance to Queen Christina," sold fire-arms and ammunition to the Indians, overhauled Dutch vessels coming up the Delaware, and finally raided the premises of Hudde, despoiled his gardens and fruit-trees, and otherwise desolated the place and surroundings. His conduct seems to have excited public inquiry, and a committee of the High Council of the New Netherlands came from Manhattan to investigate the "outrages." These officials, bearing credentials, presented themselves to Governor Printz at Fort Gottenburg. The approaches being duly guarded, the officer in charge kept them in waiting until he could communicate with his chief; meantime the rain descended in torrents, soaking these dignitaries to the skin, greatly to their displeasure. All preliminaries being arranged, they were finally admitted to an audience with the Governor. They delivered their protest against the conduct of his Excellency, and insisted upon the right of their countrymen to make settlements on the Schuylkill. They retired without molestation, but their effort to secure favor was not reciprocated by the implacable Swede.

A change in the director-generalship of the New Netherlands took place May 27, 1647. Peter Stuyvesant succeeded William Kieft. Meantime the importance of securing titles to lands became a paramount object to the most enterprising of the settlers, and trade with the Indians for peltries a secondary matter. Stuyvesant employed agents, who went among the Indians and bartered for large tracts on both sides of the Delaware, in many instances purchasing the same lands previously sold by the Indians to the Swedes, the natives being willing to repeat their sales if the "white man would buy," and the Dutch "white man" buying in some instances what he knew to have been previously sold to the Swedes, but whose evidence of purchase was not on record or susceptible of proof. As the Hollanders always preserved carefully-prepared evidences of their purchases, and had them duly recorded at their principal office at Manhattan, it enabled Stuyvesant to greatly embarrass Printz in disputes arising between them. Stuyvesant sent to Printz exemplifications of his records, describing large tracts of land, and demanded of him an exhibition of his titles. "Printz could merely define the limits of his territory, and say that his papers were on file in the Chancellory of Sweden." Finding himself thus embarrassed, Printz sought to make a new contract with the chief Waspang Zewan. Stuyvesant[1] became apprised of the secret negotiations, and personally dealt

[1] Peter Stuyvesant was appointed Governor of the New Netherlands July 28, 1646, and arrived at the Manhattans (now New York) on the 11th of May, 1647. His administration lasted until Sept. 8, 1664, when he surrendered to the English under Col. Nichols, and the name of New York was substituted for that of New Amsterdam, and the New Netherlands disappeared from the New World.—*Acrelius.*

with the Indians, securing a title to lands on both sides of the Delaware River from Christiana Creek to Bombay Hook; and, to make his triumph complete over Governor Printz, induced the wily Indians to deny that they had ever sold any of the lands described to the Swedes. To protect this acquisition from possible loss, Stuyvesant located and constructed Fort Casimir on the Delaware River, at a point at or near the present town of New Castle. The rivalry between these officials continued from 1647 to 1651.

GOVERNOR PETER STUYVESANT.

The increasing interest in their respective colonies led to personal interviews, induced by the increasing numbers and pretensions of the English, who were also crowding their way up the Delaware River. Finally "they mutually promised to cause no difficulties or hostility to each other, but to keep neighborly friendship and correspondence together and act as friends and allies." Two years of amity followed, when Printz returned to his native land.

Before embarking, October, 1653, he committed the government of the colony to the official care of his son-in-law, John Pappegoya, who ruled till May, 1654, when he was succeeded by John Claudius Rising. Of the advent of this officer and those who accompanied him Acrelius says, "In the year 1654 the ship 'Eagle' arrived from Sweden. Upon it came John Claudius Rising, formerly secretary in the Royal College of Commerce, but now appointed commissary and Governor's assistant councilor in New Sweden. In his company was the engineer, Peter Lindström, together with various officers, officials, and military. Their clergyman was one named Peter. The inhabitants of the country, submitting to the Swedish government, should enjoy free allodial grants for themselves and their heirs, have the liberty of trading with the natives at their pleasure, introduce their goods into New Sweden, export them at two per cent., and then be free from all duties in Sweden and its subject provinces. The special privileges given to certain participants in the tobacco trade in the year 1653 were also revoked, as they had fallen into disorder, while, on the other hand, the exclusive privilege of the American Company to the enjoyment of that trade was renewed. The inclination to emigrate from Sweden to America was so strong that when the ship set sail over one hundred families of good and respectable people, provided with good passports and recommendations, were compelled to remain in Götheborg. They had sold house and home and all their goods in the expectation of becoming Americans, along with their wives and children, but could not get away for want of room on the ships. They arrived safely, and immediately came to Fort Casimir, the fort upon Sandhuk, which they first saluted with two guns. They then sent up to the commandant to ask whether he would surrender the fort, which had been so improperly erected upon the Swedes' ground and against their protests. But when the commandant required rather a long time for deliberation, Commissary Rising landed about thirty soldiers, against whom the fort was not strong enough to defend itself, yet the Hollanders did not at that time purchase any right to the land with their blood. A correct inventory was made of everything in the fort, and every one was allowed to carry off his property, whether belonging to the company or to private individuals. The people were left at liberty either to go away or, after taking the oath of allegiance to the Swedish crown, to remain and be protected in all their rights. This was done upon Trinity Sunday, on which account the fort was called by the Swedes the Fort of the Holy Trinity. It was afterwards, according to the plans and measurements of the engineer, Peter Lindström, as good as built anew, and was at the same time improved with outworks.

The Hollanders could not digest the affront put upon them when Director Rising captured Fort Casimir, and at the same time drove them out of New Sweden. From that day they began to collect their forces, but could not immediately show what they had in their mind. Meanwhile, to their great joy, it happened that Mr. Deswijk, captain and supercargo of a Swedish ship called "Golden Shark," which was sent to reinforce the Swedes, as well as to carry goods back again, had the misfortune to cast anchor close alongside of their coast, while he regarded the Hollanders as old friends and neighbors, but was immediately seized by them and considered a good prize. The following extracts from the New York records will give the facts of this seizure:

"Oct. 17–24, 1654. Capt. Deswijk declares that, by an oversight of the pilot, his ship was compelled to

go up into the Raritan River, where the Hollanders forcibly seized them, and kept him a prisoner in New Amsterdam, whither he came to obtain a pilot who should conduct him to the South River, or the river of New Sweden. 'You now pretend,' says he, 'that Mr. John Rising, the Governor of New Sweden, had taken Fort Casimir from you, to which you pretend to have a right, which pretension has no ground nor

FORT CASIMIR OR TRINITY FORT.
[From Campanius' "New Sweden."]

certainty. That fortress was built by your general director in the year 1651, rather by force and violence than by right and justice, on the South River, a soil and country belonging to Her Royal Majesty of Sweden, my Most Gracious Queen, against which Governor Printz protested. Therefore said John Rising has not taken it from you, but has only taken back property which belongs to her Majesty of Sweden. It cannot be proved that he has taken a single penny of any of your subjects. But when the free people who lived there, and wished to remain permanently, had given their oath of allegiance, they were all protected in their rights. Further, no man who lives on lands there has ever been detained, but has always been left at liberty to go where he pleased, and also to take his goods and chattels with him. But as concerns myself you treat me in a very different way,'" etc.

To this Governor Stuyvesant and his Council answered as follows: "To the unfounded protest presented by Mr. Deswijk, factor of the Swedish Company, it is answered that, although he pretends to have sailed into this river by the oversight of his pilot, and had sent his people to us as to good friends and neighbors, the facts do not so appear to us. Director Rising's hostile conduct to us is well known when, under an appearance of friendship, he came before our Fortress Casimir, on the South River, in the New Netherlands, gave two salutes, and sent thirty men on shore, who were welcomed by our commandant and official as friends and neighbors. But when they saw the weakness of our garrison they did not treat our few soldiers as friends and neighbors of the crown of Sweden, but as declared enemies, though they belonged to the States-General and the West India Company. With force and arms they made themselves masters of Fort Casimir, with all its ammunition, houses, and other things belonging to the far-famed West India Company, in direct opposition to all rights and usages of war, and they still hold the same. They have also compelled some of our officers, together with other free people who represented the States-General and the West India Company, to renounce their oath of allegiance and submit to the crown of Sweden," etc. Other supposed injuries and insults were also recounted, etc.

What lame pretexts are here urged for that outrage all the world can see. What the Hollanders had, on various occasions before this, done to the English, compelling them to relinquish places which they had occupied, and allowing the people to depart with their property, or to remain in the country as their subjects, that they now determined to do to the Swedes, in conflict with all the laws and usages of nations, because this best pleased themselves, although it was an entirely different matter to take possession of one's own land from a foreign power and its garrison, which sought the injury of the country and its government, where all had liberty to go their way and take with them that which belonged to them, and to keep a ship with all its goods and people, which had of necessity come into their harbor, but was willing to leave it immediately and without creating the least disturbance. Finally their hostilities burst forth in a full flame. On the 30th of August, 1655, came the Holland Governor Peter Stuyvesant, with seven vessels, great and small, and from six hundred to seven hundred men strong, from the North River and New Amsterdam up into the river of New Sweden, and fell violently upon the Swedes. He made his first night-camp in the abandoned and decayed Fort Elfsborg, where he arrayed his soldiers, and took some freemen prisoners. The following day he sailed past Fort Trinity, and landed upon a point which is now called Swanevik. There they began to throw up some intrenchments, and with threats and arguments demanded the surrender of the fort. Sven Schute, the commander there, endeavored partly to dissuade and partly to hold out against their attack until he could receive reinforcements from Christina, but all in vain. The road to Christina had already been beset by the Hollanders, so that no one could either go or come from that place. Commander Schute's proceedings were entirely disapproved by Director Rising, especially as he gave up the fort without the least resistance. But the excuse was that necessity knows no law. The commander was allowed to march out of the fort with some few

men, but the other officers were taken prisoners and kept within the fort, and the common soldiers were put on shipboard and sent over to New Amsterdam. That was, indeed, said to be done of their own good will, thus to submit to the power of the Hollanders, but their people's own words witnessed to the contrary. As to the rest, all posts were filled with Holland soldiers. The Swedish flag was hauled down, and that of Holland put up in its place. The following document informs us more fully of these transactions:

Extract from Governor Stuyvesant's Journal, dated Sept. 10–17, 1655.

"This day, eight days since, we came into the bay of the South River, and were delayed during Sunday by the ebb and flood tide. On Thursday following we came before the deserted Fort Elsingburg, and there held a review, and divided our troops into five companies. On Friday morning, the wind and tide being favorable, we passed Fort Casimir without any hostile demonstration on either side, and cast anchor a little distance above the fort, put the people on shore, and sent Capt. Smidt, with a drummer, to the fort to demand the surrender of our property. The commandant desired leave to consult Governor Rising, which was refused. In the mean time the road to Christina was occupied by fifty men, and the commandant, Sven Schute, sent a messenger to ask a parley with us. But we advised him not to wait for a salute from our guns, lest the shedding of blood should be charged upon him. He again desired to confer with us, which was granted, and took place in a valley about half-way between the battery which we were commencing and the fort. He insisted that he should send an open letter to his Governor, which was denied him. Then he went away dissatisfied. Our troops advanced down into the valley, and our works began to rise up above the bushes. The last summons was delivered, and then the commandant desired a delay until the next day, which was granted him, inasmuch as we could not have our batteries ready before that time. On Saturday morning the commandant came out and capitulated at discretion. At noon our troops marched into the fort. Sunday.—To-day our first public divine service was held, and an imperfect thanksgiving. Yesterday came one Factor Elswyk from Christina, and in a polite manner, in the name of the Governor, asked for the reason of our coming, and our superior's instructions. Our answer was, to take back that which was our own, and keep it. He suggested to us to be satisfied with that which had been taken, and not go any farther, upon which he insisted with polite representations and arguments, with the threat finally introduced, *hodie mihi, cras tibi*.

"In one or two days our troops shall march hither; but we shall march slowly, so that our people may not be fatigued, and that we may have time to receive your orders. In the mean time we shall advance, taking counsel with Mr. Sille and Capt. Coningh, according to the best of our understanding, etc.

"PETER STUYVESANT.

"P. S.—There are thirty Swedes who have surrendered to us, and desire to settle in Manhataan, whom you may expect. It seems that many others may follow them."

The following is the capitulation[1] made at Fort Casimir between the commandant, Sven Schute, and Director-General Peter Stuyvesant:

"1. The commandant shall have liberty, if he desires it, to take back to Sweden by ship, either of the Crown or others, the cannon which belong to the Crown, both small and great, which, according to said command-

[1] The capitulation was made between the brave and noble Director John Rising, Governor of New Sweden, on the one side, and the brave and noble Director Peter Stuyvesant, Governor-General of New Netherlands, on the other side.

"1. That all cannon, ammunition, provisions, and supplies, together with other things belonging to the Crown of Sweden, which are in and around the Fort Christina, shall belong to and be preserved as the property of the Swedish Crown and the Southern Company, and shall be under the power of said Governor to take it away or deliver it to Governor Stuyvesant, with the proviso that it shall be given up upon order.

"2. Governor John Rising, his superior and inferior officers, his officials and soldiers, shall march out of the fort with drums and trumpets playing, flags flying, matches burning, with hand and side arms, and balls in their mouths. They shall first be conducted to Tecumseh Island, to which they shall be taken in safety, and placed in the fort which is there until the Governor sets sail upon the ship 'Waegh,' upon which said Governor Rising, his people and property, shall be conducted to Sandy Huck, situated five Holland miles the other side of New York, under safe conduct, within at least fourteen days. Also the Governor and Factor Elswyk shall in the mean time have allowed them four or five servants for attending to their business, whilst the others are lodged in the fortress.

"3. All writings, letters, instructions, and acts belonging to the Crown of Sweden, the Southern Company, or private persons, which are found in Fort Christina, shall remain in the Governor's hands, to take away at his pleasure without being searched or examined.

"4. None of the crown's or company's officers, soldiers, officials, or private persons shall be detained here against their wishes, but shall be allowed to go, without molestation, along with the Governor if they so desire.

"5. That all the officers, soldiers, and officials of the crown and of the Southern Company, and also all private persons, shall retain their goods unmolested.

"6. If some officials and freemen desire to depart, but are not able to go with the Governor and his party, they shall be allowed the time of one year and six weeks in which to sell their land and goods, provided that they do not take the oath of allegiance for the period that they remain.

"7. If any of the Swedes or Finns are not disposed to go away, Governor Rising may take measures to induce them to do so; and if they are so persuaded, they shall not be forcibly detained. Those who choose to remain shall have the liberty of adhering to their own Augsburg Confession, as also to support a minister for their instruction.

"8. Governor Rising, Factor Elswyk, and other superior and inferior officers, soldiers, and freemen, with all their property which they wish to take away, shall be provided by the Governor-General with a sound ship, which shall receive them at Sandy Huck, and convey them to Texel, and thence immediately by a coaster, galliote, or other suitable vessel to Götheborg, without charge; with the proviso that said coaster, galliote, or other vessel shall not be detained, for which the said Governor Rising shall be answerable.

"9. In case Governor Rising, Factor Elswyk, or any other official belonging to the Swedish Crown or the South Company has incurred any debts on account of the crown or of the company, they shall not be detained therefor within the jurisdiction of the Governor-General.

"10. Governor Rising has full freedom to make himself acquainted with the conduct of Commandant Schute and that of his officers and soldiers in regard to the surrender of Sandhuk Fort (Fort Casimir).

"11. Governor Rising promises that between the 15th and 25th of September he will withdraw his people from Fort Christina, and deliver it up to the Governor-General.

"Done and signed the 15–25th of September, 1655, on the parade between Fort Christina and the Governor-General's camp.

"PETER STUYVESANT.

"JOHN RISING, *Director of New Sweden.*"

"It is further capitulated that the captain who is to convey Governor John Rising and the Factor Henry Elswyk shall be expressly ordered and commanded to put the aforesaid Governor Rising and the Factor Elswyk on shore, either in England or in France; and that the Director-General shall lend to Governor Rising, either in money or in bills of exchange, the sum of three hundred pounds Flemish, which the said Governor Rising engages to repay to the Governor-General or his order, in Amsterdam, within six months after the receipt. In the mean time he leaves as a pledge and equivalent the property of the crown and Southern Company now given up. Hereof we give two copies signed by the contracting parties.

"Concluded September 15–25th, on the parade between Fort Christina and Governor-General Stuyvesant's camp.

"PETER STUYVESANT.

"JOHN RISING."

Thereupon all who had a desire to remain in the country were called together by a proclamation to take the oath of allegiance, and be allowed to remain in the country as a free people. All others were to depart, with liberty either to carry off their property or to sell it.

The form of the oath of allegiance was as follows:

"I, the undersigned, do promise and swear, as in the presence of the

ant's report, consist of four iron guns of fourteen lis-pounds and five field-pieces; of these latter, four large and one small one.

"2. He shall also march out with twelve men fully armed as his life-guard, and with the flags of the Crown, the others with their side-arms only; the muskets of the Crown shall stand to the commandant's account, but shall remain in the fort until they take them away or send an order for them.

"3. The Commandant shall be secure in his person and individual property, either to take it away or to let it remain until further orders. The same shall be the case in regard to the property of all the other officers.

"4. All this shall be kept inviolate, provided said commandant shall immediately surrender into the Director-General's hands Fort Casimir, with all its pieces, ammunition, materials, and other goods belonging to the aforesaid West India Company.

"Given, done, and signed by the contracting parties, Sept. 16, 1665, on the ship 'Waegh,' at Fort Casimir.

"PETER STUYVESANT.
"SVEN SCHUTE, *Engineer.*"

But the matter did not rest here. The evil undertaking was continued by a march to Fort Christina. The road taken was not directly overland from Sandhuk, which would have been about a Swedish mile, and would have brought them directly in front of the fort, but they marched around over the creek, where the Christina bridge now is, which was two and a half Swedish miles, and they thus attacked the fort in its rear, placing their camp in the field which fenced off in front of Christina harbor. No great trouble was taken in forming the siege. The time, which was only a few days, was mostly occupied with negotiations, without a single shot fired or a single Hollander's blood shed.

Commentators differ materially in their accounts of Governor Stuyvesant's administration subsequent to the submission of the Swedes. It seems certain that a sense of oppression was feared by some and experienced by others. Acrelius says, "The terrible tyranny to which the Swedes were at that time subjected cannot be fully described. The flower of the Swedish male population were at once torn away and sent over to New Amsterdam, though everything was done as though it was with their free consent. The men were taken by force and placed on shipboard; the women at home in their houses were abused, their property carried off, and their cattle slaughtered. Then it was the right time to send out a proclamation and call the people to take the oath of allegiance. Those who withheld themselves were held in continual disfavor." If the foregoing be correct, the sturdy and unwarlike Swedes were truly to be commiserated with. It is undoubtedly true that some of their number keenly felt the loss of power resulting from the military incursion of the Dutch, and refused to take the oath of allegiance prescribed by the new ruler. These heroic men left the shores of the Delaware, moving to Maryland, where many of their descendants are still living. It is also quite certain that some of the incorrigible followers of Printz and Rising, having refused to take the oath of allegiance, were transported to Manhattan. It seems probable that Acrelius, who wrote in 1759, drew largely from the official report[1] made by Governor Rising on his return home in 1656, in which the Swedish Governor animadverts with great severity upon the conduct of the Dutch, and implores his government to send out a force of troops strong enough to recapture and forever

protect and uphold the New Swedeland on the Delaware and Schuylkill Rivers. There are good grounds, however, to question the accuracy of Acrelius and Rising as to the treatment and experience of the Swedes under the administration of the Hollanders. It does not appear that a single life was lost in the many quarrels and disputes which preceded or followed the Swedish submission, or that any outrages were committed upon their settlements by the Indians, but that they were left to follow, in a general way, their own pursuits and inclinations, and maintain their own habits and customs as a people. The following extract from a letter, signed by thirty persons of their number, dated May 31, 1693, and forwarded to John Thelin, his Majesty's loyal subject

omniscient God, that I will remain faithful and obedient to the States-General of the United Netherlands, to the Director-General and his Council, now or hereafter appointed. And I will remain so without giving aid or assistance, by word or deed, to any hostile undertaking or commotion, but will conduct myself as an obedient and faithful subject so long as I remain in the country of the South River, in the New Netherlands. So help me Almighty God."

[1] Translation of Governor Rising's Report, by George P. Marsh: N. Y. Hist. Collections, New Series, vol. i. p. 443.

and postmaster at Gottenburg, is suggestive of frugality and contentment, and what seems significant under the circumstances is, that the entire letter is without complaint: "We rejoice that his Majesty doth still bear unto us a tender and a Christian care. Therefore do we heartily desire, since it hath pleased his Majesty graciously to regard our wants, that there may be sent unto us two Swedish ministers who are well learned in the Holy Scriptures, and who may be able to defend them and us against all false opposers, so that we may preserve our true Lutheran faith, which, if called to suffer for our faith, we are ready to seal with our blood. We also request that those ministers may be men of good moral lives and character, so that they may instruct our youth by their example, and lead them into a pious and virtuous way of life. Further it is our humble desire that you would be pleased to send us three books of sermons, twelve Bibles, forty-two psalm-books, one hundred tracts, with two hundred catechisms and as many primers; for which, when received, we promise punctual payment at such place as you may think fit to order. We do promise also a proper maintenance to the ministers that may be sent to us, and when this our letter is gone, it is our intention to buy a piece of land that shall belong to the church, and upon which the ministers may live. As to what concerns our situation in this country, we are for the most part husbandmen. We plow and sow and till the ground; and as to our meat and drink, we live according to the old Swedish custom. This country is very rich and fruitful, and here grow all sorts of grain in great plenty, so that we are richly supplied with meat and drink; and we send out yearly to our neighbors on this continent and the neighboring islands bread, grain, flour, and oil. We have here also all sorts of beasts, fowls, and fishes. Our wives and daughters employ themselves in spinning wool and flax and many of them in weaving; so that we have great reason to thank the Almighty for his manifold mercies and benefits. God grant that we may also have good shepherds to feed us with his holy word and sacraments. We live also in peace and friendship with one another, and the Indians have not molested us for many years. Further, since this country has ceased to be under the government of Sweden, we are bound to acknowledge and declare for the sake of truth that we have been well and kindly treated, as well by the Dutch as by his Majesty the King of England, our gracious sovereign; on the other hand, we, the Swedes, have been and still are true to him in words and in deeds. We have always had over us good and gracious magistrates; and we live with one another in peace and quietness." [1]

Pending the closing scenes of these contentions between the Hollanders and Swedes for supremacy on the upper Delaware and Schuylkill Rivers, the "Mercury," with a large number of Swedish emigrants on their way to their friends, anchored near Fort Casimir. On their arrival, much to their surprise and chagrin, they were refused permission either to pass the fort or to land at all. Governor Stuyvesant insisted upon their return to their homes, and was unyielding to all importunities coming from those on shipboard, or their friends and countrymen among the settlers of New Sweden. It was in this emergency that John Pappegoya, the son-in-law of Governor Printz, went to the rescue of his waiting and discomfited friends aboard the "Mercury" at anchor at Fort Casimir. Engaging a small party of Indians who were familiar with the channel of the river, they surreptitiously joined their friends in the vessel, and under cover of darkness passed the fort unobserved by the Dutch. Spreading all possible canvas, they sailed up the river to Tinnecum, and there hastily landed before Stuyvesant succeeded in concerting measures to compel their departure or prevent them from landing. There was great rejoicing among the Swedes over the success of Pappegoya,[2] who evidently outwitted Stuyvesant. He was the hero of the hour, and his wife,[3] Lady Armegot Printz, daughter of Governor Printz, was assiduous in her efforts to make the new emigrants comfortable, and in providing for their permanent welfare among them.

The period from 1655 to the beginning of the Penn *régime* in 1682 witnessed many changes in the administration of affairs of the early settlers, the details of which are too voluminous to be here particularized. Governors Paul Jacquet, Alrich, Beckman, and Hinoyosa all left their impress on the history of the period, during which the identity of both Dutch and Swede was lost in the multitude of English emigrants and traders who then began the work of settlement on the Delaware River, hastened and encouraged by the administration of the Duke of York, who substantially advanced the pretensions of the British government in claiming the whole line of Atlantic coast from Florida to Maine upon the discovery of Sebastian Cabot in 1497, and the charters granted by King Charles I. and Charles II.[4]

[1] Annals of the Swedes on the Delaware: Rev. J. C. Clay, D.D.

[2] Rudman does not mention Pappegoya in his account of this episode, but attributes the event to the good offices of friendly Indians, and in defense of the Dutch authority.

[3] Lady Armegot Printz (for although the wife of Pappegoya she always insisted upon being addressed by her maiden name) lived at Tenakongh, the residence of her father. Although the situation was fine and the soil rich, she was not able to gain her support from it. She could neither obtain servants nor rent the farm to any one, since every man who was able and willing to work owned more land than he needed. Whether from sympathy or on account of some debt owing to her, she received a support from the Holland government. This for some time consisted of "one fat ox, some fattened swine, and a sufficient supply of grain." She finally returned to Sweden.—*Acrelius.*

[4] Some Englishmen take to themselves the honor that the whole of America was discovered by them first of all Christian nations, inasmuch as Christopher Columbus did not go beyond the Gulf of Mexico until the year 1498 to take possession of the country, although he visited some of the islands in 1492.—*Acrelius.*

NOTE.—The following drinks, according to Acrelius, were used in America during these early times: "French wine, Frontegnac, Pontac, Port a Port, Lisbon wine, phial wine, sherry, Madeira wine, which is altogether the most used. Sangaree is made of wine, water, sugar, a dash of nutmeg, with some leaves of balm put in. Hot wine, warmed wine, is drunk warm, with sugar, cardamons, and cinnamon in it; sometimes also it has in it the yolks of eggs beaten up together and grains of allspice, and then it is called mulled wine. Cherry wine: the berries are pressed, the juice strained from them; Muscovado or raw sugar is put in; then it ferments, and after some months becomes clear. Currant wine, or black raspberry wine, is made in the same manner. Apple wine (cider): apples are ground up in a wooden mill, which is worked by a horse. Then they are placed under a press until the juice runs off, which is then put in a barrel, where it ferments, and after some time becomes clear. When the apples are not of a good sort, decayed, or fallen off too soon, the cider is boiled, and a few pounds of ground ginger is put into it, and it becomes more wholesome and better for cooking; it keeps longer, and does not ferment so soon, but its taste is not so fresh as when it is unboiled. The fault with cider in that country is that, for the most part, the good and bad are mixed together. The cider is drunk too fresh and too soon; thus it has come into great disesteem, so that many persons refuse to taste it. The strong acid which it contains produces rust and verdigris, and frightens some from its use by the fear that it may have the same effect upon the body. This liquor is usually unwholesome, causes ague when it is fresh, and colic when it is too old. The common people damask the drink, mix ground ginger with it, or heat it with a red-hot iron. Cider royal is so called when some quarts of brandy are thrown into a barrel of cider, along with several pounds of Muscovado sugar, whereby it becomes stronger and tastes better. If it is then left alone for a year or so, or taken over the sea, then drawn off into bottles, with some raisins put in, it may deserve the name of apple wine. Cider royal of another kind is that in which one-half is cider and the other mead, both freshly fermented together. Mulled cider is warmed, with sugar in it, with yolks of eggs and grains of allspice; sometimes, also, rum is put in to give it greater strength. Rum or sugar-brandy: this is made at the sugar plantations in the West India islands. It is in quality like French brandy, but has no unpleasant odor. It makes up a large part of the English and French commerce with the West India islands. The strongest comes from Jamaica, is called Jamaica spirits, and is the favorite article for punch. Next in quality to this is the rum from Barbadoes, then that from Antiquas, Montserrat, Nevis, St. Christopher, etc. The heaviest consumption is in harvest-time, when the laborers most frequently take a sup, and then immediately a drink of water, from which the body performs its work more easily and perspires better than when rye whisky or malt liquors are used. Raw dram, raw rum, is a drink of rum unmixed with anything. Egg dram, egg nog: the yolk of an egg is beaten up, and during the beating rum and sugar poured in. Cherry bounce is a drink made of the cherry juice with a quantity of rum in it. Bilberry dram is made in the same way. Punch is made of fresh spring-water, sugar, lemon-juice, and Jamaica spirits. Instead of lemons, a West India fruit called limes, or its juice, which is imported in flasks, is used. Punch is always drunk cold, but sometimes a slice of bread is toasted and placed in it warm to moderate the cold in winter-time, or it is heated with a red-hot iron. Punch is mostly used just before dinner, and is called a 'meridian.' *Mämm*, made of water, sugar, and rum, is the most common drink in the interior of the country, and has set up many a tavern-keeper. Manatham is made of small beer, with rum and sugar. Tiff, or flip, is made of small beer, rum, and sugar, with a slice of bread toasted and buttered. Hot rum, warmed with sugar and grains of allspice, customary at funerals. Mulled rum, warmed with egg-yolks and allspice. Hotch pot, warmed beer with rum in it. Sampson is warmed cider with rum in it. Grog is water and rum. Sling, or long sup, half water and half rum, with sugar in it. Mint-water, distilled from mint, mixed in the rum, to make a drink for strengthening the stomach. Egg punch, of yolks of eggs, rum, sugar, and warm water. Milk punch, of milk, rum, sugar, and grated nutmeg over it; it is much used in the summer-time, and is considered good for dysentery and loose bowels. Sillibut is made of lukewarm milk, wine, and sugar; it is used in summer-time as a cooling beverage. Milk and water is the common drink of the people. Still liquor, brandy made of peaches or apples without the addition of any grain, is not regarded as good as rum. Whiskey is brandy made of grain; it is used far up in the interior of the country, where rum is very dear, on account of the transportation. Beer is brewed in the towns; is brown, thick, and unpalatable; is drunk by the common people. Small beer, from molasses. When the water is warmed, the molasses is poured in with a little malt or wheat-bran, and is well shaken together; afterwards a lay of hops and yeast is added, and then it is put in a keg, where it ferments, and the next day is clear and ready for use. It is more wholesome, pleasanter to the taste, and milder to the stomach than any small beer of malt. Spruce beer is a kind of small beer, which is called in Swedish "lärda tidningarne" (learned newspapers). The twigs of spruce-pine are boiled in the malt so as to give it a pleasant taste, and then molasses is used as in the preceding. The Swedish pine is thought to be serviceable in the same way. Table beer made of persimmons. The persimmon is a fruit like our egg-plum. When these have been well frosted, they are pounded along with their seeds, mixed up with wheat-bran, made into large loaves, and baked in the oven; then, whenever desired, pieces of this are taken and moistened, and with these the drink is brewed. Mead is made of honey and water boiled together, which ferments of itself in the cask. The stronger it is of honey the longer it takes to ferment. Drunk in this country too soon it causes sickness of the stomach and headache. Besides these they use the liquors called cordials, such as anise-water, cinnamon-water, appelcin-water, and others scarcely to be enumerated, as also drops to pour into wine and brandy almost without end. Tea is a drink very commonly used. No one is so high as to despise it, nor any one so low as not to think himself worthy of it. It is not drunk oftener than twice a day. It is always drunk by the common people with raw sugar in it. Brandy in tea is called *lese*. Coffee comes from Martinica, St. Domingo, and Surinam; is sold in large quantities, and used for breakfast. Chocolate is in general use for breakfast and supper. It is drunk with a spoon; sometimes prepared with a little milk, but mostly only with water."

In reference to the trees in Pennsylvania, Acrelius continues, "White-oak grows in good soil; light bark, the leaves long, grass-green, blunt-pointed; the acorn is small, long, with a short cup; the wood white; is used for ship-timber, planks, staves for hogsheads or wine-pipes for spirituous liquors, but not for molasses. There is a heavy exportation of it to Europe, Ireland, France, and the West Indies in the form of boards and staves. It is also used for posts, with boards and clap-boards, around fields and gardens. It burns well, and makes good ashes. White-oak growing upon low land and in swamps is considered more reliable for ship-building than that which is found upon high ground. Black-oak grows upon any kind of soil; bark dark; leaf dark green, very blunt-pointed; the acorn large, with short cup; the wood, when split green, is of a reddish-brown color, when dry, darker. It is used for staves of molasses-hogsheads or barrels for dry-goods, such as wheat-flour, sugar, Muscovado, also for piles or palings built in water, but rots on land within three or four years; does not burn well, but dissolves into smoke and poor ashes. The bark is used in tanning. Spanish oak also grows everywhere; bark gray; leaf small, sharp-pointed, and light green; the acorns, which are gall-nuts, are serviceable for ink; the wood whitish, with spots like the beech-tree, is used as black-oak, and is considered better; the bark is the best for tanning, and yields a yellowish color. There are several species of Spanish oak, which are distinguished by their leaves, but are the same for fuel, bark, and use. Red-oak usually grows upon low land; bark gray; leaf broad, pointed, with saw-like teeth towards the stalk; the wood, when fresh, reddish, when dry, whitish; is used as black and Spanish oak. Black, Spanish, and red-oaks are porous and loose in structure, so that if one takes a piece of their wood three feet long, wets the one end and blows into the other, bubbles come out. All these species are usually spoken of under the name of black- or red-oak. Few natives of the country know how to distinguish them all correctly. Swamp-oak, water-oak, peach-leaf oak, live-oak grow in swampy places; not common; high trees; bark dark gray; leaf long as the fingers, narrow, with one point; wood gray, but the hardest of all oak; is seldom used for anything but cog-stocks in cider-mills. Walnut-tree, black-walnut, grows in dry ground; bark dark gray; the leaf in pairs on a stalk; a high tree; the nuts black, large as apples, rough and sharp on the outside, covered with a thick green skin; the shell hard enough to break with a hammer, the kernel very oily, fit for oil for fine paintings; the wood brown, and quite firm when the tree grows in free air and good soil, also valuable, but insignificant and of little value when it is surrounded by thick and close woods. It is used for furniture of houses,—tables, chairs, bureaus, etc. Boards of it are exported in large quantities. Hickory grows in a rich soil; the leaves arranged in pairs along the branches, with teeth serrated at the edges; the nuts white, flat, pointed, large as the cultivated walnuts; grows within a thick green hull, which, when ripened in the month of October, opens itself in four clefts, and pushes out the nut; has a division within, as a walnut, but is hard as a bone. The kernel has a pleasant taste, and from it the Indians, as it is said, press an oil for winter use. The wood is tough, white on the outside, brown in

the heart; that of young trees is used for hoops, that of old ones for agricultural implements and wagons, but chiefly for fuel, and makes the best fires, with the finest ashes. Chestnut-tree grows in dry soil, high, straight, and thick; the bark ash-gray; the leaf oblong, pointed, with serrated teeth at the points; the shell double, the outer one large as an apple, externally like a burdock-burr, internally with a woolly down; when ripe, naturally opens itself in four clefts and throws out the nut, of which there are usually two, round upon one side and flat upon the other. If three grow together they are mostly poor, and the middle nut is flat on both sides, the other two of the ordinary shape. Sometimes seven nuts are found together, then none of them are good. The chestnut-tree, surrounded by thick woods, bears neither large nor numerous nuts; but where they are found in abundance the swine have an excellent food. The wood is ash-gray, is used for posts or rails, but for nothing else except fuel. Poplar grows indiscriminately, high, straight, and rich in foliage; bark of a greenish gray, the seed in pods, the leaf broad, single, scalloped; the wood yellowish, brittle, but hard; used in carpenters' work for door- and window-frames, also for boards. It is cut out for canoes, is turned for wooden vessels, such as pails, dishes, boxes, and the like. Sassafras grows in rich soil; low trees and bushes. The bark is dark-green, smooth, with a yellow juice; the leaves unlike, even on the same tree, oblong, with one, two, or three stumpy points; the wood yellowish, especially the root, which, as well as the bark, has the smell and taste of saffron. It is used for planks and gate-posts, also for palings on the Susquehanna. Cedar grows chiefly in swamps or low, sandy ground; in smell and bark like the juniper-tree. Its needle-shaped leaves are long and tender. Red-cedar is dark-red, hard; used for planks and posts, and in New England for cabinet-work, on the Bermuda isles for ship-timber. White-cedar is a soft wood; used for house-timber,—boards, palings, and shingles. Maple grows in dry ground, high and straight; the bark a gray-green; the leaf small, three-pointed, serrated at the points; the wood whitish, spotted; used for furniture in houses,—tables, chairs, etc.; is exported from the country in the form of boards. Sweet-gum grows in low lands; the bark gray, smooth; the leaves five-pointed, with serrated edges; the wood yellowish, spotted, warps easily when wrought; used for furniture and cabinet-work. Sour-gum grows everywhere; the bark dark, sharp; the leaf oblong, one-pointed; the wood white, cross-grained, does not admit of any splitting, and is used for wheel-naves or hubs. Locust grows in dry, rich soil as a high tree; the bark greenish; the seed in long pods; the kernel large, sweet, edible; the leaf upon a long stalk; the leaves long, one-pointed, in pairs, like the mountain-ash; the wood bright, hard, used for pegs in ship-building, for trundles and cogs in mills. The streets in New York are planted with locusts. Dogwood grows in dry ground, seldom more than four inches in diameter; the flowers white; the berries red and small; the wood yellowish, hard, like boxwood, does not burn well; it is used for little else than carpenters' tools. Wild cherry grows in good land, not high, but thick; the bark and leaf like those of the cultivated cherry-tree, but the berry smaller, sweeter, with seed and no kernel; the wood reddish, is used for cabinet-work. Persimmon grows in good, dry ground, scarcely more than a foot thick; the bark rough and sharp; the leaf single, oblong, one-pointed, dark green; the berry like the wild plum; when frosted it is used for brewing table beer. The fruit and its seed are pounded together, kneaded up with wheat-bran, baked in large loaves in a stove; pieces of it are then taken at pleasure, and from these the drink is brewed, which becomes quite palatable. The wood is white, hard, and used for carpenters' tools. The button-tree grows wild, but is planted before the doors of houses; the bark greenish-gray, smooth; the seed-pods round and large as marbles, hang upon long stems, which when ripe, and one strikes them, all at once separate into small pieces, as if one were to throw a handful of down into the air; the leaf is quite large, broad, single, five-cornered, sharp-pointed; the wood is brittle; its greatest use is for shading houses from the great heat of the sun. Spicewood grows in dry and sandy soil as a bush; the flowers yellow; the berry red, small, mostly single upon the stalks; the leaves are oblong and one-pointed; the bark is green, has the taste of cinnamon when it is chewed, would probably serve as a medicine. Pine is planted near houses as an ornament; boards of it are introduced from other places, where it grows in a poor, sandy soil. Beech, hazel, and birch are rare. Alder is found abundantly in the marshes."

Israel Acrelius and his translator, William M. Reynolds, D.D., have left a vivid picture of these early pioneers. It is at once quaint, truthful, and life-like, and seems to carry us back among the rugged farmers who laid the foundations for that frugality and wealth of agricultural products that has always characterized the husbandmen of Eastern Pennsylvania. "The farms which were first cultivated," Acrelius writes, "have by constant use become impoverished, so that they are now considered of but little value. The people cleared the land, which was new and strong, but did not think of manuring and clearing meadows until of later years. For those who do not keep their animals in stables have no other manure than this, that they place a few hay-stacks on a field, on which the animals are fed during the winter, when they trample as much under their feet as they eat, whereby the manure becomes alike unequal and insufficient. That Pennsylvania is regarded as the best grain country in America arises more from the excellence of the climate than the fertility of the soil. Yet most of the farms are newly cleared. Some miles up in the country but few places are to be seen where the stumps do not still stand thick upon the ground. Not one-half of the forests are cleared off as they ought to be. The clearing is not made by the destructive burning of trees, whereby the fertile soil is converted into ashes and carried away by the winds. Some stocks or stumps may be thus burned, so as to put them almost entirely out of the way. As labor is very high, so sometimes only the bushes and undergrowth are removed, but the large trees are still left standing. But around these a score is cut, and they thus dry up within the first year, and thus soon fall down, so that one may often see the fields with dry trees and a heavy crop of grain growing under them.

"The implements of agriculture are the plow and the harrow. The plow is so made that from the share two pieces ascend with a handle upon each, about an ell and a half apart from each other. It is put together with screws, light and easy to handle. The plowman holds each handle with one hand, and throws up the field into high 'lands,' plowing first on the one side and then on the other side of a 'land,' so that the earth is thrown up high. Immediately before the plow a pair of oxen draw, or a pair of horses, which are guided by some little boy either leading or riding on them. The harrow is three-cornered and heavy. The traces are fastened to it with a link, which makes a convenience in turning a pair of horses before the harrow, and a boy on the horse's back smooths the field into fine and even pieces without any great trouble. Sometimes two harrows are fastened together after the same team. The beam of the plow does not come forward between the draught animals. Under the end of the beam is a strong clam with a link, on which is fastened a double-tree back of both the animals. At each end of this double-tree is another shorter one (single-tree), provided with a link for each animal. From these single-trees there go upon both sides of the draught animals ropes or chains forward to the hames,

which are held together by a broad strap above and below. In place of ropes or chains, most farmers use straps of raw deerskins twined and twisted together and so dried, which do not chafe the sides of the horses. Out of these also the whole of the harness is made.

"Flax is sown in the beginning of March. The ground is plowed for it some days before, and new or good ground is required. It is pulled in July and much used. Oats are sown at the same time, mostly on good ground, which is plowed some days before; but if the plowing is done in the autumn before, in November or December, and then again just before the sowing, the oats themselves pay for it, according to the common saying. It is cut in July. It is used a great deal, but only for horses, and is of the thin and white kind. Wheat is the land's chief product. It is sown in the beginning of September, after three plowings preceding, the first in May, then in July, and the last just before the sowing, but always according to the moisture and quality of the soil. As the autumn is long and warm, the sprouts grow so long that all kinds of cattle are fed on them during the winter. Strong ground is not required for wheat, the middling is good enough. Harvesting is performed in July, in the hottest season. Sickles are used, with the edge sharpened like a file. The stalk is cut just about half its length, so that the stubble is quite high. The sheaves, short and small, are counted in dozens, and a bushel is expected from each dozen. Rye is sown in November, mostly upon some field that has borne a crop during the same summer, and one plowing is usually regarded as sufficient. If the shoots only come up before winter there is hope of a good harvest. Where the sowing is made early there is a supply for pasturage during the winter. It is cut at the same time and in the same manner as wheat. Buckwheat is sown at the end of July. For this is taken some ground which has just before borne rye or wheat. Poor ground and one plowing does very well for it. It ripens in October, and is mostly used for horses and swine. Turnips are not in general use. The seed is sown in the beginning of August. For this is taken either a piece of newly-cleared land or swamp. Those who have neither of these prefer letting it alone. The leaves are often exposed to the ravages of small flies, which destroy the whole crop. Maize is planted at the end of April or the beginning of May. Four furrows are placed close to one another, and then five or six steps from these four other furrows, and so over the whole field. The plowing is done in the month of March. For the planting is used a broad hoe, wherewith the earth is opened to the depth of three or four inches, into which are cast five grains of corn, which are then covered with the hoe. Sometimes also they add two Turkish beans, which thrive very well with the maize and run up its stalks. Each place thus planted is called a hill. An equal distance is kept between each hill, so that the rows may be straight either lengthwise or crosswise. As soon as the young plant comes up it is plowed over, and even harrowed, that it may be free of weeds. When the plants are half an ell high the ground is hoed up around them, and again when they are two ells high. In the month of September, when the maize has attained its greatest growth, although not ripe, the strongest blades are cut off for fodder. They then plow between the rows of corn, sow wheat, and harrow it in, and this, in the next year, gives a full crop. By the end of October the ears are ripe, pulled off on the field, and carried home. The stocks and roots are torn up during the winter, when the ground is loose, to make the fields clean. Maize is the principal food of the Indians, and it has hence been called 'Indian corn.'

"Potatoes are quite common, of two kinds, the Irish and the Maryland. The Irish are also of two kinds, the first round, knotty, whitish, mealy, somewhat porous. They are planted thus: upon a smooth and hard ground a bed of dung is formed; portions of this are thrown upon the potatoes, which are then covered with ground of even the poorest kind. When the stalks have come up about a fourth of an ell high they are again hilled up with the same kind of earth, in order to strengthen the roots, which are thus considerably increased in number. The other kind is long, branching, thick, reddish, juicy, and more porous. For these a long ditch, the depth of a spade, is dug, the bottom of which is covered with manure, set with pieces of potatoes, and covered over with earth. When the stalks come up they are treated as those above mentioned. Maryland potatoes are long, thick, juicy, sweet, and yellow; they are planted from sprouts in hills or round heaps of good earth; when the stalks come up they are hoed around. These are also wonderfully prolific, so that everywhere around and between the hills the fruit is dug up.

"Cabbage is planted two or three times a year, but seldom thrives well until towards autumn. Crisped colewart stands through the whole winter. On cabbage stocks which stand through the winter new leaves come out in the spring, which are used for greens. Tobacco is planted in almost every garden, but not more than for domestic use. It is universal among the Indians. When the leaves are ripe they are cut, cured, and twined together like twists of flax, and are used without any further preparation by the country people for chewing and smoking. The trade in tobacco is permitted only for Maryland and Virginia, although its importation is almost yearly diminished, as its production is increased in Europe.

"Vegetable gardens are kept for almost every house. There are generally cultivated beets, parsnips, onions, parsley, radishes, Turkish beans, large beans, pepper-grass, red peppers, lettuce, head-lettuce, German lettuce, and scurvy-grass; anything else is regarded as a rarity. Common herbs for domestic

remedies are wormwood, rue, sage, thyme, chamomile, etc. Peas are also grown in gardens, as they can be eaten while still green. When dry, a worm grows in them, which comes out a fly in spring. And although the pea then seems destroyed, yet it still serves as seed for a new growth. That sort is like field peas. Sugar peas are also used, and are free from that evil. Orchards may be regarded as among the highest advantages of the country, but the fruit consists mostly of three sorts,—cherries, peaches, and apples. Pears are rare. Cherry-trees are generally planted here and there around houses and roads, away from the gardens. The berries are generally of the common kind, bright and sour; some black and more juicy. The better sorts are rare, and lately introduced. They bloom in April and ripen in June. Peach-trees stand within an inclosure by themselves, grow even in the stoniest places without culture. The fruit is the most delightful that the mouth can taste, and is often allowable in fevers. One kind, called clingstones, are considered the best; in these the stones are not loose from the fruit as in the others. Many have peach-orchards chiefly for the purpose of feeding their swine, which are not allowed to run at large. They first bloom in March, the flowers coming out before the leaves, and are often injured by the frosts; they are ripe towards the close of August. This fruit is regarded as indigenous, like maize and tobacco, for as far as any Indians have been seen in the interior of the country these plants are found to extend. Apple-trees make the finest orchards, planted in straight rows with intervals of twelve or fifteen paces. The best kind is called the Van der Veer, as a Hollander of that name introduced it; it serves either for cider or apple brandy. Another sort is the house-apple, which is good for winter fruit. For apple-orchards not less than two or three acres are taken; some have five or six. The cultivation consists in grafting and pruning in the spring, and plowing the ground every five or six years, when either maize is planted or rye or oats sowed in the orchard."

In reference to stock-raising, Acrelius continues: "The horses are real ponies, and are seldom found over sixteen hands high. He who has a good riding-horse never employs him for draught, which is also the less necessary, as journeys are for the most part made on horseback. It must be the result of this more than of any particular breed in the horses that the country excels in fast horses, so that horse-races are often made for very high stakes. A good horse will go more than a Swedish mile (six and three-quarters English miles) in an hour, and is not to be bought for less than six hundred dollars copper coinage. The cattle are also of a middling sort, but whence they were first introduced no one can well tell. Where the pasture is fair a cow does not give less than two quarts of milk at a time, that is twice a day. The calf is not taken from the cow until it is four weeks old,—that is, as long as she can keep it fat,—in case it is to be slaughtered, otherwise two or three weeks are regarded as sufficient; and as animals are not kept in the house during winter, so it sometimes happens that calves are sometimes caught in the snow, and are none the worse for it; there is no such thing heard of here as calves dying.

"The sheep are of the large English sort. They are washed whenever convenient, and then immediately shorn, once a year, towards the end of April; their wool is regarded as better for stockings than the English. The flesh is generally very strong in its taste, especially in old sheep; some persons are unable to eat it. When the Christians first came to the country the grass was up to the flanks of the animals, and was good for pasture and hay-making, but as soon as the country has been settled the grass has died out from the roots, so that scarcely anything but black earth is left in the forests; back in the country, where the people have not yet settled, the same grass is found, and is called wild rye. The pasture in the forests, therefore, consists mostly of leaves, but also of the grass which grows along water-courses. Until pasture comes in the stubble-fields and meadows, the best is in the orchards. Early in the spring there springs up a strong grass-leek (wild garlic), especially on poor ground, which makes the milk and butter unpleasant to the taste, but afterwards the fields are covered with clover, red and white, and make excellent pasture. Some sow clover-seed after they have harrowed in their wheat, to make the crop stronger. Back in the country, where horses and cattle are pastured in the wild woods, they become wild, and so live in great numbers.

"The clearing for meadows has advanced very slowly, as there was so much new land suitable for cultivation. Upland pastures are scarcely advantageous unless they are frequently plowed, manured, sown with good grass-seed along with other seed, and also irrigated. They conduct the water from streams and ditches, so far as it is possible to do this with dams, to irrigate the meadows when the drought increases, which must be done in the night-time, when the air is cool. Along the Delaware River and the streams which fall into it there are large tracts of swamp, which within the last fifteen years, to the extent of many thousand acres, have been improved into good meadows, but at a very great expense. The mode of procedure is to inclose a certain amount of swamp with a bank thrown up quite high, so as to keep out the water (the ebb and the flood) or tides. The bank commonly rises as high as five feet, sometimes ten feet. Also to make a ditch to carry off the water which comes on it from the land, and at the same time to place drains in the bank to let the water out; and then, again, by a gate upon the drains, to prevent it from running. When dry the earth is plowed, some kind of grain is sown in it, and then it is afterwards sown with clover and other English hay-seeds. When people saw the success of such

work, their minds were so taken with it that in the year 1751 the price of an acre of swamp-meadow advanced to six hundred dollars copper coin. But just at the same time it also happened that some high tides came up from the sea and swept away the embankments. Numerous muskrats live in these embankments and make them leaky, also a kind of crabs, called 'fiddlers,' dig into them, and make the banks like a sieve. Then the ditches were found not to be rightly built so as to answer their purpose. Thus the grass and grain were destroyed, the land returning again to its wild nature, and there was no end of patching and mending. Then the price of the land fell to half its value, and he thought himself best off who had none of it. Again, in 1755, there came a great drought; no grass nor pasture was to be found, and as no other plan could be devised, then the price of these lands rose again. The conclusion was that swamp land as well as high land has its advantages as well as its disadvantages. Experience has taught that upland earth improves the swamp land, and swamp land the upland; also that the vermin flee from the embankments when upland earth is found in them.

"Stables and cow-houses are seldom seen on a farm. The first Swedish inhabitants kept their animals under shelter during winter; but it was then said that they were then exposed to vermin and other diseases, which have not been heard of since. Then people went into another extreme, that of letting the animals endure the severity of the winter, which, along with the rain, frost, and snow, is sometimes intolerable. A good housekeeper has a stable with thin sides for the horses, and sheds for the cattle and sheep, built near the barn and standing out in the stable-yard, so that they may be protected there when the weather is severe. In milder weather all the cattle run out in the inclosure, and are foddered with hay or straw stacks which are set up there. They also graze on the land around, which is mostly used for young cattle. The sheep especially feed themselves on ferns and the young grass which grows up under the snow in warm weather. The lambs skip about in the snow, and stand in danger of being buried under it for want of proper care. The man-servant takes care of the foddering of the cattle, while the housewife and women folks roast themselves by the kitchen-fire, doubting if any one can do better than that themselves. Hay alone, even of the best kind, is not sufficient to keep any horse or cow well; a considerable amount of grain, such as oats, maize, and buckwheat, is used for horses and wheat-bran for milch cows.

"The country is undeniably fruitful, as may be judged from the following examples:[1] Joseph Cobern, in Chester, twenty years ago had the blessing to have his wife have twins, his cow two calves, and his ewe two lambs, all in one night, in the month of March. All continued to live. Olle Tossa (Thoresson), in Brandywine Hundred, in 1742, had a cow which in the month of March had one calf; at her next calving she had three; the third time, five; altogether, nine calves within two years. Three continued to live, but five died,—two males and three heifers. Thomas Bird, of the same place, had a ewe that yeaned four lambs within as many days, only one dying.

"The land is so settled that each one has his ground separate and, for the most part, fenced in. So far as was possible, the people have taken up their abode by navigable streams, so that the farms stretch from the water in small strips up into the land. No country in the world can be richer in rivers, creeks, rivulets, and good springs. The houses are built of bricks, after the English fashion, without coating, every other brick glazed; or they are of sandstone, granite, etc., as is mostly the case in the country. Sometimes, also, they build of oak planks five inches thick. To build of wood is not regarded as economy, after everything is paid for. The roof is of cedar shingles. Within the walls and ceilings are plastered, and whitewashed once a year. Straw carpets have lately been introduced in the towns. But the inconvenience of this is that they must soon be cleansed from fly-spots and a multitude of vermin which harbor in such things, and from the kitchen smoke which is universal. The windows are large, divided into two pieces, the upper and lower; the latter is opened by raising and shut by lowering. The wood-work is painted or it does not last long. The furniture of the house is usually made of the woods of the country, and consists of a dining-table, tea-table, supper-table, bureaus, cabinets, and chairs, which are made of walnut, mahogany, maple, wild-cherry, or sweet-gum. All these trees are the growth of the country except mahogany, which is brought from South America.

"The articles of dress are very little different among city and country people, except that the former procure them from the merchants' shops and the latter make them for themselves, and usually of coarser stuff. Wool-, weaving-, and fulling-mills are not used for manufacturing broadcloth, camelot, and other woolen cloths, which might be finer if more carefully attended to. The coloring of certain stuffs is very inferior. Silks are rare even in the towns. Plush is general, and satin is very widely used all over the country. Calicoes and cottons are used for women's dresses. Handsome linen is the finest stuff sought by men, as the heat is great and of long continuance. By their dress most people are known, whether of Irish or German birth. The meals are cleanly, and do not consist of a great variety of food. Ham, beef, tongue, roast beef, fowls, with cabbage set round about make one meal. Roast mutton or

[1] Penn corroborates Acrelius. He says, "As they are a people proper and strong of body, so they have fine children, and almost every house full; rare to find one of them without three or four boys and as many girls, some six, seven, and eight sons. And I must do them that right, I see few young men more sober and industrious."—*William Penn's Information about Pennsylvania*, Aug. 16, 1682.

veal with potatoes or turnips form another. Another still is formed by a pastry of chickens, or partridges, or lamb. Beef-steak, veal-cutlets, mutton-chops, or turkey, goose, or fowls, with potatoes set around, with stewed green peas, or Turkish beans, or some other beans, are another meal. Pies of apples, peaches, cherries, or cranberries, etc., form another course. When cheese and butter are added one has an ordinary meal. The breakfast is tea or coffee; along with these is eaten long and thin slices of bread, with thin slices of smoked beef, in summer. In winter, bread roasted, soaked in milk and butter, and called toast, or pancakes of buckwheat, so light that one can scarcely hold them between his fingers, are also used. The afternoon meal ("four-o'clock piece"), taken at four o'clock, is usually the same. Suppers are not much in use. When one is so invited chocolate is the most reliable. Whole pots of it are sometimes made, but little or no milk in it, chiefly of water. Of these articles of food more or less is used in the country according to the ability or luxury of the people. Tea, coffee, and chocolate are so general as to be found in the most remote cabins, if not for daily use yet for visitors, mixed with Muscovado or raw sugar. Fresh fish for a meal is found nowhere either with high or low. Of soup they think in the same manner. It serves only for ordinary household fare. Salt and dried fish are seldom seen; as few have eaten them they are almost unknown. The arrangement of meals among country people is usually this: for breakfast, in summer, cold milk and bread, rice, milk-pudding, cheese and butter, cold meat; in winter, mush and milk and milk porridge, hominy and milk. The same also serves for supper if so desired. For noon, in summer, soup, fresh meat, dried beef, and bacon, with cabbage, apples, potatoes, Turkish beans, large beans, all kinds of roots, mashed turnips, pumpkins, cashaws, and squashes. One or more of these are distributed around the dish; also boiled or baked pudding, dumplings, bacon and eggs, pies of apples, cherries, peaches, etc. In winter hominy soup is cooked with salt beef and bacon. Then also pastries of lamb or chicken are used, and can keep cold a whole week; also pancakes of wheat-flour or of buckwheat-meal. Bread is baked once a week or oftener. It is in large loaves, mostly of wheat-flour, seldom of rye. The wheat-flour which is used in the towns for bread or table use is beautiful, like the finest powder. The flour in the country is dark and coarse."

A Condensed View of the Ministers who Successively Presided over the Swedish Churches in America.—1. Reorus Torkillus accompanied Peter Menewe, who brought over the first Swedish colony about the year 1636, and died here in 1643, aged thirty-five years.

2. John Campanius Holm came over in 1642 with Governor Printz, and remained here six years. Campanius was his proper surname, Holm having been added because of Stockholm having been his place of residence. He translated Luther's Catechism into the language of the Indians.

3. Laurence Lock came over in the time of Governor Printz. He preached at Tinicum and Christina. He was for many years the only clergyman the Swedes had. He died in 1688.

4. Israel Holg came about the year 1650, but did not remain long.

5. With Governor Rising, in 1652, a chaplain came over, and returned after the conquest of the Dutch in 1655.

6. Another clergyman came over in the ship "Mercury" in the year 1656, and returned home two years afterwards.

7. Jacob Fabritius, who had been preaching for the Dutch in New York, was induced to settle among the Swedes, and preached his first sermon at Wicaco in 1677. He officiated as their pastor fourteen years, nine of which he was blind. He died about 1692.

Three clergymen arrived in 1697, from which period we may date the regular supply of the churches here with Swedish ministers. These were Andreas Rudman, Eric Biork, and Jonas Auren. The first settled at Wicaco, the second at Christina, and the third at Raccoon and Penn's Neck.

Wicaco Church.—1. Andrew Rudman was the founder of the present church, which was built in 1700. In 1702 he went to preach for the Dutch in New York; afterwards officiated at Oxford Church, near Frankford; then in Christ Church, Philadelphia, where he died in 1708.

2. Andrew Sandel arrived in 1702; returned home in 1719.

3. Jonas Lindman, sent over in 1719; recalled in 1730. The Rev. J. Eneberg took charge of the church during the vacancy.

4. Gabriel Falk, appointed rector in 1733; deposed the same year.

5. John Dylander came over in 1737. He died, honored and beloved, in 1741.

6. Gabriel Nesman, appointed rector in 1743; returned home in 1750.

7. Olof Parlin arrived in 1750; died in 1757.

8. Charles Magnus Wrangel came in 1759; returned in 1768; died 1786.

9. Andrew Goeranson, sent over in 1766; became rector 1768; officiated until the close of 1779; returned home in 1785; died in 1800.

10. Matthias Hultgren commenced his official duties in 1780; recalled in 1786.

11. Nicholas Collin, of Upsal, sent over in 1770; appointed to Wicaco in 1786; died 1831, close of the Swedish mission.

12. Rev. J. C. Clay, D.D., elected in December, 1831, entered upon his duties the January following.

After the separation of the three churches, in 1843, the Rev. Samuel C. Brinkle was chosen rector of this church, and continued to officiate as such until 1850, when he was succeeded by the Rev. J. Brinton Smith.

The latter resigned in 1856, and was succeeded by Rev. Charles A. Maison.

Upper Merion Church.—The first rector of this church, after it became separated from the others, was the Rev. Edward Lightner. He resigned the parish in 1855, and was succeeded by the Rev. William H. Rees, D.D., who retained the charge till 1861. The following clergymen have officiated at this church from 1861 to the present time: Revs. Thomas S. Yocum, 1861–70; Octavius Perinchief, 1870–73; Edward A. Warriner, 1873–76; Octavius Perinchief, 1876–77; A. A. Marple, 1877 to ——.

Church at Christina.—1. Eric Biork built a new church at Fort Christina, in 1698, in lieu of that at Tranbrook. Returned home, 1714; died in 1740.

2. Andreas Hesselius, sent over in 1711; provost, 1719; recalled in 1723; died in 1733.

3. Samuel Hesselius, brother to the former, sent over in 1729; returned in 1731; died, 1755.

4. John Eneberg, pastor, 1733; returned home in 1742.

5. Petrus Tranberg took charge of this church in 1742, and died in 1748.

6. Israel Acrelius, sent over in 1749; returned in 1756; died in 1800, aged eighty-six. He was the author of the work on the Swedish congregations in America.

7. Eric Unander, sent from Raccoon and Penn's Neck to Christina in 1756.

8. Andreas Borell, sent to preside over the Swedish churches in 1757; arrived here in 1759; pastor in 1762; received the king's diploma, constituting him provost over all the Swedish churches here, where he died in 1768.

9. The Rev. Laurence Girelius entered upon his duties as assistant October, 1767; became provost of the churches in the place of the Rev. Mr. Borell in May, 1770. He continued in charge until 1791, when he returned to Sweden. He was the last of the Swedish ministers.

After the departure of the Rev. Mr. Girelius the church at Christina became connected with the Protestant Episcopal Church. For the following details with regard to the succession of Episcopal clergymen who have officiated there I am indebted to my friend, the Rev. Charles Breck: Rev. Joseph Clarkson, 1792–99; Rev. William Pryce, 1800–12; Rev. Mr. Wickes, 1814–17; Rev. L. Bull, D.D., 1818–19; Rev. Richard D. Hall, 1819–22; Rev. Ralph Williston, 1822–26; Rev. Pierce Connelly, 1827–28; Rev. Mr. Pardee, 1828–35; Rev. Mr. Adams, 1835–38; Rev. Dr. McCullough, 1838–47; Rev. Dr. Van Dusen, 1848–52; Rev. Charles Breck, 1853.

Church at Raccoon and Penn's Neck.—The first minister was Polfladius. He was drowned in the Delaware in 1706, and was succeeded by

1. Jonas Auren, who came over with Rudman and Biork in 1697; appointed, 1706; died in the exercise of his functions, 1713.

2. Abraham Lidenius, sent over in 1711; pastor, 1714; returned home, 1724; died, 1728.

3. Petrus Tranberg and Andreas Windrufua, sent over in 1726. They divided the churches between them, and so continued until 1728, when Windrufua died. Between the time of Tranberg going to Christina and his death, in 1748, these churches had no pastor.

4. John Sandin appointed pastor, 1748; died the same year.

5. Professor Kalm, traveling through North America under authority from the king of Sweden, supplied the church for a few months. He married the widow of Mr. Sandin, and returned to Sweden after a perilous voyage.

6. Eric Unander, sent over in 1749, became pastor in 1751.

7. John Lidenius (son of Abraham above mentioned), appointed pastor in the place of Unander, 1756; died in Pennsylvania.

8. John Wicksell, sent over in 1760; arrived, 1762; returned home in 1774; died, 1800.

9. Nicholas Collin, pastor 1778; appointed to Wicaco in 1786. (See above.)

The following clergymen have been at different times assistant ministers in the Swedish churches:

The Rev. Charles Lute was appointed assistant to the Rev. Mr. Georgesen in 1774.

While Dr. Collin was rector, he had for his first assistant the Rev. Joseph Clarkson, who was appointed in 1787, and continued to officiate until 1792.

The Rev. Slater Clay was appointed in 1792, and officiated once a month in Upper Merion, and when there was a fifth Sunday in the month at Kingsessing. Only part of his time was given to the Swedes, for whom he continued to preach until the day of his death, in 1821.

The Rev. Joseph Turner was appointed also in 1792, and was for many years connected with the Swedes as one of their assistant ministers.

The Rev. J. C. Clay, soon after his ordination, in 1813, was called to the same churches, and officiated therein as an assistant for one year, when he was called to the churches at Norristown and Germantown.

The Rev. James Wiltbank was appointed to the same office in 1816, and performed its duties for four years, or until 1820.

The Rev. M. B. Roche, in 1820, became an assistant minister to the Swedes, in which situation he officiated for a period of six months.

The Rev. J. C. Clay became a second time connected with these churches in 1822, having been appointed an assistant for Upper Merion Church, in connection with the Norristown and Perkiomen Churches. He also officiated every fifth Sunday, or four times a year, at Kingsessing. He continued to fill this station until called, in 1831, to the rectorship.

The Rev. Charles M. Dupuy was, in 1822, appointed

the assistant for Wicaco and Kingsessing, and was continued as such until 1828.

The Rev. Pierce Connelly succeeded Mr. Dupuy and officiated chiefly at Kingsessing, though part of the time at Wicaco also, till the close of 1831, when he accepted a call to Natchez, Miss.

The Rev. Raymond A. Henderson was chosen assistant to the Rev. J. C. Clay in 1832, and continued in the churches until the close of 1834, when he was called to the French Protestant Church in New Orleans.

The Rev. John Reynolds was assistant for one year at Upper Merion, having been appointed about the same time with Mr. Henderson.

After the last two mentioned, the Rev. William Diehl and the Rev. Samuel C. Brinckle acted as assistants until the churches were separated.—*Annals of the Swedes: Rev. J. C. Clay.*

The reader will perceive how much the orthography of many of the above names has changed in the progress of time. Bengsten is now Bankson; Bonde has become Boon; Svenson, Swanson; Cock, Cox; Gostasson, Justis; Jocum, Yocum; Holsten, Holstein; Kyn, Keen; Hoppman, Hoffman; Van Culen, Culin; Haling, Hulings or Hewlings; Whiler, Wheeler, etc. With regard to the Christian names many of them correspond with our own, and merely show a difference in spelling and pronunciation between two languages. Anders, therefore, among the Swedes naturally became Andrew among us; Johan, John; Mats, Matthias or Matthew; Carl, Charles; Bengt, Benjamin or Benedict; Nils, Nicholas; Staphan, Stephen; Wilhelm, and also Olave, William; Hindrick, Henry; Michel, Michael; Jons, Jonathan, etc.

Dr. George W. Holstein, a lineal descendant of Matts Holstein, in his response to a toast, "The

Swedes," at the first annual banquet of the Montgomery County Historical Society, held at Norristown on the evening of Feb. 22, 1882, pays a beautiful tribute to an ancestry who pioneered Christian civilization up the Schuylkill Valley. The author is a true type of the Swedes who still dwell upon the heritage of their sturdy and illustrious fathers:

"As a lineal descendant of those Swedes who crossed the ocean so early as 1636, I am deeply conscious of the compliment thus paid to their memory, and yet I feel that it is justly due, in view of the results accomplished by them and their influence in moulding the destinies of this great country.

"Trained at home in a love for the practical teachings of the 'Sermon on the Mount' and the general truths of revealed religion, they early planted the Cross of Calvary upon these shores, and in all their intercourse with the natives and others illustrated the principles heralded thereby.

"By fair and honorable dealings they gained the confidence of the Indians, and lived among them upon the most amicable terms. Their influence over them was remarkable, as was evinced by many of the natives attaching themselves to the educational and religious institutions established by them, thus rendering much more easy the great work accomplished by William Penn, who came here over forty years later as the representative of the English Crown, supported by all the vast influence of that powerful nation, commissioned by King Charles II. to act as Proprietary Governor of the province of Pennsylvania, having received a grant of land lying north of that occupied by Lord Baltimore, and west of the river Delaware. This was in lieu of a claim of sixteen thousand pounds due him for services rendered by his father, Rear-Admiral Penn, a distinguished officer of the British navy. The charter for this grant still hangs in the office of the Secretary of the Commonwealth at Harrisburg, dated March 4, 1681. William Penn reached here in October, 1682. And now, in this bi-centennial year of that event, when it is proposed to celebrate it with distinguished honors, while I would not for one moment detract from the glory to which I believe he is eminently entitled, yet I do not wish the fact to be lost sight of that the Swedes were among the first to establish friendly relations with the natives, that the first translation into the Indian dialect was the Swedish Catechism by Rev. John Campanius, a Swedish missionary.

"In 1642, six years after their arrival, Col. John Printz, of the Swedish army, was sent over as Governor of the colony. His instructions, dated Stockholm, Aug. 15, 1642, contain twenty-eight articles, embracing his duties,—first, in relation to the Swedes; secondly, to the Europeans living in the vicinity; and thirdly, to the Indians. With respect to these latter, the Governor was directed to confirm, immediately after his arrival, the treaty with them, by which they had conveyed to the Swedes the western shore of the Delaware from Cape Henlopen to the Falls of Sanhickan, since called Trenton, and as much inland as gradually should be wanted. Also to ratify the bargain for land on the east side, and in these and future purchases to regard them as the rightful owners of the country.

"He was to treat all the neighboring tribes in the most equitable and humane manner, so that no injury, by violence or otherwise, should be done to them by any of his people. He had also in charge to accomplish, as far as practicable, the embracing of Christianity by them, and their adoption of the manners and customs of civilized life.

"He was accompanied by Rev. John Campanius as chaplain of the colony. In 1653, Governor Printz was succeeded by Governor John Claudius Rising, who soon after invited ten of the leading Indian chiefs to a friendly conference. It was held at Tinicum on the 17th of June, 1654.

"He saluted them in the name of the Swedish queen, with assurances of her favor, put them in mind of the purchase of lands already made, and requested a continuation of their friendship. He distributed various presents among them, and gave a good entertainment to them and their company. They were much pleased, and assured him of a faithful affection.

"One of the chiefs, Naaman, made a speech, during which he remarked that 'the Swedes and the Indians had been as one body and one heart, and that thenceforward they should be as one head,' at the same time making a motion as if he were tying a strong knot, and then made this comparison, 'that as the calabash was round without any crack, so they should be a compact body without any fissure.'

"Campanius represents the Indians as having been frequent visitors at his grandfather's house in Delaware County, which gave him an opportunity of studying their language, in which he became quite proficient.

"In the conversations he had there with them he succeeded in impressing upon their minds the great truths of Christianity and awakening a deep interest among them, hence his translation of Luther's Catechism.

"They attached great value to this act, as evincing a deeper interest in their welfare than that indicated by mere lip-service, and it thenceforward proved a bond of union, binding them in acts of devotion and fealty to the Swedes.

"The Swedes gave the great and good Penn a most cordial welcome, and the benefit of their influence and experience, for which he was truly grateful, and which he kindly acknowledged in a letter to his friends at home in 1683.[1]

"This society does itself credit in thus honoring

[1] He interceded in their behalf with the Swedish ambassador at London for Swedish books and ministers.

the memory of a people who were among the earliest to locate in this vicinity, and who established regulations and usages that have exercised a refining and elevating influence in shaping the morals and habits of the community around us. I thank you for the opportunity of saying thus much in their behalf."

NOTE.—The Fatherland has never lost sight of the Swedes in the Schuylkill Valley. As late as 1876, during the Centennial period, the blood royal of the home government, accompanied by a large number of distinguished guests and citizens, paid a visit to the "Merion Swedes' Church." The event took place Sunday, the 2d of July of that year. The appearance of the royal party, nearly all of whom were dressed in uniform, seated in the sombre old church, was a novel sight. The prince occupied a front pew and was the magnet of observation. He was a boyish-looking lad, yet possessing a free and unassuming manner. Among his retinue were intelligent-looking faces and fine specimens of well-developed manhood. The party consisted of the following distinguished persons: Prince Oscar, Duke of Gottland, second son of the King of Sweden; Count Frederick Posse, Royal Swedish Commissioner for the Machinery Department; Le Comte C. Lewenhaupt, Envoy Extraordinaire and Minister Plenipotentiaire of Sweden and Norway; Baron M. D. Ruuth, Royal Swedish Navy Executive officer H.M.S. "Norrkoping"; Baron O. Hermelin, Commissioner for the Fine Art Department; and many other notables from the Swedish Commission. The occasion was memorable, and the following extract from the address of the Rev. O. Perinchief forms an eventful chapter in the history of the day:

"The best thing Europe had in it four or five hundred years ago was a deep satisfaction with everything as it was in church or state. The best particular thing was the Bible, hidden away, to be sure, but here and there mighty minds that dared all difficulties to get at it and other books of thought and learning, not only of the ancient times but of the outside nations. A new life began in a whole continent. Thousands of men and women felt they were men and women, and went out to tell it to all tribes in all tongues. What we call the Reformation began. That reformation was in opening sealed books, in independent thought, in new ideas. One of these ideas was that of Columbus, who conceived that over here was another world. At last he found it. That simple discovery in itself lent a wonderful impulse to everything in Europe. The news set the nations wild. Italy had furnished the man, and Spain had furnished the means. A new world was discovered. Whose world was it? Not Spain's, not Italy's. God knew it was here. He had kept it for the nurture of all things old or new that were already good, and for the production of all things that were in any way better. But though a new continent was discovered a new nation was not born. The work of discovery was only begun. Spain, England, Holland, France, all had their ships abroad to find out what the new world was. As each nation discovered, so each claimed the territory discovered. Nearly a century had passed before any attempt was made to settle the land with Europeans,—Spain in the south, the French in the north, England and Holland in the middle territories. At last each of all these became successful, and Europe was transplanted in America. All nations took stock in the new venture, and from that day to this every American has been more or less a foreigner, and every foreigner who has been a true man, and in his nationality seeking the good of the human race, has been more or less an American. We all began, and from that day to this we all stand upon our own and greet each other as brothers. Vast is our debt to England, to Germany, to all Europe, but in particular we who are here to-day are more directly indebted to Sweden. In 1631, or from that to 1638, a colony of Swedes landed and settled upon this side of the Delaware, at or below the place where now stands the city of Wilmington. There is some uncertainty about the date. The probability is that attempts had been made, or partial settlements, having for their object the necessary investigation preparatory to a permanent occupation, which at least did take effect in 1637 or '38. At any rate, we know the great Gustavus Adolphus had contemplated the enterprise for many years. The great struggle between Romanism and Protestantism was then at its bitterest, and the hope and purpose of founding here a Protestant colony entered largely into the enterprise. But with this was combined the evangelization of the Indians, and, more than all, the establishment of the people—good, honest Swedes—in comfortable homes, upon lands they could look at and call their own. The persons who came over in that colony were of two classes,—a small class of government officials to administer order and, as occasion occurred, watch their own individual chances, but a large class of sober and industrious people truly seeking a home. It sometimes happened that persons were sent over partly as banishment and partly in hope of reform; but the people not only of this but of sister colonies sent them back, for they were always worse than useless. Though bound to hard labor, it was a sort of slave labor, and the freemen would rather do their own work, because they could do it better and because they abhorred slavery. These settlers bought their lands from the Indians, and in later times erected substantial homes. Nearly all the men were husbandmen. They saw their wealth in the soil. Up to 1700 the colony had grown to over a thousand, though they had been subjected to bitter discouragement and sad vicissitudes. But their prosperity had not been accomplished without great care and generosity on the part of their brethren at home. At the very outset the settlers were provided with ministers of the gospel—pious and learned men—to teach and admonish the people, and to preserve the spiritual privileges they had enjoyed in their native land. These ministers were supported by the funds of the mother-country. The colony was supplied with Bibles, catechisms, and books. On one single occasion ministers were sent, bearing books in plentiful supply, and encouraged by a donation of three thousand dollars from Charles XII.

"The Swedes were reminded of the Indians around them, and 'Luther's Catechism' was translated into the Indian dialect at least as soon, and perhaps sooner, than the corresponding work of Eliot in regions farther north. The fault of these Swedes, if it may be permitted to speak of such a thing to-day, was a want of unity in purpose and harmony in action. Their plans lacked breadth and unselfishness. They looked a little ahead or not at all. Before their children they set no greatness, and made little provision for its creation. In narrowed endeavors to save they very frequently lost, and left us, instead of property and rich advantages, a legacy of sad reflection and bitter regrets. In the nature of things the settlement spread on the other side of the river in New Jersey, and on this side of the Delaware and along the Schuylkill. The first settlement in this immediate neighborhood was in 1702. At that time the nearest church was at Wicaco, now Glora Dei, in Philadelphia. Gradually their numbers thickened, and in a few years we begin to hear of requests for occasional services up here. In 1733 a lot was given and a house built for the double purpose of school and church. Upon the very ground within the present stone walls which inclose our yard a wooden building was constructed, though we know that prior to 1733 the grounds had been used as a place of burial. No stated minister living nearer than Philadelphia, both religious and educational matters languished until 1759, when there arrived from Sweden a very remarkable man, whose memory is still green and deserves to be richly cherished, Dr. Charles M. Van Mangel. Under him our church here, this very structure, was built in 1760, making this present its one hundred and sixteenth anniversary. The date '1760' was engraved on its walls, and stands there to-day. In 1765 a charter was obtained from the Proprietary government of John Penn, then at the head of affairs. The churches lying within the territorial limits of Pennsylvania were incorporated under the name of the 'United Swedish Lutheran Churches of Wicaco, Kingsessing, and Upper Merion.' This charter continued until 1787, when the new state of things consequent upon the American Revolution rendered it needful to obtain a charter from the State government of Pennsylvania. The new charter was substantially the same as that of 1765, except that it gave the people the right to elect their own minister, and provided for the formal ending of the Swedish mission. Thus closed the long interval of nursing care which established us here as a church, which through many years must have exerted a vast influence in shaping the destiny of this commonwealth and nation; a period marked by noble generosity, by many sacrifices, enshrined by many holy and exemplary lives; a period which left us stewards invested with no slight responsibility. The two churches (Kingsessing and Upper Merion) continued with Wicaco until 1842, when each church obtained for itself a separate and independent charter. The other two churches passed into communion with the Protestant Episcopal Church. We remained, as we still remain, a separate organization, heir to all the traditions, invested, too, perhaps in that very fact, with the great responsibility, a witness still of a faith and kindness which never slumbered, a monument of labor which blessed our fathers, still blesses us, and which we believe will go on to bless our children. For it all we lift up our hearts and praise God, who made man of one blood. We greet our brethren to-day from that Fatherland, and thank them, and through them the people to whom they belong, and assure them that of whatever things among us their ears may hear or their eyes behold, which at the same time their hearts approve, they have had their part in producing, and that this day as a people we would not be a selfish people taking credit to

ourselves, but gratefully acknowledging our debt, and praying God to return the blessing a thousandfold upon their own people, asking in turn their prayers that we and the whole nation may be faithful in every trust, that we have freely received we may freely give, until all nations, kindreds, tribes, and tongues be gathered into one grand kingdom, under one king, the common Redeemer and Saviour of all."

CHAPTER VI.

WILLIAM PENN.—"THE HOLY EXPERIMENT, A FREE COLONY FOR ALL MANKIND."

THE life, character, and purposes of William Penn, as disclosed prior to the period of his colonial enterprise, rendered him a conspicuous personage in his native land. In his minority neither royal power nor parental displeasure could swerve him from or materially modify his religious, political, or social convictions of duty. Self-poised and self-reliant, a disciple of peace and peaceful methods, he was in strange contrast with the warlike spirit of the age that produced him. The young and those of maturer years may study his example and the circumstances of his advent with manifest advantage. As the founder of Pennsylvania and the author of that system of colonial government which prevailed previous to the institution of the commonwealth, his life and public services are a part of our common history. The impress which he left upon the laws and the religious thought of the period, his love of personal liberty, his solicitude for the education of the poor, and his abiding faith in the wisdom of the "freemen of the province" were essential factors in preparing the public mind for the simple yet adequate forms of self-government which he imposed in the organization of the colony. A pleasing sense of home-esteem insensibly associates itself with the memory of the illustrious man who gave to his generation characteristics that have made us Pennsylvanians in all generations since, whether at home or abroad. His boyhood was remarkable. He was born Oct. 14, 1644, in the city of London. His biographer says, "He was endowed with a good genius, and his father, Admiral and Sir William Penn,[1] improved the promising prospect which the son inherited by bestowing upon him the advantages of a liberal education. He acquired knowledge easily and rapidly, and in the fifteenth year of his age he was admitted a student in Christ's Church College, in Oxford. Prior to his admission to this institution of learning he seems to have been impressed with religious convictions, induced by the ministry of Thomas Loe, a preacher of the Friends. Imparting his views to his classmates, he found among them congenial and sympathizing spirits, who withdrew from the "national way of worship," and "held private meetings for the exercise of religion, where they preached and prayed among themselves." This bold innovation upon the forms of state church by the young Quakers, as they were derisively called, gave marked offense to the professors of the university, and young Penn was subjected to a fine for "non-conformity," and, later, "for his persevering in like religious practices, was expelled from the college."[2] Young Penn returned to his home, greatly to the displeasure of his father, who regarded the expulsion of his son as a serious hindrance to the future career of wealth and influence in store for him. Still further complicating the situation, the son sought the society of the plain and sober people among the Friends, and manifested an utter disregard of and contempt for the conventional formalities to which his father was devoted, both by inclination and interest. His father sought in all proper ways to engage the confidence of the son and guide him in the way of public preferment, but all to no purpose; "for, after having used both the force of persuasion upon his mind and the severity of stripes upon his body without success, he at length was so far incensed against him that, in great resentment of rage, he turned him out of his house," to choose between poverty with a pure conscience or fortune and official favor with obedience.

The virtue of patience, already possessed by the son, enabled him to calmly wait for the hour when the petulance and anger of a disappointed father would yield to the more natural feeling of parental love and affection. Results justified the expectation. The father relented, and the son was sent to France, in company with friends, who were to introduce him to persons of rank and distinction, and at the same time use all means in their power to break up the Quaker notions of the young man. While in France he applied himself to study, and acquired a knowledge of the French language. He subsequently visited Italy, and was preparing for an extended tour of the Continent when his father was placed in command of a British squadron in the naval war with Holland, in consequence of which he was obliged to return in haste and assume the care of his father's estates. The advantages of travel, and the discipline of the courtly society in which he was constrained to move gave him elegance and grace of manners, and "in London the traveled student of Lincoln's Inn, if diligent in acquiring a knowledge of English law, was also esteemed a most modish fine gentleman."

This was a critical period in the early career of William Penn. He was in the bloom of youth, of engaging manners, and "so skilled in the use of the

[1] His father, Sir William Penn, was of eminent character, and served both under the Parliament and King Charles II. in several of the highest maritime offices. He was born in Bristol, anno 1621, and married Margaret, daughter of John Jasper, of Rotterdam, in Holland, merchant, by whom he had his son, William Penn. He was himself the son of Capt. Giles Penn, several years consul for the English in the Mediterranean; and of the Penns of Penn's Lodge, in the county of Wilts; and those Penns of Penn, in the county of Bucks; and by his mother from the Gilberts, in the county of Somerset, originally from Yorkshire.—*Proud, Hist. of Penna.*, vol. i.

[2] Proud, Hist. of Penna., vol. i. p. 23.

Wm Penn

sword that he easily disarmed an antagonist," of great natural vivacity and gay good humor, and a career of wealth and preferment waiting his acceptance through the influence of his father and the favor of his sovereign. It was in 1664, when Penn was in his twentieth year, that his spiritual conflict or religious exercise of mind seems to have reached a climax. "His natural inclination, his lively and active disposition, his accomplishments, his father's favor, the respect of his friends and acquaintances did strongly press him to embrace the glory and pleasures of this world, but his earnest supplication being to the Almighty for preservation, he was in due time favored with resolution and ability to overcome all opposition and to pursue his religious prospects." It was a happy providence in the life of Penn when, in the twenty-second year of his age, his father committed to his care and management a large estate in Ireland. It withdrew him from the temptations of a great commercial centre, and gave him the freedom of a pastoral life, which quickened the spiritual sensibilities of his nature. It opened anew visions of a future, which, however obscure and uncertain, was, nevertheless, the hope of his benevolent soul. Removed from the conventional atmosphere of London, the watchful eye of parental solicitude and official favor, the struggle between conviction to self-imposed duty and obligations to friends and family became less severe, and he soon found himself in the society of his old spiritual guide and adviser, Thomas Loe, at Cork. He was in frequent attendance upon Friends' meeting in the town of Cork. Freedom of speech was indulged in, and this religious liberty, so consistent with the ideas of the Friends, was warmly espoused by the young and ardent Penn. These frequent meetings excited the hostile feelings of those in authority, and in the year 1667, Penn, with eighteen others, was arrested, and by the mayor of the city committed to prison. Upon the hearing the mayor observed that the dress of Penn was not the same as the other "Quakers," whereupon he directed that Penn should be discharged upon giving his own bond for his future good behavior. This Penn promptly refused to do, and with the others suffered imprisonment. While in jail he wrote to the Earl of Orrey, Lord President of Munster, stating his situation, declaring his innocence, and protesting against the outrage and persecution suffered by himself and friends. The earl immediately ordered his discharge from prison. Concealing with admirable tact his feelings of natural indignation, he became more than ever pronounced in his favor for the persecuted "Quakers." Those who had been his former friends now avoided him, and, as is said, "he became a by-word and the subject of scorn and contempt, both to the professor of religion and to the profane." The facts and circumstances of this episode were reported to his father, who immediately recalled him to London. The son was obedient, and manifested a profound respect for his honored and distinguished parent, but his studious deportment and deep concern of mind upon the subject of religious controversy left no room to doubt the unalterable convictions resting upon his mind.

"Here my pen," says his biographer, "is diffident of her abilities to describe that most pathetic and moving contest between his father and him,—his father, by natural love, principally aiming at his son's temporal honor; he, guided by a divine impulse, having chiefly in view his own eternal welfare; his father grieved to see the well-accomplished son of his hope, now ripe for worldly promotion, voluntarily turn his back on it; he no less afflicted to think that a compliance with his earthly father's pleasure was inconsistent with an obedience to his heavenly one; his father pressing his conformity to the customs and fashions of the times; he modestly craving leave to refrain from what would hurt his conscience; his father earnestly entreating him and, almost on his knees, beseeching him to yield to his desire; he, of a loving and tender disposition, in extreme agony of spirit to behold his father's concern and trouble; his father threatening to disinherit him; he humbly submitting to his father's will therein; his father turning his back on him in anger; he lifting his heart to God for strength to support him in that time of trial."

During this memorable conflict between the passion of love and the mandates of duty, which scarcely finds a parallel in history, the following incident occurred, which fully attested the sincerity of the son, no less than the commanding character of the parent: "His father finding him too fixed to be brought to a general compliance with the customary compliments of the times, seemed willing to bear with him in other respects, provided he would be *uncovered* in the presence of the king, the duke, and himself. This being proposed, the son desired time to consider it. This the father supposed to be an excuse to find time to consult with his Quaker friends; to prevent this he directed him to retire to his chamber and there remain until he should answer Accordingly he withdrew, and having humbled himself before God, with fasting and supplication, he became so strengthened in his resolution that, returning to his father, he humbly signified that he could not comply with his desire therein." All efforts to reach a compromising line of conduct between the haughty and commanding father and the remarkable son proved unavailing, and again the latter was "turned out of doors, having no substance except what his mother privately sent him." While Admiral Penn keenly felt the disappointment resulting from the conduct of his only son, he seems to have been duly impressed with his perseverance and integrity of purpose, and in a few months thereafter, in deference to the wise and loving wife and mother, the son was permitted to return and remain at home; and when he was subsequently imprisoned, the father privately used his influence for his liberation.

William Penn was now in his twenty-fourth year, and fearless in the advocacy of the principles he cherished; as a public speaker and author, he announced to princes, priests, and people that "he[1] was one of the despised, afflicted, and forsaken Quakers, and repairing to court with his hat on, he sought to engage the Duke of Buckingham in favor of liberty of conscience, claimed from those in authority better quarters for Dissenters than stocks and whips and dungeons and banishments, and was urging the cause of freedom with importunity, when he himself, in the heyday of youth, was consigned to a long and close imprisonment in the Tower. His offense was heresy; the Bishop of London menaced him with imprisonment for life unless he would recant. 'My prison shall be my grave,' answered Penn. The kind-hearted Charles II. sent the humane and candid Stillingfleet to calm the young enthusiast. 'The Tower,' such was Penn's message to the king, 'is to me the worst argument in the world.' In vain did Stillingfleet urge the motive of royal favor and preferment; the inflexible young man demanded freedom of Arlington, 'as the natural privilege of an Englishman.' Club-law, he argued with the minister, may make hypocrites; it can never make converts. Conscience needs no mark of public allowance. It is not like a bale of goods that is to be forfeited unless it has the stamp of the custom-house. After losing his freedom for about nine months, his prison-door was opened by the intercession of his father's friend, the Duke of York; for his constancy had commanded the respect and recovered the favor of his father. The Quakers, exposed to judicial tyranny, were led by the sentiment of humanity to find a barrier against their oppressors by narrowing the application of the common law and restricting the right of judgment to the jury. Scarcely had Penn been at liberty a year when, after the intense intolerance of 'the Conventicle Act,' he was arraigned for having spoken at a Quaker meeting. 'Not all the powers on earth shall divert us from meeting to adore our God who made us.' Thus did the young man of five-and-twenty defy the English Legislature, and he demanded on what law the indictment was founded. 'On the common law,' answered the recorder. 'Where is that law?' demanded Penn. 'The law which is not in being, far from being common, is no law at all.' Amidst angry exclamations and menaces he proceeded to plead earnestly for the fundamental laws of England, and as he was hurried out of court still reminded the jury that 'they were his judges.' Dissatisfied with the first verdict returned, the recorder heaped upon the jury every opprobrious epithet. 'We will have a verdict, by the help of God, or you shall starve for it!' 'You are Englishmen,' said Penn, who had been again brought to the bar, 'mind your privilege, give not away your right.' 'It never will be well with us,' said the recorder, 'till something like the Spanish Inquisition be in England.' At last the jury, who had received no refreshments for two days and two nights, on the third day gave their verdict, 'Not guilty.' The recorder fined them forty marks apiece for their independence, and amercing Penn for contempt of court, sent him back to prison."

The trial was an era in judicial history. The fines were soon afterwards discharged by his father, who was now approaching his end. "Son William," said the dying admiral, "if you and your friends keep to your plain way of preaching and living, you will make an end of the priests." Inheriting a large fortune, he continued to defend publicly from the press the principles of intellectual liberty and moral equality; he remonstrated in unmeasured terms against the bigotry and intolerance, "the hellish darkness and debauchery" of the University of Oxford; he exposed the errors of the Roman Catholic Church, and in the same breath pleaded for a toleration of their worship; and never fearing openly to address a Quaker meeting, he was soon on the road to Newgate, to suffer for his honesty by a six months' imprisonment. "You are an ingenious gentleman," said the magistrate at the trial, "you have a plentiful estate, why should you render yourself unhappy by associating with such a simple people?" "I prefer," said Penn, "the honestly simple to the ingeniously wicked." The magistrate rejoined by charging Penn with previous immoralities. The young man, with passionate vehemence, vindicated the spotlessness of his life. "I speak this," he adds, "to God's glory, who has ever preserved me from the power of these pollutions, and who from a child begot a hatred in me towards them. Thy words shall be thy burden. I trample thy slander as dirt under my feet!" From Newgate Penn addressed Parliament and the nation in the noblest plea for liberty of conscience, a liberty which he defended by arguments drawn from experience, from religion, and from reason. If the efforts of the Quakers cannot obtain "the olive-branch of toleration, we bless the providence of God, resolving by patience to outweary persecution, and by our constant sufferings to obtain a victory more glorious than our adversaries can achieve by their cruelties." On his release from imprisonment a calmer season followed. Penn traveled in Holland and Germany, then returning to England, he married a woman of extraordinary beauty and sweetness of temper, whose noble spirit "chose him before many suitors," and honored him with "a deep and upright love." As persecution in England was suspended, he enjoyed for two years the delights of rural life and the animating pursuit of letters, till the storm was renewed, and the imprisonment of George Fox on his return from America demanded intercession. What need of narrating the severities which, like a slow poison, brought the prisoner to the borders of the grave? Why enumerate the atrocities of petty tyrants in-

[1] Bancroft's Hist. U. S., vol. i. p. 114.

vested with village magistracies, the ferocious passions of irresponsible jailers? The statute book of England contains the clearest impress of the bigotry which a national church could foster and a parliament avow; and Penn, in considering England's present interest, far from resting his appeal on the sentiment of mercy, merited the highest honors of a statesman by the profound sagacity and unbiased judgment with which he unfolded the question of the rights of conscience in its connection with the peace and happiness of the state. It was this love of freedom of conscience which gave interest to his exertions for New Jersey.

The summer and autumn after the first considerable Quaker emigration to the eastern bank of the Delaware, George Fox and William Penn and Robert Barclay, with others, embarked for Holland to evangelize the continent, and Barclay and Penn went to and fro in Germany, from the Weser to the Main, the Rhine and the Neckar, distributing tracts, discoursing with men of every sect and every rank, preaching in palaces and among the peasants, rebuking every attempt to enthrall the mind, and sending reproofs to kings and magistrates, to the princes and lawyers of all Christendom. The soul of William Penn was transported into fervors of devotion, and in the ecstasies of enthusiasm he explained "the universal principle" at Herford, in the court of the Princess Palatine, and to the few Quaker converts among the peasantry of Kirchheim. To the peasantry of the highlands near Worms the visit of William Penn was an event never to be forgotten. The opportunity of observing the aristocratic institutions of Holland and the free commercial cities of Germany was valuable to a statesman. On his return to England the new sufferings of the Quakers excited a direct appeal to the English Parliament. The special law against papists was turned against the Quakers. Penn explained the difference between his society and the papists, and yet, at a season when Protestant bigotry was become a frenzy, he appeared before a committee of the House of Commons to plead for universal liberty of conscience. "We must give the liberty we ask,"—such was the sublime language of the Quakers,—"we cannot be false to our principles though it were to relieve ourselves, for we would have none to suffer for dissent on any hand." William Penn was an enthusiast with a benevolent heart; he despised the profligacy of the church that united the unholy offices of a subtle priestcraft with the despotic power of a warlike state. His study of English law intensified his love of tolerance and inspired him with the hope of liberalizing the government that had persecuted him; as late as 1679 he took a prominent part in the elections for that year. He was a persuasive speaker, and met with generous receptions in a canvass made especially in the interest of Algernon Sydney, who, he said, was now "embarked with those that did seek, love, and choose the best things." He grew eloquent before the electors of England, invoking them to a consciousness of their own strength and authority. "Your well-being," he said, "depends upon your preservation of your rights in the government. You are free! God and nature and the constitution have made you trustees for posterity. Choose men who will by all just ways firmly keep and zealously promote your power." But the truly Christian patriot was doomed to bitter disappointment when confronted with the defeat of his favorite and the popular will by false and perverted election returns. It was in this discouraging period of his noble manhood that he conceived of the "Holy Experiment" and a "free colony for all mankind."

The possibilities of the North American continent, and especially that portion watered by the Delaware[1]

[1] But the Proprietors of Western New Jersey being of the people called Quakers, their part of the province consequently, through their influence, became settled principally by the same kind of people; but to prevent any of their religious society from rashly or inadvertently removing into this new country, or without due consideration, and contrary to the mind of their parents and nearest relatives, three of the principal persons among the Proprietors, viz., W. Penn, G. Lawrie, and N. Lucas, wrote an epistle of caution to their friends, the Quakers, which, as it further shows their rights to this part of the province, the care of that people over one another at that time, and their concern for an orderly settlement in it, that none might be deceived and have occasion to repent of such an important undertaking, is not unworthy of the perusal of the posterity and descendants of those early adventurers, settlers, and cultivators of the country. The epistle was as follows, viz.:

"Dear Friends and Brethren: In the pure love and precious fellowship of our Lord Jesus Christ we very dearly salute you, forasmuch as there was a paper printed several months ago, entitled 'The description of New-West-Jersey,' in which our names were mentioned, as Trustees for one undivided moiety of the said province, and because it is alleged that some, partly on this account, and others apprehending that the paper, by the manner of its expression, came from the body of Friends as a religious society of people, and not from particulars, have, through these mistakes, weakly concluded that the said description, in matter and form, might be writ, printed, and recommended on purpose to prompt and allure people to dissettle and plant themselves, as it is also by some alleged, and because we are informed that several have, on that account, taken encouragement and resolution to transplant themselves and families to that province; and lest any of them (as is feared by some) should go out of a curious and unsettled mind, and others to shun the testimony of the blessed *Cross of Jesus*, of which several weighty friends have a godly jealousy upon their spirits, lest an unwarrantable forwardness should act or hurry any beside or beyond the wisdom or counsel of the Lord, or the freedom of his light and spirit in their own hearts, and not upon good and weighty grounds; it truly laid upon us to let friends know how the matter stands, which we shall endeavor to do with all clearness and fidelity.

"1. That there is such a place as New Jersey is certain.

"2. That it is reputed of those who have lived and traveled in that country to be wholesome of air and fruitful of soil, and capable of seatrade, is also certain, and it is not right in any to despise it or dissuade those that find freedom from the Lord and necessity put upon them on going.

"3. That the Duke of York sold it to those called Lord Berkeley, Baron of Stratton, and Sir George Carteret, equally to be divided between them, is also certain.

"4. One moiety, or half part, of the said province, being the right of the Lord Berkeley, was sold by him to John Fenwicke, in trust for Edward Byllinge and his assigns.

"5. Forasmuch as Edward Billinge (after William Penn had ended the difference between E. Byllinge and J. Fenwicke) was willing to present his interest in the said province to his creditors, as all that he had left him, towards their satisfaction, he desired W. Penn (though every way unconcerned) and Gawen Lawrie and Nicholas Lucas, two of his creditors, to be trustees for performance of the same, and because several of

and its confluents, were well known to him and his associates, resulting in some measure from his official connection with the settlement of "West New Jersey" and the division of that province in the year 1676.[1] No preparation could have more thoroughly fitted Penn for the subsequent work of his life than his experience up to 1680–81. Checkmated and repulsed in his efforts of reform by the brutal element

his creditors particularly and very importunately pressed W. Penn to accept of the trust, for their sakes and security we did all of us comply with these and the like requests and accepted of the trust.

"6. Upon this we became trustees for one moiety of the said province, yet undivided, and after no longer labor, trouble, and cost a division was obtained between the said Sir George Carteret and us, as trustees; the country is situated and bounded as is expressed in the printed description.

"7. This now divided moiety is to be cast into one hundred parts, lots, or proprietaries, ten of which, upon the agreement made betwixt E. Billinge and J. Fenwick, his executors and assigns, with a considerable sum of money by way of satisfaction, for what he became concerned in the purchase from the said Lord Berkeley, and by him afterwards conveyed to John Edridge and Edmond Warner, their heirs and assigns.

"8. The ninety parts remaining are exposed to sale, on behalf of the creditors of the said Edward Byllinge. And forasmuch several friends are concerned as creditors, as well as others, and the disposal of so great a part of this country being in our hands, we did in real tenderness and regard to friends, and especially to the poor and necessitous, make friends the first offer; that if any of them, though particularly those, who being low in the world, and under trials about a comfortable livelihood for themselves and families, should be desirous of dealing for any part or parcel thereof, that they might have the refusal.

"9. This was the real and honest intent of our hearts, and not to prompt or allure any out of their places, either by the credit our names might have with our people throughout the nation, or by representing the thing otherwise than it is in itself.

"As to the printed paper, some time since set forth by the creditors as a description of that province, we say, as to two passages in it, they are not so clearly and safely worded as ought to have been; particularly in seeming to hint, the *Winter* season to be so short a time; when, on further information, we hear it is sometimes longer, and sometimes shorter, than therein expressed; and that the last clause, relating to liberty of conscience, we would not have any to think that it is promised or intended to maintain the liberty of the exercise of religion by force of arms, though we shall never consent to any the least violence on conscience; yet it was never designed to encourage any to expect by force of arms to have liberty of conscience fenced against invaders thereof.

"And be it known unto you all in the name and fear of Almighty God, his Glory and Honor, Power and Wisdom, Truth and Kingdom, is dearer to us than all visible things; and as our eye has been single, and our hearts sincere in the living God in this as in other things, so we desire all, whom it may concern, that all groundless jealousies may be judged down, and watched against; and that all extremes may be avoided, on all hands, by the power of the Lord; that nothing which hurts or grieves the holy life of truth in any that goes or stays, may be adhered to, nor any provocation given to break precious unity.

"This am I, William Penn, moved of the Lord to write unto you, lest any bring a temptation upon themselves or others; and, in offending the Lord, slay their own peace. Blessed are they that can see and behold them their Leader, their Orderer, their Conductor, and Preserver in going and staying; whose is the earth and the fullness thereof, and the cattle upon a thousand hills; and, as we formerly writ, we cannot but repeat our request unto you that, in whomsoever a desire is to be concerned in this intended plantation, such would weigh the thing before the Lord, and not headily or rashly conclude on any such remove; and that they do not offer violence to the tender love of their near kindred and relations, but soberly and conscientiously endeavor to obtain their good wills; the unity of friends where they live, that whether they go or stay it may be of good favor before the Lord and good people, from whom only can all heavenly and earthly blessings come.

"This we thought good to write for the preventing all misunderstandings, and to declare the real truth of the matter, and so we recommend you all to the Lord, who is the watchman of his Israel. We are your real friends and brethren.

"William Penn,
"Gawen Lawrie,
"Nicholas Lucas."

[1] In 1675, when his disgust with European society and his consciousness of the impossibility to effect radical reform there had been confirmed and deepened, Penn became permanently identified with American colonial affairs, and was put in the best possible position for acquiring a full and accurate knowledge of the resources and possibilities of the country between the Susquehanna and the Hudson. This, which Mr. Janney calls "an instance in which Divine Providence seemed to open for him a field of labors to which he was eminently adapted," arose out of the fact of his being chosen as arbitrator in the disputes growing out of the partition of the West Jersey lands. As has already been stated, on March 12, 1664, King Charles II. granted to his brother James, Duke of York and Albany, a patent for all the lands in New England from the St. Croix River to the Delaware. This patent, meant to lead directly up to the overthrow of the Dutch power in New Netherland, was probably also intended no less as a hostile demonstration against the New England Puritan colonies, which both the brothers hated cordially, and which latterly had grown so independent and had so nearly established their own autonomy as to provoke more than one charge that they sought presently to abandon all allegiance due from them to the mother-country. At any rate, the New England colonies at once attempted to organize themselves into a confederacy for purposes of mutual defense against the Indians and Canadian French, as was alleged, but for divers other and weighty reasons, as many colonists did not hesitate to proclaim. The Duke of York secured New York, Pennsylvania, and Delaware to himself as his own private possessions. That part of New Netherland lying between the Hudson and the Delaware Rivers was forthwith (in 1664, before Nicolls sailed from Portsmouth to take New York) conveyed by the duke, by deeds of lease and release, to John Lord Berkeley and Sir George Carteret. The latter being governor of the Channel Islands at the time, the new colony was called New Jersey, or rather *Nova Cæsarea*, in the original grant. In 1675, Lord Berkeley sold for one thousand pounds his undivided half-share in New Jersey to John Fenwick, in trust for Edward Billinge and his assigns. Fenwick and Billinge were both Quakers, and Billinge was bankrupt. Not long after this conveyance Fenwick and Billinge fell out about the property, and, after the custom of the Friends, the dispute was submitted to arbitration. The disputants fixed upon William Penn as arbitrator. When he made his award, Fenwick was not satisfied and refused to abide by Penn's decision, which, indeed, gave Fenwick only a tenth of Lord Berkeley's share in the joint tenancy, reserving the remaining nine-tenths to Billinge, but giving Fenwick a money payment besides. Penn was offended at Fenwick's recalcitrancy, and wrote him some sharp letters. "Thy days spend on," he said, "and make the best of what thou hast. Thy grandchildren may be in the other world before the land thou hast allotted will be employed." Penn stuck to his decision, and, for that matter, Fenwick likewise maintained his grievance. He sailed for the Delaware at the head of a colony, landed at Salem, N. J., and commenced a settlement. Here he carried matters with such a high hand, patenting land, distributing office, etc., that he made great trouble for himself and others also. His authority was not recognized, and for several years the name of Maj. John Fenwick fills a large place in the court records of Upland and New York, where he was frequently imprisoned and sued for damages by many injured persons.

Billinge's business embarrassments increasing, he made over his interest in the territory to his creditors, appointing Penn, with Gawen Lawrie, of London, and Nicholas Lucas, of Hertford, two of the creditors, as trustees in the matter. The plan was not to sell, but improve the property for the benefit of the creditors. To this end a partition of the province was made, a line being drawn through Little Egg Harbor to a point where Port Jervis now is. The part of the province on the right of this line, called East New Jersey, the most settled portion of the territory, was assigned to Carteret. That on the left, West New Jersey, was deeded to Billinge's trustees. A form of government was at once established for West Jersey, in which Penn's hand is distinctly seen. The basis was liberty of person and conscience, "the power in the people," local self-government, and amelioration of the criminal code. The territory was next divided into one hundred parts, ten being assigned to Fenwick and ninety to Billinge's trustees, and the land was opened for sale and occupancy, being extensively advertised and

always conspicuous in British politics, he accepted the consequences of defeat, and faced the religious bigotry and tyrannical statecraft of the period with manly courage and unbroken will; thenceforth, despairing of success in his native land, he addressed his energies to the establishment of a free government in the New World. England's unfriendly historians have never borne willing testimony to the merits of the distinguished colonist who left her shores under the favor of Charles II. in 1682, but it is in pleasing contrast to know that American commentators pay deserved tribute to the founder of the Keystone State, and among them none more truthfully and impartially than Bancroft.

"Possessing an extraordinary greatness of mind, vast conceptions remarkable for their universality and precision, and 'surpassing in specr lative endowments,' conversant with men and books and governments, with various languages, and the forms of political combinations as they existed in England and France, in Holland and the principalities and free cities of Germany, he yet sought the source of wisdom in his own soul. Humane by nature and by suffering, familiar with the royal family, intimate with Sunderland and Sydney, acquainted with Russell, Halifax, Shaftesbury, and Buckingham, as a member of the Royal Society the peer of Newton and the great scholars of his age, he valued the promptings of a free mind above the awards of the learned, and reverenced the single-minded sincerity of the Nottingham shepherd more than the authority of colleges and the wisdom of philosophers; and now, being in the meridian of life, but a year older than was Locke when, twelve years before, he had framed a constitution for Carolina, the Quaker legislator was come to the New World to lay the foundations of States. Would he imitate the valued system of the great philosopher?

"Locke, like William Penn, was tolerant; both loved freedom, both cherished truth in sincerity. But Locke kindled the torch of liberty at the fires of tradition; Penn, at the living light in the soul. Locke sought truth through the senses and the outward world; Penn looked inward to the divine revelations in every mind. Locke compared the soul to a sheet of white paper, just as Hobbes had compared it tc a slate, on which time and chance might scrawl their experience; to Penn the soul was an organ, which of itself instinctively breathes divine harmonies, like those musical instruments which are so curiously and perfectly framed that, when once set in motion, they of themselves give forth all the melodies designed by the artists who made them. To Locke 'conscience is nothing else than our own opinions of our own actions;' to Penn it is the image of God, and his oracle in the soul. Locke, who was never a father, esteemed 'the duty of parents' to preserve their children not to be understood without reward and punishment;' Penn loved his children with not a thought for the consequences. Locke, who was never married, declares marriage an affair of the senses; Penn reverenced woman as the object of fervent, inward affection, made not for lust, but for love. In studying the understanding, Locke begins with the sources of knowledge; Penn, with an inventory of our intellectual treasures. Locke deduces government from Noah and Adam, rests it upon contract, and announces its end to be the security of property; Penn, far from going back to Adam, or even to Noah, declares that 'there must be a people before a government,' and, deducing the right to institute government from man's moral nature, seeks its fundamental rules in the immutable dictates 'of universal reason,' its end in freedom and happiness. The system of Locke lends itself to contending factions of the most opposite interests and purposes; the doctrine of Fox and Penn, being but the common creed of humanity, forbids division, and insures the highest moral unity. To Locke happiness is pleasure; things are good and evil only in reference to pleasure and pain, and to 'inquire after the highest good is as absurd as to dispute whether the best relish be in apples, plums, or nuts.' Penn esteemed happiness to lie in the subjection of the baser instincts to the instinct of Deity in the breast, good and evil to be eternally and always as unlike as truth and food, and the inquiry after the highest good to involve the purpose of existence. Locke says plainly that, but for rewards and punishments beyond the grave, 'it is *certainly right* to eat and drink and enjoy what we delight in;' Penn, like Plato and Fénelon, maintained the doctrine so terrible to despots that God is to be loved for His own sake, and virtue to be practiced for its intrinsic loveliness. Locke derives the idea of infinity from the senses, describes it as purely negative, and attributes it to nothing but space, duration, and number; Penn derived the idea from the soul, and ascribed it to truth and virtue and God. Locke declares immortality a matter with which rea-

particularly recommended to Friends. In 1677 and 1678 five vessels sailed for West New Jersey, with eight hundred emigrants, nearly all Quakers. Two companies of these, one from Yorkshire, the other from London, bought large tracts of land, and sent out commissioners to quiet Indian titles and lay off the properties. At Chygoes Island they located a town, first called Beverly, then Birdlington, then Burlington. There was a regular treaty with the Indians, and the Friends not only secured peace for themselves, but paved the way for the pacific relations so firmly sealed by Penn's subsequent negotiations with the savages. The Burlington colony prospered, and was reinforced by new colonists continually arriving in considerable numbers. In 1680, Penn, as counsel for the trustees of West Jersey, succeeded, by means of a vigorous and able remonstrance, in getting the Duke of York, then proprietary of New York, to remove an onerous tax on imports and exports imposed by the Governor of New York and collected at the Horekill. The next year Penn became part proprietor of East New Jersey, which was sold under the will of Sir George Carteret, then deceased, to pay his debts. A board of twenty-four proprietaries was organized, Penn being one, and to them the Duke of York made a fresh grant of East New Jersey, dated March 14, 1682, Robert Barclay becoming Governor, while Penn's friend Billinge was made Governor of West New Jersey. Both of these governments were surrendered to the crown in Queen Anne's reign, April 15, 1702.

son has nothing to do, and that revealed truth must be sustained by outward signs and visible acts of power; Penn saw truth by its own light, and summoned the soul to bear witness to its own glory. Locke believed 'not so many men in wrong opinions as is commonly supposed, because the greatest part have no opinions at all, and do not know what they contend for;' Penn likewise vindicated the many, but it was because truth is the common inheritance of the race. Locke, in his love of tolerance, inveighed against the methods of persecution as 'popish practices;' Penn censured no sect, but condemned bigotry of all sorts as inhuman. Locke, as an American law-giver, dreaded a too numerous democracy, and resolved all power to wealth and the feudal proprietaries; Penn believed that God is in every conscience, His light in every soul; and therefore he built—such are his own words—'a free colony for all mankind.' This is the praise of William Penn, that in an age which had seen a popular revolution shipwreck popular liberty among selfish factions, which had seen Hugh Peter and Henry Vane perish by the hangman's cord and the axe; in an age when Sydney nourished the pride of patriotism rather than the sentiment of philanthropy, when Russell stood for the liberties of his order, and not for new enfranchisements, when Harrington and Shaftesbury and Locke thought government should rest on property,

ARMS OF PENN.

Penn did not despair of humanity, and, though all history and experience denied the sovereignty of the people, dared to cherish the noble idea of a man's capacity for self-government. Conscious that there was no room for its exercise in England, the pure enthusiast, like Calvin and Descartes, a voluntary exile, was come to the banks of the Delaware to institute 'The Holy Experiment.'"

Upon the death of his father, William Penn fell heir to estates in England and Ireland, with an income of fifteen hundred pounds a year. The government was debtor to the estate of Admiral Penn for money loaned, amounting to fifteen thousand pounds. Charles II. was not blessed with an excessive exchequer, nor did William Penn press for payment of the claim in money. This indebtedness was an available basis for the colonial enterprise which he was projecting, and he therefore proposed to the king to grant him a tract of land in America, situated between the country held under grants to the Duke of York and Lord Baltimore, or between Maryland and the Delaware River. Penn's negotiations were successful, not, however, without great effort upon his part, as his enterprise was considered utopian by influential members of the government, and looked upon with distrust by the agents and proprietaries of the Duke of York and Lord Baltimore. William Penn and his confidential advisers and coadjutors prepared the draft of charter, which was submitted to the scrutiny of both state and church authorities. Sir William Jones, attorney-general of the realm, the Lords of Trade, and the Bishop of London all passed upon the form and substance of the grant. It was finally signed by the king on March 4, 1681. (This historical paper[1] is well preserved to this day,

[1] CHARTER OF THE PROVINCE OF PENNSYLVANIA.

CHARLES THE SECOND, BY THE GRACE OF GOD King of England, Scotland, France and Ireland, defender of the faith, &c., To all to whome these presents shall come Greeting. Whereas our Trustie and well beloved Subject, William Penn, Esquire, sonn and heire of Sir William Penn, deceased, out of a commendable desire to enlarge our English Empire, and promote such usefull comodities as may bee of benefitt to us and our Dominions, as alsoe to reduce the Savage Natives by gentle and just manners to the love of civill Societie and Christian Religion hath humbley besought leave of vs to transport an ample colonie vnto a certaine Countrey hereinafter described in the partes of America not yet cultevated and planted. And hath likewise humbley besought our Royall majestie to give grant, and confirme all the said countrey with certaine priviledges and Jurisdiccons requisite for the good Government and saftie of the said Countrey and Colonie, to him and his heires forever. KNOW YEE, therefore, that wee, favouring the petition and good purpose of the said William Penn, and haveing regard to the memorie and meritts of his late father, in divers services, and perticulerly to his conduct, courage and discretion vnder our dearest brother, James Duke of Yorke, in that signall battell and victorie, fought and obteyned against the Dutch fleete, comanded by the Herr Van Opdam, in the yeare One thousand six hundred sixtie five, in consideration thereof of our specia. grace, certaine knowledge and meere motion, Have given and granted, and by this our present Charter, for vs, our heires and successors, Doe give and grant unto the said William Penn, his heires and assignes all that tract or parte of land in America, with all the Islands therein conteyned, as the same is bounded on the East by Delaware River, from twelve miles distance, Northwarde of New Castle Towne unto the three and fortieth degree of Northern latitude if the said River doeth extend soe farre Northwards; But if the said River shall not extend soe farre Northward, then by the said River soe farr as it doth extend, and from the head of the said River the Easterne bounds are to bee determined by a meridian line, to bee drawn from the head of the said River vnto the said three and fortieth degree, the said lands to extend Westwards, five degrees in longitude, to bee computed from the said Easterne Bounds, and the said lands to bee bounded on the North, by the beginning of the three and fortieth degree of Northern latitude, and on the south, by a circle drawne at twelve miles, distance from New Castle Northwards, and Westwards vnto the begining of the fortieth degree of Northerne Latitude; and then by a streight line Westwards, to the limitt of Longitude above menconed. WEE DOE alsoe give and grant vnto the said William Penn, his heires and assignes, the free and vndisturbed vse, and continuance in and passage into and out of all and singular Ports, harbours, Bayes, waters, rivers, Isles and Inletts, belonging vnto or leading to and from the Countrey, or Islands aforesaid; and all the soyle, lands, fields, woods, vnderwoods, mountaines, hills, fenns,

and may be seen by visiting the State Department at Harrisburg.) The name of the new colony seems to have been left blank in the original draft of the charter; this was consistent with the modesty of Penn and his deferential disposition towards his royal friend, whose favor he evidently sought with extraor-

Isles, Lakes, Rivers, waters, rivuletts, Bays and Inletts, scituate or being within or belonging vnto the Limitts and Bounds aforesaid together with the fishing of all sortes of fish, whales, sturgeons, and all Royall and other fishes in the sea, bayes, Inletts, waters or Rivers, within the premises, and the fish therein taken, and alsoe all veines, mines and quarries, as well discovered as not discovered, of Gold, Silver, Gemms and pretious Stones, and all other whatsoever, stones, metalls, or of any other thing or matter whatsoever, found or to bee found within the Countrey, Isles, or Limitts aforesaid; and him the said William Penn, his heires and assignes, WEE DOE, by this our Royall Charter, for vs, our heires and successors, make, create and constitute the true and absolute proprietaries of the Countrey aforesaid, and of all other, the premises, saving always to vs, our heires and successors, the faith and allegiance of the said William Penn, his heires and assignes, and of all other, the proprietaries tenants and Inhabitants that are, or shall be within the Territories and precincts aforesaid; and saving alsoe vnto vs, our heires and Successors, the Sovreignity of the aforesaid Countrey, TO HAVE, hold and possesse and enjoy the said tract of land, Countrey, Isles, Inletts and other the premises, vnto the said William Penn, his heires and assignes, to the only proper vse and behoofe of the said William Penn, his heirs and assignes forever. To bee holden of vs, our heires and Successors, Kings of England, as of our Castle of Windsor, in our County of Berks, in free and comon socage by fealty only for all services, and not in Capite or by Knights service, Yeelding and paying therefor to us, our heires and Successors, two Beaver Skins to bee delivered att our said Castle of Windsor, on the first day of January, in every yeare; and also the fifth parte of all Gold and silver Oare, which shall from time to time happen to bee found within the limitts aforesaid, cleare of all charges, and of our further grace certaine knowledge and meere mocon, wee have thought fitt to Erect, and wee doe hereby Erect the aforesaid Countrey and Islands, into a province and Seigniorie, and doe call itt Pensilvania, and soe from henceforth wee will have itt called, and forasmuch as wee have hereby made, and ordeyned the aforesaid William Penn, his heires and assignes, the true and absolute Proprietaries of all the Lands and Dominions aforesaid. KNOW YEE therefore, that wee reposing special trust and confidence in the fidelitie, wisedome, Justice and provident circumspeccon of the said William Penn, for vs, our heires and successors, Doe grant free, full and absolute power, by vertue of these presents to him and his heirs, and to his and their Deputies, and Lieutenants, for the good and happy government of the said Countrey, to ordeyne, make, enact and vnder his and their Seales to publish any Lawes whatsoever, for the raising of money for the publick vse of the said province, or for any other end apperteyning either vnto the publick state peace, or safety of the said Countrey, or vnto the private vtility of perticular persons, according vnto their best discretions, by and with the advice, assent and approbacon of the freemen of the said Countrey, or the greater parte of them, or of their Delegates or Deputies, whom for the Enacting of the said Lawes, when, and as often as need shall require. WE WILL, that the said William Penn, and his heires shall assemble in such sort and forme as to him and them shall seeme best, and the same lawes duely to execute vnto, and upon all people within the said Countrey and limitts thereof; and WEE doe likewise give and grant unto the said William Penn, and his heires, and to his and their Deputies and Lieutenants, such power and authoritie to appoint and establish any Judges, and Justices, magistrates and officers whatsoever, for what causes soever, for the probates of wills and for the granting of administracons within the precincts aforesaid, and with what power soever, and in such forme as to the said William Penn, or his heires, shall seeme most convenient. Alsoe to remitt, release, pardon and abolish, whether before Judgement or after, all crimes and offences, whatsoever committed within the said Countrey, against the said Lawes, treason and wilfull and malitious murder onely excepted; and in those cases, to grant reprieves untill our pleasure may bee knowne therein, and to doe all and every other thing and things which vnto the compleate establishment of Justice vnto Courts and Tribunalls, formes of Judicature and manner of proceedings doe belong, altho' in these presents expresse mencon bee not made thereof; and by Judges by them delegated to award processe, hold pleas and determine in all the said Courts and Tribunalls, all accons, suits and causes whatsoever, as well criminall as civill, personall, reall and mixt, which Lawes so as aforesaid, to be published. Our pleasure is, and soe Wee enjoyne require and comand shall bee most absolute and avaylable in law, and that all the Liege people and Subjects of vs, our heires and successors, doe observe and keepe the same inviolable in those partes, soe farr as they concerne them, vnder the paine therein expressed, or to bee expressed. Provided; Nevertheles, that the said Lawes bee consonant to reason, and bee not repugnant or contrarie, but as neere as conveniently may bee agreeable to the Lawes, statutes and rights of this our Kingdome of England, and saveing and reserving to vs, our heires and successors, the receiving, heareing and determining of the appeale and appeales, of all or any person or persons, of, in or belonging to the territories aforesaid, or touching any Judgement to bee there made or given.—And forasmuch as in the Government of soe great a Countrey, sudden accidents doe often happen, whereunto itt will bee necessarie to apply a remedie before the freeholders of the said Province, or their Delegates or Deputies can bee assembled to the makeing of Lawes, neither will itt be convenient that instantly vpon every such emergent occasion, soe greate a multitude should be called together. Therefore, for the better Government of the said Countrey, WEE WILL, and ordeyne, and by these presents for vs, our heires and successors, Doe grant vnto the said William Penn, and his heires, by themselves or by their magistrates and officers, in that behalfe, duely to bee ordeyned as aforesaid, to make and constitute, fitt and wholesome ordinances from time to time within the said Countrey, to bee kept and observed as well for the preservacon of the peace, as for the better government of the people there inhabiting, and publickly to notifie the same, to all persons whome the same doeth or any way may concerne, which ordinances our will and pleasure is, shall be observed inviolably within the said Province, vnder paines therein to bee expressed, soe as the said ordinances bee consonant to reason and bee not repugnant nor contrary, but soe farre as conveniently may bee agreeable with the Lawes of our kingdome of England, and soe as the said ordinances be not extended in any sort to bind, charge or take away the right or interest of any person or persons, for or in their life, members, freehold, goods or Chattells; and our further will and pleasure is, that the Lawes for regulating and governing of propertie, within the said Province, as well for the descent and enjoyment of lands, as likewise for the enjoyment and succession of goods and Chattells, and likewise as to felonies, shall bee and continue the same as shall bee for the time being, by the generall course of the Law in our Kingdome of England, vntil the said Lawes shall be altered by the said William Penn, his heires or assignes, and by the freemen of the said Province, their Delegates or Deputies, or the greater part of them. And to the End the said William Penn, or heires, or other, the Planters, Owners or Inhabitants of the said Province, may not att any time hereafter, by misconstrucon of the powers aforesaid, through inadvertiencie or designe, depart from that faith and due allegiance which by the Lawes of this our Realme of England, they and all our subjects, in our Dominions and Territories, always owe vnto vs our heires and successors, by colour of any extent or largenesse of powers hereby given, or pretended to bee given, or by force or colour of any lawes hereafter to bee made in the said Province, by virtue of any such powers. Our further will and pleasure is, that a transcript or Duplicate of all lawes which shall bee soe as aforesaid, made and published within the said province, shall within five years after the makeing thereof, be transmitted and delivered to the privy Councell, for the time being, of vs, our heires and successors; and if any of the said Lawes within the space of six moneths, after that they shall be soe transmitted and delivered, be declared by vs, our heires and successors in our or their privy Councell, inconsistent with the sovereignety or lawfull prerogative of vs, our heirs or successors, or contrary to the faith and allegiance due by the legall Government of this realme, from the said William Penn, or his heires, or of the Planters and Inhabitants of the said province; and that thereupon any of the said Lawes shall bee adjudged and declared to bee void by vs, our heires or successors, vnder our or their Privy Seale, that then, and from thenceforth such Lawes concerning which such Judgement and declaracon shall bee made, shall become voyd, otherwise the said lawes soe transmitted, shall remaine and stand in full force according to the true intent and meaneing thereof. Furthermore, that this new Colony may the more happily increase, by the multitude of people resorting thither: THEREFORE, WEE, for vs, our heires and successors, doe give and grant by these presents, power, licence and libertie vnto all the liege people and subjects, both present and future

dinary zeal and judgment. King Charles filled the blank and called the projected colony Pennsylvania, in honor of Sir William and Admiral Penn. It is said that William Penn objected to the name, and offered a tempting fee to the Under Secretary of Colonial Affairs to change it to New Wales, and upon

of vs, our heires and successors, excepting those who shall bee especially forbidden, to transport themselves and families vnto the said Countrey, with such convenient shipping, as by the lawes of this our kingdome of England, they ought to vse with fitting provisions paying only the customes therefore due, and there to settle themselves, dwell and inhabitt and plant for the publick and their own private advantage; AND FURTHERMORE, that our subjects may bee the rather encouraged to undertake this expedicon with ready and cheerfull mindes. KNOW YEE, that wee of our especial grace certaine knowledge and meere mocon, Doe give and grant by vertue of these presents, as well vnto the said William Penn and his heires, as to all others who shall from time to time repaire vnto the said Countrey, with a purpose to inhabitt there, or to trade with the natives of the said Countrey, full license to lade and freight in any Ports whatsoever of vs, our heires and successors, according to the lawes made, or to be made within our kingdome of England, and into the said Countrey, by them, theire servants or assignes, to transport all and singular theire wares, goods and merchandizes, as likewise all sorts of graine whatsoever, and all other things whatsoever necessary for food and clothing, not phibited by the lawes and Statutes of our kingdomes and Dominions, to be carryed out of the said kingdomes without any lett or molestacon of vs, our heires and successors, or of any the officers of vs, our heires and successors, savcing alwayes to vs, our heires and successors, the legall impossitions, customes and other duties and payments for the said wares and merchandize, by any law or statute due or to be due to vs, our heires and successors. AND WEE DOE further for vs, our heires and Successors, give and grant vnto the said William Penn, his heires and assignes, free and absolute power to Divide the said Countrey, and Islands, into Townes, Hundreds and Counties, and to erect and incorporate Townes into Burroughs, and Borroughs into Cities, and to make and constitute ffaires and marketts therein, with all other convenient privileges and immunities according to the meritt of the inhabitants, and the fitnes of the places; & to doe all and every other thing and things touching the premises which to him or them shall seeme requisite, and meet, albeit they be such as of their owne nature might otherwise require a more especiall commandment and warrant, then in these presents is expressed. WEE WILL ALSOE, and by these presents for vs, our heirs and successors, WEE doe give and grant licence by this our charter, vnto the said William Penn, his heires and assignes, and to all the inhabitants and dwellers in pvince aforesaid, both present, and to come to import or vnlade by themselves or their Servants, ffactors or assignes, all merchandizes and goods whatsoever, that shall arise of the fruits and comodities of the said province, either by Land or Sea, into any of the Ports of vs, our heires and successors, in our kingdome of England, and not into any other countrey whatsoever. And WEE give him full power to dispose of the said goods in the said ports, and if need bee, within one yeare next after the unladeing of the same, to lade the said merchandizes and goods again into the same or other shipps, and to export the same into any other Countreys, either of our Dominions or fforreigne, according to lawe: PROVIDED always, that they pay such, customes and imposicons, subsidies and duties for the same to vs, our heires and successors, as the rest of our subjects of our kingdome of England, for the time being shall be bound to pay, and doe observe the acts of Navigation and other lawes in that behalfe made. AND FURTHERMORE, of our more ample and especiall grace, certain knowledge and meere motion, WEE DOE, for vs, our heires and successors, Grant vnto the said William Penn, his heires and assignes, full and absolute power and authoritie, to make, erect and constitute within the said province, and the Isles and Isletts aforesaid, such and soe many Seaports, harbours, Creeks, Havens, Keyes and other places, for discharge and vnladeing of goods, & merchandize out of the shipps, boates and other vessells, and Ladeing them in such and soe many places, and with such rights, Jurisdiccons, liberties and priviledges unto the said ports, belonging as to him or them shall seeme most expedient, and that all and singular the shipps, boates and other vessells which shall come for merchandize and trade vnto the said pvince, or out of the same shall departe, shall be laden or vnladen onely att such ports as shall be erected and constituted by the said William Penn, his heires and assignes, any vse, custome or other thing to the contrary notwithstanding: PROVIDED, that the said William Penn and his heires, and the Lieutenants and Governors for the time being, shall admitt and receive in and about all such ports, havens, Creeks and Keyes, all officers and their Deputies, who shall from time to time be appointed for that purpose, by the ffarmers or Comissioners of our customes, for the time being. AND WEE DOE further appoint and ordaine, and by these presents for vs, our heires and successors, WEE DOE grant vnto the said William Penn, his heires and assignes, that he the said William Penn, his heires and assignes, may from time to time forever, have and enjoy the customes and subsidies in the ports, harbours and other Creeks, and places aforesaid, within the province aforesaid, payable or due for merchandizes and wares, there to be laded and vnladed, the said customes and subsidies to be reasonably assessed, vpon any occasion by themselves, and the people there as aforesaid, to be assembled to whom WEE give power, by these presents for vs, our heires and successors, vpon just cause, and in a due pporcon, to assesse and impose the same, saveing vnto vs, our heires and successors, such imposcons and customes as by act of parliament are and shall be appointed; and it is our further will and pleasure, that the said William Penn, his heires and assignes, shall from time to time constitute and appoint an attorney or agent, to reside in or neare our Citty of London, who shall make knowne the place where he shall dwell or may be found, vnto the Clerks of Our privy Counsell, for the time being, or one of them, and shall be ready to appeare in any of our Courts att Westminster, to answer for any misdemeanors that shall be comitted, or by any wilfull default or neglect pmitted by the said William Penn, his heires or assignes, against our Lawes of Trade or Navigacon and after it shall be ascertained in any of our said Courts, what damages WEE or our heires or successors shall haue sustained, by such default or neglect, the said William Penn, his heires and assignes, shall pay the same within one yeare after such taxacon and demand thereof, from such attorney, or in case there shall be noe such attorney, by the space of one yeare, or such attorney shall not make payment of such damages, within the space of one yeare, and answer such other forfeitures and penalties within the said time, as by the acts of parliament in England, are or shall be pvided according to the true intent and meaning of these presents; Then it shall be lawfule for vs, our heires and successors, to seize and Resume the government of the said pvince or Countrey, and the same to retaine untill payment shall be made thereof. But notwithstanding any such seizure or resumption of the Government, nothing concerening the propriety or ownership of any Lands, Tenements or other hereditaments, or goods, or chattels of any the adventurers, Planters or owners, other than the respective offenders there, shall be any way affected or molested thereby: PROVIDED alwayes, and our will and pleasure is that neither the said William Penn, nor his heires, nor any other of the inhabitants of the said pvince, shall at any time hereafter haue or maintain any correspondence with any other king, prince or State, or with any of theire subjects, who shall then be in warr against vs, our heires or successors; Nor shall the said William Penn, or his heires, or any other the inhabitants of the said pvince, make warre or doe any act of hostilitie against any other king, prince or state, or any of their subjects, who shall then be in league or amity with vs, our heires or successors. And because in soe remote a Countrey, and scituate neare many Barbarous Nations, the incursions as well of the savages themselues, as of other enemies, pirates and Robbers, may pbably be feared. Therefore, WEE have given and for vs, our heires and successors, Doe give power by these presents vnto the said William Penn, his heires and assignes, by themselues or their Captaines or other, their officers to levy, muster and traine all sorts of men, of what condicon, or wheresoever borne, in the said pvince of Pensylvania, for the time being, and to make warr and pursue the enemies and Robbers aforesaid, as well by Sea as by Land, yea, even without the Limits of the said pvince and by God's assistance, to vanquish and take them, and being taken, to put them to death by the law of Warr, or to save them att theire pleasure, and to doe all and every other act and thing, which to the charge and office of a Capitaine generall of an Army, belongeth or hath accustomed to belong, as fully and ffreely as any Captaine Generall of an Army, hath ever had the same. AND FURTHERMORE, of our especiall grace and of our certaine knowledg and meere motion, WEE have given and granted, and by these presents for vs, our heires and successors, Doe give and grant vnto the said William Penn, his heires and assignes, full and absolute power, licence and authoritie, That he the said William Penn, his heires and Assignes, from time to time hereafter forever, att his or theire will and pleasure, may assigne, alien, grant,

refusal protested that he had no vanity or family pride to gratify in the matter, "but it is a just and clear thing, and my God that has given it me through many difficulties will, I believe, bless and make it the seed of a nation."

demise or infeoffe of the premises, soe many, and such partes and parcells to him or them, that shall be willing to purchase the same, as they shall thinke ffitt. TO HAVE AND TO HOLD to them, the said person and persons willing to take or purchase, theire heires and assignes, in ffee simple or ffeetaile, or for the terme of life, or liues, yeares, to be held of the said William Penn, his heires and assignes, as of the said Seigniory of Windsor, by such services, customes and rents, as shall seeme ffitt to the said William Penn, his heires and assignes, and not immediately of vs, our heires and successors, and to the same person or persons, and to all and every of them, WEE DOE give and grant by these presents, for vs, our heires and successors, Licence, authoritie and power, that such person or persons may take the premisses or any parcell thereof, of the aforesaid William Penn, his heires or assignes, and the same hold to themselues, their heires and assignes, in what estate of inheritance soever, in ffee simple, or in ffeetaile or otherwise, as to him the said William Penn, his heires and assignes, shall seem expedient. The Statutes made in the parliament of Edward, sonne of king Henry, late king of England, our predecessor, comonly called the Statute Quia Emptores terrarum, lately published in our kingdome of England, in any wise notwithstanding, and by these presents, WEE give and grant licence vnto the said William Penn, and his heires, likewise to all and every such person and persons to whom the said William Penn, or his heires, shall at any time hereafter, grant any estate of inheritance as aforesaid, to erect any parcells of Land within the pvince aforesaid, into mannors, by and with the licence to be first had and obteyned for that purpose, vnder the hand and seale of the said William Penn, or his heires and in every of the said mannors, to haue and to hold a Court Baron, with all thinges whatsoever, which to a Court Baron do belong; and to haue and to hold view of ffrank-pledge, for the conservacon of the peace, and the better government of those partes by themselves or their Stewarts, or by the Lords for the time being, of other mannors to be deputed when they shall be erected, and in the same, to vse all things belonging to view of ffrank-pledge; and WEE doe further grant licence and authoritie that every such person and persons, who shall erect any such mannor or mannors as aforesaid, shall or may grant all or any parte of his said lands to any person or persons, in ffee simple or any other estate of inheritance, to be held of the said mannors respectively, soe as noe further tenures shall be created, but that vpon all further and other alienacons thereafter, to be made the said lands soe aliened, shall be held of the same Lord and his heires, of whom the alien did then before hold, and by the like, rents and services, which were before due and accustomed. And further, our pleasure is and by these presents for vs, our heires and successors, WEE doe Covenant and grant to and with the said William Penn, and his heires and assignes, that WEE, our heires and successors, shall att no time hereafter sett or make, or cause to be sett, any imposicon, custome or other taxacon, rate or contribucon whatsoever, in and upon the dwellers and inhabitants of the aforesaid pvince, for their lands, tenements, goods or chattels, within the said province, or in and vpon any goods or merchandize within the said pvince, or to be laden or vnladen within the ports or harbours of the said pvince, vnless the same be with the consent of the pprietary, or chiefe Governor and Assembly, or by act of parliament in England. And our pleasure is, and for us our heires and successors, WEE charge and command, that this our Declaracon, shall from henceforward be received and allowed from time to time in all our Courts, and before all the Judges of vs, our heires and successors, for a sufficient and lawful discharge, payment and acquittance, comanding all and singular the officers and ministers of vs, our heires and successors, and enjoyneing them vpon paine of our high displeasure, that they doe not presume att any time to attempt any thing to the contrary of the premises, or that they doe in any sort withstand the same, but that they bee att all times aiding and assisting as is fitting vnto the said William Penn, and his heires, and to the inhabitants and merchants of the pvince aforesaid, their servants, ministers, ffactors and assignes, in the full vse and fruition of the beneffitt of this our Charter: And our further pleasure is, And WEE doe hereby, for vs, our heires and successors, charge and require that if any of the inhabitants of the said pvince, to the number of Tweuty, shall att any time hereafter be desirous, and shall by any writeing or by any pson deputed for them, signify such their desire to the Bishop off London, that any preacher or preachers to be approved of by the said Bishop, may be sent vnto them for their instruccon, that then such preacher or preachers, shall and may be and reside within the said

CHAPTER VII.

WILLIAM PENN'S ARRIVAL IN AMERICA—HIS COLONY FOUNDED ON THE DELAWARE.

HAVING obtained his charter, Penn at once commissioned William Markham his deputy, and urged his prompt departure for the new field of labor. Markham was in New York by June, 1681. He secured the friendly offices of Governor Anthony Brockholls, and then hastened to Upland to meet Lord Baltimore, whose friendship he courted in order to arrange boundary lines on the south and west of the new colony. Unable to adjust the southern boundary of the grant without making concessions which he deemed unjust to William Penn, he deferred further action, and immediately organized the Council of Nine, being the first exercise of "duly constituted authority" under the charter of Charles II. This Council of Nine was, in fact, a provisional government, with power to make public surveys, establish boundary lines, constitute courts, appoint justices of the peace, constables, sheriffs, to suppress violence, and generally to institute and enforce such measures as inured to the peace and good order of the province. The following is the self-instituted warrant for the Council of Nine: "Whereas, wee whose hands and Seals are hereunto Sett are Chosen by Wm. Markham (agent to Wm. Penn, Esq., Proprietor of y^{e} Province of Pennsylvania) to be of the Councill for y^{e} s^{d} province, doe hereby bind ourselves by our hands & Seals, that wee will neither act nor advise, nor Consent unto anything that shall not be according to our own Consciences the best for y^{e} true and well Government of the s^{d} Province, and Likewise to Keep Secret

pvince, without any Deniall or molestacon whatsoever; and if pchance it should happen hereafter, any doubts or questions should arise concerneing the true sence & meaning of any word, clause or sentence, conteyned in this our present charter, WE WILL ordaine and comand, that att all times and in all things such interpretacon be made thereof, and allowed in any of our Courts whatsoever, as shall be adjudged most advantageous and favourable unto the said William Penn, his heires and assignes: PROVIDED alwayes, that no interpretacon be admitted thereof, by which the allegiance due vnto vs, our heires and successors, may suffer any preiudice or diminucon, although expres mencon be not made in these presents, of the true yearly value or certainty of the premisses, or of any parte thereof, or of other guifts and grants made by vs, our pgenitors or predecessors, vnto the said William Penn, or any Statute, act, ordinance, pvision, pclamacon or restraint heretofore, had made, published, ordained or pvided, or any other thing, cause or matter whatsoever to the contrary thereof, in any wise notwithstanding. In Witness Whereof WEE have caused these our letters to be made patents, Witness our selfe at Westminster, the fourth day of March, in the three and thirtieth yeare of our Reigne.

PIGOTT.

By Writt of privy Seale.
JOHN SHALER, chv^{r}.
xxvij die Janry, 1682, Fir.

all y^e^ votes and acts of us The s^d^ Councell, unless Such as by the General Consent of us are to be published. Dated at Upland y^e^ third day of August, 1681.

"Robert Wade, Morgan Drewet, W^m^. Woodmanse, (W. W. The mark of) William Warner, Thomas Ffairman, James Sandlenes, Will Clayton, Otto Ernest Koch, and y^e^ mark (L) of Lacy (or Lasse) Cock."

By September, 1681, Deputy Markham had the new arrangement of things in working order, and the first court for jury trials was held at Upland. The justices present at the meeting of this newly-organized court were William Clayton, William Warner, Robert Wade, William Byles, Otto Ernest Cock, Robert Lucas, Lasse Cock, Swen Swenson, and Andreas Bankson, five of them being members of Markham's Council. The clerk of the court was Thomas Revell, and the sheriff's name was John Test. The first jury drawn in this court—the first drawn in Pennsylvania—was in a case of assault and battery (Peter Ericksen *vs.* Harman Johnson and wife), and their names were Morgan Drewet, William Woodmanson, William Hewes, James Browne, Henry Reynolds, Robert Schooley, Richard Pittman, Lasse Dalboe, John Akraman, Peter Rambo, Jr., Henry Hastings, and William Oxley; two more of the Deputy Governor's Council being on this jury. At the next meeting of Upland Court, in November, Markham was present, and he attended all the subsequent sessions up to the time of Penn's arrival.

Deputy Governor Markham was thoroughly conversant with the purposes and plans of Penn. He carried with him instructions which were broad enough to cover all possible contingencies, and enabled him to prepare a warm welcome to the distinguished colonist upon his advent on the Delaware River. Meantime, Penn was addressing his entire energies to his scheme of colonization. He gave the utmost publicity to his chartered privileges, and invited the co-operation of all classes in founding a free and industrial State. He published a pamphlet entitled "Some Account of the Province of Pennsylvania in America." It contained a truthful account of the resources of the country. The author was candid in pointing out to all the possible hardships and perils likely to be experienced in the New World, and impressed upon the mind of his followers the necessity of careful preparations for the long voyage and the life of toil and self-denial essential to their success. Referring to the country he says, "I shall say little in its praise to excite desires in any, whatever I could truly write as to the soil, air, and water; this shall satisfy me, that by the blessing of God and the honesty and industry of man, it may be a good and fruitful land." Penn made direct overtures to men and families of all religious persuasions, assuring them of a tolerant government in all things. He invited purchasers and renters of lands, and made special provisions for those without means. "To the first, the shares I sell shall be certain as to number of acres; that is to say, every one shall contain five thousand acres, free from any incumbrance, the price a hundred pounds, and for the quit-rent but one English shilling, or the value of it, yearly, for a hundred acres; and the said quit-rent not to begin to be paid till 1684. To the second sort, that take up land upon rent, they shall have liberty so to do, paying yearly one penny per acre, not exceeding two hundred acres. To the third sort, to wit, servants that are carried over, fifty acres shall be allowed to the master for every head, and fifty acres to every servant when their time is expired. And because some engage with me that may not be disposed to go, it were very advisable for every three adventurers to send over an overseer with their servants, which would well pay the cost."

Referring to the peculiar fitness of certain persons for frontier life, Penn classifies them as follows:

"1st, industrious husbandmen and day laborers that are hardly able (with extreme labor) to maintain their families and portion their children; 2d, laborious handicrafts, especially carpenters, masons, smiths, weavers, taylors, tanners, shoemakers, shipwrights, etc., where they may be spared or low in the world, and as they shall want no encouragement, so their labor is worth more there than here, and there provisions cheaper." 3d, Penn invites ingenious spirits who are low in the world, younger brothers with small inheritances and (often) large families; "lastly," he says, "there are another sort of persons, not only fit for but necessary in plantations, and that is men of universal spirits, that have an eye to the good of posterity, and that both understand and delight to promote good discipline and just government among a plain and well-intending people; such persons may find room in colonies for their good counsel and contrivance, who are shut out from being of much use or service to great nations under settled customs; these men deserve much esteem and would be hearken'd to."

He enumerates and commends the resources of the country. "Timber was abundant, also game, wild-fowl, and fish, flax, hemp, cider, wood, madder, liquorish, tobacco, and iron, hides, tallow, staves, beef, pork, sheep, wool, corn, wheat, rye, barley, also furs, minks, raccoons, martins, and such like store of furs which is to be found among the Indians that are profitable commodities in England." Referring to the arrival of colonists in the fall months he says, "Two men may clear as much ground by spring (when they set the corn in that country) as will bring in that time, twelve months, forty barrels, which makes twenty-five quarters of corn. So that the first year they must buy corn, which is usually very plentiful. They must, so soon as they come, buy cows, more or less, as they want or are able, which are to be had at easy rates. For swine, they are plentiful and cheap, these will quickly increase to a stock. So that

OF THE
PROVINCE OF PENNSYLVANIA,

With Names of Original Purchasers from

WILLIAM PENN.

1681.

after the first year, what with the poorer sort sometimes laboring for others, and the more able fishing, fowling, and sometimes buying, they may do very well till their own stocks are sufficient to supply them and their families, which will quickly be, and to spare, if they follow the English husbandry, as they do in New England and New York, and get winter fodder for their stock."

"To conclude, I desire all my dear country-folks who may be inclined to go into those parts to consider seriously the premises, as well the inconveniency as future ease and plenty, that so none may move rashly or from a fickle, but from a solid mind, having above all things an eye to the providence of God in the disposing of themselves; and I would further advise all such at least to have the permission, if not the good liking, of their near relations, for that is both natural, and a duty incumbent upon all. And by this will natural affections be preserved, and a friendly and profitable correspondence between them, in all which I beseech Almighty God to direct us, that His blessing may attend our earnest endeavors, and then the consequence of all our undertakings will turn to the glory of His great name, and all true happiness to us and our posterity. Amen."

Feeling assured of a large and intelligent following to the New World, he was anxious to facilitate trade and commerce between the colony and the mother-country. To this end he encouraged the organization of "The Free Society of Traders,"[1] looking upon the enterprise as a potent and peaceful agent in maintaining frequent intercourse between the inhabitants of the two continents, and as a certain avenue for continued emigration, which he felt sure once opened to the superior advantages of a new and fertile country, where religious and political freedom could be fully enjoyed, would never be closed. In his solicitude for the persons forming his colony Penn showed his humanity; in his forecast of a commercial future for the State he was founding he disclosed the character of a benefactor. One thing more, however, remained for him to do, and that was to frame a government. This was the work of statesmanship. There were three distinct subjects of consideration in framing a code of laws for the colony: 1, the limitations imposed by the charter of Charles II.; 2, the peaceful relations with the native Indians;[2] 3, the unrestrained exercise of religious liberty and the institution of self-government among the freemen of the province. It is a rare occurrence in the history of public men to find a broad humanity associated with a high order of executive ability and commercial sagacity, and it is still more exceptional to find these two qualities combined with that degree of foresight and conservatism that always characterizes the true statesman.

It is said that it required the corollated powers of Grant, Sherman, and Sheridan to match one Napoleon Bonaparte; and, without extravagance, we may say that William Penn alone foreshadowed the policy of state and republic that was later formulated in national unity by the combined wisdom of Washington, Jefferson, and Hamilton. In the marvelous light of two centuries we turn back and read his remarkable state papers. He was in his thirty-eighth year when he prepared his "Certain Conditions or Concessions,"[3]

[1] On publishing these proposals concerning the new colony, a great number of purchasers soon appeared in London, Liverpool, and especially about Bristol; among these were James Claypole, Nicholas Moore, Philip Forde, and others, who formed a colony called The Free Society of Traders in Pennsylvania. These last-mentioned persons, with William Sharloe, Edward Pierce, John Simcock, Thomas Bracy, and Edward Brooks, having purchased twenty thousand acres of land, in trust for the said company, published articles of trade, and entered into divers branches thereof themselves, which were soon improved upon by others.

[2] "London, the 18th of the eighth month, 1681.

"My Friends: There is a great God and power, that hath made the world, and all things therein; to whom you and I, and all people owe their being and well-being; and to whom you and I must one day give an account for all that we do in the world.—This great God hath written his law in our hearts, by which we are taught and commanded to love and help, and do good to one another. Now this great God hath been pleased to make me concerned in your part of the world; and the King of the country where I live hath given me a province therein; but I desire to enjoy it *with your love and consent;* that we may always live together as neighbors and friends, else what would the great God do to us, who hath made us, not to devour and destroy one another, but to live soberly and kindly together in the world? Now I would have you well observe that I am very sensible of the unkindness and injustice that have been too much exercised towards you, by the people of these parts of the world, who have sought themselves, and to make great advantages by you, rather than to be examples of goodness and patience unto you, which I hear hath been a matter of trouble to you, and caused great grudgings and animosities, sometimes to the shedding of blood, which hath made the great God angry. But I am not such a man, as is well known in my own country. I have great love and regard towards you, and desire to win and gain your love and friendship, by a kind, just, and peaceable life; and the people I send are of the same mind, and shall in all things behave themselves accordingly; and if anything shall offend you or your people, you shall have a full and speedy satisfaction for the same, by an equal number of just men, on both sides, that by no means you may have just occasion of being offended against them. I shall shortly come to you myself, at which time we may more largely and freely confer and discourse of these matters; in the mean time I have sent my commissioners to treat with you about land, and a firm league of peace; let me desire you to be kind to them and the people, and receive these presents and tokens, which I have sent you, as a testimony of my good will to you, and my resolution to live justly, peaceably, and friendly with you.

"I am your loving friend,

"William Penn."

[3] "Certain Conditions or Concessions, *agreed upon by William Penn, Proprietary and Governor of the Province of Pennsylvania, and those who are adventurers and purchasers in the same province, the eleventh of July, One thousand six hundred and eighty-one.*

"First. That so soon as it pleaseth God that the above said persons arrive there, a quantity of land or Ground plat shall be laid out for a large Town or City, in the most convenient place upon the River for health and navigation; and every purchaser and adventurer shall by lot have so much land therein as will answer to the proportion which he hath bought or taken up upon rent. But it is to be noted that the surveyors shall consider what Roads or Highways will be necessary to the Cities, Towns, or through the lands. Great roads from City to City, not to contain less than forty feet in breadth, shall be first laid out and declared to be highways before the Dividend of acres be laid out for the purchaser, and the like observation to be had for the streets in the Towns and Cities, that there may be convenient roads and streets preserved, not to be encroached upon by any planter or builder, that none may build irregularly to the damage of another. In this custom governs.

"Secondly. That the land in the Town be laid out together, after the

and his "Frame of Government and Laws," including "The Great Law," all of which evidence great thoughtfulness, a thorough knowledge of details, and a master mind. We think his "Preface" to the "Frame of Government" is the best illustration of the man and his purposes; its promulgation and acceptance by the colonists as the fundamental law of the province was a safe guide in those primitive days, and implanted in Pennsylvania a love for self-government which has continued through all later generations, as marked in peace as it has been sacrificial in war. This state paper, unique and comprehensive, is an essential part of our history, and should be the property of every household, as it has been, and still is, the subject of study among all true political economists.

proportion of ten thousand acres of the whole country,—that is, two hundred acres, if the place will bear it. However, that the proportion be by lot and entire, so as those that desire to be together, especially those that are by the catalogue laid together, may be so laid together both in Town and Country.

"Thirdly. That when the Country lots are laid out, every purchaser from one thousand to ten thousand acres or more, not to have above one thousand acres together, unless in three years they plant a family upon every thousand acres; but that all such as purchase together, lie together; and if as many as comply with this condition, that the whole be laid out together.

"Fourthly. That where any number of purchasers, more or less, whose number of acres amounts to five or ten thousand acres, desire to sit together in a lot or Township, they shall have their lot or Township cast together in such places as have convenient Harbours or navigable rivers attending it, if such can be found, and in case any one or more Purchasers plant not according to agreement in this concession, to the prejudice of others of the same Township upon complaint thereof, made to the Governor or his deputy, with assistance they may award (if they see cause) that the complaining purchaser may, paying the survey money and purchase money and interest thereof, be entitled, inrolled, and lawfully invested in the lands so not seated.

"Fifthly. That the proportion of lands that shall be laid out in the first great Town or City for every purchaser shall be after the proportion of Ten acres for every Five hundred acres purchased, if the place will allow it.

"Sixthly. That notwithstanding there be no mention made in the several Deeds made to the purchasers, yet the said William Penn does accord and declare that all Rivers, Rivulets, Woods and Underwoods, Waters, Watercourses, Quarries, Mines, and Minerals (except mines Royal), shall be freely and fully enjoyed and wholly by the purchasers into whose lot they fall.

"Seventhly. That for every Fifty acres that shall be allotted to a servant at the end of his service, his Quitrent shall be two shillings per annum, and the master or owner of the Servant, when he shall take up the other Fifty acres, his Quitrent shall be Four shillings by the year, or if the master of the servant (by reason in the Indentures he is so obliged to do) allot out to the Servant Fifty acres in his own Division, the said master shall have on demand allotted him from the Governor, the One hundred acres at the chief rent of Six shillings per annum.

"Eighthly. And for the encouragement of such as are ingenious and willing to search out Gold and silver mines in this province, it is hereby agreed that they have liberty to bore and dig in any man's property, fully paying the damage done, and in case a Discovery should be made, that the discoverer have One Fifth, the owner of the soil (if not the Discoverer) a Tenth part, the Governor Two fifths, and the rest to the public Treasury, saving to the king the share reserved by patent.

"Ninthly. In every hundred thousand acres the Governor and Proprietary by lot reserveth Ten to himself, which shall lie but in one place.

"Tenthly. That every man shall be bound to plant or man so much of his share of Land as shall be set out and surveyed within three years after it is so set out and surveyed, or else it shall be lawful for new comers to be settled thereupon, paying to them their survey money, and they go up higher for their shares.

"Eleventhly. There shall be no buying and selling, be it with an Indian, or one among another of any Goods to be exported but what shall be performed in public market, when such place shall be set apart or erected, where they shall pass the public Stamp or Mark. If bad ware and prized as good, or deceitful in proportion or weight, to forfeit the value as if good, and full weight and proportion to the public Treasury of the Province, whether it be the merchandise of the Indian or that of the Planters.

"Twelfthly. And forasmuch as it is usual with the planters to overreach the poor natives of the Country in Trade, by Goods not being good of the kind, or debased with mixtures, with which they are sensibly aggrieved, it is agreed whatever is sold to the Indians in consideration of their furs shall be sold in the market place, and there suffer the test, whether good or bad; if good to pass, if not good, not to be sold for good, that the natives may not be abused nor provoked.

"Thirteenthly. That no man shall by any ways or means, in word or deed, affront or wrong any Indian, but he shall incur the same penalty of the Law as if he had committed it against his fellow planters; and if any Indian shall abuse in Word or Deed any planter of this province that he shall not be his own Judge upon the Indian, but he shall make his complaint to the Governor of the Province, or his Lieutenant or Deputy, or some inferior magistrate near him, who shall to the utmost of his power take care with the king of the said Indian that all reasonable Satisfaction be made to the said injured planter.

"Fourteenthly. That all differences between the planters and the natives shall also be ended by Twelve men, that is by Six planters and Six natives, that so we may live friendly together as much as in us lieth, preventing all occasions of Heart burnings and mischief.

"Fifteenthly. That the Indians shall have liberty to do all things relating to improvement of their Ground, and providing sustenance for the families that any of the planters shall enjoy.

"Sixteenthly. That the laws as to Slanders, Drunkenness, Swearing, Cursing, Pride in apparel, Trespasses, Distresses, Replevins, Weights and measures, shall be the same as in England till altered by law in this province.

"Seventeenthly. That all shall mark their hogs, sheep, and other cattle, and what are not marked within three months after it is in their possession, be it young or old, it shall be forfeited to the Governor, that so people may be compelled to avoid the occasions of much strife between Planters.

"Eighteenthly. That in clearing the ground care be taken to leave One acre of trees for every five acres cleared, especially to preserve oak and mulberries for silk and shipping.

"Nineteenthly. That all ship masters shall give an account of their Countries, Names, Ships, Owners, Freights, and Passengers, to an officer to be appointed for that purpose, which shall be registered within Two days after their arrival; and if they shall refuse so to do that then none presume to trade with them upon forfeiture thereof, and that such masters be looked upon as having an evil intention to the province.

"Twentiethly. That no person leave the Province without publication being made thereof in the market-place, Three weeks before, and certificate from some justice of the peace of his clearness with his neighbors and those he has dealt withal, so far as such an assurance can be attained and given; and if any master of a ship shall contrary hereunto receive, and carry away any person that hath not given that public notice, the said master shall be liable to all debts owing by the said person so secretly transported from the province. Lastly that these are to be added to or corrected by and with consent of the parties hereunto subscribed.

THE PREFACE.

"When the great and wise God had made the world, of all his creatures it pleased him to choose man his deputy to rule it, and to fit him for so great a charge and trust, he did not only qualify him with skill and power, but with integrity to use them justly. This native goodness was equally his honour and his happiness; and whilst he stood here, all went well; there was no need of coercive or compulsive means; the precept of divine love and truth in his bosom was the guide and keeper of his innocency. But lust prevailing against duty, made a lamentable breach upon it; and the law, that before had no power over him, took place upon him and his disobedient posterity, that such as would not live conformable to the holy law within, should fall under the reproof and correction of the just law without, in a judicial administration.

"This the apostle teaches in divers of his epistles. The law (says he) was added because of transgression: In another place, knowing that the law was not made for the righteous man; but for the disobedient and ungodly, for sinners, for unholy and prophane, for murderers, for whoremongers, for them that defile themselves with mankind, and for menstealers, for liars, for perjured persons, &c. But this is not all, he opens and carries the matter of government a little further: Let every soul be subject to the higher powers, for there is no power but of God. The powers that be are ordained of God: whosoever therefore resisteth the power, resisteth the ordinance of God. For rulers are not a terror to good works, but to Evil: wilt thou then not be afraid of the power? Do that which is good, and thou shalt have praise of the same.———He is the minister of God to thee for good.———Wherefore ye must needs be subject, not only for wrath, but for conscience sake.

"This settles the divine right of government beyond exception, and that for two ends: first, to terrify evil-doers; secondly, to cherish those that do well; which gives government a life beyond corruption, and makes it as durable in the world, as good men shall be. So that government seems to me a part of religion itself, a thing sacred in its institution and end. For if it does not directly remove the cause, it crushes the effects of evil, and is as such (tho' a lower yet) an emanation of the same Divine Power, that is both author and object of pure religion; the difference lying here, that the one is more free and mental, the other more corporal and compulsive in its operations; but that is only to evil-doers; government itself being otherwise as capable of kindness, goodness, and charity, as a more private society. They weakly err, that think there is no other use of government than correction, which is the coarsest part of it: daily experience tells us, that the care and regulation of many other affairs more soft and daily necessary, make up much the greatest part of government; and which must have followed the peopling of the world, had Adam never fell, and will continue among men on earth under the high attainments they may arrive at, by the coming of the blessed second Adam, the Lord from Heaven. Thus much of government in general, as to its rise and end.

"For particular frames and models, it will become me to say little: and comparatively I will say nothing. My reasons are: first, that the age is too nice and difficult for it; there being nothing the wits of men are more busy and divided upon. 'Tis true, they seem to agree in the end, to wit, happiness; but in the means they differ, as to divine, so to this human felicity; and the cause is much the same, not always want of light and knowledge, but want of using them rightly. Men side with their passions against their reason, and their sinister interests have so strong a bias upon their minds, that they lean to them against the good of the things they know.

"Secondly, I do not find a model in the world, that time, place, and some singular emergencies have not necessarily altered; nor is it easy to frame a civil government, that shall serve all places alike.

"Thirdly, I know what is said by the several admirers of monarchy, aristocracy, and democracy, which are the rule of one, a few, and many, and are the three common ideas of government, when men discourse on that subject. But I choose to solve the controversy with this small distinction, and it belongs to all three: any government is free to the people under it (whatever be the frame) where the laws rule, and the people are a party to those laws, and more than this is tyranny, oligarchy, and confusion.

"But lastly, when all is said, there is hardly one frame of government in the world so ill designed by its first founders, that in good hands would not do well enough; and story tells us, the best in ill ones can do nothing that is great or good; witness the Jewish and Roman states. Governments, like clocks, go from the motion men give them, and as governments are made and moved by men, so by them they are ruined too. Wherefore governments rather depend upon men than men upon governments. Let men be good, and the government cannot be bad; if it be ill, they will cure it. But if men be bad, let the government be never so good, they will endeavor to warp and spoil it to their turn.

"I know some say, let us have good laws, and no matter for the men that execute them: but let them consider, that though good laws do well, good men do better: for good laws may want good men, and be abolished or invaded by ill men; but good men will never want good laws, nor suffer ill ones. 'Tis true, good laws have some awe upon ill ministers, but that is where they have not power to escape or abolish them, and the people are generally wise and good: but a loose and depraved people (which is to the question) love laws and an administration like themselves. That therefore, which makes a good constitution, must keep it, viz: men of wisdom and virtue, qualities, that because they descend not with worldly inheritances, must be carefully propagated by a virtuous education of youth, for which after ages will owe more to the care and prudence of founders, and the successive magistracy, than to their parents for their private patrimonies.

"These considerations of the weight of government, and the nice and various opinions about it, made it uneasy to me to think of publishing the ensuing frame and conditional laws, foreseeing both the censures they will meet with from men of differing humours and engagements, and the occasion they may give of discourse beyond my design.

"But next to the power of necessity (which is a solicitor that will take no denial) this induced me to a compliance, that we have (with reverence to God, and good conscience to men) to the best of our skill, contrived and composed the FRAME and LAWS of this government, to the great end of all government, viz: to support power in reverence with the people, and to secure the people from the abuse of power; that they may be free by their just obedience, and the magistrates honourable for their just administration: for liberty without obedience is confusion, and obedience without liberty is slavery. To carry this evenness is partly owing to the constitution, and partly to the magistracy: where either of these fail, government will be subject to convulsions; but where both are wanting, it must be totally subverted: then where both meet, the government is like to endure. Which I humbly pray and hope God will please to make the lot of this of Pennsylvania. Amen.

"WILLIAM PENN."

LAWS AGREED UPON IN ENGLAND.

"First. That the charter of liberties declared, granted, and confirmed the five and twentieth day of the Second month, called April, 1682, before divers witnesses by William Penn, Governor and chief proprietary of Pennsylvania, to all the freemen and planters of the said province, is hereby declared and approved, and shall be forever held for fundamental in the government thereof, according to the limitations mentioned in the said charter.

"Second. That every Inhabitant in the said province, that is or shall be a purchaser of one hundred acres of land or upwards, his heirs and assigns, and every person who shall have paid his passage, and taken up one hundred acres of land, at one penny an acre, and have cultivated ten acres thereof, and every person that has been a servant or bondsman, and is free by his service, that shall have taken up his fifty acres of land, and cultivated twenty thereof; and every inhabitant, artificer, or other resident in the said province, that pays scot and lot to the government, shall be deemed and accounted a freeman of the said province; and every such person shall and may be capable of electing or being elected representatives of the people in Provincial Council or General Assembly in the said province.

"Third. That all elections of members or representatives of the people and freemen of the province of Pennsylvania, to serve in Provincial Council or General Assembly, to be held within the said province, shall be free and voluntary; and that the elector that shall receive any reward or gift, in meat, drink, moneys, or otherwise, shall forfeit his right to elect; and such person as shall, directly or indirectly, give, promise, or bestow any such reward as aforesaid, to be elected, shall forfeit his election, and be thereby incapable to serve as aforesaid. And the Provincial Council and General Assembly shall be the sole judges of the regularity or irregularity of the elections of their own respective members.

"Fourth. That no money or goods shall be raised upon, or paid by any of the people of this province, by way of a publick tax, custom, or contribution, but by a law for that purpose made; and whosoever shall levy, collect, or pay any money or goods contrary thereunto, shall be held a publick enemy to the province, and a betrayer of the liberties of the people thereof.

"Fifth. That all courts shall be open, and justice shall neither be sold, denied, or delayed.

"Sixth. That in all courts all persons of all persuasions may freely

appear in their own way, and according to their own manner, and there personally plead their own cause themselves, or if unable, by their friends. And the first process shall be the exhibition of the complaint in court, fourteen days before the trial; and that the party complained against may be fitted for the same, he or she shall be summoned no less than ten days before, and a copy of the complaint delivered him or her, at his or her dwelling-house. But before the complaint of any person be received, he shall solemnly declare in court, that he believes in his conscience his cause is just.

"Seventh. That all pleadings, processes, and records in courts, shall be short, and in English, and in an ordinary and plain character, that they may be understood, and justice speedily administered.

"Eighth. That all trials shall be by twelve men, and as near as may be, peers or equals, and of the neighborhood, and men without just exception. In cases of life, there shall be first twenty-four returned by the sheriff for a grand inquest, of whom twelve at least shall find the complaint to be true; and then the twelve men, or peers, to be likewise returned by the sheriff, shall have the final judgment. But reasonable challenges shall be always admitted against the said twelve men or any of them.

"Ninth. That all fees in all cases shall be moderate, and settled by the Provincial Council and General Assembly, and be hung up in a table in every respective court and whosoever shall be convicted of taking more, shall pay twofold, and be dismissed his employment, one moiety of which shall go to the party wronged.

"Tenth. That all prisons shall be workhouses for felons, vagrants, and loose and idle persons; whereof one shall be in every county.

"Eleventh. That all prisoners shall be bailable by sufficient sureties, unless for capital offences, where the proof is evident or the presumption great.

"Twelfth. That all persons wrongfully imprisoned or prosecuted at law shall have double damages against the informer or prosecutor.

"Thirteenth. That all prisons shall be free as to fees, food, and lodging.

"Fourteenth. That all lands and goods shall be liable to pay debts, except where there is legal issue, and then all the goods and one-third of the land only.

"Fifteenth. That all wills and writing, attested by two witnesses, shall be of the same force as to lands as other conveyances, being legally proved within forty days, either within or without the said province.

"Sixteenth. That seven years quiet possession shall give an unquestionable right, except in cases of infants, lunaticks, married women, or persons beyond the seas.

"Seventeenth. That all briberies and extortions whatsoever shall be severely punished.

"Eighteenth. That all fines shall be moderate, and saving mens contenements, merchandize, or wainage.

"Nineteenth. That all marriages (not forbidden by the law of God, as to nearness of blood and affinity by marriage) shall be encouraged; but the parents or guardians shall be first consulted, and the marriage shall be published before it be solemnized, and it shall be solemnized by taking one another as husband and wife, before credible witnesses, and a certificate of the whole, under the hands of parties and witnesses, shall be brought to the proper register of that county, and shall be registered in his office.

"Twentieth. And to prevent frauds and vexatious suits within the said province, that all charters, gifts, grants, and conveyances of land (except leases for a year or under), and all bills, bonds, and specialties have five pounds, and not under three months, made in the said province, shall be enrolled or registered in the public enrolment office of the said province within the space of two months next after the making thereof, else to be void in law. And all deeds, grants, and conveyances of land (except as aforesaid) within the said province, and made out of the said province, shall be inrolled or registered as aforesaid within six months next after the making thereof, and settling and constituting an enrolment office or registry within the said province, else to be void in law against all persons whatsoever.

"Twenty-first. That all defacers or corrupters of charters, gifts, grants, bonds, bills, wills, contracts, and conveyances, or that shall deface or falsify any enrolment, registry, or record within this province, shall make double satisfaction for the same; half whereof shall go the party wronged, and they shall be dismissed of all places of trust, and be publickly disgraced as false men.

"Twenty-second. That there shall be a register for births, marriages, burials, wills, and letters of administration, distinct from the other registry.

"Twenty-third. That there shall be a register for all servants, where their names, time, wages, and days of payment shall be registered.

"Twenty-fourth. That all lands and goods of felons shall be liable to make satisfaction to the party wronged twice the value; and for want of land or goods, the felons shall be bondmen, to work in the common prison or workhouse, or otherwise, till the party injured be satisfied.

"Twenty-fifth. That the estates of capital offenders, as traitors and murderers, shall go one-third to the next of kin to the sufferer, and the remainder to the next of kin to the criminal.

"Twenty-sixth. That all witnesses, coming or called to testify their knowledge in or to any matter or thing in any court, or before any lawful authority within the said province, shall there give or deliver in their evidence or testimony, by solemnly promising to speak the truth, the whole truth, and nothing but the truth, to the matter or thing in question. And in case any person so called to evidence shall be convicted of wilful falsehood, such person shall suffer and undergo such damage or penalty as the person or persons against whom he or she bore false witness did or should undergo; and shall also make satisfaction to the party wronged, and be publickly exposed as a false-witness, never to be credited in any court or before any magistrate in the said province.

"Twenty-seventh. And to the end that all officers chosen to serve within this province may with more care and diligence answer the trust reposed in them, it is agreed that no such person shall enjoy more than one publick office at one time.

"Twenty-eighth. That all children within this province of the age of twelve years shall be taught some useful trade or skill, to the end none may be idle, but the poor may work to live, and the rich, if they become poor, may not want.

"Twenty-ninth. That servants be not kept longer than their time, and such as are careful be both justly and kindly used in their service, and put in fitting equipage at the expiration thereof, according to custom.

"Thirtieth. That all scandalous and malicious reporters, backbiters, defamers, and spreaders of false news, whether against magistrates or private persons, shall be accordingly severely punished as enemies to the peace and concord of this province.

"Thirty-first. That for the encouragement of the planters and traders in this province, who are incorporated into a society, the patent granted to them by William Penn, Governor of the said province, is hereby ratified and confirmed.

"Thirty-second. * * * * * * * * *
* * * * * * * * * * *
* * * * * * * * * * *

"Thirty-third. That all factors or correspondents in the said province wronging their employers, shall make satisfaction, and one third over to their said employers: and in case of the death of any such factor or correspondent, the committee of trade shall take care to secure so much of the deceased party's estate, as belongs to his said respective employers.

"Thirty-fourth. That all treasurers, judges, masters of the rolls, sheriffs, justices of the peace, and other officers and persons whatsoever, relating to courts or trials of causes, or any other service in the government; and all members elected to serve in provincial Council and General Assembly, and all that have right to elect such members, shall be such as profess faith in Jesus Christ, and that are not convicted of ill fame, or unsober and dishonest conversation, and that are of one and twenty years of age at least and that all such so qualified, shall be capable of the said several employments and privileges as aforesaid.

"Thirty-fifth. That all persons living in this province, who confess and acknowledge the one almighty and eternal God, to be the creator, upholder and ruler of the world, and that hold themselves obliged in conscience to live peaceably and justly in civil society, shall in no ways be molested or prejudiced for their religious persuasion or practice in matters of faith and worship, nor shall they be compelled at any time to frequent or maintain any religious worship, place or ministry whatever.

"Thirty-sixth. That according to the good example of the primitive christians, and for the ease of the creation, every first day of the week, called the Lord's day, people shall abstain from their common daily labour, that they may the better dispose themselves to worship God according to their understandings.

"Thirty-seventh. That as careless and corrupt administration of justice draws the wrath of God upon magistrates, so the wildness and looseness of the people provoke the indignation of God against a country: therefore, that all such offences against God, as swearing, cursing, lying, prophane talking, drunkenness, drinking of healths, obscene words, incest, sodomy, rapes, whoredom, fornication, and other uncleanliness

(not to be repeated). All treasons, misprisions, murders, duels, felonies, seditions, maims, forcible entries, and other violences, to the persons and estates of the inhabitants within this province: all prizes, stage plays, cards, dice, may-games, masques, revels, bull-baitings, cock-fightings, bear-baitings, and the like, which incite the people to rudeness, cruelty, looseness, and irreligion, shall be respectively discouraged, and severely punished, according to the appointment of the governor and freemen in Provincial Council and General Assembly, as also all proceedings contrary to these laws, that are not here made expressly penal.

"Thirty-eighth. That a copy of these laws shall be hung up in the Provincial Council, and in publick courts of justice, and that they shall be read yearly, at the opening of every Provincial Council and General Assembly, and courts of justice, and their assent shall be testified by their standing up, after the reading thereof.

"Thirty-ninth. That there shall be at no time any alteration of any of these laws, without the consent of the governor, his heirs or assigns, and six parts of seven of the freemen, met in Provincial Council and General Assembly.

"Fortieth. That all other matters and things not herein provided for, which shall and may concern the publick justice, peace or safety of the said province; and the raising and imposing taxes, customs, duties, or other charges whatsoever, shall be, and are hereby referred to the order, prudence and determination of the governor and freemen in Provincial Council and General Assembly, to be held from time to time in the said province.

"Signed and sealed by the Governor and freemen aforesaid, the fifth day of the Third month, called May, one thousand six hundred and eighty-two."

This code was a practical outline of the "Holy Experiment." It could be agreed upon in England, but must come with devoted colonists to the virgin soil of Pennsylvania for trial. These laws, so free from all repressive measures in relation to religious tolerance, were far in advance of all ecclesiastical or legislative thought in Europe, and, with but one notable exception[1] among the provinces fringing the Atlantic coast in this country, were alike new and startling. The manner of perpetuating evidences of purchase and titles to landed estates, their liability for debt, the establishment of courts of justice, the manner of distributing decedents' property, and the practical sundering of church and state all marked an era of progressive legislation.

"There are few more striking differences between the mother-country and her colonies, from the first settlement of the latter down to the present day, than the system of registration of deeds, or, as it is generally called here, their recording. It was a favorite object of the old common law—I mean long before the Conquest—that possession of land and its transfer should be open and notorious, and the livery of seisin (the mode of transfer long before the introduction of deeds) was made in the presence of others. And when later, though still in Saxon times, deeds came into use, it was the custom to transact all conveyances at the County Court, and enter a memorial of them in the ledger book of some adjacent monastery, and these gradually became the depositaries of the charters or title deeds of the great landed proprietaries. All such deeds as could be found were destroyed by William the Conqueror, as part of his policy that all titles should commence from himself, and thenceforth we lose, for several hundred years, all trace of any such thing as registration. Not only this, but with the introduction of Uses lands came to be secretly held and secretly conveyed, so that 'scantly any person could be certainly assured of any lands by them purchased, nor know surely against whom they should use their actions or executions for their rights, titles, and duties,'—so ran the preamble to the Statute of Uses,—'to the utter subversion of the ancient common laws of this realm.' In the same year of Henry VIII.'s reign there was passed both the Statute of Uses and the first of the present register acts still in force, viz., 'The Statute for inrollment of bargains and sales.' But this, as also a subsequent local statute of Elizabeth, proved inoperative, first, by reason of being limited to deeds of estates of inheritance of freehold, and the device was soon introduced of a bargain and sale for a term of years followed by a release of the reversion, which effectually evaded the statute, and, secondly, because neither was there a place assigned for keeping the records, nor was the registrar made responsible for his duty. During the time of the Commonwealth the subject was more than once presented to Parliament, and unsuccessfully, and it was not until the reign of Anne that there was passed the first of the statutes now in force, providing with some care for the registration of all deeds in the West Riding of Yorkshire, and this was followed by similar local statutes in the same reign, and in those of William and Mary and George II. Their sum may be stated in that they applied to all the Ridings of York, the town and county of Kingston-upon-Hull, the county of Middlesex, and the Bedford Level Tract; and in the preambles to those statutes you will find how earnestly are set forth the evils sought to be cured by registration. But such has been the settled dislike of the people, or at least that land-

[1] But we must except the Catholic colony in Maryland, founded by Sir George Calvert, whose charter of 1632 and the act of toleration passed by the Assembly of Maryland in 1649, under the inspiration of Sir George's son, Cæcilius, must be placed alongside of Penn's work. Two brighter lights in an age of darkness never shone. Calvert's charter was written during the heat of the Thirty Years' religious war, Penn's Constitution at the moment when all Dissenters were persecuted in England and when Louis XIV. was about to revoke the Edict of Nantes. The Virginians were expelling the Quakers and other sectaries. In New England the Puritan Separatists, themselves refugees for opinion's sake, martyrs to the cause of religious freedom, were making laws which were the embodiment of doubly distilled intolerance and persecution. Roger Williams was banished in 1635, in 1650 the Baptists were sent to the whipping-post, in 1634 there was a law passed for the expulsion of Anabaptists, in 1647 for the expulsion of Jesuits, and if they returned they were to be put to death. In 1656 it was decreed against "the cursed sect of heretics lately risen up in the world, which are commonly called Quakers," that captains of ships bringing them in were to be fined or imprisoned, Quaker books, or "writings containing their devilish opinions," were not to be imported, Quakers themselves were to be sent to the house of correction, kept at work, made to remain silent, and severely whipped. This was what the contemporaries of Calvert and Penn did. We have seen Penn's law of liberty of conscience. Calvert's was equally liberal. The charter of Calvert was not to be interpreted so as to work any diminution of God's sacred Christian religion, open to all sects, Protestant and Catholic, and the act of toleration and all preceding legislation, official oaths, etc., breathed the same spirit of toleration and determination, in the words of the oath of 1637, that none in the colony, by himself or other, directly or indirectly, will "trouble, molest, or discountenance any person professing to believe in Jesus Christ for or on account of his religion."

holding portion of it which make the laws, that notoriety or even possibility of knowledge outside of those concerned should attend the transfer of land that there has never been in England even an approach to the system which we have. Not that the subject has not been mooted. During the eighteenth century six registration bills were presented which never even went to a second reading. In the present century, in 1815, a statute for a general registration was presented by Romilly, which shared the same fate. In 1829 there was appointed the well-known commission, with Lord Campbell at its head, 'to inquire into the state of real property in England.' Prominent in the inquiry was registration, and you will find in the folio volumes of their report hundreds of pages of evidence of the ablest lawyers of the kingdom,—evidence as to the register counties, evidence as to the English colonies, evidence as to some of the United States, evidence as to Continental States,—the great weight of which the commission thought was decisive upon the question. Accordingly they reported a bill, which was introduced in an able speech by Campbell, and opposed by Sugden and others, but it only passed a first reading. You will find the subject again brought up in 1831, in 1832, in 1833, and finally in 1834, after an elaborate debate, in which the opponents of the measure had really little more to urge than that there was a prejudice against it, the bill was lost on second reading by a vote of nearly three to one, and Campbell tells us in his autobiography just published, with perhaps just a little malice, that it was owing to the country members being persuaded by their attorneys to vote against it.

"In 1854 another royal commission was issued, which, after investigation, rejected the scheme for the registration of *deeds*, and recommended the registration of *titles*, and such a bill was, in 1859, brought in by Sir Hugh Cairns. It was dropped, however, and then, in 1862, was passed Lord Westbury's act for the registration of indefeasible titles. These were very like the snakes in Iceland,—there were none, or at least very few, and the act practically came to nothing. Then came the Land Transfer Act of 1875, which was not compulsory, and came practically to nothing. Then, in 1878, was appointed a select committee to report what steps should be taken to facilitate the transfer of land, and a mass of important and interesting testimony was taken under it, including that of Lord Cairns, then Chancellor, who thought that one of the great objections to registration was that 'in the English mind there was, at the bottom, a most profound respect for title deeds, and that when the supreme moment comes at which a man is told that he must part with all his title deeds, and receive in lieu a little piece of paper, which is to be the evidence of his title to the land, the sacrifice is too great for human nature to make, and he declines to make it.' The committee reported a bill in the session of 1880, which went further than any of the previous ones, and it might have passed, but there were several other land bills of confessedly greater importance, such, Mr. Gladstone said, as the one as to 'ground game,' and accordingly, as we all remember, the House talked about 'the Hares and Rabbits Bill' till late into a late session. Finally there was passed the 'Conveyancing and Law of Property Act,' which received the royal assent, but which omits any provisions as to general compulsory registration.

"It is somewhat curious that it seems to be almost taken for granted in England that no system of registration can be effectual which does not depend upon the good-will of the land-dealing community,—in other words, that there can be no such thing practically as compulsory registration; but it would seem that nothing can be simpler than to provide for the postponement of the unregistered deed to the registered one, and this provision secures the practical, successful working of the system throughout the breadth of this country.

"In contrast with the English system, how striking is the fact that from the earliest settlement of our colonies the benefits of registration were seen. In Pennsylvania, some years before the charter to Penn, it had been provided in the early provincial laws that every clerk of every Court of Sessions should enter all grants, bargains, sales, and mortgages of land, 'together with the estates of the grantor and grantee, things and estates granted, together with the date thereof.' Then, in the 'Laws agreed upon in England,' shortly after the grant to Penn, provision was made for the registration of all charters, gifts, and conveyances of land, except leases for a year and under, 'in the public enrollment office of the province.' This was accordingly approved and enacted in the 'Great Law,' passed at Chester in 1682, and the next year it was declared that the laws as to registry should, like others deemed of great importance, such as those concerning liberty of conscience, liberty of property, liberty of person, open courts, speedy justice, the laws to be in English, etc., be reputed and held for fundamental in the government of the province.

"There is much curious learning about the various recording acts which were passed after this, in 1693, 1700, 1705, 1710, and 1715, all of them except the last repealed by the Queen in Council, and much that is interesting and not generally known as to the repeal of these laws and their re-enactment here at the singular intervals of five years. It is enough here to say that finally the act of 1715 was passed, which, escaping the fate of repeal, remains in full force to-day. It provided, in effect, for a record office in every county, and that all deeds of lands properly acknowledged and recorded were to have the force and effect of deeds of feoffment with livery and seisin, or deeds enrolled in any of the king's courts at Westminster. Except as to mortgages, however, the statute was not compulsory, and it was not until 1775 that it was *re-*

quired that *all* deeds and conveyances should be recorded within six months after their execution, or else to be adjudged fraudulent and void against any subsequent purchaser or mortgagee for valuable consideration. It is natural to pass from the devolution of estates to their administration.

"Penn's charter gave him power to establish among other things officers for the probate of wills, and for the granting of administration.

"A little thought as to what was the law in England with respect to this will show how inapplicable was its machinery to the wants of the new colony, for England was then, as now, divided, ecclesiastically, into the provinces of York and Canterbury; each of these was divided into dioceses, and the bishop of each diocese where a decedent had his domicile possessed, by the name and style of the *Ordinary*, the jurisdiction of the probate of wills, the granting of letters testamentary, the appointment of administrators, and the control over them and their accounts, and the courts in which these and cognate matters came up for judicial action were ecclesiastical courts, of which the principal ones were the Prerogative Courts of Canterbury and York, the Peculiar, the Royal Peculiar, and certain manorial courts.

"But while this was so as to the estates of *decedents*, the care of the persons and estates of *infants* had been from an early day vested in the sovereign as *parens patriæ*, and was later exercised, as it is to this day, by the Court of Chancery.

"But our colonists needed neither ecclesiastical courts for their decedents nor a *parens patriæ* for their infants. Before the charter, provision had been already made for the probate of wills and granting of administration by the Court of Sessions, as also for the distribution and sale of the estates of decedents, and for the filing of an inventory by 'all persons who have any estate in their possession belonging to any that are under age.' Provisions were made in the 'Laws agreed upon in England,' as also in the 'Great Law,' for a register for births, marriages, burials, wills, and letters of administration, and the register-general was, after the charter, appointed by the Proprietary and granted letters.

"The act of 1705 was precise as to the appointment by the Governor of the register-general, who should keep his office at Philadelphia, and from time to time constitute deputies in each of the other counties.

"From the preamble to the act of 1712 it would seem that no register-general, either for the other counties or even for Philadelphia, had been appointed, and the provisions of the act of 1705 were thereby re-enacted, with others, providing for the appointment of a register-general by 'the commissioners, agents, or stewards of the Proprietary,' if he should neglect, and in case of their neglect by the judges of the Court of Common Pleas of Philadelphia County.

"The law as to registers remained unaltered till the Revolution, when, owing to the change of government, the office of register-general was by the act of 1777 abolished, and an office called the 'Register's Office' established in each county and such is substantially the law to the present day.

"To the register and the Register's Court was committed that class of cases relating to decedents' estates which were cognizable by the Ecclesiastical Courts in England; and this continued until, by our recent Constitution of 1874, the jurisdiction of the Register's Court was transferred to the Orphans' Court.

"The Orphans' Court had a different origin, and was taken from one of the customs of London. If the sovereign had, as we have seen, as *parens patriæ*, the care of the persons and estates of infants, the 'custom of orphanage, one of the most considerable customs of London, as it respects the children of freemen who died possessed of great personal estates,' was of at least equal antiquity. The Court of Orphans was held before the Lord Mayor and Aldermen of the city of London, and the custom was that 'if any freeman or freewoman die, leaving orphans within age, unmarried, the said court have the custody of their body and goods.' To this end executors and administrators were bound to exhibit true inventories before it, and to become bound to the chamberlain to the use of the orphans to make a true account upon oath, on pain of commitment. As in the case of a ward in chancery it was a contempt to marry one without the leave of the court, it was equally a contempt of the Court of Orphans, who promptly acted by fine and imprisonment, and, as was and is the case with the Court of Chancery, only released its severity upon submission by the offender and making a proper settlement.

"Many of the colonists came from the city of London, and it was natural that some of the laws upon our early statute books, and some of our customs not found in written laws, were the same as those according to the custom of London. We have already noticed the early and vague laws of 1676, of 1683, and of 1693, but in 1701 was passed a law of greater precision. It was an elaborate act for establishing courts of judicature, and gave to the Orphans' Court jurisdiction over all persons intrusted with the property, real and personal, of orphans or persons under age, either as guardians, tutors, trustees, executors, or administrators. You will observe that this was still an *Orphans'* Court; it had no jurisdiction over executors or administrators, except as to the property of *minors* in their hands, and as to such property, its jurisdiction extended to both *lands* and chattels. This was in 1701. Then in 1705 was passed the *intestate* law we have already referred to, by which administrators (not executors) were to account to the Orphans' Court (meaning the Orphans' Court under the act of 1701), which also had jurisdiction of the distribution of the surplus, the partition of the real estate of intestates, and its sale for the payment of debts and maintenance of children. But in the same year the

Orphans' Court Act of 1701 was repealed in England, and the Intestate Act of 1705 stood, so to speak, alone, and this continued for eight years. Then in 1813 was passed 'An Act for establishing Orphans' Courts,' under which and its supplements we acted until the revised statute of 1832. Reciting the existence and repeal of the former laws, and that thereby orphans and persons concerned for them or intrusted with their estates labored under great inconveniences, the Orphans' Court, composed of the judges of the Court of Quarter Sessions in each county, was established as a court of record, and jurisdiction given over all persons who, as guardians, trustees, tutors, executors, administrators, or otherwise, should be intrusted with or accountable for lands, tenements, goods, or estates belonging to any *orphan or person under age*. The register was obliged to transmit to the Orphans' Court copies of all inventories, accounts, etc., power was given to the court to dismiss administrators in certain cases, and to exercise all the jurisdiction granted to the Orphans' Court by the Intestate Act of 1705; and so things remained until after the Revolution. Since then various supplements to the act of 1713 and other acts have greatly enlarged the power of the Orphans' Court, and in the Constitutions of 1776 and 1790 the Orphans' Court was enumerated as one of the courts of the Commonwealth. Still, however, its precise position was less settled and defined than that of any court therein. Though expressly created a court of record, and as such coming within the rule of all English-speaking countries, that its judgments could not be inquired into collaterally, cases were decided in which the rule *was* applied, and others in which it was *not*. The reasons for this were clearly given by the revisers of our code when, in 1830, they were expressly directed, such was the urgency of the case, to give their first attention to the several statutes relating to the settlement of accounts before registers and proceedings in the Orphans' Courts. 'The peculiar structure of that court,' said they, 'its extremely ill defined sphere of jurisdiction, the magnitude of the interests upon which it operates, the uncertainty of the code of law by which it is regulated, and its equally uncertain and insufficient practice and process serve to surround with difficulties every attempt to frame a regular system for it.'

"The act reported and passed brought harmony and symmetry to the subject, although the court was still composed of judges of the Courts of Common Pleas. Finally, by the Constitution of 1874, the Orphans' Court was erected into a separate and independent tribunal, the separate Registers' Courts were abolished, their jurisdiction given to the Orphans' Court, and the register himself made the clerk of the court. Its jurisdiction and that of the register may be thus briefly summed up:

"1. The register has the old jurisdiction of the ordinary in England as to the probate of wills and the granting of letters testamentary and of administration, and in his office are filed the accounts of executors, administrators, guardians, and testamentary trustees; there his power ceases.

"2. The Orphans' Court has the power of dismissal of executors and administrators and the appointment of others in their place, the settlement of their accounts and the distribution of the personal estate, and so far its jurisdiction is in analogy to that of the Ecclesiastical Courts. But, above and beyond this, its large and extended jurisdiction, including every case in which the estate of a decedent or the care of infants and their property is involved, is in analogy to the jurisdiction of the Court of Chancery, and is exercised substantially in the same manner. Meanwhile, in England, it was not until our own time that any substantial change was made, and the jurisdiction of the Ecclesiastical Courts continued as for centuries it had until the year 1857, when by the act of 20 and 21 Victoria, c. 77, the jurisdiction and authority of all ecclesiastical and other courts in the probate of wills and granting administration were given to the Court of Probate. And now by virtue of the Probate Court is exercised by the Probate, Divorce, and Admiralty Division of the High Court of Justice."[1]

Penn's work of preparation for his departure from England was completed by August, 1682. The "Welcome," under command of Robert Greenway, had shipped her stores, her crew was in service, and the "jolly tars" waited with impatience for the "Governor of the Colony" and the adventurous people who were to cross the ocean with them to come on board.

August 30th, he wrote his "valedictory epistle to England" and his affectionate farewell to his wife and children.

September 1st, he was ready to sail, in the possession of a charter for a province and future State, protected by the flag of his native land, his system of government prepared for submission to the free men of Pennsylvania. His Deputy Governor Markham, Surveyor-General Thomas Holme, and Special Commissioners Nathaniel Allen, John Bezar, and William Crispin were busy in preparing the minds of the settlers and the watchful Indian chiefs for his coming. Surrounded by the hundred and more confiding souls that had taken passage with him, he keenly felt the responsibility of the hour and situation; but, with settled purpose and convictions deepened by years of painful experience, he sought consolation and repose of mind in the hopefulness of a near and still more eventful future among a free people and in a new country. As the time of Penn's arrival approached, expectancy was intense among the settlers on the Delaware. The sale of lands by his agents, over five hundred thousand acres, with ships

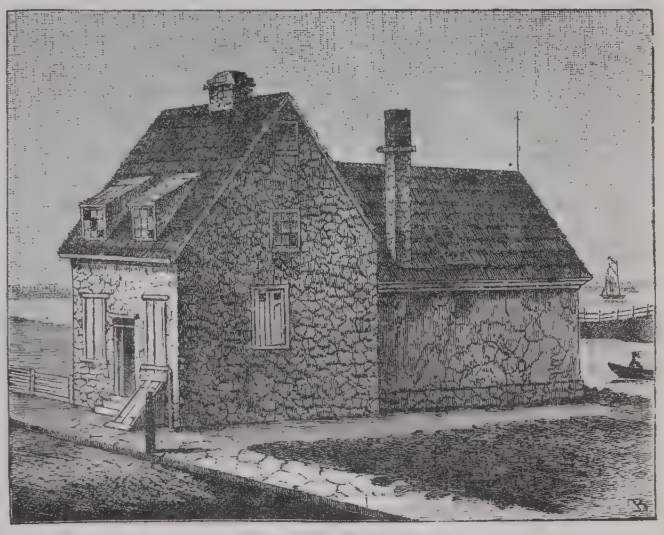
[1] William Henry Rawle, Esq.: Pennsylvania and English Law.

sailing from Europe for the province every sixteen days, the arrival of over five hundred emigrants, and the site of a great city located, created a stir and excitement among all classes that only needed the presence of Penn to insure a climax. This was reached on the 27th of October, when the ship "Welcome" anchored off New Castle. The historical account of the event is as follows:

"October 28. On the 27th day of October, arrived before the town of New Castle, in Delaware, from England, WILLIAM PENN, ESQ., proprietary of Pennsylvania, who produced two certain deeds of feoffment from the illustrious prince, James, Duke of York, Albany, etc., for this town of New Castle, and twelve miles about it, and also for the two lower counties, the Whorekill's and St. Jones's, which said deeds bear date the 24th August, 1682; and pursuant to the true intent, purpose, and meaning of his royal highness in the same deeds, he the said William Penn received possession of the town of New Castle, the 28th of October, 1682." This delivery was made by John Moll, Esq., and Ephraim Herman, gentlemen, attorneys, constituted by his royal highness, of the town of Delaware, otherwise called New Castle; the witnesses to the formal ceremony, in which the key of the fort was delivered to Penn by one of the commissioners, "in order that he might lock upon himself alone the door," and which was accompanied with presents of "turf and twig, and water and soyle of the river Delaware," were Thomas Holme, William Markham, Arnoldus de la Grange, George Forman, James Graham, Samuel Land, Richard Tugels, Joseph Curles, and John Smith.

Robert Proud, who wrote 1780, referring to the voyage and arrival of the "Welcome," says, "The number of passengers in this ship was about one hundred, mostly Quakers; the major part of them from Sussex, the Proprietary's place of residence. In their passage many of them were taken sick with the small-pox, and about thirty of their number died. In this trying situation the acceptable company of William Penn is said to have been of singular advantage to them, and his kind advice and assistance of great service during their passage; so that, in the main, they had a prosperous voyage, and in little more than six weeks came in sight of the American coast, supposed to be about Egg Harbor, in New Jersey. In passing up the Delaware, the inhabitants, consisting of English, Dutch, and Swedes, indiscriminately met the Proprietary with demonstrations of joy. He landed at New Castle on the 24th of October, and next day had the people summoned to the court-house, where, after possession of the country was legally given him, he made a speech to the old magistrates and the people, signifying to them the design of his coming, the nature and end of government, and of that more particularly which he came to establish, assuring them of their spiritual and temporal rights, liberty of conscience, and civil freedoms; and recommending them to live in sobriety and peace, he renewed the magistrates' commissions. After this he proceeded to Upland, now called Chester, where, on the fourth day of the tenth month (about three months after his sailing from England), he called an Assembly. It consisted of equal numbers of members from the province and the three lower counties, called the Territories; that is, from both of them so many of the freemen as thought proper to appear, according to the sixteenth article of the Frame of Government.

"This Assembly chose Nicholas Moore, who was president of the Free Society of Traders, for their chairman or speaker, and received as ample satisfaction from the Proprietary as the inhabitants of New Castle had done, for which they returned him their grateful acknowledgments. The Swedes for themselves deputed Lacy Cock to acquaint him 'that they would love, serve, and obey him with all they had,' declaring 'that it was the best day they ever saw.' At this Assembly an act of union was passed annexing the three lower counties to the province, in legislation, on the 7th day of December, 1682; likewise an act of settlement, in reference to the Frame of Government, which, with some alterations, was thereby declared to be accepted and confirmed. The Dutch, Swedes, and other foreigners were then naturalized; all the laws agreed on in England, with some alterations, were passed in form. The meeting continued only three days, and notwithstanding the great variety of dispositions, rawness and inexperience of this Assembly in affairs of this kind, yet a very re-



MEETING-PLACE OF THE FIRST ASSEMBLY AT UPLAND.

markable candor and harmony prevailed among them."[1]

[1] "THE GREAT LAW; OR, THE BODY OF LAWS OF THE PROVINCE OF PENNSYLVANIA AND TERRITORIES THEREUNTO BELONGING, PASSED AT AN ASSEMBLY AT CHESTER, ALIAS UPLAND, THE 7TH DAY OF THE 10TH MONTH, DECEMBER, 1682.

"*Whereas*, the glory of Almighty God and the good of mankind is the reason and end of government, and therefore government, in itself, is a venerable ordinance of God; and forasmuch as it is principally desired and intended by the proprietary and Governor, and the freemen of the Province of Pennsylvania, and territories thereunto belonging, to make and establish such laws as shall best preserve true Christian and civil liberty, in opposition to all unchristian, licentious, and unjust practices, whereby God may have his due, Cæsar his due, and the people their due from tyranny and oppression of the one side and insolency and licentiousness of the other, so that the best and firmest foundation may be laid for the present and future happiness of both the governor and people of this province and territories aforesaid, and their posterity: *Be it therefore* enacted by William Penn, proprietary and governor, by and with the advice and consent of the deputies of the freemen of this province and counties aforesaid in assembly met, and by the authority of the same, that these following chapters and paragraphs shall be the laws of Pennsylvania and the territories thereof:

"1. Almighty God being only Lord of conscience, father of lights and spirits, and the author as well as object of all divine knowledge, faith, and worship, who only can enlighten the mind and persuade and convince the understanding of people in due reverence to his sovereignty over the souls of mankind, it is enacted by the authority aforesaid that no person now or at any time hereafter living in this province, who shall confess and acknowledge one Almighty God to be the creator, upholder, and ruler of the world, and that professeth him or herself obliged in conscience to live peaceably and justly under the civil government, shall in anywise be molested or prejudiced for his or her conscientious persuasion or practice, nor shall he or she at any time be compelled to frequent or maintain any religious worship, place, or ministry whatever contrary to his or her mind, but shall freely and fully enjoy his or her Christian liberty in that respect without any interruption or reflection; and if any person shall abuse or deride any other for his or her different persuasion and practice in matter of religion such shall be looked upon as a disturber of the peace, and be punished accordingly. But to the end that looseness, irreligion, and atheism may not creep in under pretense of conscience in this province, be it further enacted by the authority aforesaid, that according to the good example of the primitive Christians, and for the ease of the creation every first day of the week, called the Lord's Day, people shall abstain from their common toil and labor that, whether masters, parents, children, or servants, they may the better dispose themselves to read the scriptures of truth at home, or to frequent such meetings of religious worship abroad as may best suit their respective persuasions."

2. Concerning qualifications of officers, etc.
3. Against swearing by God, Christ, or Jesus.
4. Against swearing by any other thing or name.
5. Against speaking profanely of God, Christ, Spirit, or Scripture.
6. Against cursing.
7. Against defiling the marriage bed.
8. Against incest.
9. Against sodomy and bestiality.
10. Against rape or ravishment.
11. Against bigamy.
12. Against drunkenness.
13. Against suffering drunkenness.
14. Against health's drinking.
15. Against selling or exchanging of rum, brandy, or other strong liquors to the Indians.
16. Against willful firing of houses.
17. Against breaking into or taking anything out of houses.
18. Lands and goods of thieves and felons, etc., liable, etc.
19. Against forcible entry.
20. Against unlawful assemblies and riots.
21. Against assaulting or menacing of parents.
22. Against assaulting or menacing of magistrates.
23. Against assaulting or menacing of masters.
24. Against assault and battery.
25. Against duels.
26. Against riotous sports and practices, as plays, etc.
27. Against playing at cards, dice, lotteries, etc.
28. Against sedition.
29. Against speaking slightly or abusing of magistrates or officers.
30. Against reporters, defamers, and spreaders of false news.
31. Against clamorous persons, scolders, and railers.
32. Provision for the poor.
33. Prices of beer and ale.
34. Measures and weights.
35. Names of days and months.
36. Witnesses lying.
37. Pleadings, processes, and records to be in English.
38. Trials in civil and criminal cases.
39. Fees and salaries, bribery and extortion.
40. Fines to be moderate, etc.
41. Numerous suits avoidable.
42. Arrest of a person departing the province, how.
43. Promises, bargains, and agreements.
44. Charters, gifts, grants, conveyances, bills, bonds, and specialties, deeds, etc., how soon to be recorded.
45. What wills shall convey lands, as well as chattels. (See appendix to the Pennsylvania laws.)
46. Wills of *non compos mentis* void.
47. Registry of wills, etc.
48. Registry of servants, etc.
49. Factors, and their employ.
50. Against defacers, corrupters, and embezzlers, of charters, conveyances, and records, etc.
51. How lands and goods shall pay debts. (See appendix to Pennsylvania laws.)
52. What prisoners bailable.
53. Jails and jailers.
54. Prisons to be work-houses.
55. Wrongful imprisonment.
56. Where the penalty is either a sum of money or imprisonment, the magistrate shall inflict which he will.
57. Freemen, who.
58. Elections.
59. No money or goods, by way of tax, custom, or contribution, to be raised or paid but by law.
60. Laws shall be printed and taught in schools.
61. All other things not provided for herein are referred to the Governor and freemen from time to time.

CHAPTER VIII.

MATERIAL IMPROVEMENTS.

To show at a glance what marvels God hath wrought through teeming brain and brawny arm of civilized man, let imagination summon before us the Montgomery County of three centuries ago. Silence brooded over the land, broken only by yells of savage men and more savage wild beasts, relieved perhaps by the murmuring brooklet and roar of the waterfall. Primeval nature reigned supreme; traversed in its whole length by a noble river and confluent creeks, our territory offered nothing to the emigrant but towering forests, spontaneous shrubbery, and wild game. Rocks and fallen timber encumbered the ground, but limestone, marble, iron, copper, and clay, which now as by magic take protean forms of usefulness, were hidden beneath the soil, almost unknown to civilized man. Our river and great creeks were obstructed by driftwood, rocks, and shoals, and the simple red man knew only foot-paths or birch canoes as means of travel from one hunting- or fishing-place to another.

Our European ancestors also, with the mere rudiments of civilization, fleeing from civil and religious

oppression of the Old World, were mainly intent on liberty and abundant food. They were mostly peasant farmers, with a few artisans indispensable to the agriculturist. As, however, settlers of various nationalities, attracted by Penn's liberal institutions, became seated along our valleys, they were drawn to the river and creeks not only by the fertility of the land but for supplies of game and fish. They therefore set about improving the streams with rude dams, weirs, and other contrivances for catching the migratory species, which soon led to contests with other occupants above who needed the river for transportation and travel. The law soon interfered in favor of the latter party; but even thus protected as a highway the river could only be so used safely in spring or in time of high water. Thus, unlike the present, they were hemmed in and obliged to live almost entirely on farm products. Still the territory filled up with a constant stream of pilgrim religionists, a rugged, industrious people, who came with two chief aims,—civil liberty and the right to worship God unawed by governmental interference. Thus situated our fathers felt the need of improvements of every description, public, private, and social, but the time for the full fruition of these had not yet come.

Having thus briefly epitomized our early settlement and civilization, we return to narrate more in detail what was founded looking to intercommunication, productive industry, and the erection of churches, schools, and other public buildings. To found these required the gathering of materials, such as timber, stone, and lime, unaided by modern machinery, as also the opening of roads, bridging of streams, utilizing water-courses, building mills, clearing navigable streams, and the like. Our topic, then, for the remainder of this chapter will be to describe what our fathers first founded and built up of a *material* kind, denominated in law betterments, or public improvements. The nature of the undertaking historically divides itself into three eras,—*the colonial dependent, national formative, labor-saving or improvement ages.* The first embraces the time from the landing of the Hollanders, Swedes, and British to the Revolution, or between 1640 and 1780, one hundred and forty years; the second, from independence to 1830, fifty years; and the third from thence to the present, about fifty-five years. The first two exhibit us chiefly as an agricultural people, striving to secure comfort and independence by rigid industry and frugal living; the last finds us reaching out after domestic grandeur and continental empire. This opening and two succeeding chapters, therefore, will be devoted to improvements of a strictly material kind, leaving to other and succeeding ones those of a social, moral, industrial, and political character; the object here shall be to give a summary of the material growth and social development of the county during distinct eras, covering our whole history, rather than statistics of date, cost, and so forth, inasmuch as this review is but introductory to what is to follow in other chapters of the work.

PART I.—THE COLONIAL DEPENDENT ERA.

At the commencement of the colonial age our ancestors were like half-taught youth, let loose from school almost untrained in the practical life that lay before them. In a strange wild country, new domestic habits had to be learned afresh. Most of them had been accustomed to a serving condition of life, charged with no responsibilities beyond daily tasks, and the rule of law left behind them everywhere meant force, arbitrary force. But they came here on a mission of peace to all men, to establish justice and love. Instead, therefore, of fighting the natives, as did Cortez and Pizarro, they attacked the forests and cumbering rocks, which fell or were removed from before them on every side. The first want was habitations of shelter from the elements and prowling beasts, but they built no "block-houses" of defense even against the savage. Seeking out, therefore, near a spring a southern declivity, to give protection from the cold, a rude cabin of logs was built, or perhaps, at first, only a cave dug into a bank and covered with hewn slabs or bark served for a habitation. Provided also with a few tools of iron and steel and some vessels of tin and wood, their toil began, while the generous Indian looked on admiring and pleased with his new "brother." A habitation thus finished, a small clearing made, with a few domestic animals, and a supply of seeds for planting, the enfranchised emigrant felt himself "lord of the manor." But his beloved children, so necessary to assist in developing the homestead and future of the family, were the next source of solicitude. The greatest want of the settlement now, therefore, was a rude school-house, which might also serve as a place for religious meetings; it was soon up, in like manner of logs, by the joint effort of the neighborhood. Contemporaneous with the first public institution just described came the neighborhood smith-shop to make and repair farm implements, and the rude mill to prepare the new grain for food. These were all established, not much more advanced in architecture than the family domicile, but they served the age. The next want of a public nature was the cart-road needful for business and travel.

Many of these, however, were but well-worn horse- or foot-paths through timber-lands or clearings, for, perhaps, the cart was not even yet provided. We have little information that the Hollanders and Swedes laid out and established any permanent highways previous to Penn's proprietary government, although their coming antedates his by many years. But no sooner had the latter landed, founded his city and "the three counties," than roads and civilization began to radiate from Philadelphia. We break the thread of narrative here to remark that it is creditable to our ancestors that, notwithstanding Mexico, South America, and the islands of the coast

had been already hunted, as by ravaging beasts, for precious metals, our fathers went quietly to plowing and reaping as though America had never been reported "the land of gold." There is scarcely a record adverse to this statement in all our early history.

Philadelphia City and County, founded 1682, of which we were a part for a century, early began to stretch its arms towards the interior, and our borders soon commenced to throng with settlers, as before described. As settlements spread, highways were ordered to be surveyed and opened from the city in nearly every inland direction. Of course these were what we now call "dirt-roads," many of them little wider than sufficient for carts to pass each other on the way, and often, with the view of accommodating land-owners, they were run out of direction to the objective-point in order to follow line fences; or, if striving to make a straight one, they would carry it over almost inaccessible hills and through deep valleys, instead of winding along streams in the general direction, as is done by judicious surveyors of the present day.[1] Within forty years after Penn's government was founded great roads were laid out leading from the city to the interior, a particular description of which, with dates and objective-points, shall be given in another chapter, to which the reader is referred. It may be remarked here, however, that the Proprietary had no sooner arranged with the Indians for the territory than his surveyors were at work laying out highways, running the lines upon new purchases, until by 1740 most of the land of the present Montgomery County had been parceled out and nearly settled by Swedes, Welsh, and English on the southern and central borders, and by Germans on the northwest, with a sprinkling of Hollanders, French, and Scotch-Irish distributed from the Delaware westward to the centre. The roads just laid out and the Schuylkill, as stated before, were the only avenues to and from the city, or local points on the way. Having become masters of their homes, and the territory laid off into townships, the people soon had municipal governments to regulate their improvements and public wants. A ready method of crossing streams was early looked after, but beyond canoes, ferries, and a few wooden bridges and foot-logs, fords were the only modes of transit from one side to another. Except the university, established near the close of the colonial age, few high schools of learning had been founded, only the primary school for children and youth had been erected; the locality and fitness of such at this time it would be impossible to point out. But of church buildings and grist-mills (both public institutions or improvements) we have more definite information; the churches will now be partially located and described in the order of their erection, from the best information at hand.

Church Buildings of the Colonial Age.—The first church edifice erected beyond city limits in Pennsylvania and located in our county was

Friends' Welsh meeting-house,[2] at Merion, 1695. Enlarged 1713.

Abington, Friends, Abington, 1697. Enlarged 1786

Gwynedd, Friends, 1700. Rebuilt 1715.

St. Thomas', Episcopal, White Marsh, 1710. Rebuilt 1817 and 1870.

Plymouth, Friends, Plymouth, 1712. Partially rebuilt.

Abington, Presbyterian, Abington, 1714. Rebuilt.

Old Goshenhoppen, Lutheran and Reformed, Upper Salford, 1716.

Baptist, Montgomery township, 1720.

St. James', Episcopal, Evansburg, 1721. Rebuilt.

Horsham, Friends, Horshamville, 1724. Rebuilt 1803.

Norriton, Presbyterian, 1730.

Providence, Presbyterian, 1737.

New Goshenhoppen, Lutheran, 1739. Rebuilt.

Boehm's, Reformed, Whitpaine, 1740.

Falkner's Swamp, Lutheran, New Hanover, 1740.

St. Augustus', Lutheran, Trappe, 1743. Standing, but a new one built.

Upper Providence, Friends, 1743. Rebuilt 1828.

Reformed, Upper Salford, 1744.

Reformed, New Hanover, 1747. Rebuilt 1790.

St. Luke's, Reformed, Trappe, 1750. Twice rebuilt.

Friends', Pottstown, 1753. Rebuilt.

Puff's Lutheran, Upper Dublin, 1753.

Mennonist, Lower Salford, 1755.

German Baptist, near Fairview, 1755.

Reformed and Lutheran (Union), Pottstown, 1760.

Christ's, Swedes, Swedes' Ford, 1760.

St. Peter's, Lutheran, Barren Hill, 1761. Rebuilt.

Schwenkfelder's, near Kulpsville, 1765.

St. Paul's, Lutheran, Lower Merion, 1769. Twice rebuilt.

St. John's, Lutheran, Centre Square, 1769. Rebuilt 1828.

Bethel, Methodist Episcopal, Whitpaine, 1770.

New Goshenhoppen, Reformed, Upper Hanover, 1770.

Lutheran and Reformed, Gwynedd, 1774.

[1] In illustration of this latter remark, the author knows of a township in a neighboring county where nearly all the highways, as first located, have been recently vacated and laid out as above.

[2] This claim of priority is plausibly and earnestly contested in favor of Norriton Presbyterian Church edifice, near Fairview, which, externally, bears the strongest evidence of its being erected as early as the landing of Penn at Philadelphia. It is believed by intelligent persons familiar with the locality that it was originally built of logs by Hollanders, and some short time after rebuilt of stone when the Scotch-Irish joined them, about 1700 or 1720. There were ancient tombstones, according to the recollections of persons recently deceased, holding dates before 1700, which were used by masons many years ago in making repairs about the building. The records of the church, if there were any, have been lost, so that this questionable claim rests solely upon tradition. It is proper to add, however, that persons, through whom these traditions come, affirmed that within their memory the house had a hip-roof, which the present does not have.

The following (as others necessarily overlooked) are believed to date back to the colonial age, but the exact period cannot be obtained: Mennonist, Towamencin; Schwenkfelder, Worcester; Reformed, near Telford, Franconia; German Baptist, Norriton; Schwenkfelder, New Hanover; German Baptist, Indian Creek, Lower Salford; Mennonist, Upper Providence; Schwenkfelder, Upper Hanover; Mennonist, Lower Salford; Schwenkfelder, Marlborough. Perhaps many of the structures above recorded were at first but rude buildings of logs. Most of them were rebuilt within a generation of their erection, and some several times, as will be noted hereafter.

The Ancient Grist-Mills.—To prepare grain to bread the people and feed domestic animals was one of the most indispensable wants of a newly-settled people; but to prepare a full list of the early mills of the county is still more difficult than of the churches, for the former had no records as the latter to supply the information. Without attempting, therefore, the exact dates, or being sure that near all are included, we name the more famous of them, with the time of their erection and their founders, so far as known. Of course, much of this information rests upon tradition alone. As prepared timber was also one of the most important factors in our early industry, the saw-mill was attached to nearly every grist-mill, but was often seen by itself on petty streams that only furnished power in spring or wet weather. There were probably three or four saw-mills in our county then where one exists to-day; they have disappeared with our old-time forests. There were also numerous oil- and bark-mills in the German districts, and some for preparing clover and plaster, and a few in the south and east for carding wool for home spinning and weaving. The following, therefore, is a very incomplete list of the early flouring- and chopping-mills existing in our part of Philadelphia County previous to the Revolution: Farmer's grist-mill, on Wissahickon, near Flourtown, about 1705; grist-mill by Edward Lane, on the Perkiomen, near stone bridge, 1708; Norris' Egypt Mill at (now) Norristown, probably 1715; Potts' on Manatawny, Pottstown, 1725; Gulf Mills, 1747; Spring Mill, in White Marsh, probably about 1750; Hunsberger's, on Perkiomen, 1725; two mills on Skippack, near Evansburg, probably about 1740; Pennypacker's, on Skippack; Moyer's, on Upper Perkiomen; Shoemaker's (now Bosler's), at Shoemakertown, 1758; Potts', on Valley Creek, Valley Forge, about 1760; Davis', in Upper Dublin, 1750; Samuel Shuler's, on Swamp Creek, 1742 (now in ruins); Jacob Graeff's, at Perkiomenville, 1760; mill at the mouth of Mingo Creek; Hillegas' mill, on Macoby Creek, Upper Hanover; Tyson's mill, on Stony Creek, near Norristown; Butler's mill, on Butler's road; Wertzner's, on Morris road; Detwiler's, on Wissahickon; several grist-mills and a fulling-mill on the Tacony, in Cheltenham; several grist-mills in Moreland township before 1785. The foregoing list does not probably contain more than half the grist- and chopping-mills in service during the colonial age, for it must be remembered that while our English rulers were extremely jealous of all attempts at manufacturing iron or cloths in America, they were glad to receive from us cargoes of flour; hence grinding and preparing flour for exportation was a leading and extensive business at that early day.

While the colonial inhabitants of our county, during the first half-century of their history, were busy clearing the land and substituting stone and framed houses of wood for the log cabins first occupied, they had little time or means to found public institutions other than school-houses, churches, mills, and attend to the opening of public roads, as has been imperfectly described. They were exclusively an agricultural people, and lacked nearly every mechanical appliance now so universally employed to provide for comfortable living. The mother-country kept our fathers in leading-strings till it grew into a cant sarcasm "that it was not lawful to fabricate anything in America more valuable than a hob-nail;" and, compared with the present, farming was of the rudest description. Plows were of the unwieldy pattern used in England, many of them having wooden mould-boards to turn the soil; wheat was cut with a sickle, gathered and thrashed by hand; hay was cut with a scythe, fastened to a straight snath, requiring the laborer to work a long summer day, stooping nearly to the ground; and when harvested, and his small surplus prepared for market, it must be borne over miry roads in springless wagons to the city for exchange for the few groceries and British manufactured goods he could afford to purchase in return. Nearly all the consumption of the family, however, was raised upon the farm. Flax, grown, rotted, swingled, spun at home, and woven by the village weaver, supplied shirting, bedding, and summer wear,—the last often ornamented as checks or plaids by copperas and butternut dyes. Sheep yielded their carcasses for food and for winter flannels; and after the laboring ox had done the summer hauling and been fattened, the flesh was consumed or sold, and the hide went to the tannery to be converted into leather for home use. Autumn was a busy time with the farmer and his family; the winter grain being sown, corn-husking, cider-making, and quilting-parties were in order, each household making a "bee" in succession, till the neighborhood corn was husked, and the winter bedding quilted by the females of the locality. As winter approached, piles of wood surrounded the homestead; the butchering being done, soap made of lye, leached in the "gum" (a hollow log set on a bench), candles made ("tallow dips"), with apples, cider, and root crops all in the cellar or buried in the garden, and they are ready for the village tailor and shoemaker, who each was expected to "whip the cat,"—that is, bring his tools and board with the family while making up the

home material into shoes and clothing for the family. These rude mechanics were expected also to do their work in the kitchen with the family, and work until bed-time by light of the aforesaid "dips," for there were no ten-hour regulations in those days, as most indoor tradesmen worked till nine at night, and field hands from "sun to sun."

This description of farmer life in the olden time only needs the further picturing of the rustic open kitchen fireplace, half across the room, on which lay a huge green back-log, expected to last a week, or perchance an elongated rock, before and over which hickory cord-wood was piled, where it crackled and blazed, while, perchance, an imaginative little boy or girl sat before bed-time in the corner listening to the "salamander" piping its plaintive note in the simmering fire. Or we may imagine further that the infantile members of the family are warmly blanketed for the night, possibly in the open, unceiled garret, and the mother has taken the great singing wheel and is spinning stocking-yarn, while the daughters or "help" sit around knitting by the faint light of one of the "dips, twelve in a pound." On the other side of the uncarpeted kitchen the father and an elder son are seated upon spades, placed over and resting upon half-bushel measures, into which they are shelling the yellow corn by the light of the kitchen fire. A half-grown boy and smaller sister gather the flying cobs and work them into a "make-believe" school-house or dwelling; presently the elder brother, intent on fun, flings a cob at the juvenile edifice, making it fall about their ears, as air-castles do at the feet of anxious builders in maturer life. A laugh from the sisters, added to the chagrin of the young architects, produces a modern "confusion of tongues," when the mother steps forth to quell the row, makes peace, as only mothers can, and the work goes on as before. But these things have passed away from all our borders, and the book, paper, piano, and sewing-machine have taken their places. In those days power-help, and even hand implement, except the plow, harrow, cider-mill, and some flax-dressing and spinning contrivances, were unknown on the farm or in the household; and the few mechanic workshops that, with the tavern and store, made up the cross-road village were of the humblest kind. Of these, also, there were rarely more than the blacksmith, wheelwright, shoemaker, tailor, and at some important places the joiner or carpenter, with the hatter and saddler, all working with rude tools, and almost without labor-saving fixtures of any kind.

The foregoing description indicates to the people of our time how our fathers and mothers worked and lived a hundred years ago. Thus circumstanced, our people still united with Philadelphia, though heterogeneous in nationality, had nevertheless become reasonably homogeneous in language and civilization, when the throes of impending revolution began to be felt on every hand. Soon the storm of "grim visaged" war burst, and most of our people went into the contest for independence, though many of our best citizens stood aloof in obedience to religious convictions; but we had a future of material development, which opens in the next chapter.

PART II.—NATIONAL FORMATIVE ERA.

The war being virtually ended 1781, and two years later acknowledged by Great Britain, our fathers, loaded with debt, public and private, and burdened with depreciated currency, set to work to repair the waste and disaster of the great struggle. Seven years' abstraction of the laboring population from the farm and workshop had run down the cleared land with repeated croppings, and beside left us almost without skilled workmen of any kind. Heavy State and national debts were also to be provided for, as well as inchoate governments brought into unison with the great declaration of 1776. Pennsylvania having in 1780 adopted a new Constitution abolishing slavery and providing for future expansion, the people began in earnest to lay broad and deep the foundation of our present improved condition by dividing it into more convenient territorial divisions. Accordingly, one year after the treaty of peace, our county was set apart from Philadelphia, and we began to improve our heritage anew. But while the farm, roadway, and bridge had each been neglected during the war, and all needed immediate attention, the unsettled character of our national government and its foreign complications, with war raging in Europe, soon drew the public mind away from home development. The period we are considering now was, therefore, eminently formative and reconstructive, as to political effort and civilization. Our industry, as before stated, was exclusively agricultural, and the first effort towards material improvement was in further clearing the land, opening roads, building bridges, mills, schools, churches, and dwellings for a growing population. Our national constitution no sooner adopted and the government put into operation than the want of intercommunication by water between the east and west of our State was felt, and some of our statesmen and engineers set about making the Schuylkill available as an outlet to the Susquehanna, as also available for freight and travel along its borders and towards the great West. Accordingly, a colonial project (conceived so early as 1761, and an act then passed to improve the navigation of our river, which came to nothing) was revived by a new law, passed Sept. 29, 1791, which organized a company to open canal navigation to its upper waters, as also to connect such works with the Susquehanna by a union canal, as was done some years later. This project had the active co-operation of Robert Morris, David Rittenhouse, Dr. Smith, of the university, as most other of our early statesmen. The scheme as first devised was to unite the two rivers by what has since been called the "Union Canal"; but early the next

year the projectors at Philadelphia, to make the junction more sure, began in 1792 to excavate a channel up the river, and it was almost accomplished to the mouth of Stony Creek, but by 1794 the company became discouraged by reason of lack of funds, and the work was abandoned, after expending nearly half a million of money. Contemporaneously with this afterwards abandoned work it was resolved to turnpike a great road leading towards "Fort Pitt," as our western metropolis was then called.

Accordingly, the first macadamized highway in the State was begun from Philadelphia to Lancaster in 1792, and finished two years later, at a cost of seven thousand five hundred dollars per mile. This great work, which was then regarded of national importance, as it led from what was then the capital to the great West, was laid out nearly parallel with the old Lancaster road, but upon selected grades to avoid hills and ravines, and most of the large streams were covered with stone bridges. This improvement crosses our county nearly five miles. Within seven years of its completion a similar one was chartered, and began to turnpike the "Old York road," as it was called, now entitled Cheltenham and Willow Grove turnpike, starting from Fourth and Vine, Philadelphia, passing through Willow Grove and Hatborough to the Delaware, in the direction of New York, chartered 1803, finished 1804. A year or two earlier another company was organized called the Germantown and Perkiomen, passing out of the city by way of Second Street, through Germantown to Chestnut Hill, thence (taking the bed of the old road laid out to Plymouth Meeting, 1687) to Perkiomen bridge. To co-operate with this last important work the great stone bridge over the Perkiomen, still existing in good condition, was undertaken. It was the joint work of the turnpike company and the county, assisted with funds raised by a lottery authorized by law. Some of the tickets of this drawing are extant, bearing the sign-manual of Gen. Peter Muhlenberg, of Revolutionary fame. This road of about twenty-five miles, costing two hundred and seventy-five thousand dollars, or eleven thousand dollars per mile, begun 1798, was finished 1802. A few years later, 1815, the Perkiomen and Reading was completed by another company from the stone bridge just described to the latter place. About the same time, or a little later, the Ridge road was turnpiked by a corporation called the Ridge Turnpike Company, commencing work at Ninth and Vine Streets, Philadelphia, *via* Roxborough, Barren Hill, and Norristown, to the same noted terminus, Perkiomen bridge. It was completed in 1816. In 1814 the pike, intersecting with the Philadelphia and Perkiomen at Chestnut Hill, deflected to the northward to Spring House, in Gwynedd township, from which, in 1814, it was continued to Bethlehem, in what is now Lehigh County. The foregoing comprise nearly all the highways leading through our county which were turnpiked during the second era, now under consideration. While these improvements were going forward, however, numerous lateral and bisecting public roads, by order of court, were laid out and opened, but being of modern construction they will not be here named.

From the earliest colonial age it had been provided by law that the poor should be cared for by "overseers," of which each township elected one or more. Very soon counties in the eastern part of the State began to found almshouses. In 1806 our influential member of the Assembly, N. B. Boileau, procured a law for the erection of one in our county, which was soon built upon a farm of two hundred and sixty-five acres, situated on the Schuylkill, in Upper Providence township. The establishment consisted of several detached buildings, which were in 1878 rebuilt and enlarged, with all the modern conveniences, and it now compares favorably with any institution of the kind in the State.

We will now go back and record the founding of the public buildings, consequent upon the location of the county-seat here by the act of Sept. 10, 1784. In order to do this understandingly it will be necessary to outline the plot of the town of "Norris,"—so written on the draft on file in the recorder's office,—as laid out in 1785 by William Moore Smith, whose father, on behalf of Pennsylvania University, held the remaining part of the tract of land. The law specified that the place should be selected "on the east side of the Schuylkill, near Stony Run;" they therefore chose the ridge between that stream and Saw-Mill Run, a half-mile eastward. Taking Egypt road (so named because it led to fertile country called "the fatlands," about the Perkiomen) as his base-line, and making it eighty feet wide, he marked a parallel street five hundred and fifty feet distant and northward, and called it Airy Street, sixty-six feet wide. Placing the county lot between, and extending to each of those streets, on the dividing-line or water-shed between those two confluents of the river, he proceeded to mark at right angles two perpendicular streets, also sixty-six feet wide, at the distance of five hundred and fifty feet from each other; the one on the west (and bounding the county lot) was called Swede Street, and the other, eastward, De Kalb Street. In the rear of each of these, except Airy, and two hundred and fifty feet distant, he laid out parallel alleys, each twenty-eight feet wide, the one on the south (since) called Lafayette, that on the west Cherry, and the other on the east Green. Between Egypt and Airy, equidistant from both, and running westward from Green, he marked another alley, twenty-eight feet wide (Penn Street), but only extending to the county lot, where it ended. (This was cut through the public grounds, and widened to present dimensions, and extended to Barbadoes Street in pursuance of an act of Assembly passed Feb. 24, 1834. This work, including several feet of excavation, was done in 1835 or 1836.)

On this public lot of one hundred and forty feet on Egypt, the same on Airy, and extending to both, having a depth of five hundred and fifty feet, the prison was erected, at the corner of Airy and Swede Streets. It was a low stone building at first, covering but a little of the ground, which extended as an open lawn down to Penn Street and the court-house. After some years a two-story addition was made to it, much larger than the original building, built up against its southern face. In the rear of the old jail stood the whipping-post,[1] an institution now justly departed forever. Thus Norristown, as originally laid out, consisted of four rectangular streets, as already described, one of eighty and three sixty-six feet wide, with three rear alleys, east, west, and south, twenty-eight feet wide, and a like bisecting alley between Egypt and Airy, but only extending from Green to the county grounds. Providing for the public buildings, on the west end of the town plot, with a tier of eleven lots (fifty by two hundred and fifty feet) on Swede Street, facing the public grounds (between Main and Airy), Smith laid out the residue of sixty-four lots, uniformly fifty by two hundred and fifty feet, on the said four streets, as follows: ten on the south side of Airy Street, between De Kalb and the county lot, and all the remainder (except five on De Kalb, above Penn), thirty-eight in number, on both sides of Egypt or Main, between Cherry and Green Alleys.

The original court-house, a stone building, two stories high, was erected a few feet back from the northwest corner of the present public square, it being part of the county lot, but the unoccupied lower part being conveyed also for public use as an open square forever; some years after its completion an addition of twenty or thirty feet was made to the west end of the building, uniform with the original structure, except that a recess on the north face was added to afford a platform-seat for the judges. The old prison and court-house, as originally built, cost about twenty-one thousand dollars, and were finished in 1787. A building similar in form, and also of stone, was erected some thirty feet east of the court building for the accommodation of the public records and the officers having them in charge. This building was put up in 1791, and was also enlarged some years later. The earliest sessions of the court were held, so tradition informs us, in what was known some years ago as the "Dykes house," occupying the site of the first office and dwelling on the northeast side of Penn Street, adjoining the court-house, the building then being a tavern. The Potter's Field of the prison, as also the garden of the jailer, was located northwest of Airy and Swede Streets. The place is marked on the original plot, two hundred feet on the latter and two hundred and fifty feet back from the former.[2] This lot is the only ground marked on that draft north of Airy Street.

At the time of the founding of the county-seat here the improvements consisted only of the county buildings, a mill (foot of Swede Street), school-house, two stores, three taverns, and about a dozen dwellings, with less than a hundred inhabitants. The public buildings being erected on the natural grade of the earth, Swede Street, descending to Egypt, was so steep as to be difficult of use; accordingly, years afterwards, it was excavated some depth, leaving the "court-house yard," as it used to be called, several feet above the street, and a retaining wall erected against the bank, which remained until about 1855, when the square was graded, terraced, and inclosed by the borough of Norristown. At the time the wall improvement was made (supposed about 1804) a small one-storied stone building was erected at the southwestern corner of the square, on Main Street, for the accommodation of the "Pat Lyon" fire-engine, in which it remained stored until the removal of the old court-house and improvement of the public square, before stated.

We turn now to describe the first awakening of improvement under the second, or rather first strictly American era. As the earliest want of colonial times was the school-house, so now the most earnest thought of the people was for better institutions of learning. At the commencement of the century we were fortunate in having so able a man as Nathaniel B. Boileau in the General Assembly, who should be credited with many of our earliest public institutions. He procured an act, and an appropriation of two thousand dollars from the State, to found an academy at Norristown, which was erected in 1805 on Airy, at the head of De Kalb Street, thirty by forty-five feet, two stories high, and built of brick. Six years later, by aid of a sum bequeathed for the purpose by Judge Robert Lollar, of Hatborough, his friend, Mr. Boileau erected Lollar Academy at that place, at a cost of eleven thousand dollars. These and one founded in Lower Merion, at Athensville, some years later, were the only educational buildings then dedicated to other than common school purposes.

The few years succeeding our separation from Philadelphia few evidences of improvement were

[1] Elizabeth Thomson, who recently died here, nearly a centenarian, resided long with the first keeper of the prison. She "remembered witnessing that punishment repeatedly." She also narrated of John Brown, who was hanged for burglary in 1788 (the old penalty still existing), "that Col. Thomas Craige, one of the two lawyers of the town, and a very resolute man, would not allow the gallows erected on the public grounds; and as no one would proffer private property, it was planted out 'jail lane' (Swede Street) on the highway; and that as soon as Brown was dead he sent his man to cut it down,—he was so disgusted at the severity of the punishment." She further related that during the famous "wheelbarrow law" she had seen numbers of prisoners under the care of the keeper, with a heavy ball and chain attached to one leg, working in his truck-patch, northwest corner of Airy and Swede Streets, lifting the iron balls and casting them forward in the direction they were working.

[2] Subsequent to 1830, when those lots were sold for improvement, in digging cellars a few skeletons were exhumed.

noticeable in any part of the county; it is proper, however, to turn back a few years to state that John Markley, who was sheriff 1798 to 1801, about the time he went out of office, purchased the remainder of the University tract of five hundred and forty-three acres, and became the first Norristown lot-seller and improver after those laid out and sold by William Moore Smith in 1785. Markley did also considerable building and parceling of land; he founded what is now Egypt Mill, at the foot of Mill Street (Heebner's), 1809, forming it and the surrounding farm-land into what was for many years known as "Maj. Matthias Holstein's mill-property." He also built a fine mansion on the present site of Oakland Seminary, long known as the residence of Judge Bird Wilson, and sold lots for improvements on both sides of Egypt, between Cherry and Barbadoes Streets. These last were laid out and a plot of them placed in the recorder's office in 1801, to the number of thirty-one, being laid out uniform with Smith's plot, on both sides of Egypt Street above Cherry, extending to Barbadoes, which latter street he laid out and opened. There were eleven of those lots on the south side, ten on the north side of the street, and ten fronting on Airy Street west of Cherry, extending back to Penn, which latter he opened from Swede to Barbadoes, the same width as on Smith's plot, twenty-eight feet. Some time after he sold to Levi Pawling the original "Egypt or Norris Mill," at the foot of Swede Street, with most of the remainder of the land he had purchased of the University. This was known for many years also as the "Pawling farm," the dwelling and barn standing near what is now Green and Oak Streets. It remained in his possession until about 1835, when it passed into the possession of some half-dozen persons, who assumed the title of the "Norristown Land Company," and who in 1835–37 organized the second enlargement of the borough limits.

On the 31st of March, 1812, Norristown was incorporated into a borough, and the following year St. John's Episcopal Church was built, and five years later the First Presbyterian Church edifice, a plain building, also erected on Airy Street, the only houses of worship in the borough for twelve years after. During this period a few other churches were erected in the county, as follows: by Mennonists, below Kulpsville, in 1805; Baptists of Lower Merion, and German Baptists of Worcester, 1809; Friends at Jarrettown, 1814; Lutherans of Limerick Square, 1817, since rebuilt.

The second era, the national formative, was a period of bitter political strife, when old English ideas and jurisprudence were contesting with our Revolutionary theories for the mastery in State and national governments. These fierce contests were lulled for a time, during our second war with Great Britain; still our social, legal, and industrial character was in but a formative state. These things drew popular attention from domestic improvements, for up to our second foreign war we had been exclusively an agricultural people, wasting our resources by shipping land products abroad with which to purchase the manufactures we needed. This and constant cropping from the same land, with little return of fertilizers, caused much of it to become thin and unproductive, hence our farmers were comparatively poor. But the salutary effects of lime and plaster becoming known, kilns were erected from the eastern border and all along the limestone valleys to beyond our limits into Chester County, and while timber-lands were cleared for the needful wood, vast quantities of lime were procured and applied to the soil, soon making it as productive as at the beginning. The hauling of wood to the kilns and lime back to the fields more than ever made public roads and bridges an indispensable necessity to the people. Accordingly, during the period we are considering, in addition to the great turnpikes leading from Philadelphia and their connecting bridges, many lateral or transverse highways were projected and opened to travel. But there were only ferries to cross the river, except Flat Rock bridge, between Lower Merion and Manayunk, erected 1810, and Pawling's bridge, same date, for the Ridge road, between Lower Providence and Schuylkill townships, Chester Co. These, with the few stone structures built by turnpike companies before described, were the only permanent ones in the county. In 1821, however, the Schuylkill was spanned by another at Pottstown. As early as 1815 an act had been passed for one at Norristown, but for want of funds was not undertaken until 1828–29, when a fine arched foot- and carriage-way of one thousand and fifty lineal feet, including the abutments, was built at a cost of thirty-one thousand two hundred dollars. Near the same date several other like bridges of inferior dimensions were placed over Perkiomen, Skippack, Neshaminy, and Wissahickon Creeks, and numerous grist-, oil-, clover-, and plaster-mills erected in different parts of the county not necessary to particularize. Up to this time, say 1820, the river front at Norristown was but farmed land, and previous to the erection and completion of De Kalb Street bridge that street had not been opened much below Lafayette, and between the present line of Washington Street and the river it was only a rude cart-road, so steep as to be nearly impassable to carriages. Up to that time ferries for high water and the fords at Pawling's mill (foot of Swede Street) and at Swedes' Ford were the only mode of transit across the river. The founding of De Kalb Street bridge filled up that street below Washington, and led to the opening of the river streets, as they now exist, from the new Egypt Mill[1] (Heebner's) to Stony Creek.

[1] To avoid confusion and seeming contradiction, the reader will remember that the ancient name "Egypt Mill" pertained to the original site founded by Norris at the foot of Swede Street; but when that early establishment was abandoned as a grist-mill, on the erection of McCredy's factory, which used the water-right, the lower mill, foot of Mill Street, took the title, as an English patent of nobility is taken and held as something too valuable to be lost.

Up to 1816 Norristown and Pottstown, the only boroughs of the county, had improved little beyond the traditional cross-roads village. In that year David Sower's weekly *Herald* records the extent of Norristown progress thus: "Near one hundred houses, including public buildings, one clergyman, five lawyers, five taverns, and 'a daily stage to Philadelphia.'" We will now turn to another class of improvements as sources of wealth not inferior to those hitherto described, the opening of ore-beds and quarries of stone. Colonial records inform us that quarries of limestone were worked in this county to supply lime for building purposes at Philadelphia so early as 1698, and we have information that Thomas Rutter and some of the Potts' mined iron ore in some of the northwestern townships so early as 1720. About that time there was malleable iron manufactured on the Manatawny, which, when sent to England as a specimen of American skill, created so much jealousy there that a bill forbidding its manufacture was introduced in Parliament, but not passed until 1750. Indications of copper ore were found not long after in Frederick and Lower Providence townships, and in the latter worked for a time, but not yielding a profit were abandoned. Marble was early discovered in White Marsh and Upper Merion, and the quarries have been successfully worked for a century at least. We have the record that Thomas Moore, the grandfather of Daniel O. Hitner, first began in 1785 to raise marble from the quarries now owned by the latter. Near by, Lentz's quarries were opened nearly as soon, and Daniel H. Dager, and later E. C. Potts, in Plymouth, and the Hendersons, in Upper Merion, have erected extensive machinery for producing marble. The working of lime-quarries and kilns all along the southern border of the county during many years has been, perhaps, the most extended and profitable form of domestic industry, other than farming, pursued in Montgomery County; in fact, it has been more permanently enriching than a like deposit of silver or gold would have been, the limestone formation extending wholly across our county, even out of the valley range, cropping out and coming down to our river, as at Port Kennedy and other places.

Other rich deposits of soapstone and bastard marble also, as in Lower Merion and Conshohocken, have led to extensive improvements for quarrying the same. At the era of which we are writing, the first quarter of the present century, the immense deposits of iron and clay since worked in the lower townships had not been discovered or opened by improvement; they will, however, be pertinent to the next chapter. It is proper here to refer generally to the enlarged barns and dwellings which gave place during the period named as against the stinted and inelegant buildings that superseded log edifices, so common the latter part of the past century. As farms increased in fertility, by the use of lime and more intelligent tillage, larger barns were needed, and this invited the farm mansion to take a more spacious and elegant form to correspond; but neither agriculturist or artisan dreamed of the mighty changes soon to appear in the internal and domestic improvements of the labor-saving era, which was now at hand. For generations our fathers, except the very wealthy, had walked upon uncarpeted floors; women were used to field-work, milking, and other drudgery, and he was a fortunate youth who could secure all the three winter months as a period of common-school instruction—but we anticipate.

To explain the rise of the incoming era of manufacturing and commercial activity, and the prodigious improvements through invention, labor-saving machinery driven by water and steam, new methods of production, and so forth, we must glance backward a few years and point out some of the agencies that spurred the popular mind in that direction.

The last war with England for the time almost closed our ports to the admission of foreign manufactures, showing our statesmen how helpless we were as an exclusively agricultural nation; the debt caused by that war also had to be provided for. Within a few years after its close, therefore, Congress laid considerable imposts on foreign goods to increase the revenues, but chiefly to encourage home manufactures. It was not long, therefore, until cotton, woolen, and other mills sprang into existence all over the country to supply the home demand for textile fabrics, and of iron, steel, and other things. To handle the finances, also, a national bank was chartered for the Union, supplemented in our State (1814) by the incorporating of a bank of circulation, discount, and deposit in nearly every county of the State, which furnished more needed currency. This latter measure (creating also our Bank of Montgomery County) was carried over the veto of Governor Snyder, but those State institutions did not get into efficient operation for some time. In the meanwhile, nearly all the currency in use was of distant State banks, private bankers, and Spanish silver, of denominations from the dollar to sixteenths of that coin, the last called "fips." As the commerce of the Union was rising to its feet again, the want of intercommunication with the far West began to be felt most urgently. The three great cities of the Atlantic coast, New York, Philadelphia, and Baltimore, turned their eyes to the rapidly-settling West, and demanded access to it by water communication of some kind. The only idea at that time was "internal improvement" by State means in constructing canals. Governor Clinton, of New York, had gotten his State to open the Hudson and Erie Canal, which Pennsylvania and Maryland hastened to follow by like works. This introduces us to the

PART III.—LABOR-SAVING OR IMPROVEMENT ERA.

In pursuance of the great object, water communication with the great West, our State as early as 1815 had revived the abandoned enterprise of 1792, to con-

nect the Schuylkill with the Susquehanna, and an act was passed that year chartering the Schuylkill Navigation Company, but the corporation was not effectually organized for several years. The failing supply of timber, however, and the recently-ascertained value of anthracite coal as a substitute fuel soon after put the navigation scheme forward without more delay, and it was so far under way that a few boats descended with coal in 1818; but the canal and navigation proper was not completed till 1826. This great work extended from Philadelphia to Port Carbon, in Schuylkill County, one hundred and eight miles, and cost two million nine hundred and sixty-six thousand four hundred and eighty dollars, or about twenty-seven thousand dollars per mile. It consisted of sixty-three miles of canal proper, and forty-five of slack-water navigation, made so by thirty-four dams. The original one hundred and nine locks, eighty feet long and seventeen broad, were enlarged in 1846, and so increased in capacity as to pass boats of one hundred and eighty tons, instead of sixty as before; and the shipping of coal, which began the first year at sixteen thousand seven hundred and seventy-six tons, increased steadily until by 1857 it had reached one million two hundred and seventy-five thousand nine hundred and eighty-eight tons, notwithstanding a railroad competition had been fully established. But the most important result of this great achievement to our county was the creation of water-power, taken up and utilized at Norristown and Conshohocken. Previous to this time there had been no manufactory of cotton or other textile fabrics in our county on the line of the Schuylkill, driven by its water-power. In 1826, McCredy's cotton-factory, a white-lead and stone-sawing mill were erected and soon went into operation, and not long after a rolling- and nail-mill, all driven by water-power drawn from the Navigation dam at Norristown. At Conshohocken, also, another stone-mill, a grist-mill, sheet-iron works and spade-factory of James Wood & Sons were put into operation by the surplus water of Plymouth dam. Within the limits of Montgomery County, and between it, Philadelphia, and Chester, the Navigation erected six dams, the lowest of them at Manayunk, hardly inferior as a source of power to that on the Merrimac at Lowell, Mass.

The next great public work crossing a corner of our county was the State undertaking to build a railroad from Philadelphia to Columbia, to connect by canal navigation with the Ohio at Pittsburgh. This was one of the first attempted railroads in the United States, and was finished soon after 1834. The next work in date and importance to us was the Philadelphia, Germantown and Norristown Railroad; the company was chartered in 1831, and the road finished to Norristown in 1834. This important line of rapid communication with the great metropolis started improvement into still greater activity at Norristown, Conshohocken, and other places by the way. Our county town, from being a mere hamlet of one thousand and eighty-five inhabitants in 1830, sprang forward, nearly doubling its population each decade for many years. Conshohocken, unmarked on maps and unknown by name till then,—hardly a village, consisting of a mill, tavern, and half a dozen houses,—grew also within a few years into a borough of three or four thousand people, and all this notwithstanding a lack of energy and gross mismanagement of the railroad; for almost within a decade, through corrupt dealing of one of its early officers, the capital stock was considered sunk, and for a short time it went into other hands. At first the road scarcely made an effort to handle freight,[1] but still its influence in promoting business, concentrating population and enterprise throughout the southeastern border of our county was prodigious.

Contemporaneously with the opening of railroad communication to Philadelphia, the State Legislature enacted a public, or, as it was then called, a "free school" law, to provide for common-school instruction at public expense. This wise policy, although old in New England, was strange to the people of Pennsylvania, and especially our upper townships, who did not put it into full practical operation for some years, but as it gained way and favor with the people the enlarging influence of education spread rapidly, and improvement, material and social, took wing in every direction. This abrupt allusion to the public-school system in this connection is justified by the fact that we shall never know the mighty power of common schools as a factor in industrial and material progress.

Almost simultaneous with the events last recorded, Norristown started on her third career of advance and improvement. John Markley, the second improver, died July, 1834, and soon after his detached property, lying between Main Street and the river, on the line of Stony Creek, was put to sale by his executor, seeming for a time to hang on the auctioneer's tongue, but finally started with considerable spirit, until all was sold at what was thought good prices. Very soon after the Pawling farm, covering much of the northeastern part of the unimproved land of the borough, came into the hands of the "Land Company," consisting of John Boyer, Mordecai R. Moore, Jacob Adle, Jr., Lewis Ramsay, and W. H. Slingluff. About the same time, Feb. 24, 1834, an act of Assembly was passed appointing a commission, consisting of Alan W. Corson, Henry Scheetz, George Richards, and Evan Jones, to "widen, extend, lay out, and grade the streets of Norristown," which up to that time had no uniform grade or ascertained sidewalks, or when

[1] It is within the recollection of some of our older citizens that from before the opening of the road until about 1843,—eight or ten years,—the late David Heebner, with a four-horse wagon and another of two-horse capacity, hauled nearly all the freight (except, perhaps, nails, iron, and flour, which went by canal) back and forth for the merchants and factories of Norristown, occupying two days in making a return trip.

paved at all were covered with rude flag-stones without curbing or proper crossings, besides many of the houses on one side of Main Street were stilted up above the street, and on the other even below the roadway. The commission, with their surveyor, Mr. Gay, proceeded to widen all the "alleys" of the original survey and plot of twenty-eight feet into streets about fifty feet wide. Thus Lafayette, called "Brick Alley," Penn, "Court-House Alley," and Cherry were ordered to be widened, curbed, and paved, and the fences and stables set back to the line. As may be supposed, this created a ferment among the non-improvement class which required several years to allay. The commission also ordered Swede, below Airy, excavated, and Penn, between its terminus at east side of public square, also opened through those grounds, and excavated eight or ten feet;[1] they also ordered Airy Street, between De Kalb and Swede, opened and lowered nearly as much, and Swede Street straightened, which used to deflect to the right at Airy. Chestnut and Marshall, two new streets parallel with Airy, were laid out from Swede, graded and excavated nearly to the line of Green Street. It was on the north side of Airy near Swede, and on both sides of the latter, as well as on the two new streets, that the "Land Company" made their sales during the few following years. The same act of Assembly gave the Town Council enlarged powers, and ordinances were enacted July 27 and Aug. 13, 1836, enforcing the recommendations of the commission and carrying them into effect. The leading improvement men of the town, John B. Sterigere, Adam Slemmer, Levi Roberts, William H. Slingluff, and others, with the first-named always on the lead, pushed these reforms until they were accomplished, while cow-stables and board-fences "fell back" to the new line, and the flag sidewalks had to give place to those of curbed brick.

We now proceed to briefly describe the third enlargement of Norristown, which took place in pursuance of a new act of Legislature and a new commission, dating from April 7, 1845. The work of the first commission chiefly related to alterations on the original draft, widening alleys into streets, fixing sidewalks, and adding Marshall and Chestnut Streets to the old plot.

This second commission consisted of Jacob S. Yost, George Richards, Isaac Linderman, and William T. Morrison, who at once proceeded to carry out the express commands of the act. First they were required to widen Swede Street nearly to the borough line; to lay out Elm, Jacoby, and Oak Streets from Swede eastward to the true line of Green Street, thus adding six new blocks exactly in the rear and northwardly from what had been laid out previously, as also to open De Kalb from Elm to Airy, and to lay out Green from Airy to Elm. A supplementary act, 1846, authorized the same commissioners to change the bed of Penn and Ford Streets, widen and straighten Main Street southeasterly from Ford, widen the bridge over Saw-Mill Run so as to bear the regulation sidewalks, and lay out Sandy Street (Sandy Hill road) eastward to David Cook's house, not less than forty feet wide.

Thus street extensions, lot sales, and building improvements had gone forward a few years longer at the county-seat, when much dissatisfaction was felt and expressed at the inconvenient and dilapidated state of the county buildings. Grand juries took the frequent recommendations of court in charge, and ordered that new ones be erected. Accordingly the commissioners purchased a large open lot east of the Episcopal Church, extending from Airy to Marshall Street. Le Brun, the architect, submitted a plan and front similar to the Eastern Penitentiary, castellated in style, which was adopted. It was erected of durable sandstone, sixty feet front by one hundred and thirty feet deep, provided with an airy corridor leading to forty cells in upper and lower tiers, designed with sufficient light and ventilation for the separate and solitary confinement of convicts at hard labor. It was built in 1851 at a cost of sixty-eight thousand dollars. Being finished late that year, the prisoners were removed, and the site of the old one cleared of the ancient material preparatory to the erection of a new court-house on the ground. The same architect prepared a plan fronting the building westwardly, instead of southwardly, according to popular wish as expressed through a town and afterwards a county public meeting called to consider the matter. The architect and commissioners alleged in defense of their purpose that the size and shape of the lot forbade a change. It was therefore built during 1852–54, fronting one hundred and ninety-six feet on Swede by sixty-four on Airy and Penn, of brick, faced with Montgomery County marble, and finished with a tall spire, clock, and bell, at a cost of one hundred and fifty thousand dollars. It is probably the most magnificent building of the kind in the State. The steeple (which ought never to have been placed upon such a plain, oblong structure in preference to a dome) was soon found to leak, and a few years after was reduced in height to a handsome cupola, containing a new clock, made by Custer, Norristown, with also a bell of three thousand two hundred and thirty-two pounds weight.

As railroads, rapid transportation, and travel by steam-power lie at the base of our amazing progress in material improvement during the past two decades, we shall proceed to record in tabulated form the corporations and the tracks they have laid across our territory, as near as may be in the order of time as established.

Pennsylvania Railroad; original line built by the State, commenced about 1830, and finished between

[1] The dwelling of Conrad Hipple, which stood precisely where the Montgomery Hose house now stands, was so left above the street by the excavation at that point, that his son John used to say "that 'Sterigere's canal' compelled them to climb three or four steps to get into the cellar," which was literally true.

Philadelphia and Columbia about 1834; sold to the present corporation, with other State works, 1849; estimated capital now invested in all its roads, owned, leased, or controlled, according to Poor's Manual (1882), $175,547,876.13.

Philadelphia and Reading proper, 98¼ miles; chartered, 1833; opened, 1838–42; estimated capital of lines owned, leased, and controlled by the corporation (same authority), $130,519,917.94.

Philadelphia, Germantown and Norristown; chartered, 1831; opened, 1834; 17 miles; cost, $2,246,900; leased, 1870, to the Philadelphia and Reading corporation for 999 years.

North Pennsylvania and branches, from Philadelphia to Bethlehem, 86¼ miles; chartered, 1852; opened, 1857; cost, or associated capital, $11,444,107.32.

Chester Valley; chartered, 1836, and part graded from Downingtown to West Conshohocken; work suspended about 1839; new company formed, 1851, including the original stockholders; terminus changed to Bridgeport; road opened, 1853; estimated cost, $1,765,900.

Perkiomen Railroad, from Reading Railroad junction to Emaus, Lehigh Co., 38½ miles; chartered, 1865; opened, 1875; cost, $2,887,374.68.

Philadelphia and Newtown Railroad, 20 miles; opened, 1878; cost, $1,900,000.

Colebrookdale Railroad, Pottstown to Barts, 12¾ miles; chartered, 1865; opened, 1869; cost, $668,-210.50.

Northeast Pennsylvania Railroad, 9½ miles, Abington to Hartsville; opened, 1875; cost, $292,056.26; leased, with the Stony Creek Railroad, to Reading Company, May, 1879, for 999 years.

Delaware and Bound Brook, from Jenkintown toward New York, 20½ miles; opened, 1876; also leased to the Reading at the same time as above, and for the same term.

Plymouth Railroad, chartered 1836; completed to Oreland (North Pennsylvania Railroad), 1868, about 8 miles.

Stony Creek, from Norristown to Lansdale, 10¼ miles; chartered, 1870; opened, 1874; cost, $497,-138.23.

Norristown Junction Railroad, ¼ mile; opened, 1880–81.

Pennsylvania and Schuylkill Valley Railroad, from Philadelphia to the coal regions, including the line from West Chester to Phœnixville, now building.[1]

On the opening pages of this article we presented a list of the first churches and grist-mills of our infant county, as also the few early turnpikes, bridges, and the like. Completeness in such an undertaking is, of course, out of the question. Nevertheless, to compare the past with the present, we shall now add lists, from available sources, of what the children have done in imitation of the fathers. To avoid duplicating some elsewhere recorded, numerous improvements of our day are omitted.

Churches known to have been Built or Rebuilt since 1830.—Friends' (Orthodox), Plymouth, erected 1830.

First Baptist, Norristown, erected 1833. Rebuilt 1876.

First Methodist Episcopal, Norristown, erected 1834. Rebuilt 1857.

St. Patrick, Norristown, erected 1836. Rebuilt 1859.

Lutheran and Reformed, Kulpsville, erected 1833.

Methodist Episcopal, Upper Dublin, erected 1833.

Baptist, Lower Providence, erected 1836. Rebuilt 1880.

Presbyterian, Jeffersonville, erected 1841. Rebuilt 1876.

Baptist, Bridgeport, erected 1843.

Presbyterian, Port Kennedy, erected 1845.

Providence Presbyterian, rebuilt about 1845, and again 1878.

Boehm's Reformed, rebuilt 1868.

Church of the Ascension, Norristown, erected 1847.

Trinity Lutheran, Norristown, erected 1849. Rebuilt 1863.

Friends', Norristown, erected 1851.

German Baptist (Green Tree), erected 1846.

St. Peter's Lutheran, Barren Hill. Rebuilt 1847.

Church of the Redeemer, Lower Merion, 1848.

First Presbyterian, Norristown. Rebuilt 1855.

Central Presbyterian, Norristown, erected 1856.

Mount Zion African Methodist Episcopal, Norristown, erected 1845. Rebuilt 1853.

Oak Street Methodist Episcopal, Norristown, erected 1854.

Ebenezer Methodist Protestant (colored), erected 1850.

Presbyterian, Springfield, erected 1857.

Mennonist, Kulpsville. Rebuilt 1854.

Methodist Episcopal, Evansburg, erected 1844.

German Baptist, Norristown, erected 1859.

Lutheran and Reformed, White Marsh, erected 1818.

Lutheran and Reformed, Sumneytown, erected 1859.

St. James' Episcopal, Evansburg. Rebuilt 1850.

Plymouth, Friends'. Partially rebuilt 1860. Destroyed by fire and rebuilt 1866–67.

St. Augustus, Lutheran, Trappe. Rebuilt.

St. Paul's Lutheran, Lower Merion. Rebuilt 1873.

Presbyterian, Huntingdon Valley, erected 1861.

Evangelical Association, Norristown, 1859.

St. Luke's Reformed, Trappe. Rebuilt about 1874.

Methodist Episcopal, Jarrettown, erected 1866.

Evangelical Association, Plymouth, 1870.

Baptist, White Marsh.

Methodist Episcopal, North Wales.

Baptist, North Wales.

Presbyterian, Bridgeport, erected 1875.

Haws Avenue Methodist Episcopal, Norristown, erected 1875.

[1] The North Pennsylvania, associated roads, and all the short lines built and running partly or entirely in our county were (1882) leased, owned, or operated by the Reading corporation.

St. Paul's German Lutheran, Norristown, erected 1872.

Baptist, Shannonville, erected 1881.

Puff's Reformed, Upper Dublin. Rebuilt.

Trinity Christian, Freeland, erected 1853.

Trinity Christian, Skippackville, erected 1858.

Methodist Episcopal, Upper Hanover.

Methodist Episcopal, Cheltenham.

Schwenkfelder, Worcester.

Methodist Episcopal, Montgomery.

Besides the above, there are several churches erected in the period which are recorded among the specialties noticed in the review of the larger boroughs.

Colleges and Higher Seminaries.—St. Charles Borromeo, Catholic, Lower Merion, buildings erected 1866–71; Pennsylvania Female College, Collegeville, 1851; Ursinus College (formerly Freeland Seminary), Collegeville, buildings erected 1848; Oakland Female Seminary, 1846–48; Cottage Seminary, Pottstown, 1850; Hill School, Pottstown, 1852; Washington Hall, Trappe; Frederick Institute; Tremont, Norristown, 1844; North Wales Academy; Centre Square Seminary; High School, Norristown.

Recent Turnpikes.—The following are some of the turnpikes constructed since 1830: Perkiomen and Sumneytown, built 1840; Conshohocken and Three Tuns, 1847; Bridgeport and King of Prussia, 1853; Spring House and Sumneytown, 1848; Norristown and Centre Square; Willow Grove and Doylestown; Goshenhoppen and Green Lane, 1851; Limekiln Road pike, Middle Road, Willow Grove.

Bridges.—The following are the most important bridge structures erected during the period under consideration: Great stone bridge, erected 1838, over Schuylkill, by the Reading Railroad, at Black Rock tunnel; Perkiomen, near Shannonville, 1834; Pawling's, rebuilt 1840; Swedes' Ford, over Schuylkill, Norristown, 1848; Phœnixville and Mont Clare, 1845; Limerick Bridge, 1849; Royer's Ford, 1840, swept away and rebuilt 1850; Black Rock, over Schuylkill, 1860; Port Kennedy, 1849; Madison, Pottstown, 1868; Mattson's Ford, Conshohocken, about 1840, swept away and rebuilt 1850; De Kalb Street bridge, Norristown, rebuilt about 1860; Schwenksville, over Perkiomen; Hunsberger's, over Perkiomen, at Arcola and Yerkes Stations; Stone bridge over Stony Creek, Norristown; also one over same stream at Marshall and Elm Streets; over Saw-Mill Run at Marshall; also Penn and Oak Streets, Norristown.

Before describing the prodigious improvements of the county at large, we turn aside to present in contrast the now twelve boroughs which have grown out of the two existing, 1830, at the close of the second era, bringing a brief and imperfect notice of them up to the present time.

Norristown (Continued).—Notwithstanding the three previously distinct enlargements, 1801, 1834, 1845, the people were not satisfied with its boundaries. Land dealers and speculators had sold into the hands of builders or third owners most of the lots offered at former public sales, and many enterprising men were anxious to have town limits extended again. Accordingly, another act of Assembly was passed 1852, appointing a third commission, consisting of Philip Super, Charles F. Jenkins, and John Thompson, who proceeded to carry the western boundary across Stony Creek, and up the river to the western line of Montgomery Cemetery, nearly half a mile, but leaving that institution in Norriton; thence northward to the Plymouth road, about two miles from Schuylkill; thence by that road eastward nearly as far, and thence southwestwardly to the river again near Magee's lime-works. This fourth extension took another large slice from Plymouth, and several hundred acres from Norriton, making the borough nearly two miles square, and adding all the First and much of the Fifth and Sixth Wards. The commissioners, before surrendering their trust, laid out all the added new territory into streets, naming them after land-holders and the distinguished public men of the town and county, thus leaving no unsettled lines for future improvers or builders to alter or dispute. They also ordered Main Street raised several feet at Stony Creek, and that stream spanned with a new stone bridge of a width to bear the usual sidewalks. This new structure, much higher than the old, with the cutting down and widening of the street up Chain's Hill, makes the entrance to and exit from the town by that great avenue both easy and convenient. This changed width, with straightened course, and cutting down also of Knox's Hill and filling of a hollow, extended the improvement to the borough line on the west. The year following this enlargement, L. E. Corson and Gabriel Kohn purchased the Chain farm, west of Stony Creek, sold the lots, and now that ground contains probably as much population as the whole borough in 1820. This last resort to the Legislature, thirty years ago, will certainly serve the county town for at least fifty years to come. Almost within the period just named Norristown has erected six spacious school buildings, the last for a high school, which is an edifice of rare taste and classic proportions.

The chief public or corporate buildings of the borough built during the era are the following: Norristown Insurance and Water Company's works, erected 1847, and greatly enlarged, with new basin, 1879; Montgomery Cemetery, 1848; Norristown Gas Company's works, constructed 1853; market-house, covering the square from Airy to Marshall, built about 1855; Norris City Cemetery, founded 1858; Montgomery National Banking-House, erected 1854, and First National building, 1869; Farmers' Market (formerly Reiff's), established about 1868; Norristown Library building, erected 1859; Odd-Fellows' Hall, erected 1850; Soldiers' Monument, nineteen feet high, erected in the public square 1870; Music Hall, with

accommodations for Masonic lodge and post-office; Western Market-House and Hall, at Kohn and Marshall Streets. Conspicuous among Norristown's latest public improvements is the great State Hospital for the Insane. The fire department of the borough consists of the Norris, Humane, and Montgomery Hose and Steam Fire-Engines, and the Fairmount Hose or Hook-and-Ladder Company. All of these associations have erected large three-story brick engine-houses with capacious halls; the first especially is one of the stateliest edifices in the town, and it is not an over-estimate to value the apparatus and real estate of all the firemen of Norristown at near a hundred thousand dollars.

Pottstown.—Very soon after the completion of the Norristown Railroad, which started the villages of the lower Schuylkill, the great Philadelphia and Reading was opened to the public along and through the whole southwestern border of the county, furnishing another rapid way to Philadelphia market.[1] The opening of this road started Pottstown from its sleep of nearly a century, a place which enjoys the rare distinction of being the first laid-out town in the county, having been surveyed and designed for a city by John Potts in 1753, thus antedating Norristown over thirty years. Like his great exemplar, William Penn, he placed the streets at right angles and in line with the cardinal points, and High or Main Street, like Market Street, Philadelphia, was laid out near a hundred feet wide. But notwithstanding its site, almost level as a floor, seemed formed for a city far above the line of overflow from the river, and in the midst of rich bottom land, above and below, it improved little until the railroad broke in upon its rural slumber, about 1842. It was, however, incorporated as a borough in 1815, and for many years from that period justly sought to become a county-seat of adjoining parts of Chester, Berks, and Montgomery Counties, under various names, but finally "Madison." That enterprise failed through purely selfish and political motives among the people of the opposing county towns; but Pottstown advanced, nevertheless, through the new-born energy already described. Since 1845 its three churches have increased to ten, including the following: Episcopal, 1833; Methodist Episcopal, 1839; St. Aloysius' (Catholic), 1850; Presbyterian, 1853; First Baptist, 1859; Salem Church (Evangelical Association), 1870; African Methodist Episcopal Church, same year. During this period also Friends' Meeting was rebuilt (1875), and the Reformed and Lutheran Churches erected separate edifices, which were finished 1870 and 1872.

The manufacturing industry of the borough has rested on a solid basis for many years, there being several corporations combining very heavy capital, and in matters of town improvements, such as gas, hydrant-water, markets, and the like; the first was secured by a company, which erected works in 1858; the second by another corporation, 1869; and the last by another, still earlier, which also furnishes a public hall, with additional lodge-rooms above.

The fire department of Pottstown is now well organized, having two steam fire-engines, the companies being named "Good-Will" and "Philadelphia"; they have hose-carriages annexed, and all their apparatus is of the most efficient description.

The school department has two or three large houses, including the former academy building. Like Norristown, the borough has passed its original barriers two or three times, there being extensive additions of laid-out and improved streets on the north, and especially eastward, now being rapidly covered with buildings. The large blast-furnace just over the Manatawny, added to the immense iron-works and other manufactures of iron in the borough proper, gives Pottstown a fair claim to contest with Conshohocken the title of "iron-clad." Pottstown has founded two public cemeteries, a little out of town,—"Pottstown" and "Edgewood." The town maintains two or three well-conducted newspapers, and from its grand site, and public-spirited, wealthy inhabitants also, we infer that at no distant day it will become a considerable city. Population (by census 1880), 5305.

Conshohocken.—The manufacturing town of Montgomery County is Conshohocken, which at the opening of the era under consideration hardly had a place on any printed map; its population now cannot be less than five thousand souls. When Plymouth dam and the aqueduct over the creek of that name were being built by the Navigation Company, a few acres of land adjoining were purchased by it for convenience in prosecuting its work at that place, which, after the canal was finished, were sold to John Freedley and James Wells, of Norristown. The latter built a hotel and store on the line of the railroad (site of present station), and the former erected below the canal on the river bank a mill for sawing marble, which was run by water-power for some years by Freedley & Heebner, the senior partner supplying much of the stone from quarries worked or owned by him in Massachusetts. A few years later they sold the residue of their purchase in lots to improvers, which was the beginning of the town. David Harry erected also a flouring-mill on the bank of the river (site of the present print-works), and just above it, driven also by water-power of the canal company, James Wood erected, 1832, a mill to manufacture spades, saws, and other tools, as also sheet-iron.

[1] The author recalls an incident worth recording here to show how the railroad broke in upon settled notions and habits of farmers of the upper townships: An enterprising Philadelphian, about 1845, passed up to Pottstown, and thence came downward to Norristown, soliciting farmers on the way to contract for daily supplies of milk, deliverable at the stations, for consumption in Philadelphia, without securing a single contract, although he offered cash on delivery. Farmers had not thought of it, and were afraid to try what has now grown into an immense trade.

These mills were the nucleus from which the present immense manufactures of the place have sprung. It is needless to add more, as these will be treated of elsewhere. The further extension of streets and building improvements was promoted by sales of land eastward of the town by Isaac Jones, along Hector Street, and later by Benjamin Harry, who sold nineteen acres along Fayette Street, on the rear centre of the town. That main avenue, turnpiked in 1847 (which was the township line between Plymouth and White Marsh), is already adorned by numerous palatial mansions, and by a handsome Episcopal Church, chapel, and adjacent rectory, which last property in completeness would do credit to any city. The borough has also a Presbyterian, Catholic, Baptist, Methodist, and an African Methodist Church, as also a handsome public hall, with market and lodge-rooms combined, the last three stories and a Mansard roof, built by a company, 1872. Two other corporations, chartered a few years ago, have erected water- and gas-works. The Washington Hose and Steam Fire-Engine Company erected in 1878 a handsome and substantial building for their steamer and hose-carriage, which, with the superior apparatus, is valued at twelve thousand dollars. In addition to a substantial open iron bridge over the river, Conshohocken has two large public school buildings, and another owned by the Catholics. Considerable attention has been given recently to grading, curbing, and paving the sidewalks, and the population is increasing quite as rapidly as any town of the county. It was chartered May, 1850.

West Conshohocken.—This new borough, formerly called by an Indian name, Baligomingo, now just entering its second decade as a corporate town (chartered 1874), owes its chief importance to the valuable water-power of Gulf Creek and to the extensive woolen manufactures of George Bullock and others near by, as also the extensive blast-furnace of Moorehead & Co. The latter works are established on territory taken from Lower Merion, and the former belonged to Upper Merion, the borough limits as in the case of East Conshohocken being taken from two adjoining townships. Population (1880), 1462. Most of the manufactories of the borough line the ravine of Gulf Creek, and being so situated the town offers little opportunity for street improvements, and yet its one or two avenues, as also the upper ones, are kept in superior condition. Here, in this mountain-like glen, fifty years ago, Bethel Moore successfully carried on the manufacture of woolen cloths, the first in our county. The borough contains a number of mills, a church, and some school buildings, as also a reservoir on the hillside to provide water for extinguishing fires.

Bridgeport.—This is the fourth borough of the county in order of incorporation, being one year younger than Conshohocken, its charter dating Feb. 27, 1851. It was in its early history called Evansville, after its then owner, Elisha Evans. It possesses a number of manufactories of textile fabrics, a paper-mill, market-house and hall combined, a Baptist and a Presbyterian Church, and the extensive depots of the Reading and Chester Valley Railroads. It also has a number of stores, and just below its corporate limits perhaps the largest manufactory of mixed woolens on the line of the Schuylkill, owned by the Lees Brothers. The population of Bridgeport is 1802.

Hatborough.—The name of this lower end borough comes down to us from colonial times, said to have been named from a manufactory of hats established there before the Revolution, though the village was as often called "The Billet," or "Crooked Billet," from a tavern sign which bore that name or symbol, no doubt of English importation. The place is one of the oldest settled districts of the county, and is full of historical and legendary remains. It was the residence of Col. Robert Lollar, of Revolutionary fame, and Hon. Nathaniel B. Boileau, both distinguished and active business men in the early dâys of our county. It contains a public library, the oldest and most extensive in our bounds, an academy, with many handsome residences and churches. Hatborough is no exception to the rule that our recent boroughs owe their corporate existence to the railroad, as the locality was densely settled for years past, but only erected into a municipality in 1871, when being opened to railroad travel. The borough contains also two or three schools, which occupy the academy; it has a weekly paper, and a handsome monument to commemorate the resting-place of soldiers killed by the British during the Revolution. Population (1880), 586.

Jenkintown.—This younger sister of Hatborough was chartered 1874, also made up mainly of old settled families in Abington township, and organized into a borough to provide local improvements. It has one of the oldest Presbyterian Church buildings, and near by one of the oldest Friends' in the county. It contains also an Episcopal, a Catholic, and a Methodist Church, and numerous fine buildings of the olden style, as also some of modern elegance. There have been recently built a bank, a large school building, and a Masonic Hall. Population, 810.

Lansdale.—This young thriving borough, which only dates its charter from 1872, owes its rare distinction as a manufacturing place to the North Pennsylvania, the Stony Creek and Doylestown Branches of that railroad, which intersect at that point. Heebner's agricultural machine-works are famous all over the Union, as also known in places abroad. It is taken from Gwynedd and Hatfield townships, is fully surveyed and carefully laid out, and for a town of its age is wonderfully improved. It lies over a plain on both sides of the North Pennsylvania Railroad; it has two or three public schools, a Reformed and a Methodist Church, a bank, and a weekly newspaper.

It is destined to be a place of great importance, and its population, at present 798, is growing rapidly. For the purpose of supplying pure water it has put down an artesian well.

North Wales.—This is the elder sister of the borough just described, being distant from it about two miles, and chartered in 1869. It was taken from Gwynedd township, and is situated on the Sumneytown and Spring House turnpike, on elevated ground, and beside the North Pennsylvania Railroad. Like its neighbor, it has grown up within little over a decade. It contains a Reformed, Baptist, Lutheran, and Methodist Episcopal Church, two or three school buildings, and a fine seminary, a steam-flouring mill, bell foundry, and other manufactures, as also a weekly newspaper. The town has been carefully surveyed and laid out into streets, and active means have been employed to place its avenues and walks in good condition; population (1880), 673.

Green Lane.—This is one of the latest boroughs, chartered 1875, and has been surveyed and laid out into streets and building lots. It is situated on Perkiomen Creek, in Marlborough township, on the Sumneytown and Spring House pike, and covers one hundred and fifty-four acres of ground. It is the old locality of Schall's Forge, which was famous in its day, and as it is adjacent to the Perkiomen Railroad, it will doubtless grow rapidly. Population, last census, 187.

East Greenville.—This borough is taken out of Upper Hanover township, and is also situated near the Perkiomen Railroad; it was incorporated 1875, and contains considerable improvements, consisting of a seminary for both sexes, one or two churches, schools, cigar manufactories, and other industries. It is on Green Lane and Goshenhoppen turnpike. Population, 331.

Royer's Ford.—This youngest of the boroughs was chartered 1879. It is a thriving manufacturing town, taken out of the lower corner of Limerick township, and is situated on the Schuylkill, where the river was formerly crossed by a deep, dangerous ford. There is a substantial bridge here now, connecting it with the borough of Spring City, in Chester County. Some years ago an extensive stove foundry was established there, which, with other manufactures, have caused an influx of population. There have been recently erected two or three churches, and a fire company has been organized. The streets are being graded and rapidly improved. Population, 558.

The foregoing hasty review of the boroughs was not undertaken or designed as a full exhibit of the material development of large centres of population, but only to show how corporate towns spring up as by magic in this labor-saving, railroad age. But to complete the picture we must name in order the other villages of the county which are on a like career, such as Trappe, Freeland, Collegeville, Schwenksville, Iron Bridge, Gilbertsville, and Sumneytown; Valley Forge, Port Kennedy, Swedesburg, Spring Mill, Pencoyd, and West Manayunk, on the line of the Schuylkill; Barren Hill, Marble Hall, Plymouth Meeting, Flourtown, Edge Hill, Cheltenham, Ashborne, Kulpsville, and Centre Square, in the centre; Ardmore, Bryn Mawr, Merion Square, and the rural seats (almost rivaling the outlying villas which once stood around ancient Rome) now spreading over the plateau beside the Pennsylvania Railroad, in Lower Merion.

But new ideas and methods of living are not confined to towns and villages, they extend to the remotest farm-house. Free schools and improved land, with ready access to market, have excited all over the county a desire for more easy and efficient methods of farming and other production. Years ago farmers threw aside sickles, scythes, and hand-rakes, resolving to keep abreast of the times by using horse-power implements to cultivate, gather, and prepare farm products for market. Thus by improved tillage upon limed land, with use of other fertilizers, crops have been nearly doubled; and now, instead of spending two months of exhaustive labor, as formerly, to gather and store a harvest, it is done in a fortnight. Thus, also, increased profit in agriculture excited a desire for more comfortable dwellings, capacious barns, more elegant equipages and attire, as also handsomer churches, and more roomy and convenient school-houses.

Travelers on the continent of Europe inform us that in many parts, especially in rural departments of France, the people are seen using the rude implements of husbandry and wearing the same style of attire that their fathers and mothers wore almost centuries ago; while here, on the contrary, observant people of advanced years express wonder and astonishment on visiting hardware-stores and other depots of merchandise, at beholding new, handy, ingenious, and often almost unimaginable contrivances for farmers', householders', and mechanics' uses. And no well-filled grocery is without manufactured viands, syrups, and canned edibles without number, showing to what a prodigious stretch of activity the industrial mind of the country is brought in this labor-saving or rather labor-combination era.

No sooner did the railroad get into operation across our territory than the telegraph wire followed it, thus putting us into instantaneous communication with the outside world. Now, poles and wires pass along many leading highways, as along all railroads; and still again the telephone, which enables us to converse with friends or correspondents in distant places, is also established in most of our chief towns; but, more wonderful than all, the electric light is coming, which will nearly actualize the Bible expression, "There shall be no night," for the sun or its reflex, electricity, almost turns night into pure daylight. But the two grandest elevators—we might say insti-

tutions—of society in this last quarter of the century are the reaping- or mowing-machine of the farmer and sewing-machine of the household. By their use the man or woman who employs either has quadrupled his or her productive power, thus approximating the philosophic principle of the machine itself,—"an instrument that *produces*, but *consumes* nothing."

Our proximity to the great cities and large manufacturing towns has also nearly revolutionized agriculture in another particular. The farmers of Montgomery County, instead of raising beef, pork, and mutton for Philadelphia market, as formerly, have to some extent come to consuming meat grown and fattened on the great plains of the far West, and it is no unusual thing to see beef-cattle driven through our streets bearing the brands of herders of Texas or Arizona. Thus transformed, husbandry in our county largely takes the exclusive type of "the dairy," boys and men doing the milking, while the product is worked into marketable shape at "creameries," now recently built and furnished all over the county, the latter worked also by men and boys, while many of our mothers and sisters only ply the needle and sewing-machine, or perhaps finger the piano or harp.

Another institution of the present, though not material in nature, must be mentioned in this connection as at the bottom of nearly half the town improvements which have sprung up during this era,—we refer to building, savings, and loan associations. These enable mechanical and manufacturing employés in our towns to build themselves homes, with a reasonably sure opportunity of paying for them in installments, by help of loans which cannot be foreclosed until savings have secured a dwelling free of debt.

But in nothing has the progress of society been more marked and surprising than in the various social or voluntary associations to protect individual members against the ills of life, as beneficial and insurance companies, such as fire, life, health, and accident insurance companies, including farmers' institutes, fairs, and the like.

The Montgomery Agricultural Society was formed, and buildings erected at Springtown, two miles northeast of Norristown, as early as 1848, which had a successful career for several years, its fairs being well attended and salutary in their influence. A few years after it was removed to near Norristown, and merged into the "East Pennsylvania Agricultural and Mechanical Society," which continued a number of years; but dissensions arising, many members of the original society reorganized under the old name, and purchased land at Ambler, Upper Dublin, and erected new buildings, which after some years has somewhat declined again, in consequence of the predominance of the sporting over the strictly farming class of patrons. These county agricultural associations and fairs, when properly conducted, cannot be too highly commended as educational institutions.

After nearly thirty years' experience the various fire, storm, and live-stock insurance companies have come to be among our most valued corporations, furnishing as they do reliable insurance at cost.

CHAPTER IX.

THE SCHUYLKILL.[1]

THE river Schuylkill has its origin from two small streams which rise in the Broad Mountain, in Rush township, Schuylkill Co. Following its windings to where it empties into the Delaware, which is five miles below Philadelphia, its total length is about one hundred and twenty-five miles, flowing in its general course, a southeasterly direction. Its principal tributaries in Schuylkill County are the Little Schuylkill, Bear, and Tumbling Creeks; in Berks County, Maiden and Tulpehocken Creeks; in Montgomery County, Manatawny, Perkiomen, and Stony Creeks; in Chester County, Pigeon and French Creeks; and in Philadelphia, the Wissahickon. Following its courses the Schuylkill laves the shores of Montgomery County for about forty miles.

On it in this distance are located nine townships and six boroughs, namely: Pottsgrove, Limerick, Upper Providence, Lower Providence, Norriton, Plymouth, White Marsh, Upper Merion, and Lower Merion townships; and Pottstown, Royer's Ford, Norristown, Bridgeport, Conshohocken, and West Conshohocken boroughs. Within these limits it is spanned by no less than thirteen noble bridges; railroads pass on its eastern and western margins, while itself has been made navigable for boats of one hundred and eighty tons. These grand improvements, wonderful to relate, have been chiefly effected within three-fourths of a century. They show the energy, the thrift and enterprise of our countrymen in these latter days, for two hundred and sixty-eight years have passed away since its first discovery by the European. What a subject is here offered for reflection!

Within these limits there are no mountains, though the country is most agreeably diversified by undulating hills and valleys, interspersed with towns, villages, and various manufacturing establishments, all beautifully situated by its banks, or nestled near by in some lateral valley. Though not on a grand scale, yet few valleys in any country for the same distance can boast of more lovely and varied picturesque scenery, sometimes meandering through broad cultivated fields and fertile plains, on which are studded, like gems in a casket, substantial stone houses and barns; next, on some eminence, may be seen an elegant country-seat; then it sweeps past bits of wood-

[1] By Wm. J. Buck.

land, tufting the hill-slopes, or contracted by a bolder bluff of rocks; then, again, follow in succession the park-like islands, so gently reposing on its bosom, and the long stretches of green meadow. Here is to be found the *utile et dulce* of the ancients to a greater degree than perhaps in any other section of equal extent in our wide-spread republic. And however much the hand of improvement may alter this valley it will still present those ever-varying succession of scenes which charm the landscape and are the admiration of every traveler.

In the year 1609, Capt. Henry Hudson, an Englishman in the service of the Dutch East India Company, it is believed, touched at the mouth of what is now known as Delaware Bay; but, finding shoal water and fearful of grounding, he retired, and in a few days after entered the harbor of New York and sailed up the river to which his name has been given. In the summer of 1610, it is said, Lord Delaware, while on his voyage to Virginia as Governor, entered the bay which now bears his name, as well as the large river that empties into it. In 1612 the Dutch commenced settlements at Fort Orange, now Albany, and at Manhattan Island, the present site of the city of New York. Capt. Hendrickson, a Dutchman, having built a yacht at Manhattan, called the "Onrust," which in English means *restless*, of only sixteen tons burden, set out on a voyage of discovery in 1616. From a map which he made of this expedition, it would appear as if he had sailed along the coast from Nova Scotia to the capes of Virginia. While on this trip he entered Delaware Bay and ascended its river as far as the Schuylkill, which he entered a short distance, and in consequence is, therefore, entitled to the honor of being its discoverer.

The origin of any name that has for a long time been applied to an object which in itself is permanent and likely to remain so is ever interesting to the inhabitants of the vicinity, especially when of a local nature. In consequence, before proceeding further in this undertaking, it may be well to venture on an explanation, if not rather an investigation of the name of Schuylkill, as well as of several others that have been applied to it. The Indians, it appears, had several names for this stream. One was "Nittaboc-kunk," which we know was applied in 1655, if not earlier. In the deeds of purchase from the Indians to William Penn, in 1683 and 1685, it is called "Manaiunk." John Heckewelder, the missionary, says it was called by the natives "Ganschowehanne," which signified, in their language, a stream whose falls and ripples make a noise. Mr. Heckewelder's statement is doubted, for the reason that no authority has yet been found to corroborate that the Indians had ever called it by this name. The Swedes, as may be seen on Peter Lindstrom's map of "New Sweden," made in 1655, also called it the "Linde Kilen," or Linden Stream, from the large trees of this kind that grew along its banks. Its present name of Schuylkill was given it by the Dutch, very probably by Capt. Hendrickson, in 1616; if not, it bore this name at least seventeen years later. By means of a rare work, entitled "Woordenbock der Nederduitsche in Fransche Taalen," by François Halma, published at Amsterdam, in 1729, we are enabled to give some light as to the origin of the Dutch name of this stream. Schuil, or Schuilen, in the Dutch signifies *concealed* or *hidden*, that is, by land or otherwise; Kil signifies a *channel, stream*, or *river*. Therefore the meaning of Schuil-Kil, or Schuilen-Kil (the way it is spelled in the Dutch, and as it should be now written), is Hidden River, or Concealed Stream. This name was given it by its discoverers from the fact of its mouth being so concealed by several low islands that the river cannot be found till actually entered, to the truth of which the writer can vouch from personal observation while ascending the Delaware and entering the Schuylkill.

Respecting a knowledge of this river, we can also glean some valuable additional information from early maps. The map of New Netherlands accompanying John Ogilby's "America," published at London in 1671, is remarkable for having it denoted thereon as the "Schuylkill," precisely the orthography of this day. According to Roggeveen's map, published at Amsterdam in 1676, its stream is represented up to about the present town of Manayunk. In Gabriel Thomas' "Historical and Geographical Account of the Province of Pensilvania," printed at London in 1698, the Schuylkill is represented from its union with the Delaware upwards of one-third its length, with the Wissahickon, Perkiomen, and the Manatawny, and their several leading branches emptying therein, with great accuracy considering so early a date, clearly demonstrating that at that time all of the present territory of Montgomery County must have been pretty well explored. In consequence this map possesses an unusual interest, which it appears has hitherto entirely escaped the observation of our historians.

Orders were given in 1633 to Arent Corsson, the commissary of Fort Nassau, by authority of Governor Van Twiller, of Manhattan, to purchase a tract of land on the Schuylkill on which to erect a fort; for the Dutch had this year commenced upon its waters the vigorous prosecution of the fur trade with the natives, particularly for that of the beaver, regarded as not only the most valuable but profitable of all the peltries. This traffic had so increased along this valley that in 1643 no less than two thousand one hundred and twenty-seven packages of skins were shipped at one time to Europe. By 1648, Corsson concluded his purchase from several Indian chiefs to the satisfaction of the West India Company, a record of which was placed in their office. The fort was now soon completed, called "Beversrede," and was stated to be a place remarkably well situated, and was named thus on account of the beaver trade which was carried on there so extensively with the Indians. This fort, it is

supposed, stood at or near the present Gray's Ferry, near the lower or western extremity of the city of Philadelphia. This trade, it appears, had increased so by 1656 that the documents of the company speak of it as the "great beaver trade of the Schuylkill." The result was that the business so stimulated the enterprise of the Indians that by constant and persistent trapping and hunting the animals became scarce and higher prices were demanded. These skins were also used for currency, and in the payment for imported goods; the standard value fixed on each by the Governor was eight guilders, or 13*s.* 4*d.*, equivalent to three dollars, no inconsiderable value for that time. Their greatest resort, the Little Schuylkill, in consequence was called by the Delaware Indians "Tamaquan," signifying the Beaver Stream, from whence *Tamaqua*, the name of this animal. The Dutch under the auspices of the company, being actuated by mere traffic and a love for gain, did little for the progress or development of the country, hence at last their easy subjugation by the English.

Though unknown to the generality of our people, the Schuylkill was about a century and a half ago the scene of a violent struggle between those who resided on its shores in this county and those who navigated its waters in canoes from the upper country, now better known as Berks, while on their voyages with produce to the Philadelphia markets. This was a contest that lasted many years, and in which both parties contended for their respective interests, which here unfortunately came in conflict. With what novelty at the present day must we view such a struggle, when we reflect on the many and mighty changes that man and time have wrought on this river. When we behold its canals, with their deeply-laden boats, its several railroads, with their long dark trains, the many thriving towns and villages that adorn its banks, and the many busy manufactories and quiet, pleasant villa residences, what a tale is told of progress! To the period to which we refer hamlets and villages were unknown; even the spot where is now our populous county-seat was perchance unmarked by a single house. The hills and the valleys were covered with their majestic ancient forests to the very shores, with the exception of here and there, where occasionally the hardy settlers had effected clearings and erected rude log dwellings. The contrast is enough to make one smile, especially now, when we reflect that the dispute which we intend to speak of simply originated from the obstructions placed in the channels of the Schuylkill by the shoremen for the purpose of assisting them to catch fish, and which considerably impeded, if it did not really render the navigation thereof dangerous.

It appears that as early as 1683, when William Penn and his colonists had not been a year in this country, that an act had been passed against the erecting of racks, wears, or dams in any navigable waters which might otherwise hinder the free intercourse thereon, and also tend greatly to diminish the brood of fish. Through the influence of Governor Penn another act was passed in the year 1700, with the intent of more effectually securing this object. After this, from what we have been enabled to ascertain, the matter remained quiet for a number of years, or with but little agitation, till in May, 1724, when the Governor's Council introduced "A bill entitled an act for demolishing and removing fishing dams, wears, and kedles set across the river Schuylkill," which was read and ordered to be returned with amendments. It next appears that the Council on the 15th of August, 1730, passed a law entitled "An Act to prevent the erecting of wears, dams, etc., within the river Schuylkill." Yet even this was found to be not altogether sufficient. It was by an act passed in 1734 further strengthened and rendered more effectual. The shoremen made a strong effort, in the years 1735 and 1736, to get an amendment, or rather a repeal, so as to get permission to erect wears in the months of April and May of every year, which was as warmly resisted by the navigators, or those living on the upper parts of the Schuylkill. The Governor, Patrick Gordon, being also opposed to any permission of the kind being given, the shoremen at length yielded so far as to look for any redress for their grievances from the Legislature.

It became a matter of complaint against the shoremen that for several miles above the racks and wears, they were in the habit of riding their horses in the river and striking the water as they came downwards with stakes and long brushes, so as to drive and frighten the fish into them, to their great diminution; that they carried stones into the river to hold the stakes and wears, which not only obstructed but rendered navigation difficult and dangerous. They were also charged on these occasions, while chasing fish, of bringing the young people together, who would become riotous and quarrelsome, "which was a reproach to good order, peace, and tranquillity." A number of depositions were taken in March, 1732, by George Boone, a justice of the peace residing in the township of Oley, in the present Berks County, but then belonging to Philadelphia, as did likewise the intervening territory now comprised in Montgomery. These Mr. Boone, who was equally interested with his neighbors, transmitted to the Governor and Legislature, and the result was the stringent enactment of 1734, to which reference has been made. To these depositions we are indebted for the following adventures encountered by the navigators of Amity and Oley townships while on their canoe voyages to Philadelphia in 1731 and 1732.

Marcus Hulings states that as he was going down the Schuylkill with a canoe loaded with wheat it struck against a fish-dam and took in a great deal of water, which damaged the wheat considerably, causing nearly a total loss of the load. He further says that on another occasion his canoe got in a similar

MAP OF PENNSYLVANIA AND WEST JERSEY, 1698.

predicament, and he would have lost his whole load of wheat if he had not leaped into the river, and with much labor succeeded in preventing it from swinging around, otherwise it would have been capsized by the current. In so doing he "suffered very much in his body by reason of ye water and cold." Again, on another occasion, he got fast on one of the rack-dams, and only by great hazard escaped with his life and freight. In the month of February, while it was extremely cold, Jonas Jones relates that he got "fast on a fish-dam, and to save his load of wheat was obliged to leap into ye river to ye middle of his body, and with all his labor and skill could not get off in less than half an hour; afterwards proceeding on his journey with ye said clothes, they were frozen stiff on his back, by means whereof he underwent a great deal of misery." The next sufferer we shall mention was Jacob Warren, who relates that his canoe, loaded with wheat, got fast on a dam, when he and his partner were forced into the river, and while one, with all his power, was obliged to hold the canoe, the other had to open a passage to get through, which with great difficulty was effected.

Isaac Smally affirms that in going down the river with one hundred and forty bushels of wheat he got fast on a rack-dam, "and in order to save ye load from being all lost he was, much against his mind, obliged to leap into ye river, the water being to his chin, frequently dashed into his mouth, where between whiles he breathed, and he and his partner held ye canoe with great labour, while a young man there present ran above a mile to call help to get off." Jonas Yocum and Richard Dunklin also state that they got fast on a fish-dam with a canoe, on board of which was Dunklin's wife and child, besides sixty bushels of wheat, and that for more than an hour they were in imminent danger of being overset and drowned. Barnaby Rhoades relates how he got fast with his canoe on a fish-dam for several hours in the winter season, when, being without any assistance, he had to suffer considerably from the severity of the cold, besides being in danger of losing both his life and load. The sufferings of the complainants might be much extended, but shall let this suffice, without going into details, that among them could also be mentioned Walter Campbell, George Boone, John Boone, and several others, who had been at divers times fast with their canoes on the fish- and rack-dams in the Schuylkill, and to preserve their loads had been forced at different times to leap into the river at the peril of their lives to save their property.

The freight carried in some of their canoes shows to what a prodigious size the timber had attained at the arrival of the early settlers, for it should be recollected that they were always hewn from out a single trunk. William Penn, in a letter from Philadelphia, dated 30th of 5th month, 1683, to Henry Savell, in England, mentions of his having seen a canoe made from a poplar-tree that carried four tons of bricks. Isaac Smally's canoe, as has been stated, carried one hundred and forty bushels of wheat, which is a still heavier load, and consequently must have been larger. Our information so far has been to favor the cause of the navigators, but the shoremen no doubt believed that they had just reasons to complain from the stringent enactments passed against them. Their dams and wears were formed at a considerable expense and labor, for the sole purpose of supplying fish to their families. They were always placed convenient to their residences, and near their own lands. Generally the most advantageous place for them was where they were the most detrimental to the interests of navigation, such as below the mouths of creeks, and where islands and shallows rendered them of easy construction. The navigators, too, on many occasions did much injury by breaking through their dams and maliciously destroying them, with the racks, wears, and baskets. Nay, the shoremen charged them with stealing at divers times the proceeds of their honest labor, the fish.

Thus between 1731 and 1740 there was an intense excitement produced by these conflicting interests along the hitherto peaceful valley of the Schuylkill. Many deeds of heroism were achieved on both sides and prodigies of valor performed which no chronicler has thought proper to transmit to posterity. The result, however, was that at length it terminated in open war between the parties. Fleets of canoes would put off on the voyage together, for the purpose of mutual protection to themselves and the mutual destruction of all fish-dams, wears, and baskets. On the other hand, the shoremen would congregate in their respective neighborhoods for the protection of their property thus assailed, and should any unlucky wights get fast with their canoes or venture too near the shore, they would bring their artillery to bear on them in a shower of stones. The navigators, being generally the greatest sufferers, at length concluded to call on the magistrates for assistance, when William Richards, the constable of Amity township, received a warrant from George Boone, Esq., "one of his Majesty's justices of the peace" for Philadelphia County, to remove the said obstructions as the true authors of the mischief. What Mr. Richards accomplished in the undertaking we shall leave him state in his own words, given on oath before Ralph Asheton, Esq., and corroborated by Benjamin Milliard, who was one of his assistants on this memorable affair, which happened the 20th of April, 1738.

Having "received a warrant requiring him to take to his assistance such persons as this deponent should think proper, and go down the Schuylkill and remove all such obstructions as should be found in the said river. In obedience to which warrant took several persons, inhabitants of the said county, as his assistants, and together with one Robert Smith, constable of Oley, who had received a warrant to the same purpose, went down the said river, in three canoes, to

Mingo Creek, where they found a large number of racks and obstructions in the said river, and saw four men upon an island near the said racks; that this deponent and company removed the said racks without receiving any opposition. From thence they proceeded down the river to the mouth of Pickering's Creek, near which they found several racks across the said river to an island, which racks this deponent and company also removed. Immediately about the number of two hundred men came down on both sides of the river, and were very rude and abusive, and threatened this deponent and his company. Expecting from the ill language and threats given that some mischief or a quarrel would ensue, he took his staff in his hand and his warrant, and commanded the said men, in the king's name, to keep the peace, and told them that he came there in a peaceable manner, and according to law, to move the racks and obstructions in the river, upon which some of the said men damned the laws and the law-makers, and cursed this deponent and his assistants; that one James Starr knocked this deponent down in the river with a large club or stake, after which several of the said men attacked this deponent and company with large clubs, and knocked down Robert Smith, the constable, as also several of his assistants; that one John Wainwright was struck down with a pole or staff, and lay as dead; that this deponent and company, finding that they were not able to make resistance, were obliged to make the best of their way in order to save their lives; proceeded down the river, in order to go to Philadelphia, to make complaint of the ill usage they had received. As they came to Perkiomen Creek they found another set of racks, which were guarded by a great number of men. That this deponent and company requested the said men to let them go down the river, they would not meddle with their racks; upon which the said men abused and cursed this deponent in a very gross manner, that they should not pass them. One of the said men called out aloud, and offered five pounds for Timothy Miller's head, who was one of the deponent's assistants; and afterwards the said men pursued this deponent and company, who, for fear of being murdered, made the best of their way with their canoes to the mouth of the Perkiomen Creek, and then went ashore, and left their canoes there, with clothes, which are since reported split in pieces and the clothes turned adrift."

This affair reached the heads of the government, whereupon the Hon. James Logan, president of the Council, issued a proclamation and a warrant, April 25, 1738, for the arrest of the "rioters," who are "to be proceeded against according to law, and that they, the said justices, exert the powers wherewith they are invested for the preservation of his Majesty's peace and the good order of government in those parts where the late tumult arose, or others may be likely to arise. And the sheriffs of the said counties of Philadelphia and Chester, respectively, are hereby enjoined and required, with a sufficient assistance, if need be, to cause the warrants to be duly executed." This is the last official act we have been enabled to find on the subject, from whence we conclude that the shoremen, after contending for half a century, to some extent at least gave way before the majesty of the law, and the navigators, the fish, and the waters of the Schuylkill were permitted, till a recent time, to pass on less obstructed. Mingo, Pickering, and Perkiomen Creeks still retain their time-honored names. The same islands and channels are there, but the people are changed. The inhabitants of Limerick and Upper and Lower Providence townships, with those on the opposite side of the river, are reckoned now among our most peaceable citizens. The contest between the navigators and shoremen is long, long past,—it might be said long, long forgotten,—but the wand of the antiquary is mighty. Out of old musty tomes it may recreate a world to live again in imagination, as it once did in reality.

That considerable importance was attached to the navigation of the Schuylkill at an early period has been already shown in the contest between the navigators and the shoremen. Even William Penn, in his proposals for a second settlement in the province of Pennsylvania, published in 1690, alludes to the practicability of effecting a communication by water between a branch of the Schuylkill and the Susquehanna. This, the reader should remember, was over half a century before canals were known in Great Britain. However, nothing was done, we believe, towards improving its navigation for a considerable length of time, though the matter was occasionally agitated. To promote the same an act was passed by the Assembly, March 14, 1761, from which we give the following extract: "Whereas, the river Schuylkill is navigable for rafts, boats, and other small craft in times of high freshes only, occasioned by the obstruction of rocks and bars of sand and gravel in divers parts of the same; and whereas, the improving of the navigation of said river, so as to make it passable at all times, will be very advantageous to the poor, greatly conductive to the promotion of industry, and beneficial to the inhabitants residing on or near said river, by enabling them to bring the produce of the country to the market of the city of Philadelphia, and thereby increase the trade and commerce of the province; and whereas, divers of the inhabitants of this province, desirous to promote the welfare of the public, have subscribed large sums of money for the purpose aforesaid, and, by petition to the Assembly, have requested that commissioners may be appointed by law to take, receive, and collect the said subscriptions, and such others as shall hereafter be given or subscribed, and to apply and appropriate the same for and towards the clearing, scouring, and rendering the said river navigable as aforesaid."

To carry out this measure Joseph Fox, John Hughs, Samuel Rhoads, John Potts, William Palmer,

David Davis, Mordecai Moore, Henry Pawling, James Coultas, Jonathan Coates, Joseph Millard, William Bird, Francis Parvin, Benjamin Lightfoot, and Isaac Levan were appointed commissioners. This act had also for its object the preservation of fish, especially the shad, herring, and rockfish, which ascended this stream annually in great shoals from the sea. For this purpose the commissioners were empowered not only to destroy but to prevent the erection of all wears, racks, fish-dams, and baskets within the same. Several of the commissioners mentioned having died, a new board was appointed by the Assembly in 1773 to carry out the measures contained in the act of 1761. For this purpose David Rittenhouse, Anthony Levering, John Roberts, William Dewees, Jr., David Thomas, James Hockley, Thomas Potts, Mark Bird, James Starr, Jacob Kern, and John Pawling, Jr., were selected. Several of this number, with David Rittenhouse, proceeded in 1773 to an examination of the channel, and estimated the cost of clearing the river from the Falls above Philadelphia to Reading at eleven hundred and forty-seven pounds. This amount included the sum of one hundred and ninety-two pounds from the Falls to Spring Mill, a distance of over seven miles, regarded the most expensive portion. It is supposed that but little was done at this time towards the improvement of its navigation, which the approaching troubles of the Revolution must have checked.

We hear of nothing further on this subject until during the encampment of Washington and his army at Valley Forge, when it became a question as to a means of procuring supplies. Charles Pettit thus wrote from the camp, May 16, 1778, to Thomas Wharton, Jr., president of the Supreme Executive Council of Pennsylvania: "The necessary transportation of stores and forage is so great that we wish to improve the little water-carriage left in our power to the best advantage. For this end we have got a number of boats now in use on the Schuylkill, which answer the purpose very well when the river is pretty full, but it is now so low that the navigation is much obstructed. Maj. Eyre has surveyed the river from Reading hither, and informs me it may without difficulty be rendered navigable through the summer season for the boats lately constructed, which are calculated to draw but little water in proportion to the burden they carry. The river is now so low, and if a number of the people of the counties bordering on the river could be assembled at each of the passes nearest to their respective habitations, the work might be completed in a very few days. Maj. Eyre informs me the expense will not probably exceed two thousand pounds."

Accompanying Mr. Pettit's communication was a report on the condition of the several fords of Schuylkill between Reading and Valley Forge. We extract that portion relating to Montgomery County as possessing interest in showing the changes that may have since been made at these several places above a century ago: "Jacob Floyd's Ford, 21 miles below Reading, 14 inches of water; Pottsgrove Ford, 2 miles, 14 inches; Mr. Bechtel's, 1 mile, 6 inches; Mr. Potts' Dam, 4 miles, 5 inches; Bombay Hook Ford, 6 inches; John Heisler's Ford, 2 miles, 12 inches; Daniel Matts' Shoals, 1 mile, 10 inches; Edward Barker's Ford, 1 mile, 6 inches, with small rocks; Barker's Shoals, ¼ mile, 6 inches; George Ross' Fish-dam, 1¼ miles, 12 inches; Erasmus Lewis' Shoals, 1½ miles, 6 inches, rocky; Frederick Lower's Shoals, ½ mile, 6 inches, rocky; Lawrence Nipple's Ford, ½ mile, 6 inches, level bottom; Adam Hallman's Long Shoals, 2½ miles, 7 inches; Black Rock, 4 to 20 feet; John Buckwalter's Fish-dam, 2 miles, 6 inches; Gordon's Ford, 7 to 15 inches; French Creek, 1 mile, and Moore Hall, 9 inches; Richardson's Ford, 1 mile, 7 inches, rocky; Pennypacker's, ½ mile, 7 inches; Pawling's Ford, 7 inches; Sullivan's Bridge, 8 to 12 inches, stony."

An account of the early fords and ferrying-places of the Schuylkill as an aid to traveling facilities before the construction of bridges is an interesting subject to the antiquary, and will be more fully treated in the history of the several townships and boroughs, where they more properly belong. During high water fording was rendered dangerous from the greater depth and velocity of the water, and with the increase of travel ferriage became more common, being made likewise less dangerous during the winter season from the masses of floating ice, or when not of sufficient thickness to permit wagons to cross upon it. Swedes' Ford was a noted fording-place even back to 1730. A tavern was there in 1760, and on its sign was a representation of a ferry. A rope was here stretched across the river in a sloping direction, securely fastened to a tree or a post or building on either shore. To this a stout iron ring was secured, to which the boat or scow would be fastened, while it would slide along, propelled more or less by the current. These ropes, so necessary in securely transporting passengers, horses, wagons, and freight, were occasionally cut and purloined by some evil-disposed persons. In consequence the ferrymen petitioned the Assembly for protection from these outrages on their property, when an act was passed Feb. 8, 1766, making such offenses along the Schuylkill finable in the sum of ten pounds to each. The first bridges to cross the river within the county were built at Flat Rock and Pawling's about 1810, at Pottstown, 1819, and at Norristown in 1829, not until more than a century had elapsed since its settlement, so slow was the spirit of enterprise.

John Adlum and Benjamin Rittenhouse, who had been appointed commissioners to examine into the feasibility of still further improving the navigation of the Schuylkill, proceeded on this labor in the fall of 1789 and the following year. Their report, addressed to Thomas Mifflin, president of the Supreme

Executive Council, was printed in 1791, from which we condense the following: "We conceived it most advisable to examine that part of the Schuylkill lying between Spring Mill and the Great Falls, being that part of the river said to be the most dangerous to the navigation of boats from Reading to this city. The 2d of November we began at Spring Mill, and proceeded down the river, carefully noting every obstruction to be removed and necessary improvements to be made, with the probable expense attending the same. On the 7th we set off for Hamburg, near the foot of the Blue Mountain, and proceeded down towards Reading, taking the courses, measuring the distance, and taking the quantity of fall in the river down to the ford opposite said town, carefully noting the fish-dams, the rocks, and other obstructions necessary to be removed. As it appears probable the principal advantages that can accrue from that part of the river, at least for some time, will be in rafting of lumber down to the city, little more is necessary at present than removing a few rocks, some fixed and others loose, lying in the channel, as the expense will be small to render the passage safe for that purpose. At Reading we hired a boat, and came down the Schuylkill to where we first began, and it is with great pleasure we can say we have, on a careful examination, found the Schuylkill River an object of much greater consequence to the State than we before had an idea of. The channel we find almost uniformly on the east side, in one instance near two miles without variation, generally very near the shore, and we are of opinion that it be made navigable for boats of eight or ten tons burthen at all seasons, except when obstructed by ice, at the expense estimated.

"We conclude our report by remarking that we have in the prosecution of this business observed with regret the great number of fishing-dams erected in defiance of the law, as a nuisance of the worst kind. In many instances, where they have been continued for a number of years, the sand and gravel has gradually settled amongst the stones, and by that means formed a firm bar or shoal from one side of the river to the other, which will be expensive to remove. We therefore are of opinion that if an effectual stop is not put to that mischievous practice every attempt to render the navigation beneficial will be abortive. The only certain method we can conceive to put a stop to the practice in future will be to lay a heavy penalty on the proprietors of the lands where such dams shall be erected." The expense estimated in this report from Philadelphia to Reading was £1519 13s., which sum included £270 for clearing the Schuylkill from the Falls to Spring Mill. Through these efforts, besides the removal of rocks and other obstructions, dams were made at various places to deepen the water and increase the volume of its current, so that boats of a greater draught could be used.

An act was passed the 29th of September, 1791, to incorporate a company to connect the Schuylkill with the Susquehanna by a canal and slack-water navigation, and also to improve the navigable waters of the Schuylkill from the Lower Falls, a few miles above Philadelphia, to Reading, for which purpose the Assembly appropriated two thousand five hundred pounds as an encouragement to the enterprise. A company was also incorporated April 10, 1792, to make a canal from Norristown to the river Delaware at Philadelphia. From the former place the Schuylkill was to be temporarily improved, and thus form with the works of the former company an uninterrupted water communication with the interior of the State. One of the objects, also, in constructing the canal from Norristown was by this means to furnish Philadelphia with water. The undertaking was commenced by the two companies, and at the close of 1794 they had expended four hundred and forty thousand dollars, and had nearly completed fifteen miles of the most difficult part of the two works, six miles of which was on the east bank of the Schuylkill. Some of the principal stockholders having become involved at the time in commercial difficulties, and declining to pay in their installments, they were compelled to suspend operations. As an additional inducement to revive the companies the State passed an act April 17, 1795, to empower them to raise by way of lottery the additional sum of four hundred thousand dollars, for the purpose of completing their works, as mentioned in the acts of incorporation. Naught availed, though this offer induced several abortive attempts, which only tended to continue in these companies a languishing existence. Below Norristown, beginning near the Swedes' Ford bridge, by the banks of the Schuylkill, may still be seen the excavation made for this canal for some distance above the river. It remains there, a monument of an undertaking commenced in 1792, but never finished.

In the year 1811 the two companies were united as the Union Canal Company, and in 1819 and 1821 the State granted further aid by a guarantee of interest and a monopoly of the lottery privilege. In consequence of this legislative encouragement, there were additional subscriptions obtained to the stock of the company to resume operations in 1821. The line was relocated, the dimensions of the canal changed, and the whole work finished in about six years from this period, after thirty-seven years had elapsed from the commencement of the work and sixty-five from the date of the first survey by David Rittenhouse and Rev. William Smith. This canal is eighty miles in length, extending from the Schuylkill four miles below Reading, where it connects with the works of the Schuylkill Navigation Company, thence up the Tulpehocken Creek to the Swatara, and thence down the same to Middletown, on the Susquehanna, thus connecting the two rivers, which William Penn conceived in 1690, but which required an interval of one hundred and thirty-seven years to be put into prac-

tical operation. The whole cost of this work was about two million dollars.

The Schuylkill Navigation Company was incorporated under the act of the 8th of March, 1815, by which they were required to commence operations at each end of the route simultaneously; their labors, in consequence, were rendered nearly useless until the whole line would be completed. This certainly was an ingenious plan in the Assembly to insure the completion of the undertaking. This work is about one hundred and ten miles in length, beginning at Fairmount, Philadelphia, and extending to Mill Creek, at Port Carbon, in Schuylkill County. It consists of a series of canals sixty-three miles in length, and slack-water-pools for forty-seven miles, produced by thirty-four dams, which feed the canals. This work in its whole length was made three and a half feet deep, with a width of no less than thirty-six feet at the surface. There were one hundred and nine locks, of six hundred and twenty feet ascent, each eighty feet long and seventeen broad, and one tunnel three hundred and eighty-five feet in length, the first, it is said, attempted in the United States. The whole cost of the line was two million nine hundred and sixty-six thousand one hundred and eighty dollars. It was commenced immediately after its incorporation, and finished in 1826. In 1818 it was sufficiently completed to allow the descent of a few boats, on which tolls were collected to the amount of two hundred and thirty dollars, which comprised the total of its first year's receipts.

In consequence chiefly of the great increase of the coal trade, it was determined to enlarge the capacity of the canal for a greater amount of business, which was accordingly done in 1846. Hitherto it had only admitted the passage of boats of sixty-six tons, but by the enlargement boats of one hundred and eighty-six tons are enabled to pass through its whole length of one hundred and ten miles, being one of the grandest works of the kind in the Union. As will be observed, a great improvement was made. The locks were reduced in number from one hundred and nine to seventy-one, and enlarged to one hundred and ten by eighteen feet, the width of its canals to not less than sixty feet, with a depth of at least five and a half feet. To guard against the danger of a deficiency of water, to which the navigation is exposed in dry seasons, the company has erected several large dams upon tributary streams at the head of navigation from which to draw supplies in cases of deficiency. The dam at Silver Creek covers nearly sixty acres, and is estimated to hold sufficient water of itself to float about 120,000 tons of coal annually to market. As may be expected, the business of this great work has increased wonderfully. In 1825 this line brought about 5000 tons of coal to market; in 1827, 31,300 tons; and in 1857 it was 1,275,988 tons, showing that forty tons had now gone over the works to one thirty years previously. It is stated on reliable authority that the coal consumed by the various furnaces, forges, and manufactories in the valley of the Schuylkill amounted in 1860 to 500,000 tons annually, and now no doubt has reached double that amount. Thus we see how greatly important this trade has become. We have said that the Schuylkill flows by Montgomery County about forty miles, in which distance the Navigation Company has erected six dams across it, which at Norristown and Conshohocken afford valuable water-power. This great work has been leased by the Philadelphia and Reading Railroad Company for several years, under whose management it is now conducted.

After having treated on the several means adopted for the improvement of the navigation of the Schuylkill, it now becomes us to give some account of the various kinds of craft used for this purpose. In the prosecution of the beaver trade by the Dutch and the Indians the canoe must have been their chief dependence for travel and freight. We know that some of these were so large as to carry in periods of high water as much as one hundred and forty bushels of wheat before 1732 to Philadelphia from a distance of at least ten miles beyond the upper limits of the present county. The Swedish settlers of Morlatton had a strong attachment to the Schuylkill, and were skilled in its navigation with the canoe some time even before 1716, transporting themselves and their produce chiefly by this means to the mill, the store, the church, and the market. We even ascertain that to their weddings and funerals they were frequently thus conveyed. As has been stated, with the greatest care they were therein at almost any time liable to accident Abraham Adams was drowned in the Perkiomen Creek by falling out of his canoe, April 5, 1738. Thomas Lewis, in an advertisement in 1752 of his mill property for sale near the mouth of Mingo Creek, mentions among its advantages that "loaded canoes can come to the mill-door."

With the improvement of the navigation the "Reading boat," as it was called, became more and more introduced, as a decided improvement over the clumsier canoe, for the general purposes of transportation. By the Revolution it had been largely substituted as much more convenient and expeditious. These boats were long and narrow, sharp at both ends, and carried from seventy-five to one hundred barrels of flour. From their size were chiefly used in freshets or high water, and for their management required a crew of from three to five men. Coming generally from Reading, they were besides called "long boats." They drifted down rapidly with the current; but to take them back was chiefly done with poles shod with iron, which was laborious work. Their return cargoes in consequence had to be light. Between Spring Mill and the Lower Falls the river descended twenty-four feet in about six miles, and it was here, at the most difficult places, as at Flat Rock, an exciting scene to see these boats shoot rapidly through the turbulent

current, at times almost lost to sight. The down-trip took from one to two days, and the return sometimes as many as five or six. They carried flour, grain, provisions, and other articles, besides, occasionally, passengers. During the war of 1812, Capt. Daniel D. B. Keim's company of soldiers from Reading and Capt. Hanley's, of Pottstown, were transported in this manner to Philadelphia.

In 1858, Rachel Roberts, of Bridgeport, then in her seventy-eighth year, informed the writer that in her youth she went with her father to Philadelphia in a canoe, and in passing through the Falls became greatly frightened from the danger attending its unsteady motion and velocity. In returning, it had to be poled the greater portion of the distance. Canoes, Reading boats, and rafts were quite common in the river at that time, but the people had no knowledge of bateaux. Strange to say, she stated that there were taverns then along the shore for the especial accommodation of voyagers, which were known as boat-houses; although travelers carried their provisions along, yet they were often obliged to resort to these public-houses for lodging and other necessaries. My informant was the great-granddaughter of Mats and Breta Holstein, among the early settlers of Upper Merion. This canoe-trip was probably made about 1790. Some knowledge of the commerce on the river may be gained from a statement made in a Reading newspaper under date of March 6, 1802: "Within the present week were taken down on the Schuylkill to the mills and city of Philadelphia in the boats of this place in one day the following articles: 1201 barrels of flour, 1425 bushels of wheat, 17 tons of barr iron, 1492 gallons of whiskey, 365 pounds of butter, and 500 pounds of snuff. The whole amounted to upwards of one hundred and sixty tons, and would require, in the present condition of the roads, at least one hundred and sixty teams of good horses to haul the same to market."

Owing to the abundance of pine and hemlock timber among the mountains and sources of the Schuylkill, the first settlers, excepting a few hunters, came hither to avail themselves of this means for a livelihood. At first rafts were entirely constructed of logs, seldom over twelve feet in width and generally sixteen feet in length. Sometimes ten such rafts or sections would be fastened behind each other and laden with shingles; being yielding, though of so considerable a length, would readily, in favorable stages of water, pass over the shallowest places. When sawmills became more numerous, these rafts were more and more constructed of boards placed crossways to each other in alternate layers, securely fastened together by hickory withes. When the whole was arranged, a long oar was placed at each end for directing its course through the windings of the stream and where its channel was the safest. On these, shingles would also be piled and no inconsiderable quantities of lathe and scantling, until they would draw a depth rarely exceeding fifteen inches. Two or three men would be attached to one raft, and on a favorable rise of the water their provisions and other comforts would be hurried on board, and the hardy adventurers would proceed on their voyage to the distant market from the vicinity of the present towns of Port Carbon, Pottsville, and other sections of Schuylkill County, as well as the adjoining portion of Berks. The distance to Spring Mill would be often made in a day and a half, and to Reading in six or seven hours, a distance of nearly forty miles. Of course the

FLAT ROCK DAM ON THE SCHUYLKILL, 1828.

completion of the canal with its dams put an end to rafting, but not until it had caused the hills and valleys of that section to be pretty well denuded of its choicest timber, that had given employment to hundreds of saw-mills since gone to decay. It was from this source chiefly that the people of Montgomery County were supplied for some time with their best lumber for building purposes.

As soon as the canal was sufficiently completed an accommodation boat, as it was then called, was established in June, 1825, for the conveyance of passengers from Reading to Pawling's Bridge, making three trips a week. At the latter place they were transferred to a line of stages passing through Norristown to Philadelphia. The following year the packet-boat "Planet" commenced making regular through trips between Reading and the city. Mention is made that on her return, May 10, 1826, she carried sixty-four through passengers. In the beginning of June, 1829, the "Comet," of Norristown, succeeded in making five trips per week to Philadelphia. A newspaper of the time states that "we notice this in order that our friends in the city and country may have a chance of enjoying a pleasant ride. Those who go on business and would prefer expedition will take the stage,"—intimating that while the cost of travel was less it was not as speedy. As a consequence the stages at this time reduced the fare from one dollar to seventy-five cents; what the cost was by packet has not been ascertained. Several attempts were also made to establish steamboat lines between the aforesaid places. The first was by Capt. Hewit, about 1822. He made several trips to Norristown, but the detention was such in passing through the several locks that it discouraged him. Another effort was made in 1829, and also still later, but were soon abandoned.

As may be judged from what has been stated, the Schuylkill was noted from an early period for the abundance of its fish. Shoals of shad, herring, rockfish, and sturgeon would ascend its free and uninterrupted course every spring from the sea, furnishing to the hardy settlers along its banks no inconsiderable supply of food. The antiquarian, Samuel W. Pennypacker, of Philadelphia, has quite a collection of spear-heads or darts from four to six inches in length, collected from the shallow channels of the river in the vicinity of Phœnixville, that must from their size been chiefly used there for the capture of sturgeon. In 1784, 2792 shad were caught in the seine at the fishery at Pottstown, and in the following year 3701. Benjamin B. Yost, formerly register, aged seventy-two years, informed me in 1858, but a few weeks before his death, that he well remembered seeing shad and herring caught there in abundance. Rachel Roberts recollected also of numerous shad, herring, and rockfish being caught in the vicinity of Norristown near the close of the last century. Jacob S. Otto, in 1803, advertises a farm of three hundred and two acres for sale, bounded by the Schuylkill and Perkiomen, "where there is a shad fishery." Catfish Island is advertised in 1806 as containing nearly five acres, with the "privilege reserved by John and Henry Pawling to fish in the pool above and to draw out the net on its shore." In the spring of 1811 upwards of five barrels of shad were caught and salted down at the poor-house for the use of the paupers, as we learn from the directors' report for said year. William Bakewell, in offering his farm of two hundred acres for sale in 1813 at Fatland Ford, does not omit mentioning its "shad fishery." All this is indicative of the value the people then set on those fisheries. However, the construction of the several dams across the Schuylkill and the completion of the canal prevented the further ascent of the fish, and hence the supply ceased. Besides the goldfish and carp, the black bass was introduced from the Potomac in 1870, and their catching prohibited by law for three years. They appear to thrive rapidly, a few having been caught after the prohibited time with the hook that weighed from four to six pounds each. It is supposed from their voracious habits that the catfish, chub, sucker, and other fish, formerly so numerous, have thus been greatly diminished.

Although William Scull, in his map of the province, published in 1770, had denoted coal thereon at three places in the vicinity of the present Pottsville, and also on the Mahanoy Creek, yet some time elapsed before any attention was directed towards it. A meeting of the inhabitants of Schuylkill County was held Dec. 18, 1813, in the court-house at Orwigsburg, to take into consideration the propriety of rendering the Schuylkill navigable by dams and locks, by which means the coal and iron ore abounding there might be much more cheaply and expeditiously sent to market and prove peculiarly advantageous to that section. This early movement on the part of the aforesaid no doubt helped to direct further attention to the subject. The first coal sent by water of which there is an account was by Abraham Pott on flats in 1821–23, two or three trips being made in each year. He soon after had the "Stephen Decatur" built, which in 1824 carried twenty-eight tons of coal as far as Reading, a feat also performed by the company's boat "Pioneer." Several arks and boats are mentioned as having passed through Norristown on their way to Philadelphia loaded with coal in September of said year, indicating that the canal and navigation had been sufficiently completed for its accomplishment. The result of this was an announcement in the *Reading Journal* of Nov. 27, 1824, that "the present price of freight from Philadelphia to Reading is only twelve and one-half cents per hundredweight on the canal, whereas by land transportation the general price is forty cents."

Daniel Pastorius, of Norristown, advertised in January, 1825, that he had just received "several arks of Schuylkill coal, and families and smiths supplied

with any quantity on reasonable terms." On June 11th, thirteen boats are announced as having passed through the locks at Reading destined for Philadelphia from Mount Carbon with coal, and that the whole line could now be considered as finished. On the following July 2d forty boats are mentioned as having passed through Norristown with coal for the city. Respecting the early introduction of coal into Norristown, the *Herald* of October 26th gives us the following interesting information: "We are pleased to find that a number of our enterprising citizens have commenced the burning of stove coal. Grates and stoves are now fixing up in several of the offices, bar-rooms, and private dwellings in this borough. It is generally believed that coal at seven dollars per ton is cheaper than hickory wood at five dollars per cord." Poulson's *Advertiser* of September, 1827, states that the "Schuylkill navigation has improved and the trade on the river increased within a short period, far exceeding the most sanguine expectations. The scene of canal-boats with coal and iron and merchandise above and below Market Street bridge indicated great commercial activity. Between Market Street and Spruce Street there were this morning three large brigs of two hundred to two hundred and forty tons each and five large schooners and sloops loading coal from Mount Carbon for Newport, Boston, Providence, Albany, and other Eastern ports; also four schooners and sloops loading iron ore."

The *Norristown Herald* of July 8, 1829, announces that "ninety-seven boats, carrying two thousand five hundred and fifty-three tons of coal, a quantity of iron, flour, eleven hundred and twenty bushels of flaxseed, and other eatables, departed from Mount Carbon during the last week. We expect that about two hundred boats now pass up and down the river Schuylkill weekly. The tolls will greatly exceed any former year, and will pay a considerable part of the debts of the company." "The advantages we reap," says James Mease, in his "Picture of Philadelphia," "from the coal trade is of considerable moment, from the consideration that wood has become almost a drug, and we purchase it this year, Dec. 30, 1830, at from four to five dollars per cord, almost as low as it sells in the early part of the fall. Eighty-one thousand tons of coal have descended the Schuylkill Canal this season, producing to the various persons engaged in mining, hauling, trans-shipping, and transporting nearly five hundred thousand dollars. The freight and tolls continue high, the former being now two dollars and the latter one dollar per ton; but, notwithstanding this, it is expected that coal in 1831 will be sold for four dollars; now it brings from five to six and a half."

The original capacity of the navigation was for boats of twenty-eight to thirty tons, which by subsequent improvements was increased to sixty-six tons. The enlargement of 1846 and a somewhat later period enabled the scow "Hercules," belonging to Messrs. Kirk & Baum, of Pottsville, in the beginning of December, 1858, to pass through with two hundred and twelve tons, and the "Pilgrim," of Schuylkill Haven, with two hundred and thirteen tons, in 1860, drawing only five feet eight inches of water,—a capacity exceeding fourteen times that of the largest-sized Reading boats used sixty years previously, and which could then only ascend but little over half the present distance. The opening of the Schuylkill navigation was celebrated in what would now be regarded as a rather novel manner. It was completed as far as Reading July 1, 1824, and the 5th was selected for the event. A number of persons from Philadelphia, Reading, and neighborhood assembled on this day and embarked on board of the boats "Thomas Oaks," "Stephen Girard," "DeWitt Clinton," and "Reading Packet," and thus from Pottstown to the aforesaid place the first experiment of canal navigation was made in Pennsylvania to the entire satisfaction of those present. By order of the managers, the name of "The Girard Canal" was given to the said twenty-two miles of cut as a mark of respect to Stephen Girard, to whose liberality the company was so greatly indebted. To attend the reception of Lafayette at Philadelphia in September, four boats were dispatched from Reading filled with volunteers and passengers, besides several laden with coal from Mount Carbon, which was regarded collectively as a subject for triumph and congratulation.

For a few years the stagnation of the water by the erection of dams caused some alarm among the residents of the vicinity from the increase of fever and ague, but the reclamation and cultivation of the low grounds and other improvements have restored it fully to its former condition of healthfulness. The Norristown dam was not completed until 1828, its breast being eight feet high, with a width of eight hundred and eighty feet. It appears strange now to state that no tow-path was constructed for the use of horses until the latter part of June, 1825, when Col. Hunzinger dispatched a boat from Pottsville loaded with lumber drawn by a horse, it being the first attempt of the kind, at least from the upper section of the navigation. It appears to have been the original intention that the boats should be propelled by oars or setting-poles as formerly. As an after-thought for this construction, the company had to receive a special act of the Legislature. In some instances the boats previously were drawn by two men attached to long lines to the end of which sticks were fastened and held at the breast. The first trips occupied three and four weeks, which was reduced by the use of horse-power down to ten or eleven days in the spring of 1826.

The Schuylkill at times has been subject to severe freshets. In February, 1784, a destructive flood occurred in the breaking up of the ice. In October, 1786, another occurred which occasioned the river to rise at Pottstown eighteen feet, and brought down immense numbers of pumpkins. July 29, 1824, the

Schuylkill arose at Norristown thirteen feet, and brought down trees, boats, logs, boards, rails, hay, oats, and cord-wood that had been swept away by the rapidly descending current. The bridge at Flat Rock, undergoing repairs and a few days more would have completed, was again destroyed, causing a heavy loss to its contractor, Mr. Wernwag. However, the freshet of Sept. 2, 1850, surpassed all former ones in destructiveness, rising twenty-one feet above ordinary level, carrying away the bridges at Pottstown, Conshohocken, Flat Rock, and Manayunk, besides occasioning a vast amount of damage throughout the valley. Those that witnessed the scene will have occasion to hold it long in remembrance.

CHAPTER X.

STAGE LINES.[1]

With the introduction of railroads the palmy days of the stage-coach are over, which, by reason of its long and continued use as an important adjunct to travel, deserves notice in these annals. Montgomery County, located so near Philadelphia, with all its main roads leading there from the northeast, north, and west, including intermediate points, must necessarily in the past have been a great thoroughfare for numerous lines of stage-coaches in the conveyance of passengers, when no readier or better facilities for expeditious travel existed. This mode of travel has now gone out of usage, and although our local historians have as yet given little attention to its history, there are many facts and reminiscences connected with it well worthy of preservation.

The first through line of stages from Philadelphia to Baltimore and New York was established in 1756. To the latter city John Butler was the proprietor, the distance requiring three days, and the fare twenty shillings, or three pence per mile. Charles Bessonett in 1773 reduced the time to two days. The first line it is supposed that passed through the present territory of this county was that established by George Klein between Bethlehem and Philadelphia, on what was known as the King's Highway, but later the Old Bethlehem road. His first trip was made in September, 1763, in what he termed a "stage waggon." He started regularly every Monday morning from the Sun Tavern, Bethlehem, and returned from the city every Thursday morning, thus consuming a week in his round. His starting-place was from the King of Prussia, a noted inn on Race Street, and the charge through was ten shillings. This no doubt was the pioneer passenger line entering the city from either the north or the west. Bradford, in his account of the distances from the court-house in Philadelphia in 1772, thus mentions the King's road: To Rising Sun, 3½ miles; Mount Airy, 8½; Scull's, 10; Ottinger's, 12½; White Marsh Church, 13¼; Benjamin Davis, at the Spring House, 16; Baptist Meeting, near Montgomeryville, 23; Housekeeper's, 25; Swamp Meeting, 37; Stoffel Wagner's, 47; and to Bethlehem, 52¾ miles.

Housekeeper's must have evidently been at the present Line Lexington, from its distance above the Baptist Church. In 1797 a stage started for Bethlehem from Lesher's tavern, sign of the "Stage Waggon," located in Second Street below Race, on every Wednesday morning at ten o'clock, and was probably an opposition line.

The post-office was established at Bethlehem in July, 1792, and as a consequence an additional encouragement was given for the transportation of the mail. The stages now reduced their time to two days to the city, which in 1798 was brought down to one by the mail line. In 1802 the Bethlehem and Allentown stage left Philadelphia on Wednesday and Saturday mornings at five o'clock from the Franklin and Camel Inns. The latter place was in Second Street above Race. It appears that two lines were running to Bethlehem in 1820, both leaving Philadelphia on Sunday, Tuesday, and Thursday mornings at four o'clock. One started from Yohe's Hotel, in Fourth Street a few doors above Market; the other from the White Swan, in Race Street above Third. The Union line of stages for Bethlehem, Allentown, and Montrose, *via* Nazareth, Easton, and Wilkesbarre, departed from the latter place. This was an association formed by the proprietors of several lines to resist competition, which at this time was quite active.

About 1781, William Coleman, an energetic business man, established a line from Philadelphia to Reading, of which he was the proprietor, and drove himself for twenty-seven consecutive years. He started from the White Swan, in Race Street, every Wednesday morning at seven o'clock, making a trip every week. Having received the contract for carrying the mail in 1804, he started from the Widow Wood's inn, Reading, every Monday and Thursday morning, arriving in the city the same days. Returning, left Philadelphia every Wednesday and Saturday mornings. This arrangement existed from May 1st to November 1st. This line passed through Norristown, Trappe, and Pottsgrove, since called Pottstown. In the winter season he left the White Swan every Tuesday and Friday at two o'clock A.M. From Reading this line was continued to Harrisburg and Carlisle. Its stopping-place in Pottstown in 1806 was at the Rising Sun tavern, kept by Jacob Barr. Mr. Coleman, in August, 1808, opened an inn at Reading for the accommodation of his passengers, his stages arriving and departing there in several directions. In 1811 he put on an additional line from Pottstown to Philadelphia, leaving John Boyer's tavern every Tuesday morning at six o'clock, arriving in the city in the evening, and returning from the White Swan

[1] By Wm. J. Buck.

every Thursday morning at the same hour, the fare being two dollars and twenty-five cents. This is the last account given of Mr. Coleman, after an experience in staging of at least thirty years. In this last venture he announces in both English and German that "a sober and careful driver will attend the stage, so that passengers may travel with safety and pleasure." The "Gentlemen's Pocket Almanac," published in 1769, thus gives the distances from Philadelphia over the Reading road to Pottstown: To Robin Hood, 4 miles; to Plymouth Meeting, 14; to Bartlestall's, 18; to Perkiomen Church, 24; to Shrack's, 26; to Widow Lloyd's, 30; to Potts', 38 miles.

On the completion of the canal in the summer of 1825, passengers from Reading were conveyed in a boat to Pawling's Bridge, and there transferred to stages passing through Norristown to Philadelphia, making three trips weekly. The packet-boat "Planet," during the summer of 1829, continued to convey passengers from Reading to the city at the reduced rate of $2.25, going through in a day. In 1831 we learn that the stage for Reading and Pottsville still left its old place, the White Swan, daily at the early hours of 2 and 4 A.M. Ah, ye sluggards by rail, think of these sweet morning hours for travel on a cold winter's day! In December, 1839, the railroad was completed to Reading, and the shrill whistle of the locomotive along the Schuylkill Valley proclaimed the triumph of the iron horse over wearied flesh and bones, through mud and dust and snow-drifts, as well as over hill and dale and rugged pikes.

A daring robbery was perpetrated on the Reading and Harrisburg mail-stage at three o'clock on Sunday morning of Dec. 6, 1829, that at the time made no little excitement. It was committed by three armed men in disguise with lanterns on the Ridge road, a short distance beyond the present Girard College. The horses were seized, and with a flourish of pistols the lines were demanded from the driver, and were taken from off the gears. The passengers, *no less than ten in number*, were ordered respectively to get out, and their hands secured on their backs with their own handkerchiefs, when their pockets were rifled. When this operation was through the driver was permitted to secure his lines, while they decamped with the mail and the contents of several trunks. The plot was brought about by the rogues having ascertained in some way that a drover, known to carry considerable money with him, would be in this morning's stage. The drover was one of the passengers, and whether they succeeded in securing as much plunder from him as was expected is not known. Although he had frequently boasted of what he would do should just such an attempt be made on him, yet on this occasion he proved as meek as the rest.

The line to Lancaster was established in April, 1785, by Frederick Doersh and Adam Weaver, who state that their "Stage Waggon" will set out every Monday and Friday morning from the King of Prussia tavern, in Market Street above Third; and from the Black Horse tavern, Queen Street, Lancaster, every Tuesday and Saturday morning. Each passenger was allowed fourteen pounds of baggage. The fare was twenty shillings, "one-half to be paid on entering the name in the book." This stage passed over the Old Lancaster road for a distance of nearly six miles through Lower Merion. The mail line in 1820 started from 286½ Market Street daily (Sundays excepted) at 7 o'clock A.M. for Lancaster and Pittsburgh, the "Lancaster coaches" starting every morning from the Red Lion, 200 Market Street. There was in addition the "Accommodation" for Lancaster at 4 o'clock A.M. from 286½ Market Street, thus showing no inconsiderable amount of travel at this time towards the West. In 1831 the Lancaster and Pittsburgh mail-stage is mentioned as starting from 284 Market Street every morning at six and a half o'clock, and for Harrisburg, Pittsburgh, Erie, Reading, Pottsville, and Northumberland from 200 Market Street. The completion of the turnpike to Lancaster in 1794 must have subsequently proved highly advantageous to these several lines, especially during the winter season and early spring, when the condition of the roads was often very bad. In April, 1834, the railroad was completed to Lancaster, and through to Pittsburgh in 1854, which in consequence must have caused along this great thoroughfare considerable decline in stage travel.

John Nicholas in 1792 established a line from Easton to Philadelphia, starting on Mondays, and making one trip a week, stopping at the present Stony Point, Doylestown, and Willow Grove; leaving the "White Swan" every Thursday morning at six o'clock; fare, two dollars. It carried also the mail, a post-office having been established at Easton three years previously. In 1800 a semi-weekly line was placed on this route to Bethlehem by John Brock, Joseph Hillman, James Burson, Charles Meredith, Charles Stewart, Alexander McCalla, Elijah Tyson, and William McCalla, the fare through being $2.75, with the same charge for one hundred and fifty pounds of baggage. About 1810, Mr. Nicholas commenced three trips a week, making Doylestown a stopping-place for the night. In 1820 it started from the "Green Tree" inn, No. 50 North Fourth Street, on every Sunday, Tuesday, and Thursday at four o'clock A.M. Samuel Nicholas, on the death of his father, became the proprietor of the line, and was long its driver, to whom were joined in partnership William White, of Philadelphia, John Moore, of Danborough, and a Mr Wilson. About 1825, William Shouse, the proprietor of a hotel in Easton, and Col. Reeside introduced a daily opposition line of stages to the city, which was continued until 1832, when the old line was bought out for a fair consideration. It is said that when the spirit of opposition began it required fifteen hours on the journey, which was reduced on good roads to

eight, an average of seven miles per hour. The relay stations were at Bucksville, Doylestown, and Willow Grove. Mr. Shouse, who became an extensive and successful stage proprietor, was still living in Easton in 1876, at the advanced age of eighty-nine years. In 1851 a daily line of stages still passed through Doylestown from Easton for the city carrying the mail, but reduced from four to two horses. On the completion of the Belvidere and Delaware Railroad in 1854 the line was withdrawn after an establishment of about fifty-eight years.

It was customary along these routes for the stage-driver, when within a mile of the place at which the stage usually stopped for breakfast, to blow a horn, the sweet and mellow tones of which would announce his approach, that breakfast might be in readiness on his arrival. No sooner there than he would drop his lines, aid the passengers out of the coach, and proceed to the awaiting meal; in the mean time the horses would be changed, when the seats would be again occupied, and the journey resumed. In some cases fifteen miles having been made over the rugged road, it may be well supposed that an appetite had been awakened to be here appeased. At every post-office, generally about four or five miles apart, a brief stop would be made to have the mail changed and the horses watered. They were what was generally termed Troy coaches, painted red with a profusion of gilding, having the proprietors' names blazoned on the panels. Four horses were always driven to each coach, who were generally selected for beauty, speed, and powers of endurance, in the proper care of which the hostlers appeared to take a delight.

Before 1802 a line was running over the Old York road to New York, passing through Jenkintown, Hatboro', or Crooked Billet, Coryell's Ferry, now New Hope, and Lambertville. It started from Mann's inn daily at eight o'clock in the morning. This coach was drawn by four horses, and carried the mail on down to the completion of the Belvidere and Delaware Railroad. John M. Jones, of Hatboro', was long a popular driver on this line. In proceeding from Philadelphia they breaktasted at the "Red Lion," Willow Grove, where the Easton stage also stopped and changed horses.

It is known that a stage for Pottsgrove passed through Norristown in 1802, leaving Hay's inn, Philadelphia, every Wednesday at sunrise. In 1804, William Coleman drove his stage through the place from the city to Reading, making two trips a week. These were evidently distinct lines, as the latter started from the White Swan, in Race Street. We possess no earlier knowledge of a stage terminating its journey at Norristown until in August, 1808, when Hezekiah Jeffries established one, starting from Jesse Roberts' inn, sign of the Rising Sun, every Monday, Wednesday, and Friday mornings at six o'clock, returning on the intervening days at 2 P.M. from the White Horse, kept by John Haines, on Fourth Street below Race. The fare through was one dollar, allowing fourteen pounds of baggage; way passengers, six cents per mile; one hundred and fifty pounds of baggage was rated the same as a passage. The following year Jesse Roberts & Co. assumed the proprietorship, leaving the city from Alexander McCalla's sign of the Green Tree. Packages under ten pounds were chargeable six cents. In the beginning of 1812, Daniel Woodruff became the proprietor, who in the spring of the following year changed it into a daily line, starting for the city at 7 o'clock A.M., and returning at 3 P.M., thus making now at least two daily lines for the conveyance of passengers to Philadelphia. Lewis Shfack became the owner in 1824, and announced its starting from John Brauch's tavern, and returning from Robert Evans' inn, Race Street. He commenced tri-weekly trips the following 8th of November, leaving Norristown at 8 o'clock A.M., and arriving at Robert Evans' inn at 12, returning at 1 o'clock P.M., thus showing that the distance of about eighteen miles was accomplished in four hours, evidently in opposition now to the packets on the canal. In the fall of 1827, Henry Styer and Levi Roberts established a daily line to the city and a copartnership in the livery business, keeping "horses, gigs, and dearborns to hire at all times." By their advertisement they now made the distance through in three and a half hours. The aforesaid daily mail line in 1829 was owned by John Crawford & Co., who announce it to start from Levi Roberts' Rising Sun Hotel every morning at seven and a half o'clock, and to pass through Yerkes', Freas' Store, Barren Hill, Hagey's, Manayunk, Falls, and Robin Hood; leaving John Hunter's hotel, sign of the Wagon, in Race above Fourth, with the fare reduced to seventy-five cents.

The railroad was opened from Philadelphia to Norristown in August, 1835, and on the opposite side of the river through to Pottsville in 1842. These several improvements of course now greatly lessened the amount of travel by stages over their old and long established routes, and necessarily had to withdraw more or less where opposition would have been useless. Yet to our surprise, with the growth and prosperity of Norristown and the country around, it really in 1860 became quite a considerable centre for staging in various directions. A line proceeded tri-weekly to Sumneytown, passing through Centre Square, Skippackville, Lederachsville, and Salfordville, from the Pennsylvania Farmers' Hotel, on the north side of Main Street above Markley. For Millerstown tri-weekly, by Perkiomen Bridge, Zeiglersville, Pennsbury, Treichlersville, and Shimersville. For Pottstown tri-weekly, by the Trappe and Limerick. For Boyerstown tri-weekly, by Limerick Square and New Hanover. A daily line for the Trappe, leaving at 4 o'clock P.M., *via* Jeffersonville, Eagleville, and Freeland; also a daily line for Phœnixville by way of Shannonville, and a tri-weekly still

running on the pike to Philadelphia at 1 o'clock P.M. The advantages derived from carrying the mail contributed materially to the encouragement of the several lines, but the building of additional railroads since, for instance along the Perkiomen and Stony Creeks, has again lessened the number of stages, until we have almost ceased to wonder at the marvelous changes going on. A writer in the *Pennsburg Valley Press*, on the completion of the railroad there in 1874, stated that "the old stage-coach has disappeared, and instead of taking three days to go from Pennsburg to Philadelphia and return, as it did a few years ago, the people of the former place can now go by train in the morning and return early in the evening, after having spent the full business part of the day in the city."

The earliest line probably from Doylestown to the city was established in the fall of 1813, making two trips weekly, the fare each way being seventy-five cents. In 1815 tri-weekly trips were made, and the price advanced to one dollar and twenty-five cents. This stage in 1820 made the Buck Tavern, 130 North Second Street, its stopping-place, starting from there during the summer at 8 o'clock A.M., and in the winter at 9, making then one trip less. In 1831 the Doylestown stage was announced to start from the Camel Tavern, in Second Street above Race. About 1846 two daily lines were running on this route in opposition to each other for several years, with the fare reduced as low as seventy-five and fifty cents, and yet from the number of passengers they carried the proprietors did not lose money. One was termed the High Grass Line, driven by Benjamin T. Clark, and the other by Joseph Lewis, succeeded by John Servis. The proprietors of the former were Charles H. Mann, Jacob E. Buck, and Joseph Hamett. The proprietor of the latter was Daniel Shelmire, of Abington. On Mondays and Saturdays during the summer season these coaches were generally drawn by four horses and sometimes six. The aforesaid fare for a distance of twenty-five miles is quite a contrast to what the Norristown lines charged, ranging from one dollar and twenty-five cents to seventy-five cents for only eighteen miles. In October, 1856, the branch from the North Pennsylvania Railroad to Doylestown was completed, which of course now tended to greatly reduce the amount of travel over the hitherto well-worn turnpike to the city, when the coaches were withdrawn.

In 1820, Flourtown became a noted terminus for several lines passing through Rising Sun, Germantown, and Chestnut Hill; a stage leaving the Cross Keys, in Fourth Street above Market, daily at 8 A.M. and 2 P.M., and another, the Old Rotterdam, at 3 P.M.; from the White Swan a line left daily at 9, 10, and 11 A.M., returning at 3, 5, and 6 P.M. From this it would appear that these several lines made no less than six daily trips to and from the city, thus showing more than sixty years ago a great amount of travel along this route. Jacob Acuff had a daily mail line running from the Broad Axe tavern in 1828, starting every Monday, Wednesday, and Saturday morning at 5.30 o'clock, arriving at Evans' tavern, Race Street, in three hours; returning on the same days at 3 P.M. This line proceeded from the Broad Axe to Kutztown on Thursday morning at 5 o'clock, returning on the following day. This route lay through Nicetown, Germantown, Chestnut Hill, Flourtown, White Marsh, Broad Axe, Pigeontown or Blue Bell, Centre Square, Zeiglersville or Skippack, Sumneytown, and Trexler's Furnace.

A new mail route having been formed by the Post-Office Department in the spring of 1828 over the Gulf road, a stage left the city on Tuesdays, Thursdays, and Saturdays at 4 o'clock A.M., passing the Gulf Mills, breakfasting at the Bird-in-Hand, thence through Valley Forge and Kimberton, arriving at Lancaster next morning. In consequence of this contemplated line a meeting of the citizens of Upper and Lower Merion was called at the house of Joseph King, sign of the Bird-in-Hand, January 19th, previous to further improving this highway so as to render its travel easier, "it being the only free road from the Conestoga Valley to Philadelphia," thus intimating that now all the other prominent roads in that direction had been turnpiked. At this time a stage line was also established from Pottstown to meet this line at Kimberton, when the passengers could either proceed to Lancaster or Philadelphia; the starting-place in the city being from Van Buskirk's hotel, 244 Market Street, arriving at the Union Hotel, Pottstown, in time to dine; fare through, two dollars and twenty-five cents.

To show what importance staging had assumed, it may be stated that James Reeside owned in the business in 1825 above one thousand horses. Through his extensive business in this direction he had bestowed on him the title of "admiral." The credit is due him for the introduction of the more comfortable and stylish Troy coaches, a decided improvement over the earlier "stage waggon." Elliptic steel springs did not come into general use for the purposes of conveyance until after 1835. The noted White Swan, in Race Street, was long kept by Jacob Peters, who was also widely known as a stage proprietor. Even down to 1854 the Willow Grove had still five daily lines stopping there for Philadelphia. The line from Easton was established in 1792, and from New York at least in 1802, besides the two Doylestown lines, and one from Hartsville, now reduced to but one, carrying the mail between said village and Doylestown.

The business of staging, directly and indirectly, gave employment and support to a number of persons in Montgomery County, among whom could be enumerated the proprietors, the drivers, groomsmen, inn-keepers, smiths, and coach-makers, besides the toll arising therefrom for the turnpike companies

amounted to considerable. It made, too, no inconsiderable home market to the farmer for oats, corn, hay, and straw, besides the provisions required for the passengers. The arrival of the stage always made a bustle in the quiet country villages and hamlets. It not only brought strangers, but acquaintances, relatives, and friends, who, having been long absent, thus returned to visit familiar scenes once more. To the post-office it brought letters and newspapers, and, as a substitute for the express, the driver was an important personage, from the amount of errands imposed on him in the delivery of his messages and parcels.

CHAPTER XI.

THE GERMANS.[1]

Among the various nationalities that settled Montgomery County the German was an important one, and their descendants at this day within its limits are the most numerous. In less than a year after the landing of William Penn a colony of Germans, chiefly from Creisheim and Creyfelt, arrived in October, 1683, and shortly afterwards founded the village of Germantown. The Proprietary had been among them in their native land, and encouraged them to come. Here liberty of conscience had now been proclaimed, and an exemption from tithes, though neither was tolerated in Great Britain, or even to a very limited extent along the valley of the Rhine, where also were the frontier lines of powerful France, and the frequent wars of Germany, the results of which combined were all powerful incentives to emigration to those more peaceably and liberally disposed. To facilitate this a company was organized at Frankfort-on-the-Main, and numerous pamphlets circulated throughout Germany in the language of its people, setting forth the peculiar advantages of the distant colony. Hence it need not be a wonder that the weaker of the persecuted sects were disposed to come first, for no matter however strong the attachments of nativity, the Fatherland presented from their experience in the past no bright or sanguine future. The doctrines of the Reformation had been established almost a century and a half, yet through the connection of church and state the progress to toleration was very slow.

Francis Daniel Pastorius, in his "Beschreibung Pennsylvania" (published at Leipzic, 1700), under date of Oct. 24, 1685, gives the following account of the settlement: "With the wish and concurrence of our Governor, I laid out and planned a new town, which we call Germantown, or Germanopolis, in a very fine and fertile district, with plenty of springs of fresh water, being well supplied with oak-, walnut-, and chestnut-trees, and having beside excellent and abundant pasturage for the cattle. At the commencement there were but twelve families of forty-one individuals, consisting mostly of German mechanics and weavers. Our German society have in this place now established a lucrative trade in woolen and linen goods, together with a large assortment of other useful and necessary articles." He enumerates the lot-holders as Tunis Conderts, John Strepers, Dirck, Herman, and Abraham Opdegraef, Paul Wolff, Jacob and Peter Schumacher, Johannes Kassell, Rynier Tissen, Jan Lucken, Gerhard Heinrich, David Sherkges, Wigart Levering, Gerhard Levering, Isaac Sheffer, Andreas Souplis, William Claus, and Dirck Rittenhouse, Dirck Keyser, Sr., and William Strepers. The aforesaid names have since been more or less Anglicized, so that their present nationality is barely perceptible. Several of these afterwards became early settlers of Montgomery County, where nearly all have now numerous descendants residing.

To these early Germans we find frequent compliments paid by the other settlers for their character, industry, business habits, and promotion of the prosperity of the colony. Richard Townsend, who arrived here in the "Welcome" with Penn, in November, 1682, thus speaks of them in his "Testimony": "About a year after our arrival there came in about twenty families from High and Low Germany of religious, good people, who settled about six miles from Philadelphia, and called the place Germantown." Robert Turner, in a letter to William Penn from Philadelphia, dated 3d of 6th month, 1685, states therein that "the Germans are manufacturing linen finely." He also adds that "Pastorius, the German Friend, with his people, are preparing to make brick next year." William Rittenhouse, in 1690, on a branch of the Wissahickon, built the first paper-mill in the British colonies of America. Though these Germans consisted of but forty-one persons, yet such was their enterprise that within five years of their first settlement they had erected upwards of fifty houses. Sypher, in his "History of Pennsylvania," in speaking of these Germans, states that they "were an industrious and intelligent, as well as a devout Christian people. Many highly-educated men were among them, who became influential and useful citizens, and aided materially in conducting the affairs of the province."

A majority of these early Germans became members of the Society of Friends, and they had not been in Pennsylvania five years before they were shocked at the system of negro slavery that prevailed and was maintained and countenanced by the English colonists. The result was a protest addressed to the Monthly Meeting, dated from Germantown the 18th of 2d month, 1688, and subscribed by Garret Henderich, Dirck Updegraef, Francis Daniel Pastorius, and Abraham Updegraef. As this was the first paper or document ever issued in English America against

[1] By Wm. J. Buck.

the iniquitous system of buying, selling, and keeping human beings in bondage, it demands for these people that justice and honor that has been too long withheld from them. At a meeting held at Richard Worrell's, in Lower Dublin, the 30th of said month, it was referred to the Quarterly Meeting in Philadelphia, and from thence to the Yearly Meeting held at Burlington, where, on the 5th of 7th month, as their minutes state, "A paper being here presented by some German Friends concerning the lawfulness and unlawfulness of buying and keeping Negroes, it was adjudged not to be so proper for this meeting to give a positive judgment in the case, it having so general a relation to many other parts, and therefore at present forbear it." Concerning themselves as a body, the Friends did not approach this matter until 1758, after the long period of seventy years had elapsed. The start, however, made by these Germans was so powerful in its effect on their countrymen, the Mennonites, Dunkards, and all other of their sects, as to cause them to abstain almost entirely from holding negroes in bondage, and hence the great exemption from an early period of the present territory of Montgomery County from the evils arising from African slavery. This result was also clearly established in Bucks, Chester, Berks, and Northampton Counties, where the German townships were almost entirely clear therefrom.

On the 7th of May, 1691, Thomas Lloyd, as Deputy Governor, granted naturalization to Dirck, Herman, and Abraham Opdegraef, Johannes Cassels, Jacob Schumacher, Dirck Keyser, Arnold Cassel, Peter Dirck Keyser, Peter Schumacher, Sr., Peter Schumacher, Jr., William and Claus Rittinghuysen, Johannes Kusters, Heinrich Buchholt, Isaac and Mathias Jacobs, Wigert Levering, Isaac Scheffer, Paul Wolff, William Streepers, Johannes Bleickers, Reiner Herman, Andreas Souplis, David Scherkes, Hans Peter Umstat, Reinert Tissen, Jan Lucken, Peter Klever, Heinrich Frey, Hans Andreas Kramer Jurgen, Isaac Schumacher, Peter Kurlis, Gerhard Levering, and Jan Williams. About three-fourths of this number settled within the limits of the present county, where their descendants are still numerous.

Mathias Van Bebber purchased a tract of six thousand one hundred and sixty-six acres of land, which by patent dated Feb. 22, 1702, was located on the Skippack Creek, constituting about one-half of the southern portion of what is now Perkiomen township. Van Bebber began thus early, for so remote a distance from the city, to invite settlement by selling it off in parcels. Among the settlers prior to the close of 1703 were Heinrich Pannebacker, Johannes Kuster, Johannes Umstat, Claus Jansen, and Jan Frey; John Jacobs, in 1704; Edward Beer, Gerhard and Herman Indehoffen, and Dirck and William Renberg, before the close of 1707. In 1708 we find here William and Cornelius Dewes, Herman Kuster, Christopher Zimmerman, Johannes Scholl, and Daniel Desmond, followed in 1709 by Jacob, Johannes, and Martin Kolb and John Strayer. The settlement so increased that Van Bebber gave one hundred acres towards a Mennonite meeting-house, which was built prior to 1726, its trustees being Heinrich Sellen, Herman Kuster, Claus Jansen, Michael Zeigler, and Martin, Henry, and Jacob Kolb. Henry Frey, who settled in this vicinity, is stated to have arrived in the colony two years before the landing of Penn.

But even prior to the Skippack settlement there is reason to believe that some of those Germantown settlers had located themselves in some of the lower townships, as, for instance, Cheltenham, Springfield, White Marsh, Abington, Moreland, and Upper Dublin, for the Shoemakers, the Tysons, the Snyders, Clines, Ottingers, Cleavers, Redwitzers, Rinkers, Bartlestalls, Melchers, Leverings, Reiffs, Conrads, Lukenses, and Yerkeses were located pretty early there, and became substantial landholders. It is not the design to enter here minutely into the names even of the early and conspicuous German settlers over the county, for that more properly belongs to the local history of the several townships; the object now being only a general treatment of what relates to the subject.

"The period from 1702 to 1727," says Professor I. D. Rupp, "marks an era in the early emigration. Between forty and fifty thousand left their native country." From 1708 to 1711 a considerable body came from the Palatinate of the Rhine. The Dunkards and the Mennonites arrived in the former year, and at first settled around Germantown, where they built places of worship and a school-house. Many had gone first to England, on the invitation of Queen Anne, at whose bounty not a few of whom were transported to America. Before their departure hundreds of them were furnished with religious and useful books by Anton Wilhelm Boehm, the court chaplain of St. James. Those who came between 1720 and 1730 were occasionally accompanied by their pastors and school-teachers. Where clergymen were wanting in their religious assemblages their places were supplied in part by the teachers, who read sermons and prayers and taught the singing of hymns, after the manner of the Fatherland.

Among the German Lutherans the congregation established at New Hanover, and so long known as the Swamp, was the earliest established in America. Justus Falkner, its first pastor, came there in 1703, having been ordained and sent by Andreas Rudman, the Swedish provost at Philadelphia. In 1717 the Rev. Gerhard Henkel settled there, besides, from 1720 to the fall of 1723, they were frequently visited by the Rev. Samuel Hesselius, the Swedish pastor from Morlatton, eight miles distant. In 1732, Rev. John Christian Shultze became pastor, and in 1733 was sent to Europe by the congregations to secure aid in the erection of churches and for additional pastors. When the Rev. H. M. Muhlenberg arrived, in November, 1742, he found this congregation worshiping

in a log church, and numbering at least one hundred and twenty members, and at the Trappe about fifty members, who built a church the following year, besides a considerable body in Philadelphia. Professor I. D. Rupp estimates that this denomination in the province may have comprised in 1731 seventeen thousand members.

Next among the German sects can be placed the German Reformed, who in 1731 had a membership of fifteen thousand, having chiefly immigrated from the Palatinate and the districts of Nassau, Waldeck, Witzenstein, and Wetterau. John Philip Boehm, who arrived here in 1720, though not at first a regular or ordained minister, yet before 1727 had established congregations to whom he preached in White Marsh, Skippack, or Salford, and New Hanover. He also founded the church in Whitpaine in 1740, since known by his name. The Rev. George Michael Weiss, a graduate of the Heidelberg University, arrived here in September, 1727, with a company of several hundred immigrants, and preached for the Skippack congregation. In the erection of houses for worship the Mennonites and Dunkards preceded the Lutherans and German Reformed. Among the latter Peter Becker and Alexander Mack were early and prominent ministers. Owing to the wars and persecution the Schwenkfelders did not arrive in the province until 1734 to 1740, after which they ceased coming.

The immigration of so many "foreigners," as they were termed, alarmed the English colonists. They feared, like Logan and Franklin, that even Pennsylvania might cease to be a British province. The matter was brought before the Assembly in 1717, and naturalization refused to all coming hither who could not speak the English language. In 1729 fears were further aroused, and under instructions of the home government the Assembly passed an act imposing a duty for the English government of forty shillings per head on all foreigners that should land here. The German citizens viewed this as a gross outrage, on which they entered an earnest but patriotic protest. The Assembly now appointed a committee to examine into the situation and conduct of these people. Their report stated that "the Germans who had been directly imported into the province had purchased and honestly paid for their lands, had conducted themselves respectfully towards the government, paid their taxes readily, and were sober and honest people in their religious and civil duties."

During this period the correspondence of James Logan, William Allen, Jonathan Dickeson, James Hamilton, Richard Peters, and others in the Proprietary interest go to show the most unfounded prejudices entertained against the Germans. In 1727, James Logan stated six thousand more are expected to arrive, and hopes that this emigration may be prevented in the future by act of Parliament, else he fears that these colonies will in time be lost to the crown, and, further, if their numbers continue at this rate, will soon produce a German colony here, and perhaps such a one as Britain once received from Saxony in the fifth century.

In the beginning of 1731 a petition was sent to the Assembly by Germans inhabiting the county of Philadelphia, wherein they pray "that they may be permitted to enjoy *the rights and privileges of English subjects.*" Among the names are those of Peter Wentz, Michael Zeigler, Valentine Hunsicker, Nicholas Lesher, John Nicholas Kressman, Johannes Langenecker, Antonius Hallman, John George Reiff, Peter Reiff, Conrad Reiff, Gerhard Peters, Johannes Schaffer, Henry Pennebacker, John Snyder, George Merkle, and Daniel Langenecker. These were all residents within the present limits of Montgomery. However just, what result attended this effort is not known. Governor George Thomas, in a letter dated April 23, 1747 expresses himself that "the Germans of Pennsylvania are, I believe, three-fifths of the population (200,000). They have by their industry been the principal instruments of raising the State to its present flourishing condition beyond any of his Majesty's colonies in North America." This estimate appears sufficiently high, making sixty Germans to every one hundred of the total population.

While the Germans have been lauded as agriculturists by such writers as Robert Proud, Thomas F. Gordon, Sherman Day, Rebecca Eaton, Charles B. Trego, and others, the subject of their intelligence and culture, in contrast with those who came from Great Britain, has been carefully if not studiously avoided.

From an early period the Germans have endeavored to acquire the English as an additional means to knowledge, for which purpose they have in the past published as aids for the use of their schools a number of books. In 1747, Christopher Sower published at Germantown a work entitled "Eine Deutsch und Englische Grammatik, besonders geignet für Deutsche welche English lernen wollen." No work is known to have been published here so early for the English to acquire German, though no doubt there were works used here then to learn French. Even in 1809, at the small town of Easton, the "Englischen Sprachlehrer" was published, and many more such can be enumerated over the State. To this day the intelligent reader of any of our numerous Pennsylvania German newspapers has no difficulty in understanding the Bible of Luther or the works of the greatest authors in the Fatherland. With four times the population of England to draw on in Europe, and the immense and continuous emigration hither, and that to the very best sections of this great country, a knowledge of the language becomes only the more necessary.

In the general diffusion of school education, to this day no portion of Great Britain can approach Germany. Hence we find many of the early Germans here, men of extensive acquirements, possessing a

knowledge of ancient and modern languages as well as of vocal and instrumental music. Indeed very few could be found among them who could not read and write, though "his X mark" is often found here on deeds of the colonial period, made too "by his Majesty's true born subjects." An educated people will support books and periodicals, and this the Germans did here though under the greatest possible disadvantages. As far back at least as 1738 they commenced here the publication of almanacs, school books, and religious works of various kinds. Christopher Sower, at Germantown, commenced Aug. 20, 1739, his *Hochdeutsch Pennsylvanische Geschichtschreiber*, the first newspaper printed in the province outside of Philadelphia, followed by two more in the city in 1743 and 1751. The almanac for 1738 for size and matter was far superior to those that had preceded it in the English.

The first Bible printed in a European language in America was in 1743 by Mr. Sower, in a magnificent

FAC-SIMILE OF THE FIRST GERMAN NEWSPAPER PRINTED IN AMERICA.

Der

Hoch-Deutsch

Pensylvanische Geschicht-Schreiber

Oder:

Sammlung

Wichtiger Nachrichten, aus dem Natur- und Kirchen-Reich.

Erstes Stück August 20/ 1739.

Geneigter Leser

Unter andern Abgöttern, denen die grobe und subtille Welt der sogenanten Christen dienet, ist nicht der Geringste der Verwitz, Curiosität und Begierde gerne offt was neues zu Schauen, zu Hören und zu Wissen, auch zu Sagen. Diesem Athenienſischen Geist nun ein Opffer zu bringen mit Ausgebung dieser Sammlung/ ist man gantz nicht willens, nochweniger, sich selbst damit auszubreiten, oder Ruhm und Nutzen zu suchen, sondern weil man ehmahlen versprochen, die nützlichste und wichtigste Geschichte u. Begebenheiten bekant zumachen, und auch, weil denckwürdige Geschichte, wann sie den Menschen zu Ohren und Gesichte kommen, öffters tieffern Eindruck und Nachdencken erregen, als Dinge die da täglich vorkommen; so wolte man dann hiermit einen Anfang machen, mit solchen Zeichen dieser Zeit so in diesem und andern Welttheilen kürtzlich und zuverläſig geſchehen, in Hoffnung es werde nicht ohne einigen Nutzen, wenigst der Aufweckung und des Auffschauens bey einigen, die es lesen, schaffen. Auch möchten wohl künfftig einige Anmerckungen und der Zeit dienliche Fragen ernstlichen Gemüthern zum Nachsinnen, oder auch wohl einige aufrichtige Antwort darauf zu geben, in dergleichen Samlung herausgegeben werden. Der Leser lebe wohl/ und brauch es wie er soll.

Vor wenig Jahren hörte man, daß der Persianer und der Türcke grosſen Krieg hatten; kaum hatte der Perſianer mit dem Türcken Friede, so hatte er mit dem groſſ Mogel wie gegenwärtig Krieg; und der Römiſche Kayſer hatte kaum Stillſtand mit dem König von Franckreich/ so ging er samt Moſcau gegen die Türcken. Anfangs victoriſirten die Moſcowiter an den Türcken; bald wendete ſich das Blatt um, und ſiegten die Türcken, jedoch ſtehen ſie noch beyderſeits miteinander zu Felde. Also auch der Kayſer mit dem Türcken/

was

edition of twelve hundred copies, each containing twelve hundred and eighty-four quarto pages. It was German labor that made the type, the ink, the paper, and the binding, the German too bore the expense, and, better still, his countrymen here gave it a generous encouragement. Christopher Sower, Jr., after his father's death, in 1763, issued a second edition of two thousand copies, and a third in 1776 of three thousand, besides having published nearly two hundred other works, some of which were in English. No Bible was printed in the English until 1780 by Robert Aiken, in Philadelphia, and in New England eleven years later. The translation and publication in 1748, by the Ephrata Brethren, of Van Braght's "Blutige Schauplatz oder Martyrer Spiegel" from the Dutch was another wonderful undertaking for the time, a folio of over fifteen hundred pages, occupying the labor of fifteen men for three years, and in magnitude exceeding all works previously published in this country, its subject being "The Persecution of Christians from the Time of Christ to the Year 1660." During the colonial period, for their education as well as instruction in Christianity, the German missionaries, Zeisberger, Pyrlaeus, Schmick, and Heckewelder, had several schools successfully established among the Indians, and spelling-books, hymns, and sermons published for their use, both in the Delaware and Iroquois languages, besides preparing thereon grammars and dictionaries,—monuments of their devotion, learning, and disinterested benevolence.

The intelligence of the Germans made a profound impression on Franklin, who, in a letter to Peter Collinson of May 9, 1753, thus expresses himself: "They import many books from Germany, and of the six printing-houses in the province two are entirely German, two half-German and half-English, and but two are entirely English. They have one German newspaper and one half-German. Advertisements intended to be general are now printed in German and English. The signs in our streets have inscriptions in both languages, and some places only in German. They begin of late to make all their bonds and other legal instruments in their own language, which are allowed good in our courts, where the German business so increases that there is continued need of interpreters, and I suppose in a few years they will also be necessary in the Assembly to tell one-half our legislators what the other half says. In short, unless the stream of importation could be turned from this to other colonies, as you very judiciously propose, they will soon outnumber us, that all the advantages we have will, in my opinion, be not able to preserve our language, and even our government will become precarious." Though the Germans had their own printers, yet through his researches Professor Seidensticker has ascertained that Franklin had actually printed for them in their own language between fifty and sixty works, perhaps a greater number than had issued from his press for English patrons. It was chiefly from the German farmers of Pennsylvania that Franklin secured the horses and wagons to transport the baggage, ammunition, and provisions for Braddock's expedition, and which old-settled Virginia, where he had landed, could not supply. In 1760 the produce of Pennsylvania was so great that it required between eight and nine thousand wagons for its transportation to Philadelphia. This came chiefly from the German districts, from whence, too, the celebrated Conestoga teams.

Dr. Rush, in his interesting account of the German inhabitants of Pennsylvania, written in 1789, states that "the principal part are farmers, but there were many mechanics, who brought with them a knowledge of those arts which are necessary and useful in all countries. These mechanics were chiefly weavers, tailors, tanners, shoemakers, comb-makers, smiths of all kinds, butchers, paper-makers, watch-makers, sugar-bakers," etc. However, he does not touch on their intellectual condition, that they had teachers of languages, of music, of painting, or that they had written and published here numerous works in their language. The Rev. George Michael Weiss, who probably spoke Latin as well as Drs. Franklin or Rush could English, advertised in the *American Weekly Mercury* of February, 1729, that he would teach logic, natural philosophy, metaphysics, and other branches to those that desired it. Christopher Dock, long a teacher in Skippack and vicinity, wrote a work on school-teaching, published in German by Sower in 1770, which his recent biographer, S. W. Pennypacker, says is one of the very few works of the colonial period treating on this subject. Charles Fortman, a graduate of one of the German universities, taught Latin, French, English, and German, as well as vocal and instrumental music, in 1803 and subsequent years at Norristown, and also in Bucks County He was the first teacher to introduce into Montgomery and Bucks the use of the piano-forte. In the adjoining county of Bucks several German Churches are known to have had organs in them before the year 1800, while among the English-speaking congregations there they are only of recent introduction. The manufacture of these instruments was commenced at Allentown by Germans at the close of the Revolution. The date of their introduction into the several churches of Montgomery County would be an interesting subject for inquiry.

The Legislature of Pennsylvania has voted that at the expense of the State two statues be placed in the Capitol at Washington to represent two of its most notable men. For this honor Gen. Peter Muhlenberg, a native and long resident of this county, and Robert Fulton have been selected. Carefully comparing the merits of the former as warrior and statesman with Gen. Wayne the preference seems just, but as to the other the claims of David Rittenhouse as a distinguished civilian are, on the whole, too superior

to be readily set aside by the one to whom the choice was given. Had this also fallen to the lot of Rittenhouse, Montgomery County and the German race would have been doubly honored, for here he resided from infancy well into middle life and made his great philosophical discoveries as well as inventions. The fame of the early high clocks made in this county by Rittenhouse, Lukens, Soliday, Seip, and others belongs also to the Germans.

In the beginning of this article it is stated that the German element in Montgomery County is the strongest. In a list of all resident taxables and landholders of the several townships within the present county in 1734 the total is 760, of whom 395 bear German surnames. The census of 1870 gives to the county 144 houses of worship. Of this number the exclusive German sects have 68, only four less than half, as follows: Lutherans, 25; German Reformed, 10; Mennonite, 10; Dunkards, 9; Evangelical Association, 9; and Schwenkfelders, 5. Of the balance, it is estimated that one-fourth may be fairly allowed the German element, which would actually make two-thirds of the total number, which, it must be confessed, appears high. However, this is not as strange as the result of a recent investigation made in Bucks County. At the County Institute, held at Doylestown in October, 1882, of 284 teachers present, 147 bore German surnames, 107 English, 8 Scotch and Irish, 8 Welsh, and the balance of 14 Dutch and French. It is to be regretted that in the settlement of the several townships within the present limits of Montgomery County no satisfactory means are possessed to denote the progress of the Germans where they came in contact with the other nationalities, the Welsh excepted, who located here somewhat earlier and in considerable bodies, so that records of their settlements are still to be obtained. The Scotch-Irish came here considerably later, and nowhere in sufficient numbers to form a distinct settlement, while the English settled numerously in Cheltenham, Abington, Moreland, and Horsham, keeping generally nearer the city.

It has cost no little labor to present the statistics given of the present result of the occupation of the soil here as originally made nearly two centuries ago by the several nationalities of Europe. Dr. Rush has observed nearly a century ago that where the German locates himself he designs to stay, and some of our recent writers state that he belongs to an aggressive race, that through his attachment to the soil even his footprints are not readily obliterated by the sands of time. According to the list of 1734, in Montgomery township the resident taxables numbered 29, of whom 22 were Welsh and not a German name. In the assessors' list of 1776, in a total of 74 the Welsh numbered 24 and the Germans 18, while in the list for 1883 the latter constitute a majority of the whole, which is additionally confirmed by the names of the landholders on the township map in Scott's Atlas for 1877. In Gwynedd in 1734 we find 48 names, of which 39 are Welsh and 1 German; in 1776 of 114 taxables the Germans numbered 55, and now are largely in the majority. Plymouth in 1734 contained 16 taxables, of which 9 were Welsh and 1 German; in 1780 of a total of 93, the Germans had attained to 30 and the Welsh numbered but 13. In White Marsh in 1734 of 50 taxables, 5 were Germans; in 1780 in a total of 163, 70 were Germans, who possibly now constitute a majority. The wealthy township of Springfield has become well Germanized, three-fourths of its present landholders bearing names from the Fatherland. In Cheltenham in 1734 the Germans did not number one-sixth of the whole; in 1776 they had reached almost to one-third. Lower Merion in 1734 contained 52 taxables, of which 46 bore Welsh names and not a German. In a total of 153 in 1780, the latter had reached 27, or nearly one-sixth, while the Welsh names were reduced to 34. Of 35 taxables in Upper Dublin in 1734, 6 were German; in 1776 of 109 the latter numbered 44, and now they possess a majority. In Upper and Lower Providence in 1734 the Germans numbered 25 in a total of 74, and from an examination of the landholders of those townships in Scott's Atlas, estimate that they now comprise three-fourths of the total population there. Franconia, adjoining Montgomery township, of its 34 taxables in 1734, 30 were German; on the map now of its landholders there can be found only four that are not German. In the townships of Upper Hanover, New Hanover, Perkiomen, and Upper Salford, so solid are they that among the landholders there cannot be found one that is not a German. One fact has now been proven here as in our other counties, —that in perseverance and energy the German descendant is fully the equal, if not the superior, of the others he has come in contact with. If slow, he is sure and progressive, never going backwards.

"There is nowhere in all America," says an editorial in the *Public Ledger* of 1856, "an agricultural population, the members of which personally till the soil, that has such thews and sinews, such a healthy development, or such generally prolonged life as our much-abused 'Pennsylvania Dutchmen.'"

In concluding this article on our German element, upon which so little has been written, there remains one matter to which may be given a brief allusion,—the influence it is exerting. A late writer in *Harper's Magazine*, in speaking of the German influx into the Mississippi Valley, stated that it would not be long before they would there become the dominant element. This development is changing the national character, as may be seen in the increasing observances of Christmas, New Year's, Good Friday, Easter, and in birthday, silver and golden wedding festivals. Montgomery County has now been settled two centuries by different European nationalities, most prominent of which have been the Germans, the English, the Irish, the Welsh, the Swedes, and the French.

CHAPTER XII.

THE WELSH.[1]

ALTHOUGH the present territory of Montgomery County within the Schuylkill valley may have been pretty well explored by the Dutch, Swedes and English, in the pursuit of beaver and other peltries from the Indians, for forty years before the arrival of Penn, yet no evidence exists of any permanent settlement having been made within said time by Europeans upon this soil. Those engaged in the traffic were actuated entirely by a love for gain, and in no way concerned for the improvement or material development of the country. As the supply of furs diminished through the activity of the pursuit, these adventurous spirits, in consequence, had to seek new fields, and thus one section would be abandoned for another. True, along the valley of the Delaware, south of the present city of Trenton, the Swedes had secured a foothold by attaching themselves to the cultivation of the soil, but it was hardly ever beyond the landing of their canoes. To them great honor is due for the peaceable relations that they so long maintained here with the Indians, thus making it a comparatively easy task, by the example set him, for William Penn in continuing the policy that Queen Christiana had so long before strictly enjoined should be carried out with the natives for their lands,—that they should be treated with justice and moderation, and, a step further, that they should be instructed in the Christian religion, for which purpose schools were established and catechisms and portions of the gospels and doctrines translated into their language, the evidences of which exist unto this day.

In securing his province from the British King, the chief aim of William Penn was to insure an asylum or refuge for the persecuted of his denomination, and of all others that professed faith in Christianity. For these liberal views he deserves credit, although they had been carried out for some time previously by Roger Williams and Lord Baltimore. From the circumstances of his position he could not do otherwise. In palliation for persecution, it was their resistance to the established laws of the land that in many cases brought the earliest immigrants hither, no matter whether from the British Isles or along the whole course and valley of the Rhine,—namely, the refusal to bear arms or do military duty and the non-payment of church-rates or tithes. To the former our own government has even not yielded, as shown in the late great Rebellion, and as to the latter, is still enforced by almost every nationality in Europe. However unjust the compulsory payment may be to an established church, this was certainly avoided in coming to Penn's distant colony, and was no small gain, when one-tenth of the farmer's products were required. It was probably as much the resistance to the two aforesaid enactments that led to fines and imprisonments as in promulgating or joining new doctrines that were regarded by those in power at variance with their own long-established principles. It was these several causes that chiefly led to early immigration hither from Wales, the larger proportion of which were Friends, the Baptists being next in number. A few, it appears, were Episcopalians, who in some cases, were induced to follow from a relationship existing with those who left on account of persecution or conscientious scruples.

In this county the date of settlement appears very close with the English in Cheltenham, but the honor of priority appears due to the Welsh. These people before the arrival of Penn had purchased in England from him forty thousand acres of land, which was subsequently located in Merion, Haverford, Goshen and extending partly into several adjoining townships. Under this encouragement, the ship "Lyon," John Compton, master, arrived with forty passengers, in the Schuylkill River, August 13, 1682, almost two months preceding Penn's arrival, on board of which was Edward Jones, "chirurgeon," with his family, who on the following 26th, sent a letter to John Ap Thomas, residing near Bala, in North Wales, wherein he states, "The Indians brought venison to our door for sixpence ye quarter. There are stones to be had enough at the Falls of Skoolkill, that is where we are to settle, and water power enough for mills, but thou must bring mill-stones and the irons that belong to it, for smiths are dear. They use both hooks and sickles to reap with." We have the authority of John Hill's map of the environs of Philadelphia, published in 1809, that the aforesaid made "the first British settlement, 18th of 6th month, 1682," being only five days after his arrival in the Schuylkill. The place designated thereon is now the estate of his descendant, the late Colonel Owen Jones, near the present Libertyville, in Lower Merion, and is certainly an early claim, for Philadelphia had not then been founded.

In the following November, Dr. Thomas Wynne arrived with his family in the ship "Welcome" with William Penn. He settled beside his son-in-law Edward Jones. From him originated the name of Wynnewood. John Roberts came from Pennychlawd, Denbighshire, in 1683, a millwright by occupation, and is supposed to have erected the third mill in the province. Among those who followed and settled early in Lower Merion may be mentioned Robert Owen, John Thomas, Thomas Owen, Hugh Roberts, Rowland Ellis, Robert Jones, John Cadwallader, Benjamin Humphreys and others. William Penn, by an order dated Pennsbury, 13th of First Month, 1684, directed Thomas Holmes, his surveyor-general to lay out the tract to which reference has been made. He therein states, "I do hereby charge

[1] By Wm. J. Buck.

thee and strictly require thee to lay out ye sd tract of Land in an uniform manner, conveniently as may be, upon the West side of Skoolkill river, running three miles upon ye same, and two miles backwards, and then extend ye parallel with the river six miles and to run westwardly so far as till the said quantity of land be completely surveyed unto them." This survey is known to have been made before the end of the aforesaid year. Owing to the continued immigration from Wales this tract within the first forty years was pretty well taken up and settled upon.

One matter caused them considerable uneasiness. They had expected, and no doubt were promised that by thus locating together, they should all be under one municipal government, which would enable them the better to manage their own affairs. When the division line was run between Philadelphia and Chester Counties by order of the Governor's Council, passed 8th of Second Month, 1685, the said tract became divided, and only that portion since known as Lower Merion township retained in Philadelphia and the balance left to Chester. This gave rise to a great deal of dissatisfaction, in which they proceeded almost to the verge of rebellion. The inhabitants of Radnor and Haverford refused to recognize the validity of said line, and in 1689 cast their votes for members of Assembly in Philadelphia. These were set aside as invalid. The result was that Griffith Owen and other inhabitants of the Welsh tract sent a long statement of their grievances to the commissioners the 13th of Tenth Month, 1690,—

"We the Inhabitants of the Welsh tract[1] in the Province of Pennsylvania, in America, being descended of the Antient Britains, who always in the land of our Nativity, under the Crown of England, have enjoyed that liberty and privilege as to have our bounds and limits by ourselves, within which all causes, quarrels, crimes and titles were tryed and wholly determined by officers, magistrates, juries of our own language, which were our equals. Having our faces towards these Countries, made the motion to our Governor that we might enjoy the same here, which thing was soon granted by him before he or they were ever come to these parts, and when he came over he gave forth his warrant to lay out 40,000 acres of land to the intent we might live together here, and enjoy our liberty and Devotion in our own Language as afore in our Country, and on the 40,000 acres was surveyed out and by his own warrant Confirmed by several Orders from the Commissioners of ye Proprietary, and settled upon already with near four score settlements."

In the aforesaid extract we see a strong, prevailing sentiment—the pride of ancestry—and an uncommon zeal evinced for the due preservation and perpetuation of their ancient language. Those that had settled so early in the townships of Upper and Lower Merion, it would appear, belonged chiefly to the Society of Friends. In the latter district they erected, in 1695, the first house of worship in the county, a temporary structure of logs. This, in 1713, was supplanted by a substantial stone edifice, which is still standing, and therefore ranks now as one of the oldest buildings used for the purpose in Pennsylvania. The population of the Welsh had increased so by continuous immigration and settlement in the two townships that out of eighty-four resident taxables in 1734, sixty-eight were actually of that nationality, being considerably over three-fourths the whole number.

About the beginning of 1698, William, John and Thomas Ap Evan purchased of Robert Turner, a merchant of Philadelphia, seven thousand eight hundred and twenty acres in the present Gwynedd, being the larger portion of the township. The last-named purchaser settled on this tract, and was soon after joined by his brothers, Cadwallader, Owen and Robert Ap Evan. In July of said year more Welsh immigrants arrived in the ship "Robert and Elizabeth," among whom were William John (since changed to Jones), Hugh Griffith, Ellis David, Robert Jones, Edward Foulke, John Hugh and John Humphrey. All these, excepting the last two, were originally Episcopalians, who afterwards joined the Friends. Edward Foulke came from Merionethshire, North Wales. He embarked at Liverpool with his wife, four sons and five daughters, and arrived in Philadelphia July 17, 1698, where he was kindly treated and entertained by his former acquaintances who had preceded him. Having purchased a tract of seven hundred acres in Gwynedd, he removed thereon the beginning of the following November.

Having become sufficiently numerous, the Welsh Friends, in 1700, erected in Gwynedd a small log building for worship in the centre of the township. There is a tradition that William Penn, accompanied by his daughter Letitia and a servant, came out on horseback to visit the settlement shortly after its erection, and that he preached in it, staying, on this occasion, over night at the house of his friend, Thomas Evans, the first settler, who resided near by. His return to England in November, 1701, will nearly determine the time that he made this visit. Owing to the influx of more Welsh settlers, a larger stone building was determined on, which was erected in 1712. In a petition from this settlement, which is therein called North Wales, dated June, 1704, praying for a road through Germantown to Philadelphia, it is stated that they then numbered thirty families. The list of 1734 gives Gwynedd forty-eight resident taxables, of which number thirty-nine bear Welsh surnames.

Immediately adjoining Gwynedd on the north is Montgomery township, which, according to the report of Rev. Evan Evans bore this name at least as early as 1707. Here John Evans, William James, Thomas James, Josiah James, James Lewis, David Williams, David Hugh and James Davis settled before 1720. In this year they built the first Baptist Church in the county, above the present Montgomeryville, in which preaching in the Welsh language was maintained down to the Revolution. In the list of 1734, out of twenty-eight residents in Montgomery, nineteen bear Welsh surnames. Before 1703, David Meredith, Thomas Owen, Isaac Price, Ellis Pugh and Hugh Jones, all from Wales, had settled in Plymouth township, where in 1734 they numbered nine out of its sixteen residents. Abraham Davis and David

[1] See Penn. Archives, i. p. 108.

Williams had settled in Whitemarsh before 1703. Stephen Jenkins, in 1698, purchased four hundred and thirty-seven acres adjoining the present borough of Jenkintown, after whose descendants the place has been called. Before 1710, Robert Llewellyn and Evan Hugh had settled in Upper Merion. The Rev. Malachi Jones, from Wales, organized at Abington, in 1714, the first Presbyterian congregation in the county, and here five years later, a church was built. Evan Lloyd, who settled in Horsham in 1719, was one of the first ministers there of the Friends' Meeting, whose original membership was probably one-third Welsh.

From the list of 1734 we ascertain that the Welsh at that date outnumbered, in a total of 760 names, the English in the proportion of 181 to 163, thus constituting at that time almost one-fourth the entire population within the present limits of the county. With the cessation of religious persecution, the Welsh almost ceased coming, and this is one reason for their having since so diminished. According to the assessment of Lower Merion in 1780, out of 153 taxables only 34 bore Welsh names; in Upper Merion for said year, out of 173 taxables, 36 are Welsh; in Gwynedd for 1776, of 143, only 43 are Welsh; in Montgomery for said year, of 74, but 24 are Welsh; and in Plymouth in 1780, of 93, only 13 are Welsh. The disproportion at present has become still greater.

That the early Welsh possessed a pride of country, language, ancestry and other characteristic traits somewhat at variance with the views entertained by their English neighbors here will admit of no doubt. That they are the direct lineal descendants of the ancient Britons, with little or no admixture of foreign blood, will not be denied. That they fought valiantly in resisting the invasion of the Romans, Saxons, Danes and Normans, as they withdrew to their mountain fastnesses, will not be disputed. Next to the Irish, the Welsh is now regarded as one of the oldest living languages spoken in Europe. Essentially it is the same language that Cæsar and Agricola heard on their first landing on the British shores, and in consequence deserves to be regarded with veneration as the only living link that unites those distant ages with the present. But the English language is indebted to it but little, so strongly is it Saxon and Latin. Rev. Joseph Harris, with ideas like some of the genealogists among his countryman, stated, in the "Seren Gomer," a work he edited in 1814, that "it is supposed by some, and no one can disprove it, that Welsh was the language spoken by Adam and Eve in Paradise."

In their petition of grievances to Penn's commissioners in 1690, they particularly specify therein that they are descended from the "Antient Britains," and desire that they may enjoy their "own language as afore in our Country." Rowland Ellis, a minister among Friends, arrived here in 1686, and settled in Lower Merion, where he made himself useful to his countrymen as an interpreter and translator in their intercourse with the English. Bowden, in his "History of Friends in America,"[1] states that "the members of his meeting being Welsh people, his ministry was in that language." Ellis Pugh, who arrived in 1687 and soon after settled in Plymouth township, wrote a religious work there in Welsh, entitled "A Salutation to the Britains," which was translated by Rowland Ellis, and printed in Philadelphia in 1727, making a duodecimo of two hundred and twenty-two pages. Respecting Hugh Griffith and the brothers Robert and Cadwallader Evans, who settled in Gwynedd, Samuel Smith remarks in his "History of Pennsylvania,"[2] that they "could neither read or write in any but the Welsh language." The subscription paper for the rebuilding of their meeting-house, in 1712, was written in Welsh, to which was affixed sixty-six names. Edward Foulke, of this congregation, wrote an account and genealogy of his family in 1702 in Welsh, which was afterwards translated by his grandson, Samuel Foulke. The late Hugh Foulke, a life-long resident of Gwynedd, who died in 1864, aged seventy-six years, exhibited to the writer in 1855 the family Bible of Hugh Griffith in Welsh, printed in London in 1654. Dr. George Smith in his "History of Delaware County," mentions that the meeting-house at Haverford was built in 1700, where "William Penn preached to Welsh Friends, who sat quietly listening to an address from the Proprietary, of which they did not understand a word."

William Jones, Hugh Griffith, Ellis David, Robert Jones and Edward Foulke, as well as several others, by leaving their church and attaching themselves to Friends, appear to have attracted the attention of the churchmen, if we are to judge by the correspondence published in the "Collections of the Episcopal Church in Pennsylvania."

The Rev. Evan Evans, in his report dated September 18, 1704, states that he frequently went out to Montgomery, twenty miles, and Radnor, fifteen miles from Philadelphia, "determined to lose none of those whom I had gained, but rather add to them, where I preached in Welsh once a fortnight for four years, till the arrival of Mr. Nichols, minister from Chester, in 1704." He adds that a hundred names had been signed to a petition to have settled among them, in Radnor and Merion, a minister "that understands the British language, there being many ancient people among those inhabitants that do not understand the English. Could a sober and discreet person be secured to undertake that mission, he might be capable to bring in a plentiful harvest of Welsh Quakers, that were originally born in the Church of England, but were unhappily perverted, before any minister in holy orders could preach to them in their own language." He continues that "there is another Welsh settlement, called Montgomery, in the county

[1] Vol. ii, p. 262.

[2] Hazard's Register, vol. vi.

of Philadelphia, twenty miles distant from the city, where were a considerable number of Welsh people, formerly, in their native country, of the communion of the Church of England; but about 1698, two years before my arrival, most of them joined the Quakers; but some of them are reduced, and I have baptized their children and preached often to them." The Gwynedd congregation is evidently here meant, for which he has unintentionally substituted Montgomery, which, it is likely, at this early time, was the only name known to him for this section.

As the Rev. Benjamin Griffith preached in the Welsh language in the Montgomery Baptist Church down to his death, in 1768, in which he was also followed by his successor, the Rev. John Thomas, this establishes the fact that, in consequence, the language must have been retained and spoken in some of the families in that section and in the adjoining townships of Hilltown and New Britain until the beginning of this century. We have thus been curious to gather from a variety of sources the aforesaid facts respecting the powerful hold of the language on the early Welsh settlers in this county, and to show how most of them were unacquainted with any other. Its duration here may be set down at about a century before the English had entirely supplanted it. Necessity at first compelled the Welsh, English, Germans and the Swedes to form settlements by themselves, owing to a general ignorance of each others' language, which, of course, for a long time must have greatly interfered with their social intercourse.

The early Welsh that came here at first continued the practice that had so long prevailed in their native country of reversing their family names. Thus John and Evan Griffith were the sons of Griffith John, taking their father's Christian name for their surname. Thomas Ap John, the son of John Ap Thomas, when he attained to manhood, wrote his name here Thomas Jones. Hugh Evan was the son of Evan Hugh, and married to Mary Robert, the daughter of Robert John. Edward and Evan Jones were the sons of John Evan; Robert and Griffith Hugh sons of Hugh Griffith. John Roger is mentioned in a marriage certificate at Merion, as late as 1717, as being the son of Roger Roberts. In the early records of Haverford and Merion Monthly Meeting, and also in that of Gwynedd, only a few instances are found in births where the surnames were exchanged. A large majority of the Welsh, however, soon after their arrival, adopted the English method, that the father's surname be retained and perpetuated, as indicative of a family origin, and which, from its simplicity, cannot be well improved upon. The Welsh practice, in consequence, has often here been puzzling in tracing early family genealogies. Welsh, like German names have also been Anglicized. John has thus been changed to Jones, David to Davis, Matthew to Matthews, Philip to Philips, Robert to Roberts, William to Williams, Hugh to Hughes, Jenken to Jenkins, Edward to Edwards, which are only a few of many that can be mentioned.

A question now arises in regard to their numbers and singular characteristic traits,—What impress have the Welsh made here in the two past centuries, through their descendants, on the existing condition of society? As respects their language, they have been certainly given to applying and perpetuating here local names from the land of their nativity. In a list of one hundred and twelve post-offices in the county, thirteen are ascertained to be more or less of Welsh origin. Outside of local names, remarkable to relate, after the most diligent inquiry, we cannot find a single word of the language retained or in use at this time that might have been either applied to some living object, utensil, or implement used in agriculture and mechanics, or relating to dress, food, furniture, buildings, scenery, habits, customs, etc., it thus seeming as if the language had never been spoken here.

CHAPTER XIII.

THE COLONIAL ERA.

THE proprietary or colonial government of Pennsylvania from 1682 to 1776 seems to have been of a peaceful and conservative character. All nations and tongues and kindred were here cordially invited to unite in their efforts to form and administer a system of government that would secure to mankind the measure of human happiness believed to be incident to the providence of life. Peaceful relations with the aborigines were first secured. On the banks of the Delaware, at a point marked by a great elm-tree, the founder of the colony, surrounded by a few judicious followers, met in council a large delegation of the Lenni-Lenape tribes. "We meet in good faith and good will; no advantage shall be taken on either side, but all shall be openness and love. We are the same as if one man's body were to be divided into two parts, we are all one flesh and blood." The response was natural,—"We will live in love with you and your children as long as the moon and the sun shall endure." This covenant of peace and amity had neither signature, seal nor oath to confirm it. No record of it can be found. The sons of the wilderness, returning to their forest homes, preserved the history of the great event by strings of wampum, and later generations would count over the shells on a clean piece of bark, and repeat to child and stranger the magic words of "peace and good will."

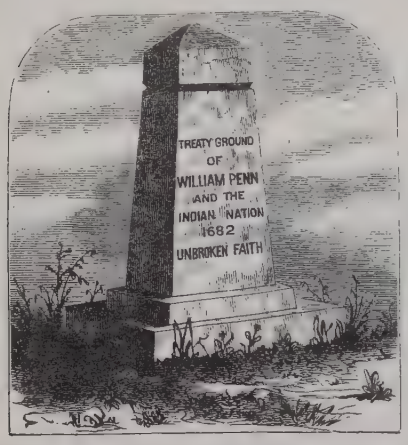
Honorable peace with the natives gave to all a sense of permanent security. Contentment and interest in the colony were inspired by assuring to a tax-paying citizenship a participation in making laws to govern themselves. The people responded promptly

to the privilege, and through their representatives entered upon the work of preparatory legislation at Chester, and in a session of three days completed a form of government. By the joint act of the people and the proprietary all were united on the basis of equal rights. The rule of equality in descent and inheritance was secured in families by abrogating the laws of primogeniture. The standard of woman was raised to an inheritable person in the distribution of all intestate estates. Every resident who paid "scot and lot to the Governor" possessed the right of suffrage, and every Christian was eligible to public office. No tax or custom could be levied or collected but by law, murder was the only crime punishable by death, marriage was declared a civil contract, every prison for convicts was made a work-house, there were neither poor-rates nor church tithes. The Swedes, Finns, Dutch, and all men of whatever nation were invested with the liberty of Englishmen. It was a bold departure in a right direction, keenly appreciated by the newly enfranchised men, and led to open exclamations of joy by many leading spirits, among them Lawrence Cook, who declared for his fellow-citizens, "that it was the best day they had ever seen."

The birth of popular power and the institution of forms of government demanded by it imposed the duty of dislodging the prejudice and superstition lurking in many minds. The establishment of "an asylum for the oppressed of every nation" was an invitation to the children of misfortune of every clime to seek refuge in it. Adventurers came in throngs, demanding personal license in the name of public liberty. The mass of emigrants came with minds clouded by the gloomy terrors of an invisible world of attending fiends. Witchcraft found advocacy and belief, and demanded the arrest and trial of a common scold in the person of a woman. The event was important and the scene memorable. Penn presided as judge; the jury was carefully selected, the Quakers outnumbered the Swedes. The nature of the accusation was carefully considered, the witnesses were patiently examined, the jury received the charge of the court, and after mature deliberation returned the following verdict: "The prisoner is guilty of the common fame of being a witch, but not guilty as she stands indicted." The personal friends of the liberated but incorrigible scold were directed to enter into bonds that she should keep the peace and be of good behavior towards all good citizens, and from that day henceforth in the colony of Pennsylvania witchcraft became an extinct offense. The sinful arts of conjuration were obscured, if not eradicated, by this public trial, and "neither demon nor hog ever rode through air on goat or broom-stick," in the presence of a Quaker judge or jury thereafter.

PENN'S TREATY TREE AND HARBOR OF PHILADELPHIA, IN 1800, FROM KENSINGTON.

Late in the year of 1682, Thomas Holmes, Penn's surveyor-general, laid out the city of Philadelphia on land purchased from the Swedes. In the spring of



MONUMENT ERECTED TO MARK THE SITE OF THE TREATY TREE.

1683 it became the capital city, the proprietor having previously divided the province into the counties Bucks, Chester, and Philadelphia, and the "territories" into three,—New Castle, Kent, and Sussex. The political freedom of the colonists induced frequent modifications in their form of government. The Council and Assembly were in session in the spring of 1683. Addressing them in reference to the form of government, Penn said, "You may amend, alter, or add; I am ready to settle such form or additions as may be for your happines." The question before them was "whether to have the old charter or a new one." A new one was adopted and approved by the Governor of the province. By this charter the Provincial Council was to consist of eighteen persons, three from each county, and the Assembly of thirty-six persons "of most note for virtue, wisdom and ability." The laws were to be prepared and proposed by the Governor and Council, and the number of Assemblymen to be increased at their own pleasure.

The popular branch of the Legislature had no power to originate laws or measures, but could negative or defeat those proposed by the Governor and Council. It was soon discovered that an elective Assembly, representing a large constituency, were unsatisfied with the exercise of a negative power. Discussions were frequent and animated. This led to conferences with the Council and the Governor; the associated wisdom of the many became manifest, and the privilege of suggesting measures was conceded to the Assemblymen. In return, they conferred upon the Governor the power to negative measures proposed by the Council. In the light of experience, it would seem to have been better to repose the veto power in the executive, granting to the most popular branch of the Assembly power to originate all laws for the public welfare. As modified in 1683, the colonial government continued until 1696. Having established the colony upon principles of constitutional freedom, Penn confided the executive power to Thomas Lloyd, an eminent Quaker, and in the month of July, 1684, returned to England. Commentators concur in reporting serious dissensions among those vested with the power of government. The trouble was mainly due to the distinction between the proprietary interests and those of the common people.

In August, 1684, the province contained eight thousand souls; over these Penn had established a democracy, while his great landed interests made him a feudal sovereign. Bancroft declares, "The two elements in the government were incompatible, and for ninety years the civil history of Pennsylvania is but an account of the jarring of the opposing interests, to which there could be no happy issue but in popular independence." Sherman Day says, "The different authorities did not support each other as they should have done; there was constant bickering between the legislative and the executive, and between the members from the 'territories' and those of the province."[1] The "territories" or what sub-

[1] The following conference between the Assembly and the Governor illustrates the temper and character of the conflict during the colonial period, and is referred to by historians generally:

"John White, David Lloyd, Saml. Carpenter and Edward Blake, from the house of representatives, bring in and offer the Bill of supplies for the government, which they say is read two times in their house, but not passed, and desires to know what is become of the other bills they have sent up; whether they are passed or not, or what amendments are made, &c.

"His Excell. Gentl., This is no bill. I will not look upon it untill it be passed the house and signed by the Speaker. I have sent you word formerlie that the Speaker was to cause be wrote under each bill, 'This bill being three times read, is assented unto by the House of Representatives, and ordered to be transmitted to the Governor and Council for their assent thereunto, and then signed by order of the house his name.' But this you will not follow becaus bid to doe it.

"Mr. White. May it please the Governor not to take it amiss that the representatives are desirous to know what is become of the other bills, ere they proceed to the passing of it. They judge it the practice of the Comons of England and their right, therefore pray, Governor, excuse it and peruse the bill.

"His Excell. Gentl., If you did design to compliment me with the sight of this Bill before it was passed yor house, you might have followed other measures. I can take no notice of it here untill it come signed by the Speaker and past the house. I will not look upon it.

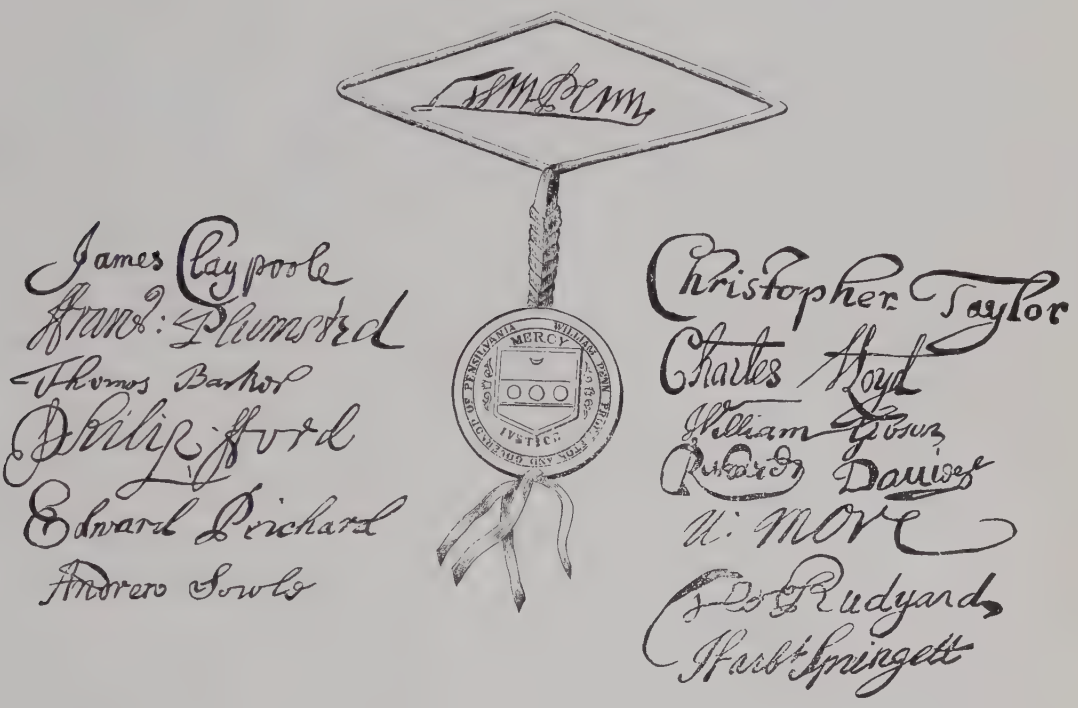
"Mr. Lloyd. To be plain with the Governor, here is the monie bill, and the house will not pass it untill they know what is become of the other bills that are sent up.

"Mr. White. May it please the Governor, the House doe not know but those bills the Governor may see cause to lay aside may be the bills they putt the greatest value upon, therefore pray thee to excuse it and condescend to them in that thing.

"His Excell. Gentl., You have not dealt fairlie by me. You have no candor; you have sitt these fifteen days and nothing done. No vote mentioning those laws ever came to my hand untill you surprise me 13 bills; and again more, some of which are directlie opposite to their Maties Lres patents. I came not here to make bargains nor expose the king's honour. I will never grant any such for all the money in your Countrie. You have had her Maties' Letter before you, and let the house consider what they are doing. I must be accompttable at whitehall for everie thing that is transacted here in this assembly. I shall be sorrie if I can be able to give you no better character; and in short, you must expect to be an annexed to New Yorke or Maryland. I will not look upon the Bill untill it will be three times read and signed by the Speaker.

sequently became the State of Delaware were a source of solicitude to Penn, and the representatives from them were generally hostile to the proprietary interests.

The third frame of government was adopted in 1696, which continued in force until 1700. Meantime Penn returned to his colony and applied himself diligently to a further modification of the government and in securing unity in the administration of the laws. The Assembly met in extra session in May, and again in October, 1700. A new charter or frame of government, and a new code of laws were submitted. After long and bitter discussion both were adopted. The charter continued in force until the separation of the province from Great Britain, 1776.[1]



FAC-SIMILE OF WILLIAM PENN'S AUTOGRAPH AND SEAL, AND THE AUTOGRAPHS OF ATTESTING WITNESSES TO THE CHARTER OF 1682.

"The Representatives did throw down another bill upon the table and withdrew.

"The Bill last delivered is concerning the estate of persons deceased, and not signed by the Speaker.

"His Excell. ordered Mr. Robinson to carie the same back to the house, and tell them that his Excell. hath passed a bill against abusing Magistrates this day in Council; that they sufficientlie abuse his Excell. in sending up such scripts of paper without being signed, and that they must not expect that hee will take anie notice of such.

"His Excell. sent Mr. Robinson and Mr. Forman to inquire if the house of representatives had any more Bills to offer. Who in ansr. said, the house wer in debate whether they should send any more bills for assent until they heard that the other former bills were passed.

"His Excell. after long expectation, did desire the advice of the board whether he should not dissolve the assemblie, having had no regard to their Majesties' demands for assisting New Yorke.

"His Excell. ordered Pat. Robinson and Geo. Forman, Esqrs., to wait upon the house of Representatives, and demand of them whether they have complied with their Majesties' demand for assisting New Yorke; whether they had considered of a Quota of men or monie, or both, and that they return an ansr. in writing, signed by the Speaker.

"His Excell. gave them the Queen's Letter, of which the Representatives had formerlie a copie, that they might see it.

"They brought in ansr. that shortlie they would bring an ansr. in writing.

"His Excell. did demand of the Council If they have observed him to take wrong measures to disoblige the representatives and make the inhabitants uneasie since he came amongs them, and prayed them to use their freedom of speech.

"The Members of the Council did return, That they were admirers of his Excell. patience, and wer wittnesses that hee hath taken all the steps of condescension imaginable to gain them, and that they wer afraid the Countrie will be att last sufferers through their means.

"His Excell. gave the board to understand that he hath sent several messages to the Representatives—they have done nothing to answer the Queen's Letter. They have adjourned ymselves twice this day, and it is now three hours since the last message was sent to them; Therefore, asks the advice of the board to send for them and dissolve them.

"Andrew Robeson, Esq., made answer, That he was ashamed of their behaviour to his Excell., after all that condescention and patience his Excell. hath shown to them; being putt to the vote, It is the opinion of the Council (only Mr. Salway excepted) that his Excell. have patience till morrow morning, and if they give not satisfactorie ansr. to the Queen's Letter by 8 o'clock to-morrow morning, then to dissolve the present assembly.

"Adjourned till 5 o'clock morrow morning."

(*Col. Rec. vol. i.*)

[1] This charter of rights and privileges, under which our progenitors lived for seventy-five years, from 1701 to 1776, merits preservation for convenient reference, containing, as it does, the germ of the commonwealth and State.

The expense attending upon the settlement and improvement of the province impaired the fortune of its founder, and in the year 1708 he was obliged to mortgage his proprietary possessions for the sum of thirty thousand dollars. This is said to be the first debt of the State. In 1712, Penn negotiated with Queen Anne for the transfer of the government of the province and territories to the crown, for

"THE CHARTER OF PRIVILEGES TO THE PROVINCE AND COUNTIES. WILLIAM PENN, PROPRIETARY AND GOVERNOR OF THE PROVINCE OF PENNSYLVANIA AND TERRITORIES THEREUNTO BELONGING.

"TO ALL TO WHOM THESE PRESENTS SHALL COME, SENDETH GREETING."

"*Whereas, King Charles the Second*, by his Letters Patents under the Great Seal of England, bearing date the fourth day of March, in the year One Thousand Six Hundred and Eighty, was graciously pleased to give and grant unto me, my heirs and assigns, forever, this Province of Pennsylvania, with Divers Great Powers and Jurisd'ction for the Well Government thereof; and whereas the King's Dearest Brother, James, Duke of York and Albany, &c., by his Deeds of feoffment under his hand and Seal, duly perfecting, bearing Date the Twenty-fourth Day of August, One Thousand Six hundred Eighty and two, Did grant unto me, my heirs and assigns, all that Tract of Land now called the Territories of Pennsylvi'a, together with Powers and Jurisdiction for the good Government thereof; *and Whereas*, for the Encouragement of all the freemen and Planters that might be concerned in the said Province and Territories, and for the good government thereof, I, the said William Penn, in the year One thousand Six hundred Eighty and three, for me, my heirs and assigns, Did grant and Confirm unto all the freemen, Planters and adventurers therein, Divers Liberties, franchises and Propertys, as by the said grant Entitled the Frame of the Government of the Province of Pennsylvania and Territories thereunto belonging, in America, may appear. Which Charter or frame, being found in some parts of it not so suitable to the Present Circumstances of the Inhabitants, was, in the third month, in the year One thousand seven hundred, Delivered up to me by six parts of seven of freemen of this Province and Territories, in General Assembly met, provision being made in the said Charter for that end and Purpose; *and Whereas*, I was then pleased to promise that I would restore the said Charter to them again with necessary alterations, or, in Lieu thereof, Give them another, better adapted to answer the Present Circumstances and condition of the said Inhabitants, which they have now by their Representatives in General Assembly met in Philadelphia, Requested me to grant; know ye therefore that I, for the further well-being and good Govrmt of the said Province and Territories, and in pursuance of the Rights and Powers before mentioned, I, the said William Penn, do Declare, grant and Confirm unto all the freemen, planters and adventurers and other inhabitants of and in the said Province and Territories thereunto annexed, forever;

"First. Because no people can be truly happy, though under the greatest Enjoyment of Civil Liberties, if abridg'd of the freedom of their Consciences as to their Religious profession and Worship; and Almighty God being the only Lord of Conscience, father of Lights and Spirits, and the author as well as object of all Divine Knowledge, faith and Worship, who only doth Enlighten the mind and persuade and convince the understanding of People, I do hereby grant and declare that no person or persons, inhabiting in this Province or Territories, who shall confess and acknowledge one Almighty God, the Creator, Upholder and Ruler of the World, and Profess him or themselves obliged to live quietly under the Civil Government, shall be in any case molested or prejudiced in his or their person or estate, because of his or their conscientious persuasion or practice, nor be compelled to frequent or maintain any Religious Worship, place or ministry contrary to his or their mind, or to do or suffer any other act or thing contrary to their Religious persuasion. And that all persons who also profess to believe in Jesus Christ, the Saviour of the World, shall be capable (notwithstanding their other persuasions and practices in point of Conscience and Religion) to serve this Government in any Capacity, both Legislatively and Executively, he or they Solemnly promising, when Lawfully required, allegiance to the King as Sovereign and fidelity to the Proprietor and Governor, and taking the attests as now established, by the law made at New Castle, in the year One Thousand seven hundred, Intitled an act Directing the attests of several officers and ministers, as now amended and confirmed by this present Assembly.

"Secondly. For the well governing of this Province and territories, there shall be an Assembly yearly chosen by the freemen thereof, to Consist of four persons out of each County of most note for Virtue, Wisdom and Ability (or of a greater number at any time as the Governour and Assembly shall agree), upon the first day of October, forever; and shall sitt on the fourteenth day of the said month, at Philadelphia, unless the Governour and Council, for the time being, shall see cause to appoint another place within the said Province or Territories, which assembly shall have power to Choose a Speaker and their other officers, and shall be Judges of the Qualifications and Elections of their own members, sitt upon their own adjournments, appoint Committees, prepare bills in or to pass into Laws, Impeach criminals and Redress Grievances; and shall have all other powers and Privileges of an Assembly, according to the rights of the free-born subjects of England, and as is usual in any of the King's Plantacons in America. And if any Court or Counties shall refuse or neglect to choose their Respective representatives, as aforesaid, or, if chosen, do not meet to serve in Assembly, those who are chosen and mett shall have the full power of an Assembly, in as ample manner as if all the Representatives had been chosen and mett; Provided they are not less than two thirds of the whole number that ought to meet; And that the Qualifications of Electors and Elected, and all other matters and things Relating to Elections of Representatives to serve in Assemblys, though not herein particularly exprest, shall be and remain as by a Law of this Governt, made at New Castle in the year One thousand seven hundred, Intitled an Act to ascertain the number of members of Assembly, and to regulate the Elections.

"Thirdly. That the freemen in each Representative County, at the time and place of meeting for Electing their Representatives to serve in Assembly, may, as often as there shall be occasion, choose a Double number of persons to present to the Govr. for Sheriffs and Coroners, to serve for three years, if they so long behave themselves well, out of which respective Elections and Presentments The Gov. shall nominate and Commission One for each of the said officers The Third Day after such presentment, or else the first named in such presentment for each office, as aforesaid, shall stand and serve in that office for the time before Respectively Limited; and in case of death or Default, such vacancies shall be supplied by the Governor to serve to the End of the said Term; Provided always, that if the said freemen shall at any time neglect or Decline to Choose a person or persons for Either or both the aforesaid offices, then and in such Case the persons that are or shall be in the Respective offices of Sherif or Coroner at the time of Election shall remain therein untill they shall be Removed by another Election, as aforesaid. And that the Justices of the Respective Counties shall or may nominate and present to the Govr. three persons to serve for Clerk of the Peace for the said County when there is a vacancy, One of which the Governour shall Commissionate within Ten Days after such presentment, or else the first nominated shall serve in the said office during good behaviour.

"Fourthly. That the Laws of this Govrmt. shall be in this stile, vizt: [By the Governour with the Consent and approbation of the freemen in General Assembly mett] and shall be, after confirmation by the governour, forthwith Recorded in the Roll's office and kept at Philadia., unless the Govr. and Assembly shall agree to appoint another place.

"Fifthly. That all Criminals shall have the same Privileges of Witnesses and Council as their Prosecutors.

"Sixthly. That no person or persons shall or may, at any time hereafter, be obliged to answer any Complaint, matter or thing Whatsoever relating to Property before the Governr. and Council, or in any other place but in the ordinary Courts of Justice, unless appeals thereunto shall be hereafter by Law appointed.

"Seventhly. That no person within this Government shall be licensed by the Governor to keep Ordinary, Tavern, or House of Publick Entertainment, but such who are first Recommended to him under the hand of the Justices of the Respective Counties signed in open Court, wch. Justices are and shall be hereby Impowered to suppress and forbid any person keeping such Publick House, as aforesaid, upon their misbehaviour, on such Penalties as the Law doth or shall direct, and to Recommend others from time to time as they shall see occasion.

"Eighthly. If any person, through Temptation or melancholly, shall Destroy himself, his Estate, Real and Personal, shall, notwithstanding, Descend to his wife and Children or Relations as if he had died a natural Death; and if any person shall be Destroyed or kill'd by Casuality or accident, there shall be no forfeiture to the Governour by reason thereof; and no act, Law or Ordinance whatsoever shall at any time hereafter be made or done to alter, Change or Diminish the form or effect of this

which he was to receive sixty thousand dollars. Pending legislation upon this subject, Penn became a hopeless invalid with impaired faculties, and after a lingering illness of six years he died at Rushcomb, in Buckinghamshire, England, on the 30th day of July, 1718.

Charter, or of any part or clause therein Contrary to the true Interest and meaning thereof, without the Consent of the Govr. for the time being, and Six parts of Seven of the Assembly mett. But because the happiness of mankind depends so much upon the Enjoying of Liberty of their Consciences, as aforesaid, I do hereby Solemnly Declare, promise and Grant for me, my heirs and assigns, that the first article of this Charter, Relating to Liberty of Conscience, and every part and Clause therein, according to the true intent and meaning thereof, shall be kept and remain without any alteration inviolably forever.

"And Lastly, I, the said William Penn, Proprietor and Govr. of the Province of Pennsylvania and Territories thereunto belonging, for myself, my heirs and Assigns, have solemnly Declared, Granted and Confirmed, and do hereby Solemnly Declare, Grant and Confirm, that neither I, my heirs or Assigns shall procure or do anything or things whereby the Liberties in this Charter Contained and Exprest, nor any part thereof, shall be infringed or Broken ; and if anything shall be procured or done by any person or persons contrary to these presents, it shall be held of no force or effect.

"In Witness whereof, I, the said William Penn, att Philadia., in Pennsylvania, have unto this present Charter of Liberties sett my hand and Broad Seal, this Twenty-Eighth Day of October, In the year of our Lord One thousand Seven hundred and One, being the thirteenth year of the Reign of King William the Third over England, Scotland, France, and Ireland, &c., and in the Twenty-first year of my Govrmt. And notwithstanding the Closure and test of this present Charter, as aforesaid, I think fitt to add this following proviso thereunto as part of the same, that is to say : that notwithstanding any Clause or Clauses in the above mentioned Charter obliged the Province and Territories to join together in Legislation, I am content and do hereby declare that if the Representatives of the Province and Territories shall not hereafter agree to Joyn together in Legislation, and if the same shall be signified to me or my Deputy, in open Assembly or otherwise, from under the hands and seals of the Representatives (for the time being) of the province or Territories, or the major part of Either of them, any time within three years from the date hereof ; That in such Case the Inhabitants of Each of the three Counties of this Province shall not have less than Eight persons to Represent them in Assembly for the Province, and the Inhabitants of the town of Philadia. (when the said Town is incorporated) Two persons to represent them in Assembly ; and the Inhabitants of Each County in the Territories shall have as many persons to Represent them in a Distinct Assembly for the Territories as shall be by them requested, as aforesaid, Notwithstanding which separation of the Province and Territories in respect of Legislation, I do hereby promise, Grant and Declare that the Inhabitants of both Province and Territories shall separately enjoy all other Liberties, Privileges and benefits Granted Jointly to them in this Charter, any Law usage or Custom of this Govrmt. heretofore made and practised, or any Law made and passed by this General Assembly to the contrary hereof notwithstanding.

"Copia Vera, "WILLIAM PENN.

} *Propry. and Gov'rs Council.*

"Recorded in the Rolls Office at Philadelphia, In Patent Book A., Vol. 2nd, pa. 125 to 129, the 31st of 8th Mo., 1701.

"By me, THOS. STORY, *Mr. ibim.*"

—*Col. Rec., vol. ii.*

By his will the government or jurisdiction of Pennsylvania and territories was given in trust to the Earls of Oxford (Mortimer and Powlet), to be disposed of to the Queen or any other person to the best advantage. The proprietary right of government of the province was claimed by the eldest son, William. The hereditary succession was disputed, and the case found its way to a Court of Chancery, which decreed the right of government to be a part of the personal estate. Under this decision the widow and executrix, Hannah Penn, exercised a proprietary interest during the minority of the heirs and for many years afterwards. She is said to have been a woman of "powerful intellect, and exerted it in securing the appointment of Governors, and in directing of the affairs of the colony."

The colony established as a "Holy Experiment" was geographically known throughout Christendom, and the tide of emigration was tending in the direction of Pennsylvania. Men of enterprise, possessing capital, came to secure timber lands, to engage in shipbuilding, to explore and develop mineral wealth and to foster the growth of cattle and grain for exportation. This development attracted the New England traders, trained in the school of republican Puritanism, who found here a congenial climate and sources of wealth which induced many of them to become permanent settlers. Among them was the boy Benjamin Franklin, who arrived in October, 1723. Among those who came from the mother country at this period were many connected with the Church of England. Following these were Presbyterians from Scotland and Ireland. These people were not averse to bearing arms in self-defense ; in truth, they were aggressive and were active, as have been their patriotic descendants in extending the line of civilization westward. In contrast with this class were the Mennonists or German Baptists, a religious people who adhered to the principles of non-resistance, and because of this belief were persecuted in Northern Europe. They naturally sought a country tolerant in its laws, and thousands of them settled in Eastern Pennsylvania in the beginning of the seventeenth century. These were followed by the Dunkers and German Lutherans. Amid this great diversity of races, languages, interests, and prejudices, agitation and sharp conflicts of opinion were natural, and slowly but surely led up to and expended their force in the Revolution that followed. Cause was not wanting to excite a well-marked division of public opinion upon subjects associated with the general welfare. On the one side was the proprietary family with their landed prerogatives, their manors of many thousand acres of the most valuable of improved lands, their quit-rents and baronial pomp, alienated in their sympathies from the colony, preferring the luxuries of aristocratic life in England to the simple manners and customs of the New World, ruling the colony by capricious Governors and deputies, and persistingly refusing to be taxed in

common for the defense of the country. On the other side was a hardy, self-reliant and enthusiastic band of pioneers, free in this New World to develop and maintain the great principles of civil liberty and self-government then just dawning upon the human mind, willing to bear their share of the pecuniary burdens of the frontier wars against the encroachments of the French and their savage allies, provided the proprietaries would consent to be equally taxed; a part of them ambitious to take up arms in defense of the colony, while the Quakers and other non-resisting sects were zealous in their humane efforts to promote peace. The policy of the home government was to keep the colonists dependent; the ambition of the enterprising colonists was to be self-supporting and independent.[1]

The conflict of opinion upon the subject of taxation was intensified by the declaration of hostilities between France and England, in March 1744. The French seized upon and fortified important points on the Ohio River, and by artful means secured the Shawnees and other Indian tribes to join them. The situation boded evil to the colony, and a frontier war seemed inevitable. Deferential measures were necessary for the protection of life and property. The Assembly urged that the proprietary estates, as well as those of the common people, should be taxed for warlike purposes. The proprietaries, through their deputies, opposed the measure, pleading prerogative, charter and law; the representatives of the people urged equity, common danger and reciprocal benefits. The Assembly passed laws laying taxes, but annexing conditions. The Governors objected to the condition, and insisted upon laws taxing the people, but not the proprietaries. Benjamin Franklin was at this date a leading member of the Assembly, and took an active part in this controversy in relation to the equality of taxation. He was subsequently commissioned to visit London, where, in 1759,[2] he secured the royal assent to a law authorizing the taxation of proprietary estates in the province. This was deemed an important triumph at the time, and gave to Franklin his first diplomatic honors.

Braddock's defeat, in the summer of 1753, gave rise to apprehension among settlers between the Schuylkill and Delaware Rivers. The peaceful Moravians fortified Bethlehem and took up arms for their defense. Colonel William Franklin with a regiment of five hundred men proceeded to the Lehigh and superintended the erection of a line of fortifications. The precautionary measures were wisely taken; the line of frontier from the Delaware Water Gap to the Potomac was the scene of burning settlements, massacre and cruelty. The imperiled condition of the colony as represented by Franklin attracted the attention of the home government, whose affairs at this date were guided by the statesmanship of William Pitt. The French were vigorously attacked on the northern frontier of New York, compelling their withdrawal from all operations on the frontier of Pennsylvania. Meantime, efforts were made by the unwarlike people of the colony to renew peaceful relations with the Indian tribes who were in sympathy with the French. Grand councils were held at Easton in November, 1756, and at the same place in the autumn of 1758. At the last-named council the chiefs of the Six Nations and the Delawares were present. The complaints of the Indians concerning lands were duly considered, and all differences were for the time amicably settled. Two years later the French were driven from the colonial boundaries, and in 1762 a treaty of peace was concluded between Great Britain, France

[1] The restrictive policy of the home government is shown in the following proclamation conceding the privilege of exporting the fruits of coarse and cheap labor, but denying to the enterprising manufacturer the right to employ skilled labor in the higher and more profitable branches of productive industry.

"By the Honourable James Hamilton, Esqr., Lieutenant-Governor and Commander-in-Chief of the Province of Pennsylvania and Counties of New Castle, Kent and Sussex, on Delaware:

"A Proclamation.

"*Whereas*, By an Act of Assembly passed in the twenty-third year of his Majestie's Reign, entitled 'An Act to encourage the importation of Pig and Bar Iron from his Majestie's Colonies in America, and to prevent the erection of any mill or other engine for slitting or rolling iron, or any plating forge to work with a Tilt Hammer, or any furnace for making steel in any of the said colonies,' it is enacted 'That from and after the Twenty-Fourth day of June, in the Year of our Lord One Thousand Seven Hundred and Fifty, every Governor, Lieutenant-Governor and Commander-in-Chief of any of his Majestie's Colonies in America shall forthwith transmit to the Commissioners for Trade and Plantations a certificate under his Hand and Seal of office, containing a particular account of every mill or engine for slitting and rolling Iron, and every plating forge to work with a Tilt Hammer, and every furnace for making Steel at the time of the commencement of this act erected in his Colony, expressing also in the said Certificate such of them as are used, and the name or names of the proprietor or proprietors of each such mill, engine, forge and furnace, and the place where each such mill, engine, forge and furnace is erected, and the number of engines, forges and furnaces in the said Colony.' To the end, therefore, that I may be the better enabled to obey the directions of the said Act, I have thought fit, with the advice of the Council, to issue this Proclamation, hereby enjoining and requiring the proprietor or proprietors, or in case of their absence, the occupiers of any of the above mentioned mills, engines, forges and furnaces erected within this Province, to appear before me at the city of Philadelphia on or before the Twenty-first day of September next, with proper and ample testimonials of the rights of such proprietor, proprietors and occupiers therein, and sufficient proofs whether the said mills, engines, forges and furnaces, respectively, were used on the said Twenty-fourth day of June or not. And I do further hereby require and command the Sheriff of every County in this Province respectively on or before the said Twenty-first day of September to appear before me at the city of Philadelphia, aforesaid, and then and there, by writings under their Hands and Seals, to certify and make known to me every mill or engine for slitting and rolling Iron, every plating forge to work with a Tilt Hammer, and every furnace for making steel which were erected within their several and respective counties on the said Twenty-fourth day of June, and the place and places where the same were erected, with the names of their reputed proprietor or proprietors, and the occupiers of them and every of them, and whether they or any of them were used on the said Twenty-fourth day of June or not, as they and each of them will answer the contrary at their peril."

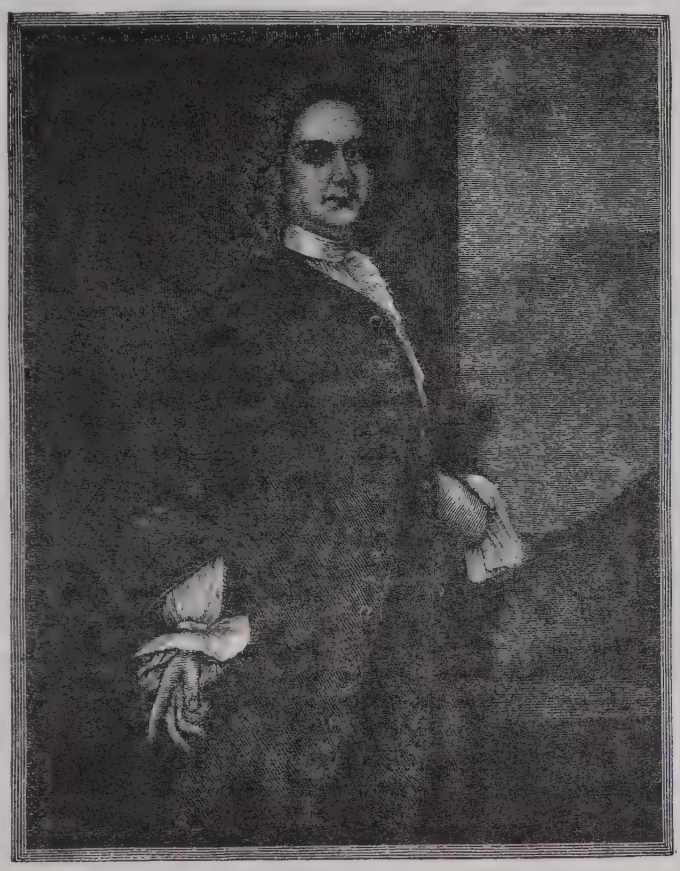
"August 16, 1750."

—*Col. Rec. vol. v.*

[2] The famous "Review of the History of Pennsylvania," written by Franklin, was published in London, anonymously, in 1759. It is an able argument in favor of the position taken by the Assembly, and against the proprietors of the province.

and Spain, by which Canada became a British colony. At this period of our colonial history the province and "Territories" of Pennsylvania were supposed to have a population of two hundred thousand souls.[1]

Although no census had been taken, the number of men capable of military duty was estimated to be about thirty thousand. It had no organized militia, but maintained and garrisoned a chain of forts protecting its frontiers, at an annual cost of seventy thousand pounds currency. The Assembly were steadily encroaching upon the prerogatives of the executive powers of the government. When new public offices were created by law, as the growing necessities of the people required, the names of those who were to fill them were inserted in the bill, with a clause reserving to the Assembly the power to nominate in case of death. Sheriffs, coroners, and all persons connected with the treasury were named by the people, and were responsible to their constituency. The Assembly could not be prorogued or dissolved, and adjourned at its own pleasure. "In Pennsylvania," wrote Loudon, in the hope of influencing the mind of Pitt, "the majority of the Assembly are Quakers; whilst that is the case they will always oppose every measure of Government and support that *independence which is deep-rooted everywhere in this country.*"



FRANKLIN AT THE AGE OF TWENTY.

"The people of Pennsylvania," said Thomas Penn in 1757, "will soon be convinced by the House of Commons, as well as by the ministers, that they *have not a right to the powers of government they claim.*" The same year the House of Commons resolved that "the claim of right in a Colonial Assembly to raise and apply public money, by its own act alone, is derogatory to the Crown and to the rights of the people of Great Britain." Said Granville to Franklin, on his arrival in London, "Your Assemblies slight the King's instructions; they are drawn up by men learned in the laws and constitution of the realm; they are brought into Council, thoroughly weighed, and amended, if necessary, by the wisdom of that body, and when received by the Government they are laws of the land, for the *King is the legislator of the Colonies.*"

In 1758 Parliament laid grievous restrictions on the export of provisions from the British colonies. America protested against the wrong and injury. Granville replied, "The Colonies must not do anything to interfere with Great Britain in the European markets." "If we plant and reap and must not ship," retorted Franklin, "your lordships should apply to Parliament for transports to bring us all back again."

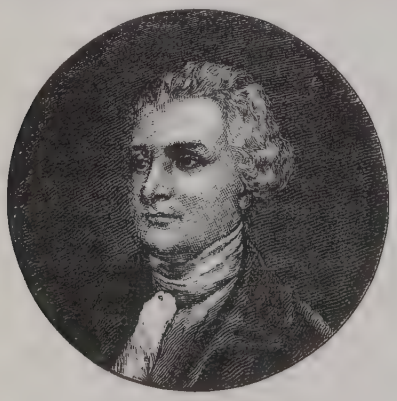
Peace with France and the acquisition of the Canadian provinces gave impetus to the colonizing efforts of the crown, whose troops were stationed at remote points from Lake Huron to and beyond the Ohio. The peace that followed was of short duration. The Indians around the great lakes and on the Ohio cheerfully assented to the building of a chain of forts by the French, from Presque Isle to the Monongahela, so long as they proved a barrier to the advance of the English westward. But now they saw the English in possession of Canada and all the forts, with the evident intent to occupy the country for purposes of agriculture. This line of occupation was fully a hundred miles west of all purchases, and excited the hostility of the savages. Pontiac, "the King and Lord of all the Northwest," and chief of the Ottawas, counseled with the Senecas, Delawares, Shawnees, Miamis and Wyandots. In their own councils they said, "The English mean to make slaves of us, by occupying so many posts in our country; we had better strike now to recover our

[1] Bancroft, vol. iii, p. 167.

liberty and our country than wait until it is too late." Pontiac proposed the gigantic plan of uniting all the northwestern tribes in a simultaneous attack upon the whole frontier. The forts and garrisons were to be taken by force or artful stratagems by separate parties on the same day, the border settlements were to be attacked in the harvest season, and men, women and children were to be killed or carried into captivity. The events which speedily followed crimson the annals of our early history. The forts of Presque Isle, Le Bœuf, Venango, St. Joseph and Michilimackinac were taken with a general slaughter of their garrisons, while those of Bedford, Ligonier, and Pitt were preserved through great loss and privation.

The frontier settlements among and near the mountains were overrun with scalping-parties, marking their track with blood and fire. Of one hundred and twenty English traders located on the line of operations, only three escaped the general massacre. Consternation spread throughout the colony, and thousands of settlers refuged from the Juniata and Susquehanna, fleeing with their families and flocks for shelter to Carlisle, Lancaster, and Reading.

John Penn, grandson of William Penn, was then Governor, and heartily seconded the efforts of General



John Penn

Gage to repel the invasion. His conduct was in strange contrast with that of his great progenitor. He published his proclamation in July, 1764, offering the following bounties for the capture or scalps and death of Indians: "For every male above the age of ten years captured, one hundred and fifty dollars; scalped, being killed, one hundred and thirty-four dollars; for every female Indian enemy, and every male under the age of ten years, captured, one hundred and thirty dollars; for every female above the age of ten years, scalped, being killed, fifty dollars."

The military operations conducted by Colonel Bouquet in the autumn of 1764 were successful.

Henry Bouquet

The Indians were overawed and sued for peace. The Delawares, Shawnees and Senecas agreed to cease hostilities, and in token of their good faith surrendered a large number of prisoners, among them many women and children, whose safe return gladdened many hearts and homes in Pennsylvania.

All wars are costly, and this last one had entailed large expenses that now must be met. Taxation was the basis of credit, and a revival of the subject in the Assembly raised anew the controversy between the people and the proprietaries. The Governor used his influence in shielding his family estates from their equitable share of the public burden, debtors became clamorous, and finally the Assembly was compelled to provide for the necessities of the province, and the supplies were granted; but the conduct of the executive so incensed the Assembly that they determined by a large majority to petition to the King to purchase the proprietary interests and vest them in the crown for the common welfare.

The taxable resources of the province and the necessary consumption of two hundred thousand people now began to attract the attention of the ministry, and the measures adopted by the British government to replenish its home treasury by a grievous system of taxation upon all the American colonies introduced a new and absorbing subject of great public interest. The policy of England was to secure the mo-

nopoly of manufactured articles, to encourage her home population of artisans, to develop maritime enterprise, and by legislation perpetuate the dependency of her distant colonies. This policy involved the question of taxing a people without their consent and without allowing them a representation in the Parliament laying the tax. It was at this period in the colonial era, and in the well-concerted but ill-advised efforts to enforce this policy, that those convictions of hostility that later developed in revolution were inspired. No period in the history of our country can be studied with greater advantage than that from 1765 to 1776. Colonies fringed the Atlantic from Massachusetts Bay to Florida. They emerged from a wilderness and were possessed by two millions of people, who were pressing westward to civilize a continent. The frontier line required the presence of an army of ten thousand troops; the cost of these required an annual expenditure of one million five hundred thousand dollars. Naturally the home government felt that the colonies should bear a part of this expense. On March 22, 1765, the Stamp Act was passed. It consisted of fifty-five

BRITISH STAMP.

resolutions embracing all details, and making all offenses against it cognizable in the Courts of Admiralty without any trial by jury.

To prove the fitness of the tax, George Grenville argued that the colonies had a right to demand protection from Parliament, and Parliament, in return, had a right to enforce a revenue from the colonies; that protection implied an army, an army must receive pay, and pay required taxes; that, on the peace, it was found necessary to maintain a body of ten thousand men, at a cost of three hundred thousand pounds, most of which was a new expense; that the duties and taxes already imposed or designed would not yield more than one hundred thousand pounds, so that England would still have to advance two-thirds of the new expense; that it was reasonable for the colonies to contribute this one-third part of the expense necessary for their own security; that the debt of England was one hundred and forty millions sterling, of America but eight hundred thousand pounds; that the increase of annual taxes in England within ten years was three millions, while all the establishments of America, according to accounts which were produced, cost the Americans but seventy-five thousand pounds.

The charters of the colonies were referred to, and Grenville interpreted their meaning. The clause under which a special exemption was claimed for Maryland was read, and he argued that the province, upon a public emergency, is subject to taxation, in like manner with the rest of the colonies, or the sovereignty over it would cease; and if it were otherwise, why is there a duty on its staple of tobacco? and why is it bound at present by several acts affecting all America, and passed since the grant of its charter? Besides, all charters, he insisted, were under the control of the Legislature. "The colonies claim, it is true," he continued, "the privilege which is common to all British subjects, of being taxed only with their own consent, given by their representatives, and may they ever enjoy the privilege in all its extent; may this sacred pledge of liberty be preserved inviolate to the utmost verge of our dominions, and to the latest pages of our history. I would never lend my hand towards forging chains for America, lest in so doing I should forge them for myself. But the remonstrances of the Americans fail in the great point of the colonies not being represented in Parliament, which is the common council of the whole empire, and as such is as capable of imposing internal taxes as impost duties, or taxes on intercolonial trade, or laws of navigation."

The House was full, and all present seemed to acquiesce in silence. Beckford, a member for London, a friend of Pitt, and himself a large owner of West India estates, without disputing the supreme authority of Parliament, declared his opinion that "taxing America for the sake of raising a revenue would never do." Jackson, who had concerted with Grenville to propose an American representation in Parliament, spoke and voted against the resolutions. "The Parliament," he argued, "may choose whether they will tax America or not; they have a right to tax Ireland, yet do not exercise that right. Still stronger objections may be urged against their taxing America. Other ways of raising the moneys there requisite for the public service exist and have not yet failed; but the colonies in general have with alacrity contributed to the common cause. It is hard all should suffer for the fault of two or three. Parliament is, undoubtedly, the universal, unlimited legislature of the British dominions, but it should voluntarily set bounds to the exercise of its power; and, if the majority think they ought not to set these bounds, then they should give a share of the election of the legislature to the American colonies; otherwise the liberties of America I do not say will be lost, but will be in danger, and they cannot be injured without danger to the liberties of Great Britain."

Grenville had urged the House not to suffer themselves to be moved by resentment. One member,

however, referred, with asperity, to the votes of New York and Massachusetts; and it is generally held that America was as virtually represented in Parliament as the great majority of the inhabitants of Great Britain.

Isaac Barrê, the companion and friend of Wolfe, sharer of the dangers and glories of Louisburg and Quebec, seemed to admit the power of Parliament to tax America, yet derided the idea of virtual representation. "Who of you, reasoning upon this subject, feels warmly from the heart?" he cried, putting his hand to his breast. "Who of you feels for the Americans as you would for yourselves, or as you would for the people of your own native country?" And he taunted the House with its ignorance of American affairs.

The charge of ignorance called upon his feet Charles Townshend, the professed master of them. He confirmed the equity of taxation, and insisted that the colonies had borne but a small proportion of the expense of the last war, and had yet obtained by it immense advantages at a vast expense to the mother-country. "And now," said he, "will these American children, planted by our care, nourished up by our indulgence to a degree of strength and opulence, and protected by our arms, grudge to contribute their mite to relieve us from the heavy burden under which we lie?"

As he sat down Barré rose, and, with eyes darting fire and outstretched arm, uttered an unpremeditated reply,—

"*They planted by* YOUR *care!* No; your oppression planted them in America. They fled from your tyranny to a then uncultivated, unhospitable country, where they exposed themselves to almost all the hardships to which human nature is liable, and, among others, to the cruelties of a savage foe, the most subtle, and, I will take upon me to say, the most formidable of any people upon the face of God's earth; and yet, actuated by principles of true English liberty, they met all hardships with pleasure, compared with those they suffered in their own country, from the hands of those who should have been their friends. *They nourished up by* YOUR *indulgence!* They grew by your neglect of them. As soon as you began to care about them that care was exercised in sending persons to rule them in one department and another, who were, perhaps, the deputies of deputies to some members of this House, sent to spy out their liberties, to misrepresent their actions and to prey upon them,—men whose behavior on many occasions have caused the blood of those sons of liberty to recoil within them; men promoted to the highest seats of justice, some who, to my knowledge, were glad, by going to a foreign country, to escape being brought to the bar of a court of justice in their own. *They protected by* YOUR *arms!* They have nobly taken up arms in your defense; have exerted a valor, amidst their constant and laborious industry, for the defense of a country whose frontier was drenched in blood, while its interior parts yielded all its little savings to your emolument. And believe me—remember I this day told you so—the same spirit of freedom which actuated that people at first will accompany them still. But prudence forbids me to explain myself further. God knows I do not at this time speak from motives of party heat; what I deliver are the genuine sentiments of my heart. However superior to me in general knowledge and experience the respectable body of this House may be, yet I claim to know more of America than most of you, having seen and been conversant in that country. The people, I believe, are as truly loyal as any subjects the King has, but a people jealous of their liberties, and who will vindicate them if ever they should be violated. But this subject is too delicate; I will say no more."

As Barré spoke, there sat in the gallery Ingersoll, of Connecticut, a semi-royalist, yet joint agent for that province. Delighted with the speech, he made a report of it, which the next packet carried across the Atlantic. The lazy post of that day brought it in nearly three months to New London, in Connecticut, and it was printed in the newspaper of that village. May had not shed its blossoms before the words of Barré were as household words in every New England town. Midsummer saw them circulate through Canada in French, and the continent rung from end to end with the cheering name of the Sons of Liberty. But at St. Stephen's the members only observed that Townshend had received a heavy blow. The opponents of the measure dared not risk a division on the merits of the question, but about midnight, after a languid debate of seven hours, Beckford moved an adjournment, which Sir William Meredith seconded; and, though they were aided by all those interested in West Indian estates, it was carried against America by two hundred and forty-five to forty nine. Conway and Beckford alone were said to have denied power of Parliament, and it is doubtful how far it was questioned even by them.

While this debate was proceeding, faith in English liberty was conquering friends for England in new regions. The people of Louisiana, impatient of being transferred from France, would gladly have exchanged the dominion of Spain for that of England. Officers from West Florida reached Fort Chartres, preparatory to taking possession of the country, which was still delayed by the discontent of the Indians. With the same object, Croghan and a party descended the Ohio from Pittsburg. A plan was formed to connect Mobile and Illinois. The Governor of North Carolina believed that by pushing trade up the Missouri, a way to the great western ocean would be discovered, and an open trade to it be established; so wide was the territory, so vast the interests for which the British Parliament was legislating.

On the 7th of February, Grenville, Lord North and Jenkinson, with others, were ordered to bring in a stamp bill for America, which, on the 13th, was introduced by Grenville himself, who read the first without a syllable of debate. Among the papers that were to be stamped, it enumerated the several instruments used in the courts of episcopal jurisdiction, for he reasoned that one day such courts might be established in America. On the 15th, merchants trading to Jamaica offered a petition against it, and prayed to be heard by counsel. "No counselor of this kingdom," said Fuller, formerly chief justice of Jamaica, "would come to the bar of this House and question its authority to tax America. Were he to do so, he would not remain there long." It was the rule of the House "to receive no petition against a money bill," and the petition was withdrawn.

Next, Sir William Meredith, in behalf of Virginia, presented a paper in which Montague, its agent, interweaving expressions from the votes of the As-

sembly of the Old Dominion, prayed that its House of Burgesses might be continued in the possesion of the rights and privileges they had so long and uninterruptedly enjoyed, and might be heard. Against this, too, the same objection existed. But Virginia found an advocate in Conway. Indignant at his recent dismissal from the army, as he rose in opposition to Grenville, his cheeks flushed, and he was tremulous from emotion.

"Shall we shut our ears," he argued, "against the representations which have come from the colonies, and for receiving which we, with an affectation of candor, allotted sufficient time? For my own part, I must declare myself just as much in the dark as I was the last year. My way of life does not engage me in intercourse with commercial gentlemen or those who have any knowledge of the colonies. I declare, upon my honor, I expected, as a member sitting in this House, in consequence of the notice given, to receive from the colonies information by which my judgment might be directed and my conduct regulated. The light which I desire the colonists alone can give. The practice of receiving no petitions against money bills is but one of convenience, from which, in this instance, if in no other, we ought to vary; for from whom, unless from themselves, are we to learn the circumstances of the colonies, and the fatal consequences that may follow the imposing of this tax? The question regards two millions of people, none of whom are represented in Parliament. Gentlemen can not be serious when they insist even on their being virtually represented. Will any man in this House get up and say he is one of the representatives of the colonies?"

"The commons," said Gilbert Elliot, "have maintained against the crown and against the lords their right of solely voting money, without the control of either, any otherwise than by a negative; and will you suffer your colonies to impede the exercise of those rights, untouched as they now are by the other branches of the Legislature?"

"Can there be a more declared avowal of your power," retorted Conway, "than a petition submitting this case to your wisdom, and praying to be heard before your tribunal against a tax that will affect them in their privileges, which you at least have suffered, and in their property, which they have acquired under your protection? From a principle of lenity, of policy and of justice, I am for receiving the petition of a people from whom this country derives its greatest commerce, wealth, and consideration."

In reply, Charles Yorke entered into a long and most elaborate defense of the bill, resting his argument on the supreme and sovereign authority of parliament. With a vast display of legal erudition, he insisted that the colonies were but corporations, their power of legislation was but the power of making by-laws, subject to Parliamentary control. Their charters could not convey the legislative power of Great Britain, because the prerogative could not grant that power. The charters of the proprietary governments were but his hereditary Governors. The people of America could not be taken out of the general and supreme jurisdiction of Parliament. The authority of Yorke was decisive; less than forty were willing to receive this petition of Virginia. A third from South Carolina, a fourth from Connecticut, though expressed in the most moderate language, a fifth from Massachusetts, though silent about the question of "right," shared the same refusal. That from New York no one could be prevailed upon to present. That from Rhode Island, offered by Sherwood, its faithful agent, claimed by the charter under a royal promise equal rights with their fellow-subjects in Great Britain, and insisted that the colony had faithfully kept their part of the compact; but it was as little heeded as the rest. The House of Commons would neither receive petitions nor hear counsel. All the efforts of the agents of the colonies were fruitless. "We might," said Franklin, "as well have hindered the sun's setting." The tide against the Americans was irresistible. "We have power to tax them," said one of the ministry, "and we will tax them. The nation was provoked by American claims of legislative independence, and all parties joined in resolving by this act to settle the point." Within doors less resistance was made to the act than to a common turnpike bill. "The affair passed with so very little noise that in the town they scarcely knew the nature of what was doing."

On the 27th the House of Commons sent up the Stamp Act to the House of Lords. In that body Rockingham was silent; Temple and Lyttelton both approved the principle of the measure and the right asserted in it. Had there existed any doubt concerning that right, they were of opinion it should then be debated before the honor of the Legislature was engaged to its support. On the 8th of March the bill was agreed to by the lords without having encountered an amendment, debate, protest, division or single dissentient vote.

The King was too ill to ratify the act in person. To a few only was the nature of his affliction known. At the moment of passing the Stamp Act, George III. was crazed; so on the 22d of March it received the royal assent by a commission. The sovereign of Great Britain, whose soul was wholly bent on exalting the prerogative, taught the world that a bit of parchment bearing the sign of his hand, scrawled in the flickering light of clouded reason, could, under the British constitution, do the full legislative office of the King. Had he been a private man, his commission could have given validity to no instrument whatever. It was thought "prudent to begin with small duties and taxes, and to advance in proportion as it should be found the colonies would bear." For the present Grenville attempted nothing more than

to increase the revenue from the colonial post-office by reducing the rate of postage in America.

His colleagues desired to extend the mutiny act to America, with power to billet troops on private houses. Clauses for that purpose had been strongly recommended by Gage. They had neither the entire conviction nor the cordial support of Grenville, so that they were introduced and carried through by the Secretary at War as a separate measure. In their progress, provincial barracks, inns, ale-houses, barns and empty houses were substituted by the merchants and agents for private houses; but there remained a clause to compel the colonies to furnish the troops with various articles, and the sums needed for the purpose were "required to be raised in such manner as the public charges for the province are raised."

Thus the billeting act contained what had never before been heard of,—a Parliamentary requisition on the colonies. Bounties were at the same time granted on the importation of deals, planks, boards and timber from the plantations. Coffee of their growth was exempted from an additional duty; their iron might be borne to Ireland, their lumber to Ireland, Madeira, the Azores and Europe south of Cape Finisterre; the prohibition on exporting their bar-iron from England was removed; the rice of North Carolina was as much liberated as that of South Carolina, and rice might be warehoused in England for re-exportation without advancing the duties. It was further provided that the revenue to be derived from the Stamp Act should not be remitted to England, but constitute a part of the sum to be expended in America. Grenville also resolved to select the stamp officers for America from among the Americans themselves. The friends and agents of the colonies were invited to make the nominations, and they did so, Franklin among the rest. "You tell me," said the minister, "you are poor and unable to bear the tax; others tell me you are able. Now, take the business in your own hands; you will see how and where it pinches and will certainly let us know it, in which case it shall be eased."

Not one of the American agents in England "imagined the colonies would think of disputing the stamp tax with Parliament at the point of the sword." "It is our duty to submit" had been the words of Otis. "We yield obedience to the act granting duties" had been uttered by the Legislature of Massachusetts. "If Parliament, in their superior wisdom, shall pass the act, we must submit," wrote Fitch, the Governor of Connecticut, elected by the people, to Jackson. "It can be of no purpose to claim a right of exemption," thought Hutchinson. "It will fall particularly hard on us lawyers and printers," wrote Franklin to a friend in Philadelphia, never doubting it would go into effect and looking for relief to the rapid increase of the people of America. The agent for Massachusetts had recommended it. Knox, the agent for Georgia, wrote publicly in its favor.

Still less did the statesmen of England doubt the result. Thomas Pownall, who had been so much in the colonies and really had an affection for them, congratulated Grenville in advance "on the good effects he would see derived to Great Britain and to the colonies from his firmness and candor in conducting the American business." No tax was ever laid with more general approbation. The act seemed sure to enforce itself. Unless stamps were used, marriages would be null, notes of hand valueless, ships of sea prizes to the first captors, suits at law impossible, transfers of real estate invalid, inheritances irreclaimable. Of all who acted with Grenville in the government, he never heard one prophesy that the measure would be resisted. "He did not foresee the opposition to it, and would have staked his life for obedience."

The following correspondence with Governor John Penn shows the persistency of the British government in efforts to enforce the odious measures of taxation, and the inability or unwillingness of the Governor to comprehend the true situation and temper of the colonists:

STATE HOUSE IN 1744.

"At a Council held at Philadelphia, on Wednesday, the 19th of February, 1766. Present: The Honourable John Penn, Esquire, Lieutenant-Governor, &c.; Lynford Lardner, Benjamin Chew, Richard Penn, Esqrs.

"The Governor laid before the Board a letter he lately received by the packet from the Right Honourable Henry Seymour Conway, Esq., one of his majesty's principal Secretaries of State, dated the 24th of October last, expressing the King's concern at the late commotions in some of the American colonies, which happened on account of a late Act of Parliament for collecting Stamp Duties, and setting forth his majesty's pleasure respecting the conduct to be observed by this Government in case any such disturbance should take place in Pennsylvania, which letter being read, was ordered to be entered, and follows in these words, viz.:

"*A Letter from the R't. Hon'ble. H. S. Conway, Esq'r., to the Governor.*

"'ST. JAMES', October 24, 1765.

"'*Sir*: It is with the greatest concern that his majesty learns the disturbances which have arisen in some of the North American Colonies. If this evil should spread to the Government of Pennsylvania, where you preside, the utmost exertion of your prudence will be necessary so as justly to temper your conduct between that caution and coolness which the delicacy of such a situation may demand on one hand and the vigour necessary to suppress outrage and violence on the other. It is impossible at this distance to assist by any particular or positive instruction, because you will find yourself necessarily obliged to take your resolution as particular circumstances and exegencies may require.

"'His Majesty, and the servants he honors with his confidence, cannot but lament the ill-advised intemperance shown already in some of the provinces by taking up a conduct which can in no way contribute to the

removal of any real grievance they might labour under, but may tend to obstruct and impede the exertion of His Majesty's benevolent attention to the ease and comfort as well as welfare of all his people. It is hoped and expected that this want of confidence in the justice and tenderness of the mother country, and this open resistance to its authority, can only have found place among the lower and more ignorant of the people. The better and wiser part of the colonies will know that decency and submission may prevail, not only to redress grievances, but to obtain grace and favour, while the outrage of a public violence can expect nothing but severity and chastisement. These sentiments you and all his majesty's servants, from a sense of your duty to and love of your country, will endeavour to excite and encourage; you will all, in a particular manner, call upon them not to render their case desperate: you will, in the strongest colours, represent to them the dreadful consequences that must inevitably attend the forcible and violent resistance to Acts of the British Parliament, and the scene of misery and calamity to themselves and of mutual weakness and distraction to both countries inseparable from such a conduct.

"'If by lenient and persuasive methods you can contribute to restore that peace and tranquillity to the provinces on which their welfare and happiness depend, you will do a most acceptable and essential service to your country. But having taken every step which the utmost prudence and lenity can dictate, in compassion to the folly and ignorance of some misguided people, you will not, on the other hand, fail to use your utmost power for the repelling of all acts of outrage and violence, and to provide for the maintenance of peace and good order in the province by such a timely exertion of force as the occasion may require, for which purpose you will make the proper applications to General Gage or Lord Colvill, commanders of his majesty's land and naval forces in America. For, however unwilling his majesty may consent to the exertion of such powers as may endanger the safety of a single subject, yet can he not permit his own dignity and the authority of the British Legislature to be trampled on by force and violence, and in avow'd contempt of all order, duty and decorum. If the Subject is aggrieved, he knows in what manner legally and constitutionally to apply for relief; but it is not suitable, either to the safety or dignity of the British Empire, that any individuals, under the pretence of redressing grievances, should presume to violate the public peace.

"'I am, with great truth and regard, Sir,
"'Your most obedient humble Servant,
"'H. S. Conway.

"'Deputy-Governor Penn.'

"The above letter having been taken into due consideration, and an answer thereto prepared in order to be transmitted by the next pacquet, the same was approved by the Board, and is as follows:

"*A Letter to the Right Honble. H. S. Conway, Esquire, from the Governor.*

"'Philadelphia, 19th February, 1766.

"'*Sir:* I had the honour of your letter of the 24th October last, respecting the disturbances which have lately been committed in severa of the North American colonies. Give me leave to assure you, Sir, tha no one of his majesty's servants is more sensible than I am of the rashness and folly of those who have been concerned in these outrages, which at the same time that they violate the public tranquillity and set Government at nought, are undutiful and affrontive to the best of kings and productive of the most dangerous consequences. I am sorry to be under the necessity of informing you that the dissatisfaction with some of the late Acts of the British Legislature (particularly the Stamp Act) is almost universal in all the colonies on the continent, and prevails among all ranks and orders of men; but I should do great injustice to numbers of his majesty's faithful subjects if I did not represent to you at the same time that the wiser and more considerate among them highly disapprove of and detest the violent and illegal measures which have been pursued in many of the colonies. In the province of Pennsylvania, where I have the honor to preside, matters have been conducted with more moderation and respect to his majesty and Parliament than in most others, and the giddy multitude have hitherto been restrained from committing any acts of open violence.

"'Upon the arrival of the first cargo of stamp'd papers into this province, in the month of October last, John Hughes, of this city, who was reported and indeed generally known to be the person appointed to distribute them, refused to take charge of them, tho' they were consigned to him, under pretence that he had not received his commission or had any authority to take them into his possession; and there being no fort or place of security where I could lodge them on shore, I thought it most advisable to order them on board his Majesty's Sloop of War, the "Sardoine," Captain James Hawker, commander, stationed in the River Delaware, to whose care (on Hughes' afterwards resigning his office of Stamp Distributer), I have also committed all the papers which have since been sent by the Commissioners for the use of this province, till his Majesty's further orders can be received or another person shall be appointed to the office of distributor by the Commissioners, agreeable to the directions of the Act. The Americans have the most sanguine hopes that the remonstrances drawn up by the committees of the several Assemblys at the Congress held for that purpose at New York last Fall, and transmitted by them to the Parliament, will produce a repeal of the Stamp Act; but if they should be disappointed in their expectations, it is impossible to say to what length their irritated and turbulent spirits may carry them. Of this, however, Sir, you may rest assured, that I shall esteem it my indispensible duty on this and every other occasion to use every means in my power to preserve the public peace, and support to the utmost the honor and dignity of his Majesty's Government committed to my care.

"'I have the honor to be, with great truth and regard, Sir,
"'Yr most obedt 'hble servant,
"'John Penn.'"

The Stamp Act excited the bitter and uncompromising hostility of all the colonies.[1] The Sons of Liberty of New England and New York concerted with leading citizens of Pennsylvania, Virginia and the Carolinas, and a united protest went back to the mother-country, which resulted in the speedy reconsideration of the measure. Benjamin Franklin had been commissioned by the anti-proprietary party of Pennsylvania to visit London as early as November, 1764, to secure the transfer of all proprietary estates to the crown, but the question of taxation without representation as embodied in the Stamp Act became of such widespread importance that he was appointed general agent for all the colonies,[2] and played a conspicuous part in the repeal of the infamous act. Franklin was summoned before the bar of the House of Commons on the 13th of February, 1766. In answer to questions, he declared that "America could not pay the stamp tax for want of gold and silver, and from want of post-roads and means of sending stamps back into the country; that there were in North America about three hundred thousand white men from sixteen to sixty years of age; that the inhabitants of all the provinces together, taken at a medium, doubled in about twenty-four years; that their demand for British manufactures increased much faster; that in 1723 the whole importation from Britain to Pennsylvania was but about fifteen

[1] Dr. Franklin, with a view to place the execution of the act in proper hands, got his friend, John Hughes, nominated as stamp officer at Philadelphia. On the arrival at Philadelphia, in October, 1765, of the stamps from England, the vessels hoisted their colors at half-mast, bells were muffled, and thousands of citizens assembled in a state of great excitement. Mr. Hughes was called on to resign his commission, but he only agreed for the present not to perform the duties of the office. The inhabitants, determining not to encourage monopoly, determined to manufacture for themselves. This touched a vital cord in Great Britain, and the clamors of her own manufacturers were raised in opposition to the oppressive act. The Stamp Act was repealed on the 18th of March, 1766, but the right of taxation by Parliament was reaffirmed.—*Day's "Hist. of Pennsylvania."*

[2] New England urged and organized continental resistance and nonconformity. "The hum of domestic industry was heard more and more. Young women would get together and merrily and emulously drive the spinning wheel from sunrise till dark, and every day the humor spread for *being clad in home-spun.*"

thousand pounds sterling, and had already become near half a million; that the exports of the province to Britain could not exceed forty thousand pounds."

"Do you think it right," asked Grenville, "that America should be protected by this country, and pay no part of the expense?" "That is not the case," answered Franklin; "the colonies raised, clothed and paid during the last war twenty-five thousand men, and spent many millions." "Were you not reimbursed by Parliament?" rejoined Grenville. "Only what, in your opinion," answered Franklin, "we had advanced beyond our proportion; and it was a very small part of what we spent. Pennsylvania, in particular, disbursed about five hundred thousand pounds, and the reimbursements, in the whole, did not exceed sixty thousand pounds." "Does the distinction between internal and external taxes exist in the charter of Pennsylvania?" asked a friend of Grenville. "No," said Franklin; "I believe not." "Then," asked Charles Townshend, "may they not, by the same interpretation of their common rights as Englishmen, as declared by Magna Charta and the Petition of Right, object to the Parliament's right of external taxation?" And Franklin answered instantly: "They never have hitherto. Many arguments have been lately used here to show them that there is no difference, and that, if you have no right to tax them internally, you have none to tax them externally, or make any other law to bind them. At present, they do not reason so; but, in time, they may be convinced by these arguments."

The question of repeal came before the House of Commons on the 21st of February. Every seat had been taken; between four and five hundred members were in attendance. Pitt was ill, but his zeal was above disease. "I must get up to the House as I can," said he; "when in my place I feel I am tolerably able to remain through the debate and cry aye to the repeal with no sickly voice." And through the huzzas of the lobby he hobbled into the House on crutches, swathed in flannels. Conway moved for leave to bring in a bill for the repeal of the American Stamp Act. It had interrupted British commerce, jeopardized debts to British merchants, stopped one-third of the manufacturers of Manchester, and increased the rates on land by throwing thousands of poor out of employment. The act, too, breathed oppression. It annihilated juries and gave vast power to the Admiralty Courts. The lawyers might decide in favor of the right to tax, but the conflict would ruin both countries. In three thousand miles of territory the English had but five thousand troops, the Americans one hundred and fifty thousand fighting men. If they did not repeal the act, France and Spain would declare war, and protect the Americans. The colonies, too, would set up manufactories of their own. Why, then, risk the whole for so trifling an object?

Jenkinson, on the other side, moved a modification of the act, insisting that the total repeal, demanded as it was with menaces of resistance, would be the overthrow of British authority in America. In reply to Jenkinson, Edmund Burke spoke in a manner unusual in the House, connecting his argument with a new kind of political philosophy. About eleven Pitt rose. He conciliated the wavering by allowing good ground for their apprehensions, and, acknowledging his own perplexity in making an option between two ineligible alternatives, he pronounced for repeal, as due to the liberty of unrepresented subjects and in gratitude to their having supported England through three wars. He spoke with an eloquence which expressed conviction, and with a suavity of manner which could not offend even the warmest friends of the act. "The total repeal," replied Grenville, "will persuade the colonies that Great Britain confesses itself without the right to impose taxes on them, and is reduced to make this confession by their menaces. Do the merchants insist that debts to the amount of three millions will be lost, and all fresh orders be countermanded? Do not injure yourselves from fear of injury; do not die from the fear of dying. With a little firmness, it will be easy to compel the colonists to obedience. America must learn that prayers are not to be brought to Cæsar through riot and sedition."

The lobbies were crammed with upwards of three hundred men, representing the trading interests of the nation, trembling and anxious, and waiting to learn the resolution of the House. Presently it was announced that two hundred and seventy-five had voted for the repeal of the act against one hundred and sixty-seven for softening and enforcing it. The roof of St. Stephen's rung with the long-continued shouts and cheerings of the majority. When the doors were thrown open and Conway went forth there was an involuntary burst of gratitude from the grave multitude which beset the avenues; they stopped him; they gathered round him as children around a parent, as captives round a deliverer. The pure-minded man enjoyed the triumph; and while they thanked him, Edmund Burke, who stood near him, declares that 'his face was as if it had been the face of an angel.' As Grenville moved along, swelling with rage and mortification, they pressed on him with hisses. But when Pitt appeared the crowd reverently pulled off their hats, and their applause touched him with tender and lively joy. Many followed his chair home with benedictions. He felt no illness after his immense fatigue. It seemed as if what he saw and what he heard, the gratitude of a rescued people and the gladness of thousands, now become his own, had restored him to health; but his heart-felt and solid delight was not perfect till he found himself in his own house, with the wife whom he loved and the children for whom his fondness knew no restraint or bounds, and who all partook of the overflowing pride of their mother. This was the first great political lesson received by his second son, then

not quite seven years old, the eager and impetuous William, who, flushed with patriotic feeling, rejoiced that he was not the eldest born, but could serve his country in the House of Commons, like his father.

In the House of Lords ten peers spoke against the repeal, the session being the longest ever experienced by that body to that date. Sixty-one votes were recorded against repeal and seventy-three in favor. Royal sanction was given the measure on the 18th day of March, 1766, and the odious Stamp Act was a matter of history. The colonies had triumphed.[1] The sense of peace and joy resulting from the repeal of the Stamp Act was of short duration. The King and his political followers smarted under their defeat, and regarded the repeal as "a fatal compliance" which had "planted thorns" under his royal pillow and forever "wounded the majesty of England." "The administration is dead and only lying in state," was the common criticism of the hour. A keen satire still further wounded the household of state, shrewdly predicting the independence of the American colonies. The causes which hastened the close of our colonial era were still active. Parliament reasserted its supremacy and resolved to try a new mode of taxation.

Heavy duties were imposed on goods, wares and merchandise; necessities and luxuries were offered to rich and poor subject to the tax or duty imposed without the assent of the colonies. John Dickinson of Pennsylvania, led public opinion in resisting the right of Parliamentary taxation. So persistent was the opposition to the measure that the home government modified the law, 1770, retaining only a tax of threepence a pound on tea, and yet so uncompromising was the spirit of Pennsylvania to the principle of the law that "this duty was paid on but one single chest of tea."

The Assembly declared against the "iniquitous act." Governor Penn was advised by the secretary of colonial affairs to prorogue the Assembly. The Assembly resolved "they had the right to sit on their own adjournments." And this popular branch of the provincial government continued their agents at London with full pay and emoluments of office to protest against a "tea tax" or any other tax involving the same principle, and also to oppose any plan that might be proposed for an American representation in Parliament, "the principle of Pennsylvania being that taxation of the colonies should not in any shape be allowed except by the Provincial Assembly." "I will freely spend nineteen shillings in the pound," said Franklin, "to defend my right of giving or refusing the other shilling, and after all, if I cannot defend that right, I can retire cheerfully with my little family into the boundless woods of America, which are sure to afford freedom and subsistence to any man who can bait a hook or pull a trigger."

"The Americans," said Thomas Mason, the leader of the Virginia bar, "are hasty in expressing their gratitude, if the repeal of the Stamp Act is not at least a tacit compact that Great Britain will never again tax us." Laymen, lawyers, preachers and philosophers all united in support of a principle deemed essential to the development of the colonies, and for the maintenance of which they accepted the challenge to arms.

PROVINCIAL GOVERNORS.

1623.—The Dutch planted a colony on the Delaware, under Cornelius Jacob May, appointed Governor of the West India Company, under the authority of the States-General.

1624.—William Useling appointed Governor of the Swedish colony to be established on the Delaware, but he never came here.

1630.—David Peterson De Vries (Dutch).

1631.—John Printz (Swedish).

1638.—Peter Minuits (Swedish, but himself a native of Holland).

1640.—William Kieft, Dutch Governor of New York.

1643.—John Printz (Swedish).

1653.—Papegoia (son-in-law to Printz).

1654.—Risingh.

[1] The joy of the colonies was, for a time, unmixed with apprehension. Virginia voted a statue to the King, and an obelisk on which were to be engraved the names of those who, in England, had signalized themselves for freedom. "My thanks they shall have cordially," said Washington, "for their opposition to any act of oppression." The consequences of enforcing the Stamp Act, he was convinced, "would have been more direful than usually apprehended." Otis, at a meeting at the town-hall in Boston, to fix a time for the rejoicings, told the people that the distinction between inland taxes and port duties was without foundation; for whoever had a right to impose the one had a right to impose the other, and, therefore, as the Parliament had given up the one, they had given up the other; and the merchants were fools if they submitted any longer to the laws restraining their trade, which ought to be free. A bright day in May was set apart for the display of the public gladness, and the spot where resistance to the Stamp Act began was the centre of attraction. At one in the morning the bell nearest Liberty Tree was the first to be rung; at dawn colors and pendants rose over the housetops all around it, and the steeple of the nearest meeting-house was hung with banners. During the day all prisoners for debt were released by subscription. In the evening the town shone as though night had not come, an obelisk on the common was brilliant with a loyal inscription, the houses round Liberty Tree exhibited illuminated figures of the King, of Pitt and Camden and Barre, and Liberty Tree itself was decorated with lanterns till its boughs could hold no more. All the wisest agreed that disastrous consequences would have ensued from the attempt to enforce the act, so that never was there a more rapid transition of a people from gloom to transport. They compared themselves to a bird escaped from the net of the fowler, and once more striking its wings in the upper air; or to Joseph, the Israelite, whom Providence had likewise wonderfully redeemed from the perpetual bondage into which he was sold by his elder brethren.

The clergy from the pulpit joined in the fervor of patriotism and the joy of success. "The Americans would not have submitted," said Chauncy. "History affords few examples of a more general, generous and just sense of liberty in any country than has appeared in America within the year past." Such were Mayhew's words, and while all the continent was calling out and cherishing the name of Pitt, the greatest statesman of England, the conqueror of Canada and the Ohio, the founder of empire, the apostle of freedom, "the genius and guardian of Britain and British America." "To you," said Mayhew, speaking from the heart of the people and as if its voice could be heard across the ocean, "to you, grateful America, attributes that she is reinstated in her former liberties. The universal joy of America, blessing you as our father, and sending up ardent vows to Heaven for you, must give you a sublime and truly god-like pleasure; it might, perhaps, give you vigor to take up your bed and walk, like those cured by the word of Him who came from heaven to make us free indeed. America calls you over and over again her father; live long in health, happiness and honor. Be it late when you must cease to plead the cause of liberty on earth."—*Bancroft's "Hist. of U. S."*

1657.—Alrichs.
1658.—John Paul Jaquet.[1]
1659.—Beekman.[1]
1664.—Robert Carr.[2]
1673.—Anthony Colve, Dutch Governor of New York.
1674.—Sir Edmund Andross, English Governor of New York.
1681.—William Penn, founder of the province.
1684.—Governor's Council, Thomas Lloyd, president.
1687.—Five commissioners appointed by William Penn.
1688.—John Blackwell, Lieutenant-Governor.
1690.—Governor's Council.
1691.—Thomas Lloyd, Deputy Governor.
1692.—Benjamin Fletcher, Governor of New York.
1693.—William Markham, Lieutenant-Governor.
1700.—William Penn.
1701.—Andrew Hamilton, Deputy Governor.
1704.—John Evans.
1709.—Charles Gooken.
1717.—Sir William Keith.
1726.—Patrick Gordon.
1736.—James Logan, President of Council.
1738.—George Thomas, Lieutenant-Governor.
1747.—Anthony Palmer, President of Council.
1748.—James Hamilton, Lieutenant-Governor.
1754.—Richard H. Morris, Lieutenant-Governor.
1756.—William Denny, Lieutenant-Governor.
1759.—James Hamilton, Lieutenant-Governor.
1763.—John Penn, Lieutenant-Governor.
1771.—Richard Penn, Lieutenant-Governor till 1776.

COUNTIES OF THE PROVINCE.

Philadelphia City and County, organized 1682.
Bucks County, organized 1682.
Chester County, organized 1682.
Lancaster County, organized May 10, 1729.
York County organized, August 9, 1749.
Cumberland County, organized January 27, 1750.
Burks County, organized March 11, 1752.
Bedford County, organized March 9, 1771.
Northampton County, organized March 21, 1772.
Northumberland County, organized March 21, 1772.
Westmoreland County, organized February 26, 1773.

Council of Safety, instituted at Philadelphia, June 30, 1775, by the Assembly of the province.

"*Resolved*, That this House approves the association entered into by the good people of this colony for the defense of their lives, liberty and property.

"*Resolved*, That John Dickinson, George Gray, Henry Wynkoop, Anthony Wayne, Benjamin Bartholomew, George Ross, Michael Swoope, John Montgomery, Edward Biddle, William Edmunds, Bernard Daugherty, Samuel Hunter, William Thompson, Thomas Willing, Benjamin Franklin, Daniel Roberdeau, John Cadwalader, Andrew Allen, Owen Biddle, Francis Johnson, Richard Reiley, Samuel Morris, Jun., Robert Morris, Thomas Wharton, Jun., and Robert White, Gentlemen, be a committee of safety for calling forth such, and so many, of the associators into actual service, when necessity requires, as the said committee shall judge proper."

The Council of Safety was organized July 3, 1775, by electing Benjamin Franklin president and William Govett clerk.

The first Constitutional Convention convened in Philadelphia on the 15th of July, 1776. This body not only entered upon the task of framing the constitution, but assumed the legislative power of the State. This was followed by the institution of the Supreme Council of Safety, in which reposed the executive powers of the commonwealth until the first constitution was revised in 1790. Thomas Wharton, Joseph Reed, John Dickinson, Benjamin Franklin and Thomas Mifflin presided over this body in the order named between the years 1776 and 1788.

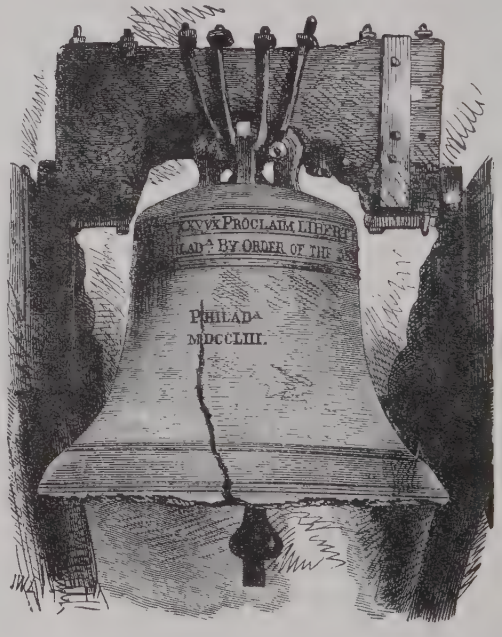
The colonial era closed with the adjournment of the Provincial Assembly on the 23d of September, 1776. Governor Richard Penn yielded reluctantly to the forces of revolution, and the last act of provincial authority was a fierce denunciation of the Constitutional Convention in assuming the legislative power of the State. "God save the King!" was said for the last time in a Pennsylvania Assembly; henceforth it was to be "God save the Commonwealth!"

[1] Under Stuyvesant, Dutch Governor of New York.
[2] Under Richard Nichols, English Governor of New York.

CHAPTER XIV.

THE REVOLUTION.

THE memorable events associated with the movements of the Continental army, under the personal direction of General Washington, in the autumn of 1777 and winter of 1778, will always render Eastern



INDEPENDENCE BELL.

Pennsylvania conspicuous in the annals of the Revolution. The provincial conservatism and peaceful character of the people who had permanently settled in the Schuylkill Valley woke slowly and painfully to the warlike preparations which preceded Lord Howe's attack upon Philadelphia, and when reverses befell our armies on the Brandywine a profound sense of alarm pervaded the capital city, shared by many sorrowing homes that lay on the line of march, and within limits certain to be desolated by hostile armies.

"The spirit of 1776," which animated leaders and Revolutionists, was by no means universal in the province. Society was divided by well-marked differences of opinion, stoutly maintained at the cost of large estates, the sacrifice of comfortable homes, domestic pleasures and social advantages. A century and more of time has well and wisely obscured from public notice the bitter feuds and political animosities which prevailed in this locality during and for many years after the close of the struggle. The student of our colonial era is amazed at the uncompromising character of the men and measures of the period. The British officers found ready friends in every township from the Brandywine to the Delaware, from the fatal massacre of Paoli to its attempted repetition upon the force of Lafayette at Barren Hill. The Tory, not less for his King than for the love of his gold, was ever ready to peril his life and honor; on the other hand, the Revolutionists resorted to confiscation of property, banishment and imprisonment of those who declined to espouse their cause. For eight years these alienations prevailed, until society seemed to be known, in the common parlance of the day, as "Rebel" and "Tory."

No just conception of the scope and magnitude of the campaign organized for the defense of Eastern Pennsylvania and the capital city in the autumn of 1777 can be realized unless it comprehend the movements and results of the two principal armies of the Middle States, and for whose conduct Washington, as commander-in-chief, was responsible to the Continental government.[1] To disconcert him by strategy, to compel him to battle with troops superior in armament and discipline, and to overwhelm him with numbers was the general and well-matured plan of the enemy. The preparations of the home government to this end were commensurate with the reasonable hope of success; and the belief that the resources of men and means so lavishly confided to commanders would speedily end the conflict, and compel submission to the mother-country, was shared by many of the wayward and doubting of the period.

The efforts of Washington through the winter of 1777 to organize a powerful army for the ensuing campaign is a matter of history. The hopes inspired from time to time by the flattering reports which reached his headquarters were cruelly disappointed, and he found himself not only powerless to take the aggressive, but unequal to that measure of defensive warfare necessary to preserve his long lines unbroken. The steady and persevering courage, however, which had supported him and the American cause through the gloomy scenes of the preceding year did not forsake him, and that sound judgment which applies to the best advantage those means which are attainable, however inadequate they may be, still remained. His plan of operation was adapted to that which he believed the enemy had formed. He was persuaded either that General Burgoyne would endeavor to take Ticonderoga, and penetrate to the Hudson, in which event General Howe would co-operate with him, by moving up that river and possessing himself of the forts and high grounds commanding its passage, or that Burgoyne would join the grand army at New York by sea, after which the combined armies would proceed against Philadelphia.

To counteract the designs of the enemy, whatever they might be, to defend the three great points alike vital to the country—Ticonderoga, the Highlands of the Hudson and Philadelphia—against two powerful armies so much superior to his in arms, numbers and discipline, it was necessary to make such disposition of his troops as would enable the several departments to reciprocally aid each other without neglecting objects of great and almost equal magnitude, which were alike endangered, though widely divergent. To effect these purposes, the troops of New England and New York[2] were divided between Ticonderoga and Peekskill, while those from New Jersey to North Carolina, inclusive, were directed to assemble at the camp to be formed in New Jersey.

The situation in May, 1777, was critical, and called into activity the magnificent horoscope of the commander-in-chief. In camp at Morristown, with an effective rank and file, excluding cavalry and artillery, of less than six thousand men, after a winter of ceaseless anxiety in camp and field and vain endeavor to secure large and certain accessions to his army; the enemy certain to assume the aggressive as soon as the season would warrant the movement of troops; the Howes in possession of New York City with an army twice the number of his own, with a navy at command large enough to transport it with the speed of the winds to any point on the coast deemed vulnerable; General Burgoyne with ten thousand veteran and volunteer troops on Lake Champlain, and Colonel St. Leger with a co-operating army of veterans, Tories, and savages in the Mohawk Valley, waiting orders to march at the earliest practicable moment.

As late as June 18th, says a distinguished historian,[3] "the cares of the Northern Department were thrown upon the American commander-in-chief, and Schuyler besieged him with entreaties to supply his wants and remedy all that was going wrong." As commander-in-chief of America, Washington watched with a peculiar care the Northern Department.

[1] On the 19th of June, 1775, Washington received his commission and instructions as "General and Commander-in-Chief of the armies of the United Colonies, and of all the forces raised or to be raised by them, and all others who shall voluntarily offer their services and join the army for the defense of American Liberty."

The favor lavished on the new chief of the Northern Department raised a doubt whether Washington retained authority over him, till Congress resolved, August, 1777, that "they never intended to supercede or circumscribe his power."—*Bancroft's "History of the United States," vol. v. p. 591.*

[2] Marshall's "Life of Washington," vol. i. p. 145.

[3] Bancroft's "History of the United States," vol. v. p. 566.

Alarmed at Schuyler's want of fortitude, he ordered Arnold to his command, also Lincoln, who was acknowledgedly popular among the New England troops. Besides detaching these two distinguished officers and assigning them to the Northern Department, he added to their command General Glover's brigade of Continental troops, and yielded Colonel Morgan's corps of riflemen, upon request being made through Congress for them. The Continental army,[1] under the immediate command of Washington, charged with the defense of the capital city, was the objective-point of the grand campaign, and the coveted prize of Lord Howe. To engage it in battle, to thoroughly defeat and dispirit it, to seize, fortify and garrison Philadelphia, then quickly transfer the bulk of his army to co-operate with Burgoyne, and insure his triumph over Schuyler and Gates on the Hudson, was a consummation to which all energies were directed.

The persistence of Washington in declining battle, save in his fortified camp at Middlebrook, his constant readiness to attack the flank of his sagacious adversary should he attempt to cross the Delaware, there to be confronted by Arnold with a hastily improvised army, compelled General Howe to change the general plan of operations for the season, and rendered all further co-operation between him and Burgoyne impossible. While employed in discomfiting Howe, he was actively engaged in resisting the impending advance of St. Leger and Burgoyne. Says Marshall:[2] "He hastened the march of those generals designed to act in that department, pressed the Governors of Eastern States to reinforce the retreating army with all their militia, and made large detachments of choice troops from his own army. The fame of being himself the leader of the victorious army did not, with false glare, dazzle his judgment or conceal the superior public advantage to be derived from defeating Burgoyne."

Having used his best efforts to hasten the concentration of troops from the Eastern States, and overcome in some measure the shock to public confidence resulting from the loss of Ticonderoga and the disastrous retreat of General St. Clair; having strengthened the willing hands of General Schuyler in bringing into the field the militia of New York State, rendering the victory at Bennington and other minor points possible, and witnessed the departure of Lord Howe from New York Bay, he turned the head of his devoted columns toward the Delaware, massing his army at Germantown early in the month of August, 1777.

For days and weeks the work of marshaling new troops, collecting supplies and fitting the command to resist the impending attack by Howe went on. The commander-in chief was in daily consultation with committees of Congress, heads of departments, and for the first time met the youthful and heroic Lafayette, who was by him assigned to duty on his staff, with the rank of major-general. The public mind became feverish and excited in anticipation of events now certain to affect the gravest interests of the colony. War, with its desolation, its bloody horrors, its blighting consequences upon society and sacrifice of life, was at the threshold of a community devoted by sentiment, religion, and pecuniary interests to peaceful pursuits. Evidence of disaffection increased with the certainty of Howe's approach, and when his presence, with fleet and army, in the Chesapeake Bay was announced, it was deemed politic by the government that Washington should march his army through the city as he moved south to meet the advance of the foe. It was accordingly done, and the 24th of August, 1777, was a memorable day in the history of the capital city, as well as in the lives of the patriotic soldiers, who received at every square the most marked consideration at the hands of the populace, who were wild in their demonstrations of joy as divisions marched by them under commanders who had grown into popular favor, resulting from their distinguished services in the field. On the other hand, the displeasure of those who, from a sense of duty, adhered to the mother-country was manifest in the frowning faces and silent contempt with which they apparently treated the unusual events of the day.

The story of the campaign which was opened by this movement of the Continental army, to meet and resist the combined operations of the enemy, to save the capital if possible, and to preserve the army, though the city should be lost, has always possessed a rare interest to Pennsylvanians who participated in it and to their descendants.

Other fields, in other States, before and afterwards, witnessed the brighter triumph of our arms and the more immediate results of victories won; but nowhere on the long and varying line of battle were more sanguinary engagements fought, in no campaign of the protracted struggle was the suffering of the troops so continuous and severe, at no time was the solicitude of the commander-in-chief so keenly exercised or the patriotism of the people more sorely tried.

The field of Eastern Pennsylvania presented a tempting prize to the British commander at the period referred to. Philadelphia was the seat of the colonial and continental government. Its occupation by the enemy, it was thought, would greatly dispirit the colonists from Massachusetts to South Carolina. Howe's point of attack being selected but fifty-one miles south of the city, with no natural barriers to resist the advance of his land forces, assuming, not without reason, that Washington's army had been weakened by detachments sent to the Northern Department, he was confident that, with a few days' easy marches and perhaps a battle, the fall of the capital

[1] Bancroft's "History of the United States" vol. v. p. 602.
[2] Marshall's "Life of Washington," vol. i. p. 152.

would follow. Then a rapid march across New Jersey, and he would be able to co-operate with Burgoyne and St. Leger, and overwhelm Gates in New York.

With these results accomplished, his fleet securely anchored in the Delaware, a base of operations for fresh conquest farther south would be finally established, and the work of subduing the colonists so nearly done as to assure the home government of ultimate success and prevent the interposition of those friendly offices of France, growing more and more imminent each succeeding month. One more consideration entered into the plans of the campaign upon the part of the enemy. The settlement was largely of Englishmen, and it was therefore assumed, because of the influential following of Penn and the many devotees of the Established Church, that sentiments of loyalty to King George would be inspired anew by their presence, and terms of accommodation, permanent in character, would be suggested and accepted as inevitable.

Washington promptly drew his line of battle between the approaching enemy and the capital city. Conscious of the overwhelming disparity of numbers, impressed with the importance of preventing the concentration of Howe's forces with those from which he had recently separated, believing that his dispositions in the Northern Department were such as would insure success, his great work in hand now was to *delay* the enemy in the accomplishment of a purpose which, with the means at hand, he might not ultimately defeat. His hostile attitude on White Clay Creek and display of resources put Howe upon his caution, who, pleading the want of cavalry—which in truth he greatly felt—lost days and weeks in feeling his way from the place of debarkation. Twenty-three days elapsed before he drew the American commander to determined battle on the Brandywine, and then he was obliged to concede to him the choice of position.

On the 11th of September, 1777, the battle of Brandywine was fought. The plan of the engagement, as subsequently revealed, the necessities which induced it, the skillfully executed movement of the enemy upon the right of the patriot army, the inefficiency of Washington's mounted troops in not disclosing the movement of Cornwallis at an earlier hour in the day, the uncertain and embarrassing reports that reached him from sources that should have been reliable, the partial surprise, and the heroic, though ineffectual, effort to meet and resist a fierce attack from a direction unlooked for, the deeds of valor upon the part of officers who sought to retrieve misfortune by personal daring, and the usual conduct of battle-shocked troops have gone into history, and been graphically described by Marshall, Botta, Lossing, Headley, Bancroft and others, less distinguished in history, it may be, but by no means less truthful in narrative.[1]

The battle was lost, and its discouraging features were keenly felt by those who left the field in possession of the enemy. But its effects, as measured by them, were by no means as disastrous as intended or

[1] The arrival of Sir William Howe in the Chesapeake Bay late in the month of August, 1777, with an army eighteen thousand strong, removed all doubt in the mind of Washington as to the designs of the enemy, and in his judgment left but one proper course to pursue: to give battle to the enemy. He at once proceeded to concentrate all his forces. Orders were issued directing detachments to join the main army by forced marches, while the greatest activity prevailed in all the departments, in order to prepare the army for a vigorous campaign. In order to strengthen the regular or Continental army, and have in process of organization a reserve force, the militia of Pennsylvania, Maryland, Delaware and the northern part of Virginia were direct to report to the main army. As soon as the forces thus concentrated were in a condition to move Washington commenced his march to meet Howe.

In order to encourage the patriots and overawe, if possible, the many disaffected residents of Philadelphia, who were fully apprised of the designs of the enemy, Washington concluded to march his troops through the principal streets of the city as he moved South.

The movement continued southward, until the advance guard reached White Clay Creek, Delaware, when it halted, while the main body of the army took position on the left bank of Red Clay Creek, the right wing resting on the town of Newport, on the then great road to Philadelphia, and the left wing extending to the town of Hockesen, in the direction of the Delaware River.

The enemy, who by this time had disembarked, were in position on the left bank of the Elk River, with the advanced guard as far north as Gray's Hill. General Maxwell, of the patriot army, with his corps of riflemen, held the line on White Clay Creek with slight defensive earthworks.

In advance of Maxwell there were employed four regiments of cavalry, composed of nine hundred men, including persons of every description. These partisan soldiers, composed of independent organizations, occupied the country as far south as Iron Hill, and did good service in watching the movements of the enemy and reporting the same to the commander-in-chief.

The enemy, having completed his preparations to advance upon Philadelphia, commenced a flank movement upon the right of Washington, and succeeded in compelling him to fall back to the Brandywine River, which he crossed at Chadd's Ford, on the 10th of September, and went into position. Here he determined to give battle to the enemy if he attempted to advance upon him, believing, as he did, that Philadelphia could only be saved by a victory.

The centre of Washington's army covered Chadd's Ford, his right wing extending in the direction of Birmingham Meeting-House, northwest of the ford, and the left, several miles south of the ford, was held by General Armstrong, who commanded the Pennsylvania militia.

The front, on the south or right bank of the river, was occupied by Maxwell's riflemen, who had been delaying the advance of the enemy's cavalry.

The situation was critical; the stake for which the impending battle was to be fought on the morrow involved the fate of the capital of the new nation, and, to an unusual degree, the hopes of the people who had resolved to sever their political relations with Great Britain. On the other hand, Howe, with a finely appointed army, which outnumbered that of Washington, felt that victory was within his grasp—only a silver thread, which the morning sun would betray, and mark as the coming line of battle, lay between him and the coveted prize. At the dawn of day on the morning of the 11th the British army was in motion.

Howe had formed his army into two grand divisions. The one designed to make a feint on the position of Washington, at Chadd's Ford, was commanded by General Knyphausen, the Hessian, the other, the flanking column, was commanded by Lord Cornwallis. They moved up its right flank on south side of the Brandywine some fifteen miles, crossing at Jeffries' and other ferries, where the headwaters unite, and where the stream is narrow and easily forded.

While this movement was in progress, unknown to Washington, the advance of General Knyphausen fell in with the troops commanded by General Maxwell, on the south side of the river, and a skirmish ensued. Maxwell's forces fell back, were promptly reinforced, and in turn drove the English back upon the original line. Knyphausen immediately brought up his reserves, and compelled Maxwell to retire to the north side of the river.

Batteries were immediately placed in position, and a furious cannonade

believed to be. Marshall, referring to the immediate results of the engagment, declares, "It was not considered decisive by Congress, the general or the army,"[1] and cites the fact that the government, upon receiving Washington's official report, immediately passed vigorous resolutions for reinforcing the

opened upon the American line, while the disposition of troops, now plainly visible, was of such a character as indicated an intention to force a passage of the river at the point covered by the centre of Washington's army.

The advance upon this part of the line was promptly met with counter dispositions of troops by the commander-in-chief, and the enemy seemed to be foiled in every effort to cross the river at this point. Meanwhile Lord Cornwallis, at the head of the flanking column, by a well-conceived and unobserved line of march, reached the forks of the Brandywine, crossing at Trimble's and Jeffries' Fords, without opposition, at about two o'clock in the afternoon, and then turning down the river, took the road to Dilworth, in order to strike the right flank of the American army.

This was a most critical hour on that memorable day. The fact that Cornwallis had reached a position on the flank of Washington's army was at the hour spoken of unknown to him. Various reports reached his ear; about noon he received a report that General Howe was in command of a large body of the enemy, who were moving on his right flank. Upon this information, which he deemed reliable, he immediately conceived the idea of recrossing the river with the main body of his army, overwhelm Knyphausen before Howe could reach him, very properly concluding that the advantage thus obtained would more than compensate for whatever loss he might sustain by leaving his right wing exposed to the assault of Howe and Cornwallis. Accordingly, he ordered General Sullivan to pass the river at an upper ford and attack Knyphausen on his left, while he in person should cross lower down, and fall upon his right. They were both in the act of moving their troops when a second report arrived, representing what had really taken place as false, or, in other words, that the enemy had not crossed the headwaters of the Brandywine, and hence the army of Howe was not divided for the day, and therefore not in such a position as to invite the attack designed by the commander-in-chief.

Deceived by this false intelligence, Washington recalled General Greene, who crossed the river with the advance. Time now was of incalculable value, and the want of a reliable body of cavalry was severely and fatally felt. The confusion and conflict of reports received at headquarters, the inability to determine whether the demonstration of Knyphausen was the prelude to an attack in force of the entire army of Howe upon the centre of the line at Chadd's Ford or a feint to cover a movement in great force upon the right of the position, rendered the situation painfully uncertain. Strange to say, yet it seems to be authoritatively stated, that a citizen, in the person of Squire Cheyney, was the first man to give Washington reliable information of the enemy's approach upon his right wing or flank. He was well mounted and incidentally had been within a short distance of the enemy, and with trouble made his escape and hastened with the utmost speed to communicate the fact, doubtless unconscious of the terrible importance his message bore. Washington at first was unwilling to believe his statement, classing it with the exaggerated and stampeding reports that had been embarrassing him during the entire day's operations. He put the squire to the test. He ordered him to dismount and draw a draft of the roads in the sand, and give a clear description of the movement of the troops he reported to have seen. This was promptly and skillfully done. Washington still appeared to doubt the statement, unwilling to believe that he had so fatally misconceived the operations of the army up to so late an hour in the day. Cheyney was a pure and devoted patriot; his whole soul was in the cause. Conscious of the truth of his statement, although unaware of its great importance, comprehending the doubt still in the mind of Washington, he exclaimed, "Take my life, General, if I deceive you!" Washington was at length convinced, and a few moments afterwards found that the enemy were within sight of his extreme right wing.

As soon as the approach of Cornwallis upon the right flank became a certainty, General Sullivan, who was in command of that wing of the army, made every proper disposition of the troops at his disposal to resist it. The position of the troops was taken on the commanding ground above Birmingham Meeting-House, the left extending toward the Brandywine, both flanks being covered by densely wooded country. His artillery was well posted; the position had great advantage for defensive operations, and but for the fact that one brigade of this division was absent from the line, having been withdrawn some hours previous to join in the intended attack upon Knyphausen, and therefore could not reach the position which it left in time to defend it, the results would certainly have been modified, if in no other particular than that of delaying his march until Washington could have made the necessary dispositions to meet it, or if unable to meet it, then to have fallen back upon a new position.

The attack upon the outpost of General Sullivan was followed up with overpowering numbers, which quickly developed the length of his line. This done, the British commander hastened his formation, and attacked the patriot troops with the utmost impetuosity. The engagement became equally fierce on both sides about four o'clock in the afternoon. For some length of time, says Botta, the Americans defended themselves with great valor, and the carnage was terrible. But such was the emulation which invigorated the British and Hessians that neither the advantages of the situation, the deadly effect of the artillery, the ceaseless fire of musquetry, nor the unshaken courage of the line from one end to the other could resist the onslaught.

MUD ISLAND IN 1777 BEFORE THE BRITISH ATTACK.

The fury of the enemy was directed toward Sullivan's left flank, which, after a gallant resistance, gave way. This success upon the part of Cornwallis was quickly followed up, the troops were thrown into confusion, the line felt the shock, wavered a few moments, and then gave way in rapid retreat. Sullivan's men fled into the woods in their rear, their pursuers following on the great road toward Dilworth. Upon the first fire of the artillery, Washington, having no longer any doubt of what was passing, had pushed forward the reserve to the aid of Sullivan; but this corps, on approaching the field of battle, under the immediate direction of General Greene, was met by the very men to whose succour they had been rapidly marching, in full retreat. A proper disposition was at once made to receive the fugitives, and, after their passage to the rear, Greene conducted the retreat in good order, checking the pursuit of the enemy by a continual fire of the artillery, which covered his rear. Having at length reached a defile covered on both sides with woods, he again went into position, with the full determination to finally check the advancing foe. The troops of General Greene were composed of Virginians and Pennsylvanians, and their conduct in defense of this position is said to have been remarkable for its gallantry and heroism. Conspicuous among those on the line of battle, and in immediate command, were General Muhlenburg and Colonel Stephens.

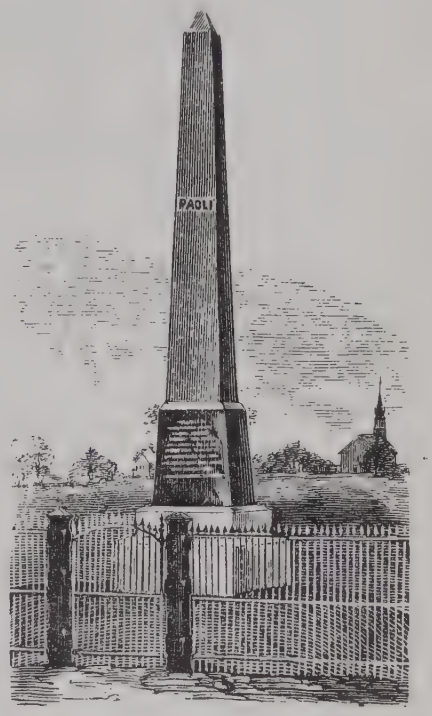
General Knyphausen, finding the Americans to be fully engaged on their right, and observing that troops opposed to him at Chadd's Ford were enfeebled by those withdrawn under Greene to the support of the right wing, began to make his dispositions for crossing the river in real-

[1] Marshall's "Life of Washington," vol. i. p. 150.

army, and directed him to complete the defenses of the Delaware.

On the 15th, four days after this battle, the army was on the march to attack Howe, who, apprised of the movement, immediately put his army in motion, and the opposing armies met between the Goshen Meeting-House and the White Horse Tavern, on the table-land south of the Great Valley. The choice of position was again with Washington. Hostilities had actually commenced, when storm and flood rendered the movement of troops impossible, and disclosed the alarming fact that arms and ammunition were so seriously damaged that to further engage the enemy would be suicidal.

This exigency decided temporarily the fate of the capital city, and doubtless hastened the period of occupation by the British troops. The situation was critical, and the day certainly memorable. To retire upon Philadelphia and suffer a partial investment, leaving the country open from the Schuylkill to the Hudson, making a diversion in favor of Burgoyne not only possible, but probable, would be unwise for many reasons; to give up all further defense of the capital would subject him to severe criticism,[1] injuriously affect public affairs in the Middle States, in some measure discourage the troops, and increase the spirit of disaffection in Pennsylvania and New Jersey.[2] It



PAOLI MONUMENT.

was an hour of supreme interest in the struggle, and upon his decision hung the most momentous results. Assuming the entire responsibility, courting the

ity. The ford was defended by a line of entrenchment and one battery. The troops left in defense of this position (commanded by General Wayne) successfully resisted the crossing of the Hessian general until the force of Cornwallis made their appearance on their right flank. This development convinced them of the hopelessness of their task, and they fled in disorder, abandoning their artillery, ammunition and stores to the enemy.*

In their retreat they passed to the rear of General Greene, who, with the unbroken troops under him, was still able to maintain the position he had selected, and was the last to quit the field of battle. Night finally came to the rescue of the vanquished, under cover of which the army retreated to Chester, and on the following day to Philadelphia. Hundreds of men who had become fugitives in the rapid retreat of the right wing, as well as of the extreme left wing, in retiring from the ford promptly rejoined the army again within twenty-four hours at Philadelphia. The loss of the Americans, however, was heavy. It is reported that three hundred were killed, six hundred wounded and nearly four hundred captured; they also lost eleven pieces of artillery. The loss of the enemy is reported to have been one hundred killed and four hundred wounded. —*Historical Oration, Valley Forge*, 1878.

* William Dunning, a blacksmith of Cumberland County, during the Revolution endeavored to serve his country by the construction of a wrought-iron cannon of a curious description. One of these is said to have fallen into the hands of the British at the battle of Brandywine, and is to this day preserved in the Tower of London, and another unfinished specimen is said to be at the arsenal in Philadelphia. These singular pieces of ordnance were made of "wrought-iron staves, hooped like a barrel, with bands of the same material, excepting there were four layers of staves breaking joint, all of which were firmly bound together, and then boxed and breeched like other cannon." An obituary notice of Denning, who died in Mifflin township, in 1830, at the age of ninety-four, states that he was an artificer in the Revolutionary army, and that his was the only successful attempt ever made in the world to manufacture wrought-iron cannon, one of which he completed in Middlesex, Pa., and commenced another and larger one at Mount Holly, but could get no one to assist him who could stand the heat, which is said to have been so great as "to melt the lead buttons on his clothes." The British, it is added, offered a stated annuity and a large sum to the person who would instruct them in the manufactrue of that article, but the patriotic blacksmith preferred obscurity and poverty in his own beloved country, though the country for which he had done so much kept her purse closed from the veteran soldier until near the close of his long life. —Bishop, "*Hist. of American Manufactures*," *vol. i.*

[1] See remonstrance, Pennsylvania Assembly.

[2] On the morning of the 18th a messenger arrived in the American camp, bringing letters from Putnam and Clinton, prematurely, but positively, announcing the surrender of the army of Burgoyne. Washington received them with joy unspeakable and devout gratitude "for this signal stroke of Providence." "All will be well," he said, "in His own good time." The news circulated among the Americans in every direction, and quickly penetrated the camp of Sir William Howe. The difficulty of access to the upper *chevaux-de-frise* had rendered its reduction much more tedious than was conceived; under a feeling of exasperated impatience, he gave verbal orders to Colonel Donop, who had expressed a wish for a separate command to carry Red Bank by assault if it could be easily done, and make short work of the affair. On the 22d, Donop, with five regiments of Hessian grenadiers and infantry, four companies of yagers, a few mounted yagers, all the artillery of the five battalions and two English howitzers, arrived at the fort. Making a reconnoissance with his artillery officers, he found that on three sides it could be approached through thick woods within four hundred yards. It was a pentagon, with a high earthy rampart, protected in front by an abattis. The battery of eight three-pounders and two howitzers was brought up on the right wing, and directed on the embrasures. At the front of each of the four battalions selected for the assault stood a captain with the carpenters and one hundred men, bearing the fascines which had been hastily bound together. Mad after glory, Donop, at half-past four, summoned the garrison in arrogant language. A defiance being returned, he addressed a few words to his troops.

Each colonel placed himself at the head of his division, and at a quarter before five, under the protection of a brisk cannonade from all their artillery, they ran forward and carried the abattis. On clearing it, they were embarrassed by pitfalls, and were exposed to a terrible fire of

counsel of his subordinates, but acting upon his own mature judgment, he uncovered Philadelphia, detaching General Wayne, and directing him to attack the extreme left of the enemy, in the hope of detaining him until he could refit his army and renew the conflict, providentially postponed.

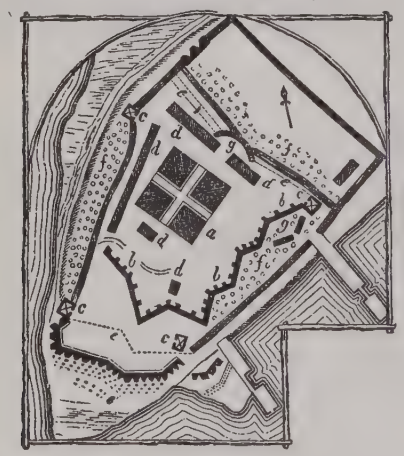
Disasters seemed to repeat themselves in quick succession during those trying days. General Wayne's enterprise, from which further delay was ardently hoped, resulted in his early discomfiture, occasioned by the betrayal of his position to the enemy by spy or Tory, promptly followed by a night attack, led by General Grey, characterized by a fierceness and bru-

WASHINGTON'S HEADQUARTERS, WORCESTER.

tality[1] which has justly obscured the fame of that officer, and rendered his name forever odious in the annals of the Revolution. The season of anxiety was intensified by this unexpected misfortune, followed by the removal of the seat of government, the establishment of new lines of communication, new sources of supplies, and the "perplexing manœuvres of Howe," which required counter-movements to prevent a farther advance into the interior of the State with a view to the destruction of government stores at Reading, or in the direction of the Hudson River

small arms and of grape-shot from a concealed galley, while two galleys, which the bushes had hidden, raked their flanks with chain-shot. Yet the brave Hessians formed on the glacis, filled the ditch, and pressed on towards the rampart. But Donop, the officers of his staff, and more than half the other officers were killed or wounded; the men who climbed the parapet were beaten down with lances and bayonets; and as twilight was coming on, the assailants fell back under the protection of their reserve. Many of the wounded crawled away into the forest, but Donop and a few others were left behind. The party marched back during the night unpursued. As the British ships-of-war which had attempted to take part in the attack fell down the river, the "Augusta," of sixty-four guns, and the "Merlin" frigate grounded. The next day the "Augusta" was set on fire by red-hot shot from the American galleys and floating batteries, and blown up before all her crew could escape; the "Merlin" was abandoned and set on fire. From the wrecks the Americans brought off two twenty-four pounders. "Thank God," reasoned John Adams, "the glory is not immediately due to the commander-in-chief, or idolatry and adulation would have been so excessive as to endanger our liberties."

By the 10th of November the British had completed their batteries on the reedy morass of Province Island, five hundred yards from the American fort on Mud Island, and began an incessant fire from four batteries of heavy artillery. Smith gave the opinion that the garrison could not repel a storming-party, but Major Fleury, the French engineer, reported the place still defensible. On the eleventh, Smith, having received a slight hurt, passed immediately to Red Bank; the next in rank desired to be recalled and early on the thirteenth the brave little garrison of two hundred and eighty-six fresh men and twenty artillerists was confided to Major Simeon Thayer, of Rhode Island, who had distinguished himself in the expedition against Quebec, and who now volunteered to take the desperate command. Supported by his superior ability and the skill and cool courage of Fleury, the garrison held out gallantly during an incessant bombardment and cannonade. On the fifteenth, the wind



FORT MIFFLIN.

proving fair, the "Vigilant," carrying sixteen twenty-four pounders, aided by the tide, was warped through an inner channel which the obstructions in the river had deepened, and anchored so near the American fort that they could send into it hand-grenades, and marksmen from the mast of the "Vigilant" could pick off men from its platform.

Five large British ships-of-war, which drew near the *chevaux-de-frise*, kept off the American flotilla, and sometimes directed their fire at the fort on its unprotected side. The land batteries, now five in number, played from thirty pieces at short distances. The ramparts and block-houses on Mud Island were honey-combed, their cannon nearly silenced. A storming-party was got ready; but, to avoid bloodshed, Sir William

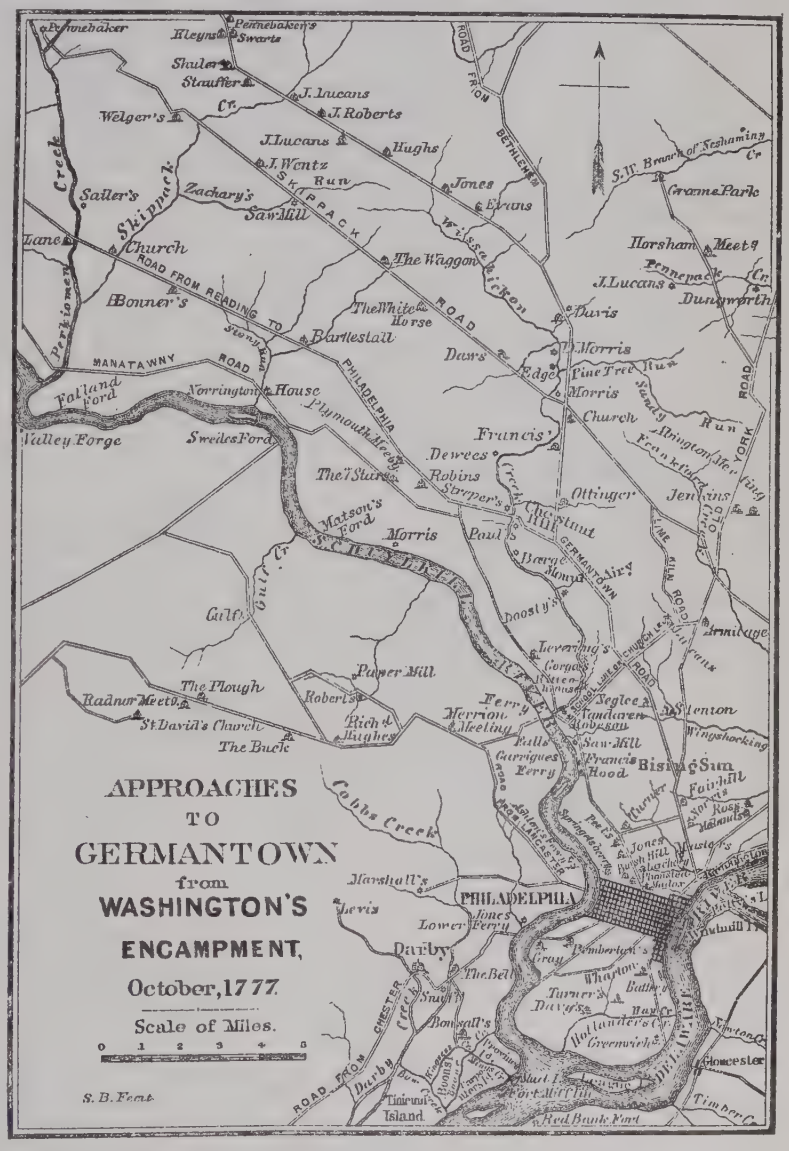
Howe, who on the fifteenth was present with his brother, gave orders to keep up the fire all night through. In the morning, Thayer sent all the garrison but forty men over to Red Bank, and after midnight followed with the rest. When on the sixteenth, the British troops entered the fort, they found nearly every one of its cannon stained with blood Never were orders to defend a place to the last extremity more faithfully executed. Thayer was reported to Washington as an officer of the highest merit; Fleury won well-deserved promotion from Congress. Cornwallis was next sent by way of Chester to Billingsport with a strong body of troops to clear the left bank of the Delaware. A division under Greene was promptly despatched across the river to give him battle. But Cornwallis was joined by five British battalions from New York, while the American reinforcements from the northern army were still delayed. It therefore became necessary to evacuate Red Bank. Cornwallis, having leveled its ramparts, returned to Philadelphia, and Greene rejoined Washington, but not till Lafayette, who attended the expedition as a volunteer, had secured the applause of Congress by routing a party of Hessians. For all the seeming success, many officers in the British camp expressed the opinion that the States could not be subjugated, and should be suffered to go free.—*Bancroft*, "*History of U. S.*," *vol. vi.*

[1] "One Hundredth Anniversary of Paoli Massacre," by J. Smith Futhey, Esq.

to relieve Burgoyne, who was then beseeching for reinforcements to save him from disaster.

After a succession of feints by Howe, indicating his eager desire for more substantial conquests, he moved from the neighborhood of these hills, crossing the Schuylkill at Fatland Ford on the 22d day of September, and from necessity, rather than choice, occupied Philadelphia on the 24th of the same month. Light brigades of Continental troops interposed between the enemy and the Delaware, and watched his movement in the direction of Philadelphia by day and night, while the main army under Washington took position on the hills of Perkiomen and Skippack. At this place reinforcements reached him, and his army, decimated by the untoward events of the campaign, was reported eight thousand Continental troops and three thousand militia present and effective for duty. With this force at command he determined upon further operations against the enemy, whose situation, as disclosed to him by information deemed reliable, invited rather than repelled attack.

The plan of the battle of Germantown[1] was then formed while encamped upon the Perkiomen hills; from them, on the night of October 3d, the advance was made, and after it was fought and lost, on the day



[1] The following letter, written by Lieutenant-Colonel T. Pickering, who was serving as adjutant-general on the staff of General Washington at the battle of Germantown, dated Salem, Mass., August 23, 1826, will be read with interest in connection with the events of a day which opened so auspiciously for American arms, and closed in gloom and disaster:

"*Sir*: Nearly forty-nine years have elapsed since the battle of Germantown. Of course, you may well suppose that many facts respecting it are beyond my power of recollection, while a few are indelibly impressed on my memory. General Washington, in his letter to Congress of October 5th, the day after the battle, says that 'the army marched about 7 o'clock on the evening of the 3rd, and that General Sullivan's advanced party attacked the enemy's picket at Mount Airy, or Mr. Allen's house, about sunrise the next morning, which presently gave way. His main body, consisting of the right wing, following soon, engaged the light infantry and other troops encamped near the picket, which they forced from the ground. Leaving their baggage, they retreated a considerable distance, having previously thrown a party into Mr. Chew's house.'

"The term here applied to the advanced corps of the enemy, that 'they were forced from the ground,' shows that they were in arms, and resisted their assailants, and that the previous brush with the picket, a guard always posted in advance on purpose to give notice of the enemy's approach, roused 'the light infantry and other troops,' who had time enough to take their arms and form for action. They retreated of necessity before the greatly superior force of the whole right wing of our army.

"But the 'leaving of their baggage' authorizes the inference that they had no knowledge of the march of the American army until the firing in the engagement with the picket guard gave the alarm. If, then, these advance corps of the enemy were not, in the strict sense of the word, *surprised*,—that is, 'caught napping,' unprepared for action,—much less could the main body, posted in the centre of Germantown, two miles farther off, have been surprised. The distance gave them ample time to prepare for action in any manner which the attack of their enemy should require.

"You ask 'at what distance from Chew's house the attack commenced?' At that time I was a stranger to that part of the country. From my subsequent acquaintance with it, during my residence in Pennsylvania, I should estimate the distance from Mount Airy to Philadelphia

following (October 4th), to the same hills the army returned, defeated, it is true, with considerable loss in killed, wounded and captured, but with its organization unimpaired and its devotion to the cause still unbroken.

Mr. Bancroft, in writing of this battle, says:[1] "In the official report of this engagement the commander-in-chief stated with exactness the tardy arrival of Greene," and adds, "Had the forces trusted to that officer and the militia under Armstrong acted as efficiently as the troops with Washington, the morning might have been fatal to Howe's army. The renewal of the attack so soon after the defeat at the Brandywine, and its partial success, inspirited Congress and the army.

to be eight miles, Chew's house seven miles, and the centre of Germantown six miles. And these, I think, are the distances as I have occasionally heard them mentioned.

"You ask 'how long a pause was made at Chew's house, and what space of time probably intervened between the beginning of the action and the general engagement at the head of the village?' The pause at Chew's house, in the manner I shall presently mention, probably delayed the advance of the *rear division* of our army into action for half an hour. Taking the attack on the picket at Mount Airy as the beginning of the action, it was probably nearly half an hour before it became general as to the whole of Sullivan's column, and this general engagement must have commenced after he had passed Chew's house, for I saw not one dead man until I had passed it, and then but one, lying in the road where I fell in with General Sullivan. I presume that following close upon the heels of the British battalion of light infantry and the Fortieth Regiment, which were retiring before him, Sullivan, with his column, had passed Chew's house without annoyance from it, for it must have taken Colonel Musgrave, who entered it with six companies of the Fortieth Regiment, some time to barricade and secure the doors and windows of the lower story, before he would be ready to fire from the chamber windows– and it was from them that the firing I saw proceeded.

"In the march of the army, General Washington, following Sullivan's column, kept in the road leading to and through Germantown to Philadelphia. When he had entered the northern part of the village, we heard in advance of us (I was riding by the General's side) a very heavy fire of musketry. General Sullivan's divisions, it was evident, were warmly engaged with the enemy, but neither were in sight. This fire was brisk and heavy, and General Washington said to me, 'I am afraid General Sullivan is throwing away his ammunition; ride forward and tell him to reserve it.' I do not know what was the precise idea which at that moment struck the mind of the general. I can only conjecture that he was apprehensive that Sullivan, after meeting the enemy in the front, kept up his brisk and incessant fire, when the haziness of the air and its increased obscurity, from the burning of so much powder, prevented his troops having such a distinct view of the enemy as would render their fire efficient. Be that as it may, the instant I received the general's orders I rode forward, and in the road, three or four hundred yards beyond Chew's house, met Sullivan, and delivered to him the general's orders.

"At this time I had never heard of Chew's house, and had no idea that an enemy was in my rear. The first notice I received of it was from the whizzing of the musket-balls across the road, before, behind and above me as I was returning, after delivering the orders to Sullivan. Instantly turning my eyes to the right, I saw the blaze of the muskets, whose shots were still aimed at me from the windows of a large stone house, standing back about a hundred yards from the road. This was Chew's house. Passing on, I came to some of our artillery who were firing very obliquely on the front of the house. I remarked to them that in that position their fire would be unavailing, and that the only chance of their shot making any impression on the house would be moving down and firing on its front. Then immediately passing on, I rejoined General Washington, who, with General Knox and other officers, was in front of a stone house (nearly all the houses in Germantown were of stone), next northward of the open fields on which Chew's house stood. I found they were discussing, in Washington's presence, this question,—Whether the whole of our troops then behind should immediately advance, regardless of the enemy in Chew's house, or first summon them to surrender? General Knox strenuously urged the sending of a summons. Among other things, he said, 'It would be unmilitary to leave a castle in the rear.' I answered, 'Doubtless that is a correct general maxim; but it does not apply in this case. We know the extent of this castle (Chew's house), and to guard against the danger of the enemy's sallying and falling on the rear of our troops, a small regiment may be posted here to watch them; and if they sally such a regiment will take them. But,' I added, 'to summon them to surrender would be useless. We are now in the midst of the battle, and its issues are unknown. In this state of uncertainty, and so well secured as the enemy find themselves, they will not regard a summons. *They will fire at your flag.*'

However, a flag was sent with a summons. Lieutenant Smith, of Virginia, my assistant in the office of adjutant-general, volunteered his service to carry it. As he was advancing, a shot from the house gave him a wound of which he died. Whatever delay in the advance of the division in our rear was occasioned by the pause at Chew's house, I am satisfied that Sullivan's column did not halt there at all, as mentioned by Judge Johnson. The column was certainly not in sight when the general sent me with the orders already noticed, and it is alike certain that it was then beyond Chew's house. Nor were the enemy forming under cover of the house, or I would have seen them. When the orders were sent to our troops in the rear to advance I do not know, but it must have been subsequent to the sending of the flag, and, I should think, twenty minutes, at least, after it was found that an enemy was in the house. The general did not pass it at all. I had remained near him until our troops were retreating, when I rode off to the right to endeavor to stop and rally those I met retiring in companies and squads; but it was impracticable. Their ammunition, I suppose, had generally been expended.

"In the foregoing letter from General Washington to Congress, he says, 'The attack from our left column, under General Greene, began about three-quarters of an hour after that from our right.' You ask the cause of this. The answer is obvious. The right column, under General Sullivan, which Washington accompanied, marched on the direct road to Germantown; Greene, with his column, was obliged to make a circuit to the left to gain the road which led to his point of attack. The columns thus entirely separated, and at a distance from each other, no calculations of their commanders could have insured their arriving at the same time at their respective points of attack.

"Judge Johnson, in his 'Life of Greene,' has represented as 'almost ludicrous' the 'scene' exhibited by some writers of the discussion near Chew's house in the presence of General Washington, in which it is hinted that opinions were 'obtruded, and that even field officers may have expressed their opinions; but,' he adds, 'General Washington was listening to the counsels of his own mind and of his general officers.' I know, however, that he did listen to the discussion, and Lee (Light-Horse Harry) commanded a troop of horse that day on duty near the General's person. This accounts for his determination to send the summons. 'Knox,' he says, 'being always high in the general's confidence his opinion prevailed.' Further, I must remark, that the general officers whom the judge supposes to have been present and advising the commander in-chief, were in their proper places with their divisions and brigades. Knox alone, of the general officers, was present. Commanding in the artillery department, and the field pieces being distributed among the brigades of the army, he was always at liberty in time of action to attend the commander-in-chief.

"Some two or three years since I wrote to Judge Johnson, informing him of his mistakes in the matter noticed in this paragraph. Others of his details of this battle, which are inconsistent with the statements I have here given to you, must be incorrect. The truth is that General Washington, not sanguine in his own opinion, and his diffidence being increased, probably, by a feeling sense of high responsibility as commander-in-chief, was ever disposed, when occasions occurred, to consult those officers who were near him in whose discernment and fidelity he placed a confidence, and certainly his decisions were often influenced by their opinions. This is within my knowledge.

"I am, etc.,

"T. Pickering."

The retreat of Washington from Germantown was accomplished without the loss of material. He retired to Skippack Creek, placed his wounded and disabled soldiers in hospitals wherever he could establish them, generally using the churches and other public buildings between the Perkiomen and Reading for that purpose.

In Europe it convinced Frederick of Prussia and the Cabinet of France that the independence of America was assured."

Information of the success of General Gates in the Northern Department reached the commander-in-chief on the 18th of October,—one day after the surrender. The event was promptly made known to the army, and received by soldiers and citizens with manifestations of joy. Immediately the Continental troops under General Glover and Morgan's corps of riflemen were recalled from the Department of the North. Delay followed, with evident disinclination upon the part of General Gates to promptly obey the order of the commander-in-chief, and not until Colonel Hamilton was dispatched in person to renew the demand was the summons obeyed.

Pending the movement of reinforcements from the North, the public mind, having recovered from the first effects of the reverses at Brandywine, Paoli and Germantown, perhaps unduly elated by the surrender of Burgoyne and its sequences, clamored for further aggressive movements against Howe. Partly in deference to this feeling, and to quiet the unfriendly criticism inspired by the disingenuous spirit subsequently and more notoriously connected with the developments of the Conway cabal, Washington moved his army to the east, taking a strong position at Whitemarsh, from which he was able to watch the movements of the enemy, harass his outposts, cut off his source of supplies, give protection to the agricultural people and confidence to the public mind. Here, after an ineffectual attempt[1] on the part of the enemy to dislodge him, on the 5th and 6th of December, the campaign closed, Howe retiring within his lines of defense, reaching from the Delaware to the Schuylkill River. The war-worn and jaded condition of the patriot troops, the want of supplies, the hopelessness of further operations to repossess Philadelphia, and the approach of winter, all admonished the commander to seek shelter and repose for his army.

The proposition to retire the army for the winter gave rise to well-marked differences of opinion. Within army circles the only question was that of location. Whether it should fortify and remain where it was, or retire to the Perkiomen hills, or move south and occupy the vicinity of Wilmington, was canvassed by leading officers in the army, whose opinions were sought by the commander-in-chief. In political circles, and among a large and influential class of patriotic citizens of Pennsylvania, a different view prevailed. In their opinion, the exigency of the public service demanded a continuation of active operations upon the part of this army. Their hostility to the proposed cantonment of troops culminated in a remonstrance prepared by the General Assembly, and by that body presented to Congress, then in session at York. We recite the remonstrance here in order to illustrate the wisdom and force of character of the great and good man who, in serving the higher interests of his country, disregarded the remonstrance of those whose sensibilities were shocked by the calamities of war, and who, for a temporary respite from its ravages, would have sacrificed the army of hope by denying it that well-earned repose absolutely necessary at that season and period to preserve its existence.

REMONSTRANCE OF COUNCIL AND ASSEMBLY TO CONGRESS, 1777.[1]

"At a conference with the Supreme Executive Council and General Assembly of the State, held in the Assembly Room, *Resolved*, that a remonstrance be immediately drawn up and forwarded to Congress against the proposed cantonment of the army of the United States under command of His Excellency, General Washington, and that the following reasons be urged.

"1st. That by the army's removal to the west side of the Schuylkill as far as Wilmington and its neighborhood, a great part of the State, particularly that on the east side, together with the State of New Jersey,

[1] Pennsylvania Archives, vol. vi., 1777–1778, p. 279.

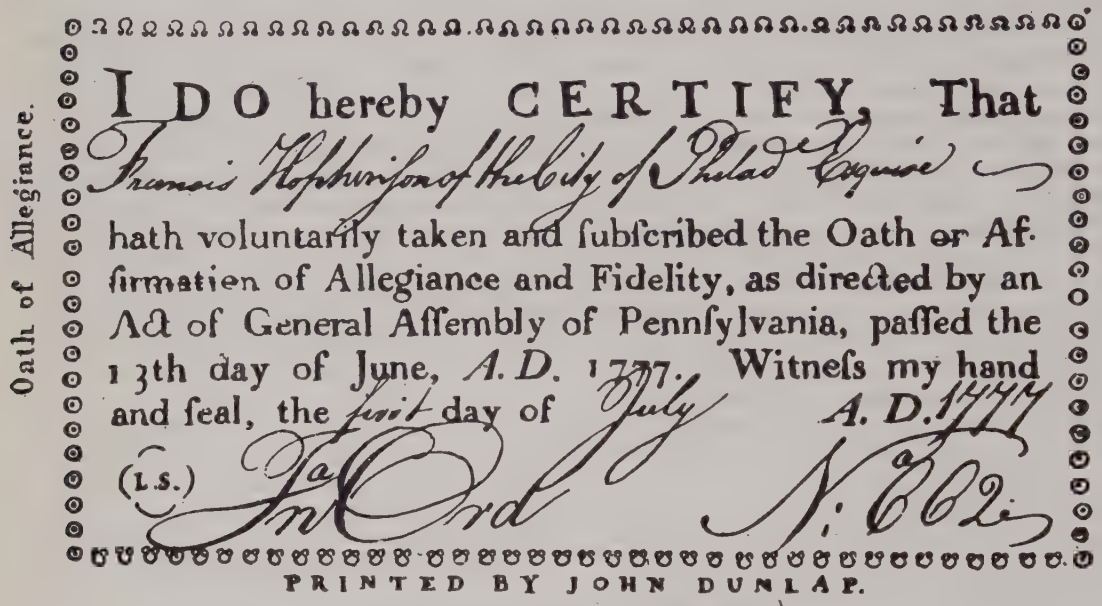
[1] When General Howe took formal possession of Philadelphia, in the autumn of 1777, he established his headquarters in Second Street, fourth door below Spruce, in a house formerly occupied by General Cadwallader. Directly opposite resided William and Lydia Darrach, members of the Society of Friends. A superior officer of the British army, believed to be the adjutant-general (Major André), fixed upon one of their chambers, a back room, for private conference, and two officers frequently met there, with fire and candles, in close consultation. About the 2d of December the adjutant-general told Lydia that they would be in the room at 7 o'clock and remain late, and that they wished the family to retire early to bed, adding that when they were going away they would call her to let them out and extinguish their fire and candles. She accordingly sent all her family to bed; but as the officer had been so particular her curiosity was excited. She took off her shoes, put her ear to the keyhole of the conclave, and overheard an order read for all the British troops to march out late on the evening of the 4th and attack General Washington, then encamped at Whitemarsh. On hearing this she returned to her chamber and laid down. Soon after, the officer knocked at her door, but she rose only at the third summons, having feigned herself asleep. Her mind was so agitated that she could neither eat nor sleep, supposing it in her power to save the lives of thousands of her fellow-countrymen, but not knowing how she was to convey the information to General Washington, not daring to confide it to her husband. The time, however, was short. She quickly determined to make her way as soon as possible to the American outposts, where she had a son who was an officer in the American army. She informed her family that as she was in want of flour, she would go to Frankford for it. Her husband insisted she should take her servant maid with her, but to his surprise she positively refused. She got access to General Howe and solicited what he readily granted,—a pass through the British lines. Beyond the lines she was met by an American officer, Lieutenant-Col. Craig, of the Light Horse, who knew her. To him she disclosed her secret, after having obtained from him a solemn promise never to betray her individually, as her life might be at stake with the British. He conducted her to a house near at hand, directed something for her to eat, and hastened to headquarters, where he immediately acquainted General Washington with what he had heard. Washington made, of course, all preparations for baffling the meditated surprise. Lydia returned home with her flour, sat up alone to watch the movements of the British troops, and heard their footsteps; but when they returned in a few days after, did not dare to ask a question, though solicitous to learn the result. The next evening the adjutant-general came in, and requested her to walk up to his room, as he wished to ask some questions. She followed him in terror, and when he locked the door and begged her, with an air of mystery, to be seated, she was sure she was either suspected or betrayed. He inquired earnestly whether any of her family were up the last night when he and the other officer met. She told him they all retired at eight o'clock. He observed, "I know *you* were asleep for I knocked at your door three times before you heard me. I am entirely at a loss to imagine who gave General Washington information of our intended attack, unless the walls of the house could speak. When we arrived near Whitemarsh, we found all their cannon mounted and the troops prepared to receive us; *and we have marched back like a parcel of fools.*"

must be left in the power of the enemy subject to their ravages; the inhabitants be obliged either to fly to the neighboring States or submit to such terms as the enemy may prescribe.

"2d. That the State Assembly at their last session had laid a tax of five shillings on the pound on all estates, real and personal, in order to call in and sink the moneys issued by this Government, and at this session had *Resolved* over and above said tax to raise the sum of sixty-two thousand dollars for support of war for the ensuing year. Agreeably to resolve of Congress, both which taxes must infallibly fail, provided the army go into cantonment at such distance as will prevent their covering the country from the depredations of the enemy, it being a melancholy truth that too many of our people are so disaffected already that nothing but the neighborhood of the army keeps them subject to Government, whilst the Whigs and those who have taken the most active part in support of our cause will be discouraged and give up all as lost.

"I can assure those gentlemen that it is a much easier and less distressing thing to draw remonstrances in a comfortable room by a good fireside than to occupy a cold, bleak hill, and sleep under frost and snow without clothes or blankets. However, although they seem to have little feeling for the naked and distressed soldiers, I feel superabundantly for them, and from my soul I pity those miseries which it is neither in my power to relieve or prevent."

On the 11th of December the camp was broken up at Whitemarsh, and after a painful march over rough and frozen roads reached the Gulf Hills, crossing the Schuylkill River at Swedes' and Matson's Ford on improvised bridges. Here the advance division under General Potter, which moved south of Matson's Ford



Oath of Allegiance.

FAC-SIMILE OF OATH OF ALLEGIANCE.

"3d. By removal of our army it will be impossible to recruit the regiments of this State, as those who would be active and zealous in promoting that measure will be obliged to leave the State, whilst the Tories and disaffected will gain strength, and in many places, perhaps, declare openly for the enemy, by which means there will be a probability of their not only supplying their exhausted magazines, but greatly strengthening their army.

"4th. The army removing at a distance from the enemy must give a fatal stab to the credit of the Continental currency throughout this State. It is a melancholy truth that it is very difficult to purchase from many of our most able farmers the necessary provisions of our army, owing to their fear of the money; but this difficulty must be greatly increased when another market, without interruption, will open to them where they will receive at least a promise of hard money."[1]

"We have this day no less than two thousand eight hundred and ninety-eight men in camp unfit for duty, because they are barefoot and otherwise naked. Our whole strength in Continental troops amounts to no more than eight thousand two hundred in camp fit for duty. Since the fourth inst., our numbers fit for duty, from hardship and exposure, have decreased nearly two thousand men. Gentlemen reprobate the going into winter-quarters as much as if the soldiers were made of sticks and stones.

[1] To this remonstrance Washington replied on the 23d of December, 1777. After laying blame upon General Mifflin for neglect of duty as quartermaster-general, he says: "For want of a two days' supply of provisions, an opportunity scarcely ever offered of taking an advantage of the enemy that has not been either totally obstructed or greatly impeded. Men are confined to hospitals or in farmers' houses for want of shoes."

to cover the passage of the main army, unexpectedly came in contact with a strong detachment of the enemy under Cornwallis, out upon a foraging expedition. The presence of the enemy in this quarter and in such force was a surprise at the time, and occasioned delay, the counter-movement of troops and some apprehension upon the part of the commander-in-chief, which subsequently proved to be without cause.

A camp was established for some days on the Gulf Hills, fourteen miles distant from Philadelphia, where the army remained until the 18th, when it retired to Valley Forge, going into position with the right resting upon the base of Mount Joy, near the acute angle of the Valley Creek, the left flank resting upon and protected by the Schuylkill River, about one-half mile below Fatland Ford or Sullivan's bridge.

Historians have uniformly signalized the arrival of the army on this ground as coincident with the famous order of the commander-in-chief dated, "Headquarters on the Schuylkill, December 17, 1777," congratulating his troops upon the close of the campaign, the results accomplished, the heroic conduct of officers and the endurance of men, counseling them to continue in

fortitude and patience, assuring his followers "that while in some instances he had unfortunately failed, that upon the whole, heaven had smiled upon their army and crowned them with success, that the end of their warfare was independence, liberty and peace, and that the hope of securing these blessings for themselves and their posterity demanded a continuance of the struggle at every hazard."

This was the pleasing side of the picture, set in the gilded framework of war's seducing blandishments and panoplied with its field-day glories. But there was another,—the shoeless soldiers, the frozen ground, the cheerless hills, the lowering leaden sky that arched them over with gloom. These were the sorrowing and mute witnesses to the true scene of the arrival, and which the artist has thus far failed to place upon canvas. We are not, however, wanting for the pen picture. I give it in the language of Mr. George Washington Parke Curtis.

"The brigades had gone into position upon the line of defense indicated by the skillful officer who drew it. The pitiless winter winds swept the hills and valley with unceasing fury as the December sun sank into banks of snow-clouds, presaging the coming storm. The poverty of supplies in food and raiment was bitterly and profanely bewailed by shivering, unpaid officers and half-naked men as they crowded around the comfortless camp-fire of the bivouac, when suddenly the appearance of the Horse Guard announced the approach of the commander-in-chief. The officer commanding the detachment, choosing the most favorable ground, paraded his men to pay their general the honors of a passing salute. As Washington rode slowly up he was observed to be eying very earnestly something that attracted his attention on the frozen surface of the road. Having returned the salute with that native grace and dignified manner that won the admiration of the soldiers of the Revolution, the chief reined in his charger, and ordering the commanding officer of the detachment to his side, addressed him as follows: "How comes it, sir, that I have tracked the march of your troops by the blood-stains of their feet upon the frozen ground? Were there no shoes in the commissary's stores, that this sad spectacle is to be seen along the public highway?" The officer replied: "Your Excellency may rest assured that this sight is as painful to my feelings as it can be to yours, but there is no remedy within our reach. When shoes were issued the different regiments were served in turn; it was our misfortune to be among the last to be served, and the stores became exhausted before we could obtain even the smallest supply."

The general was observed to be deeply affected by his officer's description of the soldiers' privations and sufferings. His compressed lips, the heaving of his manly chest betokened the powerful emotions that were struggling in his bosom, when, turning towards the troops, with a voice tremulous, yet kindly, he exclaimed, "Poor fellows!" Then, giving rein to his horse, he rode rapidly away.

The purpose of the commander-in-chief in taking position at Valley Forge was to give the greatest measure of protection possible to the State, and to circumscribe the operations of General Howe within limits that would seriously affect his source of supply. To this end his line was admirably drawn. On the west side of the Schuylkill he extended his right flank to Wilmington, at which point he stationed General Smallwood with his brigade of infantry, covering the long interval with Morgan's rifle corps and the squadron of cavalry under Major Harry Lee.

On the east of the river he occupied the country as far as Whitemarsh, placing General Armstrong with a brigade of Pennsylvania militia so as to cover the principal roads converging at that point; the cavalry under Major Jameson and Captain McLane[1] guarded the highways in the direction of Barren and Chestnut Hills; and to still further prevent the incursions of the enemy northward from Philadelphia, he directed General Pulaski, who was in command of the brigade of cavalry, to go into camp at Trenton, N. J.

The line of defense from the west shore of the Schuylkill River to the base of Mount Joy, at the angle of Valley Creek, occupied commanding ground, and the earthworks and fortifications erected under the direction of General Duportail were extensive in character and skillfully constructed. The interior line of works and abatis were semicircular in form, crossing from north to south, with one star and two square forts, from which the army could have successfully covered a retreat westward, had such a movement become necessary. The interior lines, with the remains of the two square forts, are still discernible, and constitute the only landmarks which the crumbling hand of time has left to guide the pilgrim over these hills. Fortunately for the living of to-day, we are not without reliable data by which we may indicate with accuracy the position of the fourteen brigades of Continental troops encamped within the fortified lines, representing a maximum of seventeen thousand men, but reduced by sickness and the paucity of supplies to the pitiable number of five thousand and twelve effectives.

The extreme right of the line, commanding the approaches from the southwest, was held by Brigadier-General Charles Scott, of Virginia, upon whose left Brigadier-General Anthony Wayne, commanding the Pennsylvania line, was placed; then in succession from right to left came the brigades of General Enoch Poor, of Massachusetts, General John Glover, of Massachusetts, General Ebenezer Larned, General John Patterson, of Massachusetts, General George Weedon, of Virginia, who connected with General

[1] Lossing's "Field-Book," vol. ii. p. 105; Day's "Historical Collections," p. 501.

Peter Muhlenberg, of Pennsylvania, holding the extreme left of the line, resting on the Schuylkill at a point near where the village of Port Kennedy is now located.

The second or supporting line of troops was encamped immediately in front of the interior line of earthworks, still discernible. Brigadier-General William Woodford, of Virginia, held the right, covering the corps of Major-General Henry Knox's artillery, located a short distance to his left and rear; to the left of Woodford, successively, the brigades of General William Maxwell, of New Jersey, General Thomas Conway, of Irish birth, General Jedediah Huntingdon, of Connecticut, connecting with the brigade of General James Varnum, of Massachusetts; on the extreme left, covering the bridge over the Schuylkill River, built by General Sullivan, Brigadier-General Lochlan McIntosh, of Scottish birth, a Georgian by adoption, with the remaining brigade, was encamped in the rear of the second line of intrenchments, a short distance east of the Potts mansion, occupied by the commander-in-chief; near by and to the left of McIntosh, Washington's body-guard, commanded by Major Gibbs, of Rhode Island, was encamped; still farther to the west, and on the opposite side of the Valley Creek, the artificers of the army were quartered in huts, with large log buildings for work-shops.

The bake-house, used for the double purpose of furnishing food for the army and as a place for holding court-martial, was located within a few yards of these work-shops. By the 20th of December the army was in position as indicated, and the order to construct huts for the winter was issued. Its execution followed with dispatch and great exactness. Soldiers became axemen from necessity; before them the forest fell, and hundreds of log houses grew as by magic. The dimensions of each hut were fourteen by sixteen feet, with chimney, fire-place, and door, facing upon company streets, drawn in strict conformity with the rules of military encampments. Quarters for field and staff officers were erected in rear of the line of troops, while still farther to the rear, upon the sloping hills, shelter was sought for the trains of the army. History and tradition alike confirm the fact that the hills were made bare of timber in completing the shelter necessary for men and animals, and the wood necessary for fuel during the long winter was hauled by men a distance of one and more miles from the camp.

Major-Generals Lafayette, De Kalb and Stirling established their headquarters for the winter with the army, and were alternately assigned to important field and detached duty during the winter. Major-General Charles Lee, at the time a prisoner of war, was subsequently exchanged for General Prescott, and returned to this camp, together with Major-General Thomas Mifflin, of Pennsylvania, who had also been absent some months.

The following staff officers established their headquarters near the Potts mansion: Major-General Nathaniel Greene, of Rhode Island, quartermaster-general of the army; Major-General Baron Steuben, inspector-general; Brigadier-General Duportail, chief engineer; Colonel Timothy Pickering, adjutant-general; and Colonel Alexander Hamilton, aide-de-camp.

POTTS' MANSION,
Washington's Headquarters at Valley Forge.

Time and space forbid what would otherwise be a pleasing task of calling from the long roll of honor the names of subordinate officers, who were conspicuously associated with those near the person of the commander-in-chief, and supported him in his trials and embarrassments while in occupation of Valley Forge. Long before the works for defense were completed, or the huts that were to shelter the army were finished, the bitter cry of hunger, from thousands of brave and heroic men, reached the ears and heart of Washington. He appealed in vain to the government for supplies. The hasty removal of Congress from Philadelphia to Lancaster, thence to York, had its disorganizing effects upon all the departments; especially upon those of the quartermaster and commissary. The limited provisions made to meet the wants of the army, greatly increased by the losses inseparable from the defeats and retreats experienced, were with difficulty placed within reach of the commander, whose transportation had been reduced to the minimum from necessity, whose trains had been enfeebled by overwork, irregular food and that want of care for which the quartermaster's department had become noted. To overcome in some measure the pressing necessity which threatened the dissolution of his army, as early as the 20th of December, 1777, he issued the following order:

"By virtue of the power and direction especially given, I hereby en-

join and require all persons residing within seventy miles of my headquarters to thresh one-half of their grain by the first day of March next ensuing, on pain, in case of failure, of having all that shall remain *in sheaves*, after the period above mentioned, seized by the commissaries and quartermasters of the army, and paid for as *straw*."[1]

In the absence of blankets, the want of straw as well as grain was sorely felt by the army; farmers in the immediate vicinity had suffered great loss by the presence of both armies in their midst. If the patriot army were considerate of those known to be friendly to their cause and merciless upon the "Tory," the British, who closely followed them, laid a heavy hand upon the supplies of the "Rebel," and between the two the farmers from the Brandywine to the Delaware found an involuntary market. Under these circumstances, it was not surprising that those who had stowed away the grain and hay that was relied upon to keep body and soul together for another year were tardy in threshing it out. The commander-in-chief comprehended the situation, and the order issued went direct to the vital point; it suggested an alternative which brought flails to the front, barn-doors were opened, the golden sheaves were brought in from well-preserved stacks, in many instances by the soldiers themselves, who were glad to exchange the rigors of a starving camp for the toil of the threshing-floor, which exchange yielded bread for themselves and compatriots by day, and afforded the hope of merriment amidst the cheerful homes of patriot mothers and daughters by night. Tradition says that throughout the length and breadth of "Washington's seventy miles" could be heard from morn till night two or three threshers on every barn-floor. Straw was soon in the market, soft as flails could make it, and contributed greatly to the comfort of the men at Valley Forge, and hundreds and thousands of other sick and wounded, who filled every church and meeting-house from Barren Hill to the "Swamp," and from "Birmingham to Reading."

"At no period of the war," writes Chief Justice Marshall, "had the American army been reduced to a situation of greater peril than during the winter at Valley Forge. More than once they were absolutely without food. Even while their condition was less desperate in this respect, their stock of provisions was so scanty that there was seldom at any time in the stores a quantity sufficient for the use of the troops for a week. The returns of the 1st of February exhibit the astonishing number of three thousand nine hundred and eighty-nine men in camp unfit for duty for want of clothes. Of this number scarcely a man had a pair of shoes. Although the total of the army exceeded seventeen thousand men, the present effective rank and file amounted to only five thousand and twelve. The returns throughout the winter did not effectually vary from that which has been particularly stated."

The situation of the camp was so eminently critical on the 14th of February that General Varnum wrote to General Greene "that in all human probability the army must dissolve." On the 16th of the same month Washington wrote to Governor Clinton: "For some days past there has been little less than a famine in camp. A part of the army has been a week without any kind of flesh, and the rest three or four days. Naked and starved as they are, we cannot enough admire the incomparable patience and fidelity of the soldiery that they have not been ere this excited by their sufferings to general mutiny and desertion."

Dr. Thatcher, in his private journal, states: "That it was with the greatest difficulty that men enough could be found in a fit condition to discharge the military camp duties from day to day, and for this purpose, those who were naked borrowed of those who were more fortunate in having covering for their bodies and shoes for their feet." Yet, amidst the sufferings and privations endured by these devoted troops week after week and month after month, pelted by the storms of one of the severest winters ever known in this region, the love of country, the hope of victory, and an abiding confidence in their great leader sustained them until, in the Providence of God, the cause found an ally whose offices of friendship, long and ardently hoped for by the chivalrous Lafayette, were finally assured by the diplomacy of our own glorious Franklin.

Captain Peter S. Duponceau, aide-de-camp on the staff of Baron Steuben, in a speech at Valley Forge on the 26th day of July, 1828, at a "Harvest Home" held in commemoration of the trials and sufferings and sacrifices of the Continental army, thus speaks of the period and situation: "At that time no nation in Europe had acknowledged our independence except a few insufficient succors secretly sent to us from France. We were left entirely to our own resources, which were, alas! all centred in the courage of our rulers and our brave soldiers. Despondency reigned everywhere except in the hearts of those who watched and suffered for our safety. I cannot well represent to you with what fortitude, resignation and patience these trials were borne by the soldiers of the Revolution. They never broke into loud murmurs, much less into mutiny or disobedience. I have seen them when pressed by hunger sometimes pop their heads out of their poor huts and call out in an undertone, 'No bread, no soldier;' but a single kind word from an officer would still their complaints, and they were willing to brave everything for the sake of liberty and their country"

Passing from the gloom of the command, we are met with the perils of the commander. The surrender of Burgoyne on the Hudson, due primarily to the comprehensive direction of Washington, successfully

[1] In a letter to Congress touching this order, Washington says, "I regret the necessity which compelled us to issue this order, and I shall consider it among the greatest of our misfortunes to be under the necessity of practicing it again. I am now obliged to keep several parties from the army threshing grain, that our supplies may not fail us; but this will not do."—*Marshall's "Washington," vol. i., p.* 216.

carried into execution by Major-General Philip Schuyler, who in an evil hour was superseded by Major-General Horatio Gates, giving to the latter officer easy honors and bringing to his standard the disaffected spirits of the army, as it did the impatient and fawning politicians of the period.

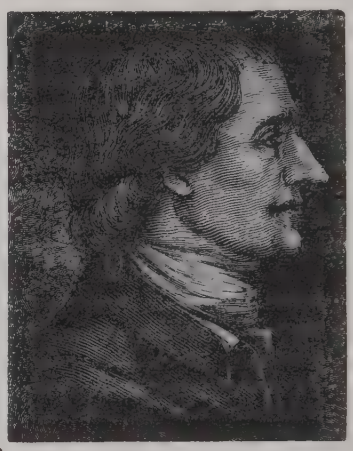
The victory of Gates at Saratoga was the inevitable result of conditions precedent to his assuming command in that department, a fact well understood by his contemporaries at the time; and it would seem that a proper respect for the proprieties of his profession, a due regard for the troops who served him and the superior officers in merit and rank who made his triumph a possibility should have induced subsequent conduct upon his part consistent with the highest interest of his country. But it was not so. Assuming honors he never merited and powers never conferred upon him, he covertly sought to destroy personal attachments and inspire public distrust in his commander-in-chief.

General Conway, with others of less importance, served the base purpose of Gates only too well, and for a time the cabal worked unseen mischief in the attempted alienation of friends and disorganization of the army, which ultimately recoiled upon those most conspicuously connected with the movement, leaving the character of him they thought to asperse brighter and purer and nobler than ever before.

When apprised of the intrigues of faction by his personal friend, Mr. Laurens, then President of Congress, he replied with a frankness which, while it disclosed a wounded spirit, breathed in every line and sentence his unqualified attachment to the cause and his unselfish love of country. He writes to his friend: "As I have no other view than to promote the public good, and am unambitious of honors not founded in the approbation of my country, I would not desire in the least degree to suppress a free spirit of inquiry into any part of my conduct that even faction itself may deem reprehensible. The anonymous paper handed you exhibits many serious charges, and it is my wish that it may be submitted to Congress.[1] This I am the more inclined to, as the suppression or concealment may possibly involve you in embarrassments hereafter, since it is uncertain how many or who may

[1] Charles Thomson was, in some respects, one of the most interesting characters of the Revolution. His life has never been written, because he deliberately destroyed the materials for it; he knew more of the inside history of the great struggle than any other man, but never opened his lips about it, burning his papers before his death and calmly insisting that his secrets should die with him. This self-repression cost him no pangs; it was natural to him; he habitually acted behind the scenes and by indirect methods, and he did this not from any spirit of intrigue or other unworthy motive, but because his nature seemed to demand it. He was the soul of truth and honor, frank, ingenuous, much beloved of his friends, serene, companionable, quiet, yet evidently capable of emotions of the very strongest sort, so that he fainted from excitement in speaking upon the Boston Port Bill, and John Adams spoke of him as "the Sam Adams of Philadelphia." Perhaps it was this excitability and his consciousness of it which made Thomson always avoid the demonstrative part of the great work to which he had laid his hand and which he did so thoroughly. This and the untoward circumstances of his childhood may suffice to explain the seeming anomaly in Charles Thomson's character. He was born in Ireland, whence, in 1740, being then eleven years old (born November, 1729, at Maghera, Derry), he, an elder brother and three sisters, and a sick father crossed the ocean for the Delaware. His mother had died when Charles was very young, and the father died on the voyage and was buried at sea.

The captain of the vessel seized the children's effects and put them ashore at New Castle, committing Charles to the care of a blacksmith, who proposed binding the boy to his trade. To defeat this, Charles at



Chas Thomson

once ran away, found a friend on the road, a lady, a stranger to him, was taken under her care, and sent to school to Dr. Francis Allison, at Thunder Hill, Md. Then and afterwards the lad was a diligent student, and was made usher under Allison when the latter became vice-principal of the Philadelphia College. Thomson lodged with David J. Dove, and may have taught in the latter's private school and in the Germantown Academy also. To show the habitual caution of the man, he got a certificate of good character from Dove and his wife both before leaving their house. He taught in the Friends' school, in Fourth Street, below Chestnut, becoming principal.

His first public service was as short-hand reporter for the Quakers, in 1757, at the famous Indian council that year, when Tedyuscung gave him the name which stuck to him, *emeritus*, through life,—Weagh conlau-mo-und, the man who tells the truth. After this Thomson went into business and made money. Watson says he was interested in iron-works at Egg Harbor. As soon as the suspicions of ministerial intention to tax America were awakened Thomson began to correspond with leading men in other colonies. He was intimate with Franklin, trusted in business circles, and must have revealed his qualities as a confidential agent very early. Jefferson and he corresponded as early as 1764; the New England patriots all knew him, and he was secretary of the New York (Stamp Act) Congress of 1765. He managed all the political leaders in Philadelphia as easily as puppets are moved by the hand pulling their wires. He was secretary of the First Continental Congress, perpetual secretary of Congress during and after the war (fourteen years in all), and confidential friend of every leader in the colonies throughout the struggle. The delicacy of his responsible and confidential relations to Congress were enhanced by the fact that he obviously had charge of the secret service of Congress, and that body required to have spies everywhere, domestic and foreign, and of every grade.

Watson learned from him incidentally, perhaps accidentally, that James Rivington, the Tory printer in New York, was one of these agents, and Mrs. Logan reports that Patience Wright, the wax modeler, was another. The latter had the means to be very useful. She was intimate with Franklin, passed for a half-mad woman, went where she pleased, even to Windsor Castle, without leave, where she used to burst in abruptly, calling the king "George" and the queen "Charlotte," and withal she was astute, shrewd and full of resources. Thomson married,

be privy to the contest. My enemies take an ungenerous advantage. They know the delicacy of my situation, and that motives of policy deprive me of the defense I might otherwise make against their insidious attacks. They know I cannot combat their insinuations, however injurious, without disclosing secrets it is of the utmost moment to conceal. But why should I expect to be free from censure, the unfailing lot of an elevated station? Merit and talents which I cannot pretend to rival have ever been subject to it. My heart tells me that it has been my unremitted aim to do the best which circumstances would permit. Yet I may have been very often mistaken in my judgment of the means, and may in many instances deserve the imputation of error."

The secret intrigues within army circles, the violent criticism of partisans in the civil service, the protest of Pennsylvanians against the cantonment of the army, the hasty appointment of a new Board of War, consisting first of Major-General Thomas Mifflin, Colonel Timothy Pickering, and Colonel Robert H. Harrison, enlarged on the 17th day of November, 1777, by the addition of Mr. Francis Dana and J. B. Smith, and again on the 27th of the same month by the further appointment of General Gates, Joseph Trumbull, and Richard Peters, Gates being chosen chairman, and, as thus constituted, evidently in sympathy with the cabal, these circumstances promptly induced a correspondence by Washington with Congress,[1] which resulted in the appointment of a committee from that body, consisting of Mr. Francis Dana, General Joseph Reed, Nathan Folsom, Charles Carroll and Gouverneur Morris, to visit the camp at Valley Forge, and who, if not in perfect accord with the condition of public affairs resulting from the campaign in Pennsylvania, were at least willing to hear an impartial statement of facts as presented by the commander-in-chief and those who surrounded him, and report to Congress such suggestions for the future conduct of the army as would insure its preservation for the winter and probable success in the proposed operations for the ensuing year, now rendered doubly promising by the friendly offices and assurances of France.

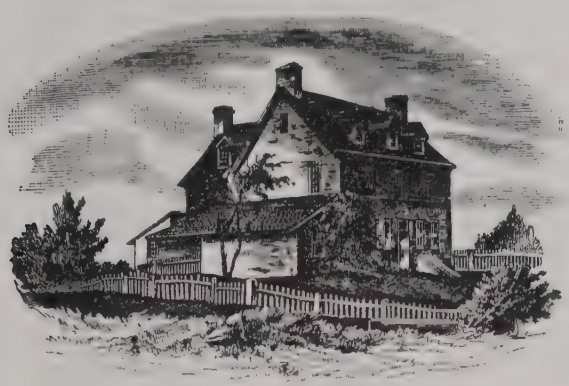
This committee remained in camp for several weeks, and finally drafted a report embodying suggestions generally accredited to the foresight, sagacity, and wisdom of Washington. Their labor was productive of the best results. They restored whatever want of confidence had been felt in the public mind, and hastened the work of preparation for the future by conceding to the commander-in-chief the exercise of those powers originally contemplated by the terms of his commission.

Major-General Nathaniel Greene, was, at the urgent request of Washington, appointed quartermaster-general of the Continental army, a position which he accepted with great reluctance, but to which office he brought a degree of energy and judgment that speedily brought order out of chaos, and substituted plenty in the place of poverty. Under his supervising care supplies were organized by contract and purchase wherever possible, and by methodical impressment when and wherever the preferable mode was impossible or impracticable.

Having the department of supplies now under the direction of an officer in accord with his plans and purposes (although he was not committed to certain details insisted upon by its chief), Washington turned his attention to filling the place left unoccupied by the apostasy of Conway as worthily as he had filled that made vacant by the resignation of Mifflin. Happily the choice of men for the position of inspector-general of the army fell upon Baron Steuben, a Prussian officer of great distinction, having served seven years in the army and on the staff of Frederick the Great. He was then in his forty-seventh year, and had adopted America for his country. He came highly recommended by Franklin, then at Paris, and many distinguished officers in the French and Prussian armies, especially as a disciplinarian. He reached Washington's headquarters on the 5th of February, 1778, and was promptly assigned to the inspector-general's department.

None but those who have attained proficiency in the science of war by academical training and long experience can fully appreciate the importance of discipline in an army, or measure the loss resulting in a hundred ways from the want of it, as seen in the

for his first wife, a daughter of Charles Mather, of Chester County. His two children by her died in infancy. In 1774 he married Hannah Harrison, daughter of a Maryland Quaker of fortune, and with her he got the estate of Harriton, in Montgomery County, a large property for a man of Thomson's simple ways. His wife was a kinswoman of John Dickinson's, and a lineal descendant of Isaac Norris and Governor



RESIDENCE OF CHAS. THOMSON.

Thomas Lloyd. The wedding had just taken place when Thomson was called to act as secretary of Congress. After he was relieved from this place he steadily declined to take any other public position, gave twelve years hard labor to the preparation of a translation of the Septuagint and Greek Testaments, and survived until August 16, 1824, his mind much decayed by age in his last quiet years.—*Scharf and Westcott's "Hist. of Phila.," vol. i.*

[1] Journal of Congress, 1778–79, vol. ix. pp. 21–29.

improvidence which it begets, the insubordination which it inspires, and the tardiness in men and officers which always endangers and often defeats the best laid plans of the commander.

Great was the astonishment of Steuben upon his arrival. Having united his destiny with the struggling patriots, viewing the field of strife through eyes accustomed to the trained and well-supplied armies of Europe, always near the person and headquarters of his sovereign, brightened by the display of royal splendor, he keenly felt the unpleasing contrast as seen at Valley Forge. "He found our cities in the possession of a powerful foe, and when he came to look for the troops to retake them, he saw only a few thousand famished, half-naked men, looking more like beggars than soldiers, cooped up in miserable log huts, dragging out a dreary winter amid snow and storm." His first tour of inspection disclosed to his practiced eye the impoverished condition of the camp, the want of discipline in officers and men, the vice of gambling, the frequency of petty theft, want of cleanliness of person, and its sure concomitant, pestilential disease,—the itch was only more common in the camp than the presence of vermin among the rank and file. So terrible was the poverty of necessary supplies, as late as January 12th,[1] that the commander-in-chief issued an order to his brigade commanders to collect tallow and ashes with which to make soft-soap for the use of the men in camp. Well might the amazed Steuben declare "that no European army could be kept together under such suffering." Nothing daunted, however, and with all the sympathies of his noble nature aroused in behalf of the American cause, he commenced as soon as the season would permit to instruct both officers and men. It was his practice to rise at three o'clock in the morning, dress his hair, smoke, take his cup of coffee, and at sunrise be in the saddle, and if the weather permitted, would have his men marching to the field for morning drill.

He organized one company, which he drilled in person to the highest point of efficiency in the use of the arms then relied upon in the infantry branch of the service, subsequently using them as a model or example by which to instruct regiments and brigades. We regret that history does not furnish us with the letter, name or some means of identifying the company thus selected, the example of which was so effectual in promoting the efficiency of their comrades. Honorable mention is frequently made of the distinguished service of Baron Steuben in this regard, and for which he was, on May 5, 1778, commissioned major-general. But, alas! for the brave men who answered his imperative roll-call upon these hills at each morning sun, who generously sunk their individuality and became automatons to exemplify the first great duty of the soldier,—*i. e.*, to obey.

[1] Brigade Order, Valley Forge, January 12, 1778. Order Book, Pennsylvania Historical Society rooms.

Truer fame was never won on tented field by more heroic men, and though they be nameless on our history's page, no greater victory emblazoned the banners of the patriot army than that which this company achieved in the discipline of themselves, and, by their example, the discipline of the army at Valley Forge. Unknown though this company be, and nameless its roll of heroes, honor and gratitude alike demand that they should share the credit bestowed upon their zealous commander by a country whose historians declare the result of this primary school of discipline was seen in the ensuing campaign at the battle of Monmouth, where "Washington rallied his men when in full retreat, and brought them into action under the very blaze of the enemy's guns. They wheeled like veteran troops in their places, and then moved steadily on the foe."

The department of the inspector-general now received the attention its vast importance deserved, and discipline, before irregular, or practiced only under particular leaders, was introduced into and imposed as a duty upon every command and in every department. All the arrangements to carry into effect the plans of the commander-in-chief were heartily seconded and perfected by this accomplished master of details, and as the legitimate sequence, the intricate machinery of the army began to move in order and in the direction of success.

With the explosion of the Conway cabal, the restoration of public confidence by the patriotic officers of the committee of Congress, the induction of Greene into the department of supplies, the assignment of Steuben to the task of organizing and disciplining the army, a burden was lifted from the shoulders of Washington, who, as he calmly surveyed the future, supported by the presence and fidelity of Knox and Stirling, of Hamilton and Pickering and Lafayette, felt that the crisis in his life and country had been reached and passed, and the midnight gloom of the Revolution was broken.

As repulse had followed repulse in rapid succession in the preceding months, at Brandywine, Paoli, and Germantown, giving rise to detraction, crimination, infidelity, divided and dissenting counsels, so now in the lengthening days and genial suns of coming spring he felt the assuring circumstance of returning confidence, found new and better men to fill the places of those who had been tried and found weak, vacillating and faithless, and, above all, and greater than all these agencies of human life, he saw in the impending providences of Almighty God, in whom he reposed an abiding trust, a hastening ally in France, the assurance of whose friendship and co-operation, in means and men, by land and sea, removed the last doubt in his mind of achieving "Independence, Liberty, and Peace." Coming and portentous events cast their long and succoring shadows before, and although no electric wire flashed the glad news of Franklin's success at the court of Louis XVI. in concluding a

"treaty of amity and commerce" on the 6th of February, 1778, and also a defensive treaty of alliance, in which the two parties mutually engaged not to lay down their arms until "the Independence of the United States should be assured by the treaties terminating the war;" yet the constancy of Lafayette, his influence with and assurances from his sovereign, made him a daily monitor at the side of the great commander, and prepared him for the reception of the official announcement, which reached Valley Forge on the 1st day of May, 1778. His official order, issued May 7th, announcing the event, and preparing his camp to celebrate the occasion, beautifully and feelingly expresses the sense of gratefulness universally felt by army and people, and, as we may believe, was inspired by the fervent prayers he uttered on bended knees in his season of joy upon the hills of Valley Forge: [1]

"It having pleased the Almighty Ruler of the universe to defend the cause of the United States, and finally raise up a powerful friend among the princes of the earth to establish our liberty and independence upon a lasting foundation, it becomes us to set apart a day for gratefully acknowledging the Divine interposition. The several brigades are to assemble for this purpose at nine o'clock to-morrow, when their chaplains will communicate the information contained in the postscript of the *Pennsylvania Gazette* of the 2d inst., and offer up a thanksgiving and deliver a discourse suitable to the event."

The day was signalized as one of national deliverance. Devotional exercises were followed by patriotic addresses, national salutes were fired, and upon a given signal the whole army joined in a grand huzza, "*Long live the King of France! Long live the friendly powers of Europe and the American States!*"

The commander-in-chief and staff were the guests of the New Jersey troops during the religious services of the day, after which the general officers of the command joined him at the Potts mansion, whereat was served in true Continental style one of those famous dinners for which Washington always manifested a fondness.

To crown the day with universal rejoicing, before the hour of dining he issued the following order, and directed its immediate execution:

"The commander-in-chief, in this season of general joy, takes occasion to proclaim pardon and release to all persons now in confinement, whether in the provost or other places. This he is induced to do that the influence of prosperity may be as extensive as possible. Even those that merit punishment rather than favor should not be excluded the benefit of an event so interesting to mankind as that which lately appeared to the officers of America. He hopes the indulgence will not be abused, but excite gratitude and produce a change of conduct, and an allowance of every practice consistent with the duty they owe their country."

With the changing season came the hopeful change in the tide of human affairs. Guided by the unfaltering wisdom of the great chieftain, who never for a moment loosed his grasp upon the helm of power committed to his command, he steadily, amidst praise and blandishment, detraction and calumny, directed the combined agencies of America and her ally around the sharp angle, the turning-point in the Revolution, and on the high road to final success. Within forty-eight hours after signing the treaties of commerce and alliance between America and France, British spies carried the portentous news to their sovereign, whose ministry at once sought, by well-marked measures of conciliation, to paralyze the inevitable result contemplated by the alliance. Three months elapsed before Washington was apprised of the proceedings; yet so certain and well founded were his anticipations of the event, so thoroughly had he prepared the public for its announcement, so closely had he discounted the probable action of the home government, that all their well-laid schemes to disconcert him and induce the acceptance of terms at variance with the declared will of the people utterly failed, leaving him master of the situation with an army fresh for the field, reorganized, equipped, drilled, and disciplined by the exertions of his splendid staff.

Active operations along the entire line, from Wilmington to Trenton, were commenced at an early period. Smallwood and Morgan and Lee were constant in their efforts on the west of the Schuylkill, and Lacy and Jameson and McLane were equally as vigilant on the east side of that river, to press back the outer line of the British and confine them to a city, the occupancy of which was now seen to be a blunder, if not the pregnant source of approaching disaster to Howe's army. Washington, feeling assured of its evacuation, prepared for the event, and on the 18th of May directed General Lafayette, with a corps of two thousand five hundred picked men to occupy Barren Hill, observe the movements of the enemy, and in the event of their retreat across New Jersey, to fall upon their left and rear, while he was to follow as rapidly as possible [2] with the main army. The

[1] The following account of Washington's prayer at Valley Forge was copied from a paper in the handwriting of Ruth Amy Potts, daughter of Isaac Potts, who died in 1811, (see Potts' Manual, by Mrs. F. P. James, member of the Pennsylvania Historical Society): "While the American army lay at Valley Forge, a good old Quaker by the name of Potts had occasion to pass through a thick wood near the headquarters. As he traversed the dark, brown forest he heard a voice, which, as he advanced, became more fervid and interesting. Approaching with slowness and circumspection, whom should he behold in a dark bower, apparently formed for the purpose, but the commander-in-chief of the United Colonies on his knees, in the act of devotion to the Ruler of the universe. At the moment when friend Potts, concealed by the trees, came up, Washington was interceding for his beloved country. With tones of gratitude that labored for adequate expression, he adored that exuberance of goodness which, from the depths of obscurity, had exalted him to the head of a great nation, and that nation fighting at fearful odds for all the world holds dear. . . .

"As soon as the General had finished his devotions and retired, friend Potts returned to his house and threw himself in a chair beside his wife. 'Heigh, Isaac,' said she, with tenderness, 'what is the matter?' 'Indeed,' quoth he, 'if I appear agitated, 'tis no more than what I am. I have seen this day what I shall never forget. Till now I have thought that a Christian and a soldier were characters incompatible, but if George Washington be not a man of God, I am mistaken; and still more shall I be disappointed if God, through him, do not perform some great thing for this country.'"

[2] Early in the month of May, 1778, intelligence reached Washington in

story of Lafayette at Barren Hill is one of the most interesting historical episodes of the Revolutionary war. The assignment of this youthful and illustrious officer by the commander-in-chief to the command of an independent expedition, composed of the flower of the army, charged with duties certain to expose

his camp that the British were making preparations to evacuate Philadelphia. In order to cover this intended movement, scouting and foraging parties were almost daily scouring the country between the Delaware and the Schuylkill, as far west as the Skippack and Towamencin Creeks, and on the 7th of May they sent an expedition up the Delaware River to destroy all the local shipping between Philadelphia and Trenton. Between forty and fifty vessels were burned, a considerable quantity of army stores were destroyed, and many inhabitants were killed or wounded. To prevent these incursions, and at the same time to cut off all possible communication between the country and the enemy, to obtain positive information concerning the movements of the enemy, and to be ready to follow up Howe's retreat with the utmost promptness and force, Washington detached Lafayette with the force before mentioned to take position at Barren Hill. He crossed the Schuylkill River at Matson's Ford (Conshohocken) about noon on the 18th of May, and proceeded to the Ridge Road, thence to Barren Hill, and went into position about a fourth of a mile west of the church. The position was naturally a strong one, but at the same time a critical one, owing to the concentration of prominent roads at that point, and its proximity to the main body of the enemy. His position was remarkable for its location, and very skillfully selected. His artillery was planted so as to command the main road to Philadelphia, supported by the right wing of his forces, while the main or Ridge Road was occupied for several miles in front by Captain McLane with a squadron of cavalry, to which command was attached a body of fifty Indians, who were used as scouts through the surrounding country, then densely wooded. His left was, as he supposed, covered by a body of six hundred Pennsylvania militia, who were posted "near Whitemarsh." Whether this body of troops were detailed from those commanded by Lafayette, and by him put in position, or whether they were acting under other orders, we are left to conjecture, but from the fact that they changed their position without his orders or knowledge would seem to indicate that they were an independent body of troops, upon whose presence he was led to rely, and only when his discomfiture was almost accomplished by his cunning and vigilant enemy did he learn to his great surprise that the officer in command of these troops had retired without communicating with him, thus leaving his left flank exposed to imminent peril; this view is further corroborated by the fact, as before stated, that the officers and troops detailed were selected with great care; it is therefore improbable that militia constituted any part of it.

The Command in Great Danger.—Immediate notice of his arrival was given Sir William Howe, who the same day reconnoitered the position and at once formed his plan to surprise and cut him off. Our best historians differ in relating who forwarded the information of Lafayette's arrival at Barren Hill, as also in the matter of the officer in command at Philadelphia. Lossing says Lafayette at first quartered in the house of a Tory Quaker, who sent a messenger with the information to Sir Henry Clinton. Marshall, in his "Life of Washington," quotes from General Wilkinson's memoirs, and says that this notice was given by a person formerly a lieutenant in Proctor's artillery regiment, who, disgusted at being discarded from the American service, became a spy to Sir William Howe, and the better to fulfill his new engagements, kept up his acquaintance with his former comrades, and frequently visited the camp at Valley Forge. To avoid suspicion, which would be excited by his visiting Philadelphia, a rendezvous was established on Frankford Creek, where he met a messenger from General Howe, to whom the information was immediately given. The distinguished author says this statement is certainly correct. From the account given by Lossing we would be led to believe that Sir Henry Clinton was in command at that time. But Marshall says that this was the last enterprise attempted by Sir William Howe previous to his resignation of the command in this country.

In pursuance of the plan which Howe had formed to capture the "Stripling Frenchman," as Lafayette was called by many of the thoughtless enemy, General Grant was, on the night of the 19th, directed to move with a column of five thousand of his choicest troops and gain the rear of Lafayette's position. In this movement General Grant was accompanied by Sir William Erskine. All night this flanking column marched, hastened in their steps as they neared their objective-point without meeting so much as a picket to fire the alarm, or intimate to Lafayette their coming. The road over which these troops marched on the night in question, as indicated by history and tradition, was as follows: From Philadelphia direct to Flourtown, thence to the present village of the Broad Axe, thence to the Plymouth meeting-house, where the main body of the troops halted just about daylight the following morning. The Ridge Road was occupied by the advance guard in force, at the junction of the road leading to Matson's Ford (now Conshohocken turnpike), with pickets thrown down the Ridge Road almost to the camp of the American forces. Such was the situation on the left just about the hour the presence of the enemy became known. While this movement was in progress on the left, General Grey, with a strong detachment, estimated at fifteen hundred men, advanced up the Ridge Road and took possession of the next ford south of Matson's on the river Schuylkill, while the main body of the enemy, under the direction of General Howe, had advanced to the summit of Chestnut Hill, on what was then known as the Manataun road. The distance from the advance of General Grant's forces to Matson's Ford, the only point at which Lafayette could possibly recross in safety, was a mile, at least, nearer the former than the latter, and being uninformed of any other road by which Lafayette could reach that point of crossing than the one he occupied, he halted and went into position in the certain belief that the game was as good as bagged.

Captain McLane, a vigilant cavalry officer of great merit, who had command, as before stated, of the Indians accompanying the expedition, and whose forces were actively employed down the Ridge Road, from whence danger was most reasonably apprehended, during the night of the 19th captured a pair of prowling British grenadiers at a place then known as Three-Mile Run. From these men the captain learned of the movement made by General Grant, and also of the detachment then rapidly marching to occupy the ford below Matson's, on the right of Lafayette. Immediately conjecturing the purpose of the enemy, and being familiar with the roads and the country, he sent Captain Parr, with a portion of the command, across the country to Wanderer's Hill to check the column advancing up the Schuylkill, and still another in the direction of Chestnut Hill, while he, in person, at lightning speed, hastened to the headquarters of his commander to apprise him of the danger now evidently surrounding him. He arrived at headquarters about daylight and gave the information he had received, with his conjecture. A few moments only elapsed when the firing of Parr on the Ridge Road could be distinctly heard, while the simultaneous arrival of a resident of Whitemarsh, who had escaped after the passage of Grant's column, confirmed the worst apprehensions of the officers in consultation, and convinced them that they were in a manner surrounded, but with one possible road of escape, and even this could be closed by the forces of General Grant before it could be reached by them, if that general knew the importance of so doing. A singular coincidence took place during this eventful night of the 19th of May, 1778. While Howe was busy in his preparations, made upon information received from a native spy, and which promised him such fruitful results, a quiet citizen, who had been apprised of the intended movement of British troops from their encampments, and believing some important movement was intended, but not knowing exactly its character, escaped through the lines on the south side of the river, hastened to the nearest house of a known patriot, mounted his fleetest horse, and by sunset was dashing headlong up the old Gulf road in the direction of Valley Forge. He reached Washington's headquarters before daybreak on the 20th, and communicated his intelligence. The long roll was at once beat. The whole camp was called to arms; the danger to Lafayette was considered imminent. Alarm guns were fired to announce it to him, and the whole army was put in readiness to act as circumstances might require

Lossing gives a graphic description of the hour. He says the situation of Lafayette was now critical. Owing to the disobedience of orders on the part of the militia in leaving Whitemarsh, General Grant's approach was undiscovered, and the little band of Americans was nearly surrounded by a greatly superior force before they were aware of their danger. Early in the morning scarlet coats were seen through the trees in the distant forest. An officer sent by Lafayette to reconnoitre came back in haste with the information that a large British force was on the road leading from Whitemarsh to Matson's Ford, a little more than a mile from his encampment. The marquis, young as he was, at once comprehended the situation and the extent of his danger. A skillful manœuvre was instantly conceived. He changed his front without disorder, stationed a large party in the churchyard, around which was a stone wall, and drew up the remainder

him to trials and perils of the most extraordinary character, illustrates the boundless confidence reposed in him, and the manner in which he acquitted himself in disconcerting the plans laid by Howe, Clinton, Grant, and Sir William Erskine to destroy or capture him and his command marks him as an officer of quick and brilliant perceptions upon the field of battle, perfect self-control in the hour of peril, and brave to a fault.

Space will not permit us to repeat the names of the distinguished officers who served with him in the expedition, or disclose the movements by which he extricated himself from a situation made perilous by the withdrawal of the militia from Whitemarsh and a rapid night march by the enemy, but which was timely revealed by the sleepless vigilance of Colonel McLane.[1] Suffice it to say, on the morning of May 20, 1778, Washington, surrounded by a number of his field officers, witnessed the passage of Lafayette and his troops across the Schuylkill at Matson's Ford (now Conshohocken), under cover of the guns of General Poor, with a loss of only nine men, killed and captured.

Here we pause, trusting that a grateful people will ever cherish and honor the memory of the heroic men whose valor and vigilance, toil and patient suffering,

in such manner as to be protected by the stone houses and thick woods. Ascertaining that the main road to Swedes' Ford was in the possession of the enemy, he resolved to retreat to Matson's Ford, although the distance from his position was greater than from that of Grant. The only road by which he could reach this point unseen by the enemy lay along the southern slope of the hills, and concealed by woods. In order to more effectually cover this movement of wagons, artillery and troops, he threw forward small detachments through the woods, with orders to show themselves at different points in the enemy's front, as heads of columns, and thus deceive them into the belief that he was marching with considerable force to an attack. This device was successful, and while General Grant was preparing his forces to resist what he supposed to be an attack upon his flank, the main body of the force made a forced march to Matson's Ford, Brigadier-General Poor leading the advance guard and Lafayette bringing up the rear, carefully retiring all the detachments with which he had so successfully deceived those who, a few hours before, were confident of his discomfiture.

He was closely pursued to the river by the advance parties of the enemy. Personally directing the details of the retreat, he placed small parties in advantageous positions, where he could hold many times his number at bay, meantime urging his forces on to the ford, where General Poor had taken a strong position and placed his artillery so as to cover the rear guard in yielding the eastern shore to the now infuriated enemy. In the final skirmish near the river he lost nine men in killed, wounded and captured. His success in putting the river between himself and the powerful enemy, who had so promptly and adroitly laid their plans for his capture or destruction, still further increased the confidence which the commander-in-chief had reposed in him.

We have already intimated that Washington had been apprised of the movement against Lafayette at Barren Hill, in his camp at Valley Forge, and at once put his army in readiness to move at his command. It is related by John Marshall, who was at that time a lieutenant in his father's (Colonel Marshall's) regiment, and in camp at Valley Forge, that he "saw the commander-in-chief, on the morning of the 20th, a little after sunrise, accompanied by his aides and a number of his field officers, ride to the top of the hill on the summit of which the huts were constructed, and look anxiously toward the scene of action through a field-glass. He witnessed, too, the joy with which they returned after the entire detachment had crossed the Schuylkill." Mr. Marshall closes his account of Lafayette at Barren Hill in the following language: "It might be supposed that this young nobleman had not displayed the same degree of military talent in guarding against the approach of danger as in extricating himself from it. But the imputation which generally attaches to an officer who permits an enemy to pass unobserved into his rear is removed by a circumstance stated by Lafayette. The Pennsylvania militia were posted on his left flank with orders to guard the roads about Whitemarsh. Without his knowledge they changed their position, leaving that important pass open to the enemy."

[1] Extract of letters from the adjutant-general and the officer of the day to Captain McClane (sometimes spelled McLane), by the same author, John Marshall. See pages 247 and 250, "Marshall's Life of Washington," vol. i.

"CAMP VALLEY FORGE, May 21, 1778."

"DEAR CAPTAIN,—I am happy you have conducted your brave little party with so much honor to yourself. The Marquis effected, owing to your vigilance, a glorious retreat, as well as a difficult one.

(Signed) "ALEX. SCAMMEL, Adjutant-General."

"CAMP VALLEY FORGE, May 23, 1778.

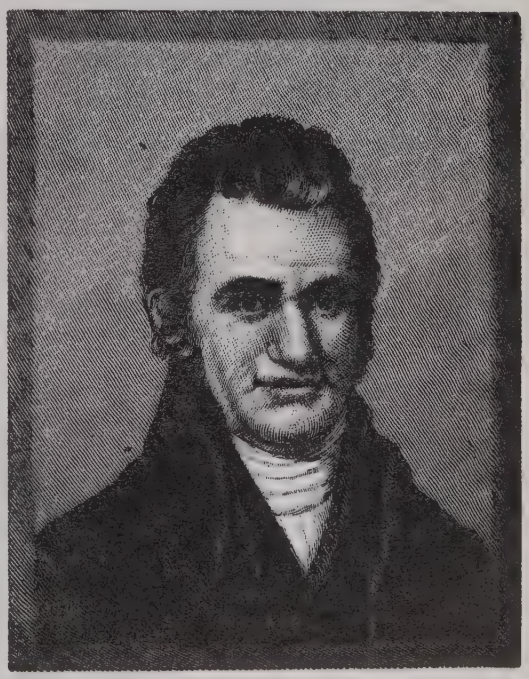
"DEAR CAPTAIN,—I am glad to hear you are still doing something to distinguish yourself in the eyes of your country. I have the pleasure to inform you that your conduct with the Marquis has been very pleasing to his Excellency and the whole army.

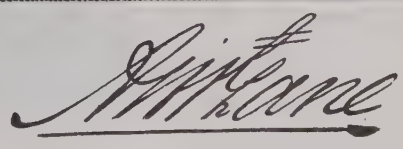
"I am your obedient servant,

"CHARLES SCOTT,

"Brigadier-General and Officer of the Day."

We believe the Captain McClane mentioned in these letters by Marshall to be the same officer designated by some writers as Colonel Allen McLane. Lossing designates him as Colonel Allan McLane in his





"Field Book," vol. i., page 105, where he relates that on the night of the Meschianza, while the enemy were enjoying the festivities of the fête, he reached the abatis in front of their works at ten o'clock, P.M., with one hundred and fifty men, in four divisions, supported by Clow's dragoons. They carried camp kettles filled with combustibles, and at a given signal they fired the whole line of abatis. The

won for themselves and their posterity Independence, Peace and the Republic.

The following order is found in the Lee papers, New York Historical Society, vol. ii. p. 406:

"HEADQUARTERS, 30th May, 1778.

"SIR,—Poor's, Varnum's and Huntingdon's brigades are to march in one Division under your command to the North River. The Quarter-master-General will give you the route, encampment and halting-places, to which you will conform as strictly as possible, to prevent interfering with other troops, and that I may know your situation every day. Leave as few sick and lame on the road as possible. Such as are absolutely in-

British beat the long roll and the assailants were attacked and pursued by the reserve picket along the whole line. The officers at the fête managed with difficulty to keep the ladies in ignorance of the cause of

MESCHIANZA TICKET.

the alarm created. McLane and men escaped without loss and returned to Valley Forge. The same author, in same vol., page 122, in his account of Lafayette at Barren Hill, speaks of the distinguished services of this officer as Captain McLane. The following incident in the life of this dashing officer appears in Sherman Day's "Historical Collections of Pennsylvania," under the head of "Montgomery County," p. 161: "Colonel Allen McLane, who died at Wilmington, Del., in 1829, at the patriarchal age of 83, was distinguished for his personal courage and for his activity as a partisan officer. He was long attached to Major Lee's famous legion of horse. While the British occupied Philadelphia, McLane was constantly patroling the upper end of Bucks and Montgomery Counties to cut off scouting-parties of the enemy and intercept their supplies of provisions. Having agreed for some purpose to rendezvous near Shoemakerstown, Colonel McLane ordered his little band of troopers to follow at some distance, and commanded two of them to precede the main body, but also to keep in his rear, and if they discovered an enemy to ride up to his side and inform him of it without speaking loud. While leisurely approaching the place of rendezvous in this order, in the early gray of the morning, the two men directly in his rear, forgetting their orders, suddenly called out, 'Colonel, the British!' faced about and putting spurs to their horses, were soon out of sight. The colonel, looking around, discovered that he was in the centre of a powerful ambuscade, into which the enemy had silently allowed him to pass without his observing them. They lined both sides of the road, and had been stationed there to pick up any straggling party of the Americans that might chance to pass. Immediately on finding that they were discovered, a file of soldiers rose from the side of the road and fired at the colonel, but without effect; and as he put spurs to his horse and mounted the roadside into the woods the other portion of the detachment fired. The colonel miraculously escaped, but a shot striking his horse upon the flank, he dashed through the woods and in a few minutes reached a parallel road upon the opposite side of the forest. Being familiar with the country, he feared to turn to the left, as that course led to the city, and he might be intercepted by another ambuscade. Turning, therefore, to the right, his frightened horse carried him swiftly beyond the reach of those who fired upon him. All at once, however, on emerging from a piece of woods, he observed several British soldiers stationed near the roadside, and directly in sight ahead, a farm-house, around which he observed a whole troop of the enemy's cavalry drawn up. He dashed by the troopers near him without being molested, they believing he was on his way to the main body to surrender. The farm-house was situated at the intersection of two roads, presenting but few avenues by which he could escape. Nothing daunted by the formidable array before him, he galloped up to the cross-roads, on reaching which he spurred his active horse, turned suddenly to the right, and was soon fairly out of reach of their pistols, though as he turned he heard them call loudly to surrender or die! A dozen were instantly in pursuit, but in a short time they all gave up the chase but two. Col. McLane's horse, scared by the first wound he had ever received, and being a blooded animal, kept ahead for several miles, while his two pursuers followed with unwavering eagerness. The pursuit at length waxed so hot that as the Colonel's horse stepped out of a small brook which crossed the road his pursuers entered it upon the opposite margin. In ascending a little hill the horses of all three were so greatly exhausted that neither could be urged faster than a walk. Occasionally as one of the troopers pursued a little faster than the other, the colonel slackened his pace, anxious to be attacked by *one* of his two pursuers; but no sooner was his willingness discovered than the other fell back to his companion. They at length approached so near that a conversation passed between them, the troopers calling out: "Surrender you d——d rebel, or we'll cut you to pieces!" Suddenly one of them rode up to the right side of the colonel, and without drawing his sabre, laid hold of the colonel's collar. The latter, to use his own words, "had pistols which he *knew he could depend upon.*' Drawing one from the holster he placed it to the heart of his antagonist, fired, and tumbled him dead to the ground. Instantly the other came up on his left, with his sabre drawn, and seized the colonel by the collar

MESCHIANZA PROCESSION.

of his coat. A fierce and deadly struggle here ensued, in the course of which Col. McLane was desperately wounded in the back of his left hand by a sabre cut from his brave antagonist, severing the veins and tendons of that member. Seizing a favorite opportunity, he drew his other pistol, and with a steadiness of purpose, which appeared even in his

capable of marching with you are to be committed to the care of proper officers, with directions to follow as fast as their condition will allow.

"Be strict in your discipline, suffer no rambling, keep men in their ranks and officers with their divisions, avoid pressing horses as much as possible, and punish severely every officer and soldier who shall presume to press without authority. Prohibit the burning of fences. In a word, you are to protect the persons and property of the inhabitants from every kind of insult and abuse.

"Begin your march at four o'clock in the morning at the latest, that it may be over before the heat of the day, and that the soldiers may have time to cook, refresh and prepare for the following day. I am, etc.,

"G°. WASHINGTON.

"P. S.—June 18. The foregoing instructions may serve you for general directions, but circumstances have varied since they were written. You are to halt on the first strong ground after passing the Delaware at Coryell's Ferry till further orders, unless you should receive authentic intelligence that the enemy have proceeded by a direct route to South Amboy or still lower. In this case you will continue your march to the North River, agreeably to former orders, and by the route already given you. If my memory does not deceive me, there is an advantageous spot of ground at the ferry, to the right of the road leading from the water.

"The Detachment under Col. Jackson to move to and take possession of Philadelphia, and prevent plundering and abuse of persons. Van Scoick's Regiment to replace the Eighth Pennsylvania Regiment in the Pennsylvania Brigade. The Second State Regiment of Virginia to replace the Thirteenth Regiment in Scott's Brigade, Park of Artillery to the several divisions equally, and march with them,

"The First and Second Divisions to move the morning after intelligence is received of the enemy's evacuation of the city.

"The Third and Fourth Divisions, the morning after [illegible], and the Fifth Division the morning succeeding; every day's march to be given at four o'clock A.M., at furthest.

"G°. WASHINGTON.

"The disposition for the Baggage of the Army to be as follows: The Commander-in-chief's Baggage is to march in the front of the column of wagons. The Adjutant-General's, Paymaster-General's, Engineers', Muster Master, Auditor of Accounts, the Baggage of the Marquis de Lafayette and De Kalbe's Division, the Baggage of Lord Stirling's Division, and then the Wagons of the Quarter-master-General's department, Flying Hospital, and lastly the Commissary and Forage-Master-General's Wagons. The whole Baggage to fall in rear of the Column of Troops.

"There will be a party of Artificers to go in front and rear of whole to mend Bridges and repair the broken carriages, which will take their orders from Qa.-M. Gen'l.

"G°. WASHINGTON.

"Order of March and route of the Army from Camp Valley Forge to Newburg on the North River, opposite Fishkill:

Poor, Varnum, Huntingdon,	1st, Lee. Coryell's.
1st Penna., 2d ditto, Late Conway's	2d, Mifflin. Sherard.
Woodford, Scott, No. Carolina,	3d, Marquis. Coryell's.
Glover, Patterson, Learned,	4th, De Kalb. Easton.
Weedon, Muhlenberg, 1st Maryland, 2d Maryland,	5th, Sterling. Coryell's.

"NOTE.—The Light Horse is to march in front and upon the right flank in the day, and encamp in the rear of the troops at night.

"The new guards will form the advance guard of the army, and the old guards the rear guard. Each regiment will send out a flank guard on the right flank in the proportion of a sergeant and twelve men to every 200 men."

REVOLUTIONARY REMINISCENCES.

State of Affairs in 1777.—Preston Westcott, in his "History of Philadelphia," says,—

"The Association system, after the experience of its effects from the beginning of the war, was admitted to be too uncertain to be depended upon in case of emergency. The conduct of the Philadelphia Associators at Amboy in the preceding summer was not near as bad as that of some of the companies from the county after the battle of Princeton, some of whom deserted in full bodies, leaving only their officers, and in one case spoken of by General Putnam, 'only a lieutenant and a lame man.' The time had now come for the establishment of a regular and permanent militia, and to that task the Assembly addressed itself. A militia bill was prepared and passed. It provided that the city and county of Philadelphia and the various counties throughout the State should be divided into districts, each of which was to have within it not less than six hundred and eighty men fit for militia duty. Over these divisions were placed lieutenants from each city and county, and sub-lieutenants for each district. Each district was sub-divided into eight parts or companies, and each district was to elect its own lieutenant-colonel, major, captains and other officers. The lieutenants and sub-lieutenants took lists of all the inhabitants of their districts, collected the fines and superintended generally the execution of the details of the law.

"The companies were divided by lots into classes, and provision made for calling out the classes as they were wanted. Persons enrolled who refused to parade when ordered were to be fined 7*s*. 6*d*. per day; officers absent, 10*s*. per day; non-commissioned officers and privates 5*s*. per day. On field days, officers not attending were to be fined £5, and non-commissioned officers and privates 15*s*.

Companies were to be exercised upon two days in April, three days in May, two days in August, two days in September and one day in October, of each year. Battalions were to parade once in May and once in October. In cases of loss of limb by militiamen in service the State undertook to pay half the monthly pay to the sufferers.

"According to the provisions of the Act Philadelphia County was divided into seven battalion districts.

"The officers for the county were William Coates, lieutenant; Jacob Engle, Samuel Dewees, George Smith, Archibald Thomson and William Antis, sub-lieutenants.

"First Battalion for the townships of Upper Salford, Lower Salford, Towamensing, Hatfield, Perkiomen and Skippack.—Daniel Heister, Jr., colonel; Jacob Reid, lieutenant-colonel; and Jacob Markley, major.

"Second Battalion, Germantown, Roxborough, Springfield and Bristol.—John Moore, colonel; Aaron Levering, lieutenant-colonel; and George Miller, major.

"Third Battalion, Cheltenham, Abington, lower division of the manor of Moreland, Lower Dublin, Byberry and Oxford.—Benjamin McVeagh, colonel; David Schneider, lieutenant-colonel; and John Holmes, major.

"Fourth Battalion, upper division of Moreland, Upper Gwynedd and Montgomery.—William Dean, colonel; Robert Loller, lieutenant-colonel, and George Right, major.

"Fifth Battalion, Whitemarsh, Plymouth, Whitpain, Norriton, Worcester and New Providence (now Upper and Lower Providence).—Robert Curry, colonel; Archibald Thomson, lieutenant-colonel; and John Edwards, major.

"Sixth Battalion, Limerick, Douglas, Marlboro, New Hanover, Upper Hanover and Frederick.—Frederick Antis, colonel; Frederick Weis, lieutenant-colonel, and Jacob Bush, major.

"Seventh Battalion, Upper Merion, Lower Merion, Blockley and Kingsessing.—Jonathan Paschal, colonel; Isaac Warner, lieutenant-colonel; and Matthew Jones, major."

On the 21st of September, 1782, the General Assembly passed an act authorizing the assessors to estimate the damages sustained by the inhabitants during the time that the British were in possession. This appraisement was afterwards made and filed in the office of the county commissioners and the Supreme Executive Council.

recital of the incident, placed it directly between the eyes of his foe, pulled the trigger and scattered his brains on every side of the road. Fearing that others were in pursuit, he abandoned his horse in the highway, and apprehensive from his extreme weakness that he might die from loss of blood, he crawled into an adjacent mill-pond, entirely naked, and at length succeeded in stopping the profuse flow of blood occasioned by his wound. We have seen," says Day, "a painting of this desperate encounter, very accurately representing the contest. It used to be common in our auction-rooms, but of late years it has become scarce."

Townships and Assessors.	Amount. £.	s.	d.
Cheltenham, Peter Rush	210	1	6
Gwynedd, Stephen Bluem	120	0	0
Hatfield, George Sheive	71	12	6
Lower Merion, Hugh Jones	3413	11	0
Moreland, Robert Whitten	2119	13	2
Norriton, Jacob Auld	7076	10	6
Plymouth, Zebulon Potts	1172	12	8
Providence, Benjamin Dismant	679	5	9
Springfield, Baltzer Hydrick	1165	19	9
Upper Merion, John Johnson	1525	9	6
Upper Dublin, John Mann	343	10	0
Worcester, Peter Wentz	125	0	0
Whitemarsh, William Johnson	668	1	6
Whitpain, Daniel Yost	610	0	6

There were no returns received from the townships of Abington, Douglas, Frederick, Franconia, Horsham, Lower Salford, Limerick, Montgomery, Marlboro, New Hanover, Skippack, Towamensing, Upper Salford or Upper Hanover.

Much damage that was done was never made a subject of claim. The whole amount of the assessment for Philadelphia City was £187,280, 5*s*. The amount for the county £19,300, 8s. 10d.

CHAPTER XV.

THE WAR OF 1812 AND THE MEXICAN WAR.

THIRTY years after the colonies had achieved their independence and twenty-three years after the constitutional Union was established Congress declared war against Great Britain.[1] The population, as shown by the census of 1810, was 7,239,881, and at the date of the declaration of war the number of inhabitants of the United States was estimated to be 8,000,000. The event occurred in the third year of the first administration of James Madison, and was supported by the Democratic party as an administration measure, and resisted with great unanimity by the Federalists. The bill was supported by seventy-nine members in the House of Representatives; forty-nine of the one hundred and twenty-eight present entered their protest against it, and the measure passed the Senate by a light majority.[2] The provocation which induced the hostile act was the conduct of England in insisting upon the right of search and impressment of naturalized American citizens into her naval service. This alleged right was exercised in the most brutal and insolent manner against the solemn protest of the government, and finally, to vindicate the rights of her citizens, the appeal to arms was made. At this period England had not conceded the right to her subjects or people to absolve their allegiance to the King by the simple forms of American naturalization, while the United States government was in honor and interest bound to protect her foreign-born citizens in the full and free exercise of their rights. At the date referred to thousands of American citizens were serving out terms of impressment in the British navy, many of them suffering imprisonment and subjected to treatment of extreme cruelty.

One among many examples will serve to show the unwarrantable conduct of the British government. In the month of June, 1807, the English man-of-war "Leopard" came in sight of the American frigate "Chesapeake" near Cape Henry. At this point the "Leopard" was joined by the British frigates the "Bellona" and "Melampus." The "Chesapeake" was hailed by Admiral Berkley, an officer sent aboard with an order of search, alleging that five deserters from the English service were aboard the American vessel. Commodore Barron refused the officer, saying that he did not know of any deserters on board, that the recruiting officers for the "Chesapeake" had been particularly instructed not to receive any deserters from His Britannic Majesty's service, and that he was directed never to permit the crew of a ship under his command to be mustered by any officers but his own. Upon receiving this answer the officer returned to the "Leopard," when a heavy fire was opened upon the "Chesapeake," to the surprise and discomfiture of Commodore Barron, who was unprepared to resist the attack. After remaining under fire for thirty minutes, having three men killed and eighteen men wounded, himself among the rest, the ship surrendered. The British officer refused to accept the surrender, but came aboard, made search, claimed four of the seamen as British subjects and deserters, conveyed them to Halifax where they were tried and one of them executed in order to establish the rightfulness of their system of impressment. Subsequently the other three were proved to be Americans who had been previously impressed and made their escape from the British service. The intelligence of this outrage upon the high seas was received by the country with profound indignation. The citizens of Montgomery County held a public meeting at the court-house, July 22d, 1807, "for the purpose of expressing their sense of the late unwarrantable and dastardly outrage committed by one of the British ships-of-war on the American frigate "Chesapeake." " General Francis Swaine, was appointed president, and Samuel Patterson, secretary. Levi Pawling, William Henderson, Israel Bringhurst, George Weaver, Mathias Holstein, John Markley, and James Winnard reported seven resolutions, wherein they state, "that the outrage committed by the British ship-of-war, "Leopard," on the American frigate "Chesapeake,"

[1] Peace was concluded November 30, 1782. War was declared by Congress June 18, 1812.

[2] The measure met with violent opposition in some localities. The editors of several newspapers in different parts of the country were very decided in their expressions of disapprobation, so much so as to provoke the violence of the war party and cause mobs and riots. The most remarkable of these mobs was at Baltimore. The rioters first tore down the printing office of the paper which had offended them. The editor and others undertook to defend themselves with arms. The military force of the city was finally called out. The conflict was severe and continued two or three nights; General Lingare was killed and several others were wounded.—*Goldsmith's "History U. S."*

and the murder of our seamen, whether it be considered as the act of the British government, or of individuals who committed it, requires rigid retribution or honorable reparation. That we will, at the hazard of our lives and properties, support the proclamation of the President of the United States, and any other measures that may be adopted by the constituted authorities to obtain redress from the British Government, for the reparation of our national honor and insulted sovereignty. At this crisis, it is the duty of every citizen, who is not conscientiously scrupulous against bearing arms, to arm in defense of his injured country, and to prepare for the event of a war." Public meetings were called in all the principal cities of the Union, party feelings were forgotten for the time, and all united in resolutions supporting the government in measures deemed necessary to redress the wrong. The President issued a proclamation forbidding British ships-of-war the ports and harbors of the United States, and instructed the American minister at the court of St. James to demand satisfaction for the insult. He also summoned Congress to meet and take the subject into consideration.

The act of the British naval officer was promptly disavowed by the English government, but they still persisted in their right of search, nor did they offer adequate reparation for the injury and indignity suffered. The exasperated feelings of national hostility became deep-seated; foreign complications arising out of contentions between France and England still further embarrassed American shipping interests. Napoleon, by his Berlin Decree of 1806, had forbidden the introduction of any English merchandise to the continent of Europe, even in neutral vessels that should touch at an English port. Great Britain retaliated by prohibiting the trade from port to port of neutrals belonging to the enemy, and, declaring the whole coast of Europe in a state of blockade, rendering the vessels of all neutrals passing to European ports liable to capture. Upon learning of this measure, Napoleon issued his famous Milan Decree, confiscating not only the vessels that should touch at a British port, but such as should submit to be searched by the English. These measures were very injurious to American shipping interests, and induced the American Congress, in December, 1807, to pass an Embargo Act, prohibiting American vessels to leave their ports. This was admittedly a preparatory step in the direction of war with England, and a cautionary measure to call home all trading vessels and seamen in order to put the country in the best possible condition for the struggle that all sagacious minds saw to be near at hand. In March, 1809, the Embargo Act was repealed, and an act prohibiting all commercial intercourse with both England and France was passed.

The non-intercourse act expired by its own limitation in 1810. In anticipation of this event, the administration invoked France and England to remove their restrictive measures from American shipping. Napoleon promptly responded through his minister directing a suspension of his decrees so far as they affected American interests. Encouraged by this success, efforts were made to induce England to follow the example of France. The British diplomats of the period sought delay in skillfully devised dilatory proceedings, questioning the formality of the seemingly friendly act of France. Mr. Pinckney, the American envoy in London, grew weary and impatient at "the shuffling behavior of the British government," and demanded his audience of leave. Continuous breaches of national amity on the high seas by British naval officers, commented on by a free press, and made the subject of debate in and out of Congress, kept the public mind inflamed and strengthened the President and his Cabinet in their preparatory efforts for actual hostility. On the 20th of May, 1812, the "Hornet" arrived from London, conveying the intelligence that England refused to repeal or suspend her restrictions upon American shipping interests, and further insisting upon her right of search and impressment. This information brought public affairs to a crisis, and in the following June the President transmitted to Congress a special message, disclosing to the nation the unwarranted attitude of England, the necessity of protecting the rights of naturalized citizens, enumerating the grievances suffered, and submitting the question "whether they should be longer endured or immediate resource had to the ultimate resort of injured nations, a declaration of war." Congress deliberated on the measure with closed doors, and on the 18th of June passed an act declaring war against Great Britain.

The lapse of time and the remarkable events that have intervened, including the war with Mexico and the great Rebellion, have in some measure obscured the importance attached to the war of 1812 and the principles settled by it. But it is certain that the national administration was warmly sustained by the people of Pennsylvania, and there is an honorable sense of pride associated with the memory of the men who served the nation in the struggle, as well as the public men who were in official position at that time.[1]

[1] *War of* 1812–14, *General Orders*.—"The President of the United States having, in conformity to an act of Congress, required a draft of fourteen thousand men as the quota of Pennsylvania towards the detachment of one hundred thousand militia, the Governor is desirous with promptitude to perform all the duties which the Constitution and laws, principle and patriotism assign him. He feels his high responsibility. He knows the ardent, heart-warm zeal of the Pennsylvania militia, and his sensibilities are alive to the honor of his country. The Revolution of America, that great and mighty struggle, which issued in giving to the United States that place among the powers of the earth to which the laws of nature and of nature's God entitled them, had scarcely been consummated when the King over whom we had been triumphant began an invasion of our rights and property which has almost uninterruptedly been continued and yearly aggravated in kind and in degree. Remonstrance has followed remonstrance, but they 'have been only answered by repeated injury' and new outrage. Their promises, their written engagements, their plighted faith have all been wantonly violated.

The nation took a new growth in the emergency. The army which, until the year 1808, numbered but three thousand troops, was increased to six thousand. In January, 1812, Congress further increased the regular army to thirty-five thousand men. This force was organized in twenty-five regiments of infantry, three regiments of artillery, two regiments of dragoons, two regiments of light artillery, two regiments of rifles and one of engineers. In addition to this, the President was authorized to accept the services of volunteers, who were to be armed and equipped by the United States, and further authority was given the executive to call upon the Governors of the several States for detachments of militia, the whole force at any one time not to exceed one hundred thousand men. Similar provision was made for the increase of the navy. This branch of the public service at that date consisted of ten frigates, ten sloops and smaller vessels and a number of small gunboats used in the defense of coast and harbors. The commerce and extensive New England fisheries employed a large number of vessels and seafaring men, all which were recalled by the government or driven from the ocean by England's cruisers, most of which were quickly converted into war-vessels, this being practicable when wooden vessels only were known to naval architecture.

The subsequent achievements of this arm of the service have gone into national history as among the most brilliant exploits known in civilized warfare. Thirty years of peace, chiefly devoted to the development of agriculture and manufacture, had left the country without military officers of experience and distinction. The organization of the land forces was experimental, and, as results proved, extremely unfortunate in the early campaigns of the war. A general plan of operations was decided upon, aggressive in its character. It was believed that England's fear

---

These wrongs have been so long endured that our motives have been mistaken, and our national character misrepresented. Our forbearance has been called cowardice; our love of peace a slavish fear to encounter the dangers of war. We know that these representations have no foundation in truth; but it is time that our enemies, that our friends, that the world should know we are not degenerated sons of gallant sires.

"For nearly thirty years we have been at peace with all the nations of the earth. The gales of prosperity and the full tide of happiness have borne us along, while the storm of war has been desolating the greater part of the civilized world, and inundated it with the bitter waters of affliction. All the means which wisdom and patriotism could devise have been in vain resorted to in the hope of peace. The cup of patience, of humiliation and long suffering, has been filled to overflowing, and the indignant arm of an injured people must be raised to dash it to the earth, and grasp the avenging sword. In the cultivation of the earth, and in manufacturing and transporting its products, the people of the United States have been honestly, usefully and harmlessly employed, and for many years have we been feeding the nation whose navy 'has plundered our seas, ravaged our coast, and destroyed the lives of our people;' our ability and disposition to serve them has whetted their commercial jealousy and monopolizing animosity. It is our property that has been plundered; it is our rights that have been invaded; it is the persons of our friends, relatives, and countrymen that have been 'taken captive on the high seas,' and constrained 'to bear arms against their country, to become the executioners of their friends and brethren, or fall themselves by their hands.' It is our flag that has been bathed in our waters, made red with the blood of our fellow-citizens. Every gale from the ocean wafts to our ears the sighs, the groans of our impressed seamen, demanding retribution. It is our homes and firesides that have been invaded by the 'merciless Indian savages,' who have been instigated to pollute our sacred soil with hostile feet, and tomahawk our citizens reposing in peace in the bosom of our country. The seeds of discord have been sown amongst our people by an accredited spy of the British government, at a time, too, when the relations of peace and amity were subsisting between our own and that government, founded on reiterated assurances from them of national esteem and friendship. If ever a nation had justifiable cause of war, that nation is the United States.

"If ever people had motives to fight, we are that people. Our Government, the watchful guardians of our welfare, have sounded the alarm; they have called upon us to gird on our swords, and to be ready to go forth and meet our enemies. Let us hasten to obey the Government of our choice, and rally around the constituted authorities of the Union. Let an honorable zeal glow in our bosoms as we eagerly press forward to render our services. It would give the Governor inexpressible satisfaction if Pennsylvania would volunteer her quota. May each State animate the others, and every citizen act as if the public weal, the national honor and independence rested on his single arm. The example of the heroes and statesmen of our Revolution, and the rich inheritance their courage and wisdom achieved, cannot fail to urge all who love their country to flock around her standard. Upborne by the right hand of freemen, planted in the sacred soil their valor won and consecrated by a righteous cause, this nation may well go forth 'with a firm reliance on the protection of a Divine Providence,'" and a conscious belief that the arm of the Lord of Hosts, the strength of the mighty one of Israel, will be on our side. The last appeal being now made by an injured and indignant nation, it remains for the militia and the volunteers of Pennsylvania, by a prompt co-operation with her sister States, to render efficient the measures which are or may hereafter be adopted by the United States Government. The adjutant-general is charged with the necessary organization of the quota of the State conformably to the following plan:

"1st. There shall forthwith be drafted, in the manner prescribed by law, fourteen thousand militia officers and privates, to be formed into two divisions, four brigades, and twenty-two regiments. The offer of service to the Governor of any flank company or companies attached to any regiment, of a number equal to the number of militia required to be drafted from such regiment, may be accepted in substitution of such draft from the regiment.

"The corps of artillery, cavalry, riflemen and infantry shall be in the following general proportions, as nearly as practicable: artillery, 700; cavalry, 700; riflemen, 1400; infantry, 11,200.

"2d. The whole quota required shall be apportioned among the several divisions of the State, agreeably to a detail to be furnished by the adjutant-general. The quotas of the several divisions of the State shall be formed into two divisions for the present service. The quotas of the first, second, third, fourth, fifth, sixth and seventh divisions of the State shall form the first division for service, under the command of Major-General Isaac Worrell, with a brigadier-general from the first division and a brigadier-general from the third division of the State.

"The quotas of the eighth, ninth, tenth, eleventh, twelfth, thirteenth, fourteenth, fifteenth and sixteenth divisions of the State shall form the second division for service, under the command of Major-General Adamson Tannehill, with a brigadier-general from the second division and a brigadier-general from the fourth division of the State.

"3d. The men shall be mustered and inspected as soon as the drafts are made, and without delay returns shall be made to the adjutant-general, who shall thereupon transmit copies to the Secretary of War.

"When the organization of the detachment shall be effected, then the respective corps will be exercised under the officers set over them,—drafted militia, by their proper officers; volunteers as prescribed by law. The corps, either of drafted militia or volunteers, will not remain embodied, nor be considered as in actual service, until by subsequent orders they are directed to take the field.

"JOHN B. GIBSON,
"*Aids-de-Camp.*
"Harrisburg, May 12, 1812."

Pennsylvania Archives, vol. ii.

of Napoleon's hostile designs in Europe would detain her regular troops, and with three thousand miles of ocean between the two countries, the American troops could successfully invade Canada and capture the province before an army could be organized or transferred there for its protection. General William Hull, then Governor of Michigan Territory and in command of an army of two thousand troops, was intrusted with the initial movement. He failed, and was relieved from his command and gravely censured by the government. Gens. Harrison, Van Rensselear and Smyth subsequently were charged with the execution of the general plan, all being under the direction of Major-General Dearborn. The year 1812 closed without victory or advantage to the American forces. On the ocean, Captain Hull, commanding the "Constitution," forty-four guns, attacked a British frigate, thirty-eight guns, August 19th, and in thirty minutes rendered the latter vessel a complete wreck. Captain Jones, of the "Wasp," eighteen guns, captured the British sloop "Frolic," twenty-two guns; Captain Decatur, with the frigate "United States," encountered the British frigate "Macedonia," and, after a severe engagement, brought the captured prize to New York. In addition to these thrilling adventures, a number of American privateers were constantly cruising, and by the last of December had captured over five hundred English merchant vessels. Interest in public affairs for the year was further intensified by a Presidential canvas and the rëelection of James Madison.

Congress convened in November. The President's message stated with frankness the defeats experienced on the Canadian frontier, condemned the employment of the Indians by the British, complained of the conduct of Massachusetts and Connecticut in withholding their quota of militia and cited with pride and satisfaction the signal victories of the navy. He also suggested the more efficient organization of the army, with increase of numbers and pay. His recommendations were promptly granted, and twenty additional regiments of regular infantry were organized. The field of actual hostilities embraced a wide range of territory. The Indian tribes of the North and West, with the Creeks and Seminoles of the South, were incited to hostilities, and necessarily employed a large number of troops, while the Atlantic coast from Maine to South Carolina was in danger from the powerful navy of the enemy. It was these exposed points on the coast or situations on navigable rivers that invited attack, and for the defense of which the government relied upon the militia of the several States.

The campaigns of 1813, or the second year of the war, were in some measure a repetition of the first. The policy of invading Canada was still pursued, Montreal being the objective point. General Dearborn, ably supported by General Pike, led several expeditions over the border, but all without definite results. General Harrison conducted operations on the western frontier with great ability, recapturing all that was lost by the unfortunate campaign of General Hull the preceding year.[1] General Andrew Jackson conducted a vigorous campaign against the Creeks and Seminoles in Georgia. The naval officers were successful on lake[2] and ocean, and but for the destructive incursions, at many points on the Atlantic coast, by the blockading squadrons of the enemy's navy the country escaped the blight and scourge inevitably associated with marching armies, cantonments and great battle-fields. The presence of large blockading fleets, the exposed situation of our principal seaport cities, the threatened attacks upon the capital of the nation and the untrained troops or militia relied upon for coast or defensive service were at all times sources of apprehension, largely shared by the people of the most populous States.

The year 1814 witnessed the downfall of Napoleon, and left Great Britain in peace with all nations except the United States, and to this country she transported her veteran troops in the hope of terminating a war upon terms of her own dictation. The political party in power still received the approbation of the country, and maintained its supporting majority in Congress, while the Federalists were active in the employment

---

[1] Some conception of the dangers apprehended by the people in the northwestern part of our own State, resulting from the defeat of General Hull, will be manifest from the petition addressed to Governor Snyder, dated September, 1812.

"*His Excellency the Governor of the State of Pennsylvania*: Your petitioners, inhabitants of the county of Tioga and its vicinity, viewing with anxious solicitude the alarming situation in which the sound of war has placed them, beg leave to suggest to your Excellency the propriety of taking some effective measures to guard against and repel the inroads and depredations of our common enemy on the unprotected inhabitants of the counties of Tioga, Potter and McKean. We have no longer any confidence in such a part of our red brethren as have lately left their homes to join our enemy (as we suppose), and fear many acts of cruelty and barbarity may be perpetrated by those above described and others who may lead them on. The country west of this to Lake Erie is thinly inhabited, which will be favorable to any desperate fellows to hold intercourse with those among us, and execute their black designs and escape with impunity. We therefore pray your Excellency to take our unprotected situation into consideration, and cause such a part of the militia as have lately been drafted from Colonel Satterlee's and Colonel Kilburn's regiments to be stationed in the most convenient situation in Potter or McKean for the protection of our defenseless frontiers. We hope your Excellency will not consider us as presuming or officious by renewing our solicitations that our destitute situation may be immediately taken into consideration, and we, your petitioners, in duty bound, will ever pray.

"Signed by Major Benjamin Berkley and forty-nine privates of the militia of the counties named."

[2] "To Colonel Rees Hill:

"*Sir:* By a resolution of the Legislature, the Governor is directed to present to each of those citizens of Pennsylvania who volunteered on board the American squadron on Lake Erie, at the time the British fleet were captured, a silver medal, with such emblematical devices as he may think proper. In order to comply with the resolution it is necessary he should be furnished with the names of those volunteers. I have, therefore, to request that you will take the earliest opportunity of forwarding a correct list of their names. If you are not in possession of their names, you will please to apply to Capt. Perry, or to some other person who may be in possession of the proper information competent to certify their names, and transmit with all convenient dispatch such information.

"Very respectfully, Sir,

"Your obedient servant,

"N. B. Boileau."

of all honorable measures looking to peace and the amicable adjustment of existing disagreements. Commissioners of peace were at all times ready to meet those of England, but in the mean time measures for the more vigorous prosecution of hostilities on land and sea were inaugurated in Congress and executed by the administration. It was this last year of the struggle that most keenly affected the people and drew most directly upon them for the supplies of men and means, as the seaport towns were now in imminent danger, and men for their defense must come from the militia of the States whose cities were in danger.

Early in the spring of 1814 the four great commercial cities, New York, Philadelphia, Boston and Baltimore, displayed great activity in extending and strengthening their fortifications, and the militia of the several States were mustered in large bodies and ordered to camp for defensive duty.[1] On the 10th of August a British fleet of sixty vessels, commanded by Admiral Cochrane, with a land force of six thousand troops of all arms, under command of General Ross, was discovered in Chesapeake Bay, and moving

[1] Twenty-odd years of national government had inspired a just pride of country, and all men upheld the cause in public assemblies as they understood it; but in society the old sympathies for France and England reappeared on each side. Unfortunately for the Federalists, while they were wholly right in many of their criticisms on the manner in which the war came about, they put themselves in the wrong as to its main feature. We can now see that in their just wrath against Napoleon they would have let the nation remain in a position of perpetual childhood and subordination before England. No doubt there were various points at issue in the impending contest, but the most important one, and the only one that remained in dispute all through the war, was that of the right of search and impressment, the English claiming the right to visit American vessels and impress into the naval service any sailors who appeared to be English. The one great object of the war of 1812 was to get rid of this insolent and degrading practice. It must be understood that this was not a question of reclaiming deserters from the British navy, for the seamen in question had very rarely belonged to it. There existed in England at that time an outrage on civilization, now abandoned, called impressment, by which any sailor and many who were not sailors, could be seized and compelled to serve in the navy. The horrors of the "press-gang," as exhibited in the seaside towns of England, have formed the theme of many novels. It was bad enough at home, but when applied on board the vessels of a nation with which England was at peace, it became one of those outrages which only proceed from the strong to the weak, and are never reciprocated. Lord Collingwood said well, in one of his letters, that England would not submit to such an aggression for an hour. Merely to yield to visitation for such a purpose was a confession of national weakness; but the actual case was far worse than this. Owing to the similarity of language, it was always difficult to distinguish between English and American seamen, and the temptation was irresistible to the visiting officer, anxious for the enlargement of his own crew, to give England the benefit of the doubt. The result was that an English lieutenant, or even midshipman, once on board an American ship, was, in the words of the English writer Cobbett, "at once accuser, witness, judge and captor," and we have also Cobbett's statement of the consequences. "Great numbers of Americans have been impressed," he adds, "and are now in the navy . . . That many of these men have died on board our ships, that many have been worn out in the service, there is no doubt. Some obtain their release through the application of the American consul, and of these the sufferings have been in many instances very great. There have been instances where men have thus got free after having been flogged through the fleet for desertion."

Between 1797 and 1801 more than two thousand applications for impressed seamen were made through the American minister, and of these only one-twentieth were proved to be English subjects, though nearly one-half were retained for further proof. When the "Hornet" captured the British sloop "Peacock," the victors found on board three American seamen who had been forced, by holding pistols at their heads, to fight against their own countrymen. Four American seamen on the British ship "Actæa" were ordered five dozen lashes, then four dozen, then two dozen, then kept in irons three months, for refusing to obey orders under similar circumstances. There was nothing new about the grievance; it had been the subject of indignant negotiation since 1789. In 1796, Timothy Pickering, Secretary of State, a representative Federalist, had denounced the practice of search and impressment as the sacrifice of the rights of an independent nation, and lamented "the long and fruitless attempts" to correct it. In 1806 the merchants of Boston had called upon the general government to "assert our rights and support the dignity of the United States;" and the merchants of Salem had offered "to pledge their lives and properties" in support of necessary measures of redemption. Yet it shows the height of party feeling that when, in 1812, Mr. Madison's government finally went to war for these very rights, the measure met with the bitterest opposition from the whole Federalist party and from the commercial States generally. A good type of the Federalist opposition on this particular point is to be found in the pamphlets of John Lowell.

John Lowell was the son of the eminent Massachusetts judge of that name; he was a well-educated lawyer, who was president of the Massachusetts Agricultural Society, and wrote under the name of "A New England Farmer." In spite of the protests offered half a dozen years before by his own neighbors, he declared the whole outcry against the impressment to be a device against Mr. Madison's party. The nation, he said, was "totally opposed to a war for the purpose of protecting British seamen against their own sovereign." The whole matter at issue, he declared, was "the protection of renegadoes and deserters from the British navy." He argued unflinchingly for the English right of search, called it a "consecrated" right, maintained that the allegiance of British subjects was perpetual, and that no residence in a foreign country could absolve them. He held that every sailor born in Great Britain, whether naturalized in America or not, should be absolutely excluded from American ships, and that until this was done the right to search American vessels and take such sailors out was the only restraint on the abuse. He was a man of great ability and public spirit, and yet he held views which now seem to have ignored all national self-respect. While such a man, with a large party behind him, took this position, it must simply be said that the American republic had not yet asserted itself to be a nation. Soon after the Revolution, when some one spoke of that contest to Franklin as the war for independence, he said, "Say rather the war of the Revolution; the war for independence is yet to be fought." The war of 1812 was just the contest he described. To this excitement directed against the war the pulpit very largely contributed, the chief lever applied by the Federalist clergy being found in the atrocities of Napoleon. "The chieftain of Europe, drunk with blood, casts a look upon us; he raises his voice, more terrible than the midnight yell of savages at the doors of our forefathers." These melodramatic words are from a sermon, once famous, delivered by Rev. Daniel Parish, of Byfield, Mass., on Fast Day, 1810. Elsewhere he says: "Would you establish those in the first offices in the land who will poison the heart of your children with infidelity, who will harness them in the team of Hollanders and Germans and Swiss and Italians to draw the triumphal car of Napoleon? Are you nursing your sons to be dragged into his armies?" The climax was reached when one pulpit orator wound up his appeal by asking his audience if they were ready to wear wooden shoes, in allusion to the *sabots* of the French peasants.

A curious aspect of all this vehemence was the firm conviction of the Federalists that they, themselves, were utterly free from all partisan feeling, and what they called the "Baleful Demon Party" existed only on the other side. For the Democrats to form Jacobin societies was an outrage; but the "Washington Benevolent Societies" of the Federalists were claimed to be utterly non-political, though they marched with banners, held quarterly meetings and were all expected to vote one way. At one of their gatherings, in 1789, there was a company of "School boy Federalists," to the number of two hundred and fifty, uniformed in blue and white, and wearing Washington's Farewell Address in red morocco around their necks. It was a sight hardly to be paralleled in the most excited election of these days; yet the Federalists stoutly maintained that there was nothing partisan about it. The other side was partisan. They admired themselves for their width of view and their freedom from prejudice, and yet they were honestly convinced that the mild and cautious Madison, who would not have declared war with England unless forced into it by others, was plotting to enslave his own nation for the benefit of France. The very names of their pamphlets show this.

towards the mouth of the Potomac River. General alarm spread through the country, and a sense of insecurity was quickly felt at the capital city of the country.

The invading army was apprised of the defenseless condition of the national capital and the character of the raw troops hastily mustered to protect it. The tempting prize was suggestive of certain victory before

---

One of John Lowell's bears on the title-page "Perpetual war the Policy of Mr. Madison. . . . The important and interesting subject of a conscript militia and an immense standing army of guards and spies under the name of a local volunteer corps." The Federalist leaders took distinctively the ground that they should refuse to obey a conscription law to raise troops for the conquest of Canada; and when that very questionable measure failed by one vote in the Senate, the nation may have escaped a serious outbreak. Had the law passed and been enforced, William Sullivan ominously declared, "No doubt the citizens would have armed and might have marched, but not, it is believed, to Canada." This was possibly overstated, but the crisis thus arising might have been a formidable matter. It might, indeed, have been far more dangerous than the Hartford Convention of 1814, which was, after all, only a peaceable meeting of some two dozen honest men, with George Cabot at their head,—men of whom very few had even a covert purpose of dissolving the Union, but who were driven to something very near desperation by the prostration of their commerce and the defenselessness of their coast. They found themselves between the terror of a conscription in New England and the outrage of an invasion of Canada. They found the President calling, in his Message of November 4, 1812, for new and mysterious enactments against "corrupt and perfidious intercourse with the enemy, not amounting to treason," and they did not feel quite sure that this might not end in the guillotine or the lamp-post. They saw what were called "the horrors of Baltimore" in a mob where the blood of Revolutionary officers had been shed in that city under pretense of suppressing a newspaper. No one could tell whither these things were tending, and they could at least protest.

The protest will always be remarkable from the skill with which it turned against Jefferson and Madison the dangerous States' rights doctrines of their own injurious Virginia and Kentucky resolutions. The Federalist and Democratic parties had completely shifted ground; and we can now see that the Hartford Convention really strengthened the traditions of the Union by showing that the implied threat of secession was a game at which two could play. It must be remembered, too, in estimating the provocation which led to this famous convention, that during all this time the commercial States were most unreasonably treated. In the opinion of Judge Story, himself a moderate Republican and a member of Congress, "New England was expected, so far as the Republicans were concerned, to do everything and to have nothing. They were to obey, but not to be trusted." Their commerce, which had furnished so largely the supplies for the nation, was viewed by a great many not merely with indifference, but with real dislike. Jefferson, whose views had more influence than those of any ten other men, still held to his narrow Virginia planter opinion that a national commerce must somehow be an evil, and it was hard for those whose commerce his embargo had ruined to be patient while he rubbed his hands and assured them that they would be much better off without any ships. When the war of 1812 was declared the merchants of Boston and Salem had—as it was estimated by Mr. Isaac P. Davis, in the "Memoirs of Mrs. Quincy"—twenty million dollars' worth of property on the sea and in British ports. The war sacrificed nearly all of it, and they were expected to be grateful. In a letter to the Legislature of New Hampshire, four years before (August, 1808), Jefferson had calmly recommended to the people of that region to retire from the seas and "to provide for themselves (ourselves) those comforts and conveniences of life for which it would be unwise ever to recur to other countries." Moreover, it was argued, the commercial States were almost exclusively the sufferers by the British intrusions upon American vessels, and if they did not think it a case for war, why should it be taken up by the States which were not hurt by it?

Again, the commercial States had yielded to the general government the right of receiving customs duties and of national defense, on the express ground of receiving protection in return. Madison had pledged himself, as he was once reminded in the once famous "Rockingham County (New Hampshire) Address," penned by young Daniel Webster, to give the nation a navy, and it had resulted in Mr. Jefferson's hundred and fifty little gun-boats and some twenty larger vessels. As for the army, it consisted at this time of about three thousand men all told. The ablest men in the President's Cabinet, Gallatin and Pickering, were originally opposed to the war. The only member of that body who had any personal knowledge of military matters was Colonel James Monroe, Secretary of State, and it was subsequently thought that he knew just enough to be in the way. Nevertheless, the war was declared June 18, 1812,—declared reluctantly, hesitatingly, but at last courageously. Five days after the declaration the British "Orders in Council," which had partly caused it, were revoked, but the war went on. In the same autumn Madison was re-elected President, receiving one hundred and twenty-eight electoral votes against eighty-nine for De Witt Clinton, Elbridge Gerry, of Massachusetts, being chosen Vice-President. A sufficient popular verdict was thus given, and the war was continued. In its early period much went wrong. British and Indians ravaged the northwestern frontier, General Hull invaded Canada in vain, and finally surrendered Detroit, August 15, 1812, in a way long considered pusillanimous, but now in some degree pardoned by public sentiment. He was condemned by court-martial, and sentenced to be shot, but was pardoned because of his Revolutionary services, and much has since been written in his vindication. To the surprise of every one, it was upon the sea, not the land, that the United States proved eminently successful, and the victory of the "Constitution" over the "Guerrière" was the first of a long line of triumphs. The number of British war vessels captured during the three years of the war was fifty-six, with eight hundred and eighty cannon; the number of American war vessels, twenty-five, with three hundred and fifty guns; and there were, besides these, thousands of merchant vessels taken on both sides by privateers. But these mere statistics tell nothing of the excitement of those picturesque victories which so long thrilled the heart of every American school-boy with the conviction that this nation was the peer of the proudest upon the seas. Yet the worst predictions of the Federalists did not exaggerate the injury done by the war to American commerce, and the highest expectations of the other party did no more than justice to the national prestige gained by the success of the American navy.

It is fairly to be remembered to the credit of the Federalists, however, that but for their urgent appeals there would have been no navy, and that it was created by setting aside all Mr. Jefferson's pet theories of sea defense. The Federalists could justly urge, also, that the merchant service was the only nursery of seamen, and that with its destruction the race of American sailors would die out,—a prediction which the present day has almost seen fulfilled. But for the time being the glory of the American navy was secure; and even the sea-fights hardly equalled the fame of Perry's victory on Lake Erie, immortalized by two phrases, Lawrence's "Don't give up the ship," which Perry bore upon his flag, and Perry's own brief dispatch, "We have met the enemy and they are ours." Side by side with this came Harrison's land victories over the Indians and English in the Northwest. Tecumseh, who held the rank of brigadier-general in the British army, had, with the aid of his brother, "the Prophet," united all the Indian tribes in a league. His power was broken by Harrison in the battle of Tippecanoe (November 7, 1811), and finally destroyed in that of the Thames, in Canada (October 5, 1813,) where Tecumseh fell. But the war from the first yielded few glories to either side by land. The Americans were still a nation of woodsmen and sharp-shooters, but they had lost the art of war, and they had against them the veterans of Wellington and men who boasted—to Mrs. Peter, of Washington—that they had not slept under a roof for seven years. Even with such men the raid on the city of Washington by General Ross was a bold thing,—to march with four thousand men sixty miles into an enemy's country, burn its capitol and retreat. Had the Americans renewed the tactics of Concord and Lexington, and fought from behind trees and under cover of brick walls, the British commander's losses might have been frightful; but to risk a pitched battle was to leave themselves helpless when defeated. The utter rout of the Americans at Bladensburg left Washington to fall like a ripe apple into the hands of General Ross. The accounts are still somewhat confused, but the British statement is that, before entering the city, General Ross sent in a flag of truce, meaning to levy a contribution, as from a conquered town, and the flag of truce being fired upon the destruction of the town followed. Washington had then less than a thousand houses. The British troops set fire to the unfinished capitol with the library of Congress, to the treasury buildings, the arsenal, and a few private dwellings. At the President's house—according to their own story, since doubted—they found dinner ready, devoured it, and then set the house on fire.

the advance of the veteran force of General Ross, and the fleet was therefore hastened up the Potomac River to within easy marching distance of Washington City, where five thousand troops were disembarked and rapidly marched to the attack. Commodore Barney was in command of the American flotilla designed for the defense of the capital, and occupied the Potomac River. This means of defense proved wholly inadequate to cope with the powerfully armed fleet of the enemy, and was timely destroyed by the officer in command, who gallantly transferred his force to land, subsequently using several of his cannon with deadly effect against the foe. On the 24th of August the force under General Ross advanced, driving the American troops before them. Between seven and eight thousand militia, under command of General Winder, were in position on the heights of Bladensburg. Commodore Barney had placed his battery on an eminence, from which he opened a deadly fire of shot and shell upon the advance of the British, confidently relying upon the support of the troops under General Winder. The untrained militia fled on both flanks before the steady march and effective volleys of General Ross' troops. The brave seamen and mariners stood by their guns until surrounded, losing heavily in killed and wounded, among the latter being the heroic Barney, who, with his men and guns, was finally compelled to surrender. Their soldierly conduct won for them the admiration of their captors; the private soldiers of the battery were treated with great consideration, and the commodore was paroled on the field of battle by General Ross as a mark of honor for his manly courage. The hasty and ill-advised retreat of General Winder's troops left the capital city an easy prey to the Britsh. The advance of the enemy reached Capitol Hill in the afternoon, and demanded a ransom for the immunity of the government buildings equal to their money value; upon this sum being paid the troops would retire, and no property should be destroyed. Compliance with this demand was impossible.

The civil authorities had hastily fled with the retreating troops, and there was no one present or available who was competent to enter into engagements satisfactory to the officer in command. The torch was applied to the costly edifices of the republic, together with the president's mansion and a considerable number of private dwellings. The navy-yard with its equipments, a large war-frigate in course of construction, and several small vessels were also destroyed. The public archives, library and all the works of art contained in the public buildings were lost in the midnight conflagration. The conduct of the American officers and troops on this occasion has always been declared discreditable, and in some measure invited the unparalleled act of vandalism of the British commander. Had the command of General Winder exhibited but a tithe of the pluck of Barney and his marines, General Ross would have met reverse at Bladensburg, as he did at a later day near Baltimore. The naval force co-operating with General Ross, under Commodore Gorden, took possession of Alexandria on the 29th, and in order to save the city from fire and indiscriminating plunder, the

---

Mr. Madison sent a messenger to his wife to bid her flee. She wrote to her sister ere going: "Our kind friend, Mr. Carroll, has come to hasten my departure, and is in a very bad humor with me because I insist on waiting till the large picture of General Washington is secured and it requires to be unscrewed from the wall." She finally secured it, and went off in her carriage with her sister, Mrs. Cutts, bearing the original parchment of the Declaration of Independence, which also owes its safety to her. The Federalist papers made plenty of fun of her retreat, and Mr. Lossing has preserved a fragment of one of their ballads, in which she says to the President, in the style of John Gilpin,—

"Sister Cutts and Cutts and I,
And Cutts's children three,
Shall in the coach, and you shall ride
On horseback after we."

But, on the whole, the lady of the Presidential "palace" carried off more laurels from Washington than most American men. The news of the burning of Washington was variously received in England. The *British Annual Register* called it a "return to the times of barbarism," and the London *Times* saw in it, on the contrary, the disappearance of the American republic, which it called by the withering name of an "association." "That ill-organized association is on the eve of dissolution, and the world is speedily to be delivered of the mischievous example of the existence of a government founded on democratic rebellion." But the burning had, on the contrary, just the opposite effect from this. After Washington had fallen Baltimore seemed an easy prey. But there was a great rising of the people; the British army was beaten off, the affair turning largely on the gallant defense of Fort McHenry by Colonel George Armistead, and General Ross was killed. It was at this time that Key's lyric, "The Star-spangled Banner," was written, the author being detained on board the British ship "Minden," during the bombardment. Before this there had been various depredations and skirmishes along the coast of Maine, and a courageous repulse of the British at Stonington, Conn. Afterward came the well-fought battle of Lundy's Lane and the closing victory of New Orleans, fought after the treaty of peace had been actually signed, and unexpectedly leaving the final laurels of the war in the hands of the Americans.

After this battle an English officer visiting the field saw within a few hundred yards "nearly a thousand bodies, all arrayed in British uniforms," and heard from the American officer in command the statement that the American loss had consisted only of eight men killed and fourteen wounded. The loss of the English was nearly twenty-one hundred in killed and wounded, including two general officers. A triumph so overwhelming restored some feeling of military self-respect, sorely needed after the disasters at Washington. "There were," says the Federalist William Sullivan, "splendid processions, bonfires and illuminations, as though the independence of the country had been a second time achieved." Such, indeed, was the feeling, and with due reason. Franklin's war for independence was at an end. The battle took place January 8, 1815, but the treaty of peace had been signed at Ghent on the day before Christmas. The terms agreed upon said not one word about the impressment of British seamen, but the question had been practically settled by the naval successes of the United States; and so great were the rejoicings on the return of peace that even this astounding omission seemed of secondary importance. The verdict of posterity upon the war of 1812 may be said to be this: that there were ample grounds for it and that it completed the work of the Revolution, and yet that it was the immediate product of a few ambitious men whose aims and principles were not really so high as were those of many who opposed the war. The outrageous impressment of American seamen touched a point of national pride, and justly; while the United States submitted to this, it certainly could not be called an independent nation, and the abuse was practically ended by the war, even though the treaty of peace was silent. On the other side the dread entertained of Napoleon by the Federalists was perfectly legitimate; and this, too, time has confirmed. But this peril was really far less pressing than the other; the United States needed more to be liberated from the domineering attitude of England than from the remoter tyranny of Napoleon, and it was therefore necessary to reckon with England first.

civil authorities induced the people to give up all supplies demanded by the invaders. A number of vessels lying at anchor at the wharves were seized and loaded with flour, tobacco, cotton, wines and sugars, of which at the time Alexandria was a grand depot, and the whole was carried down the river with the victorious squadron. The success of the invaders on the Potomac hastened further operations of the combined land and naval forces, then in undisputed occupancy of the Chesapeake Bay. The city of Baltimore was the next objective point, having a fine harbor to anchor their fleet, and a rich country west and north of it, from which supplies could be drawn in the event of a permanent occupation, contemplated during the ensuing winter.

UNIFORMED SOLDIER, 1812.

The loss of the capital had thoroughly aroused the country to a sense of danger, and in anticipation of an attack on Baltimore, every possible preparation, with the means at hand, was promptly made for its defense. What was of equal importance, the officers and troops assembled, among them some of those who were present at the assault on Washington, smarting under the severe criticism of the press, the country and indignation of the people, having resolved that there should be no "bloodless retreat" from the city of Baltimore. The American forces amounted to nearly fifteen thousand men, with a full complement of artillery. The command was given to General Smith, of Maryland.

On the 11th of September the enemy, with a squadron of fifty-six vessels and six thousand men, entered the mouth of the Patapsco River, and on the following day landed the attacking force at North Point, fourteen miles below the city. General Stricker, with three thousand five hundred militia troops, was directed to oppose their advance. This was most effectively done, and it was while General Ross was making a personal reconnoisance, rendered necessary by the stubborn resistance of the Americans, that he was shot through the breast by a rifleman. He fell into the arms of his aide-de-camp, and died in a few minutes. He was succeeded by Colonel Brook, who brought up his reserve, and in turn forced the troops of General Stricker to retire to Washington Mills, a half-mile in advance of the main army. Both armies slept on their arms, and on the 13th the advance on the city began. While engaging the American troops, the enemy waited the attack of the naval force on Fort McHenry, commanded by Major Armistead, with a garrison of one thousand men. A storming-party of twelve hundred men were landed on the night of the 13th, and led to the assault of Fort McHenry. The attack was repulsed with great loss to the enemy, and the land forces were recalled, being pressed to the cover of the fleet by the troops of General Smith.

The whole affair was admirably managed by the officers in command, and the troops, not excepting the militia, exhibited the courage and endurance of veteran soldiers. The whole fleet soon after sailed from the Chesapeake southward, and Baltimore escaped the ruin and desolation suffered by the neighboring city of Washington. The defenders of Baltimore have always been honored by their countrymen, and their memories are held in grateful remembrance to this day. The New England coast was the constant scene of depredations, being more defenseless than that of the Middle States; and, at the same time, operations could be carried on against it with facility, because of its proximity to the Canadian base of supplies. The extreme South was selected as the next point of attack, and to this point all efforts were directed. The Spanish authorities at Pensacola, who had encouraged the Indians in their hostilities since the commencement of the war, now afforded the same encouragement to the English. The ships-of-war were invited to anchor under their forts, storage was furnished for their munitions of war, and English troops encamped in and occupied their fortifications. A profitable trade was opened with New Orleans, and the people were invited by Colonel Nicholls, in a published address, to unite with the English in expelling the Americans from the South. To this new field of peril General Andrew Jackson was assigned to duty. This officer promptly concentrated all his available troops, having been duly apprised of the intended attack upon New Orleans by the British, who were largely reinforced by General Packenham, then concentrating his forces at Bermuda and Jamaica preparatory to the occupation of the mouth of the Mississippi River.

The enemy were confident in their ability to establish themselves in Louisiana. In their preparations

they provided themselves with printing-presses, and brought with them experienced merchants and traders, who were furnished with capital to establish houses for the purchase and shipment of cotton and supplies produced in the great Mississippi Valley. While this great campaign was in progress in the South, opposition to the measures of the administration were growing more intense upon the part of the leading Federists throughout the Middle and New England States. The opposition focalized in the Hartford Convention, which assembled December 15, 1814,[1] and continued in session for three weeks. Its members sat with closed doors. The administration was at all times anxious to conclude an honorable peace, and commissioners were kept in Europe duly authorized to negotiate a treaty consistent with the preservation of the rights of American citizens. The pacification of Europe, resulting from the overthrow of Napoleon in 1814, and the joy that pervaded all classes of the people, were shared by the rulers, and had a happy influence upon England in inducing that country to relinquish the right of impressment of American citizens. This point gained, the object of the war was practically accomplished, and the commissioners concluded a treaty of peace at Ghent on the 24th day of December, 1814, the same being ratified by the Prince Regent of England on December 27th. The news of this event did not reach this country until the following 11th of February (1815), the treaty being ratified on the 27th of the same month by the President and Senate. It will thus be seen that the great battle of New Orleans, that made General Jackson the hero of the war, was fought and won after the treaty of peace had been concluded with England. Truly, an Atlantic cable and telegraphic communication with the British army and navy in the Gulf at this time would have saved that nation from the humiliation of the most disastrous battle of the war, and thousands of lives would have been preserved for the better service of peace.

The population of Montgomery County at this period of the war was about thirty thousand. The constant apprehension of the enemy's attack upon Philadelphia,[2] and possible incursions into this and the adjoining counties of Delaware and Bucks, kept the people in a state of anxiety. Discussions in political and social circles upon the principles involved in the struggle were animated. Democrats warmly espoused the cause as maintained by the administation of James Madison, while the Federalists boldly criticised many of the leading measures of those in authority, and the manner of conducting the war. The Democrats evinced considerable sympathy towards Napoleon, and looked upon his operations against England at that time with favor. On the other hand, the Federalists proclaimed the French Emperor an adventurer, tyrant and a leader dangerous to all forms of government and the peace and stability of society.

The stage was the only means of public travel in those days, only two weekly papers were published in the county, mail facilities were limited, and news from the capital and the remote points of active hostilities found its way to the country post-office with its weekly newspaper once, and, in some favored localities, twice a week. Volunteer and militia troops, organized in the interior and northern counties of the State, and ordered to report at Marcus Hook, passed down our main highways to Philadelphia, followed by long trains of supplies and munitions of war. The same iron-works on the Manatawny and Schuylkill that supplied the American army during the Revolution were busily employed from 1812 to 1815 in furnishing supplies of common shot and shell, while powder mills and establishments for the manufacture and repair of small-arms were operated at many places in the county.

Some few persons are still living who were eye-witnesses to the movements of troops going to and returning from camp at Marcus Hook. The troops spoken of appear to have been militia, dressed in home-spun clothing, and officered by men who seemed to exercise but a limited control while in the line of march. The "stragglers," or that class of men who habitually "fall out by the way," are vividly recalled by an aged friend, who, then a girl twelve years old, lived near the Perkiomen bridge. She says her father, a miller, fed scores while passing, and that sick, bare-footed and weary soldiers were slowly pass-

[1] This convention was composed of members appointed by the Legislatures of Massachusetts, Connecticut, Rhode Island, New Hampshire and Vermont. Two members from New Hampshire and one from Vermont received their appointment from county conventions.

[2] "Gov. Simon Snyder to N. B. Boileau.

"General Orders.

"Harrisburg, August 27, 1814.

"To N. B. Boileau, *Aid-de-Camp:* The recent destruction of the capital of the United States, the threatened and probable conflagration of the metropolis of sister States, and the general threatening aspect of affairs warranting the opinion that an attack is meditated by the enemy on the shores of the Delaware, the Governor, to guard against surprise, and to have ready an efficient force of freemen to repel the enemy in case of such an event, orders and directs that the militia generally within the counties of Philadelphia, Bucks, Montgomery, Delaware, Chester, Lancaster, Dauphin, Lebanon, Berks, Schuylkill, Lehigh, Northampton and Pike (in addition to those drafted and designated for the service of the United States, under orders of the 22d of July who are already subject to the orders of General Bloomfield) be held in readiness to march, at a moment's warning, to such place as may be named in subsequent orders that will issue, if the exigencies of our country shall require The several Brigade Inspectors, within their respective bounds, are commanded to execute promptly this order. The Generals and other officers are urged to assist in the providing of equipments for the men. Those for whom arms cannot be found within the respective brigade bounds will, it is presumed, be furnished by the United States at the place of rendezvous. It is confidently expected that the ardor and love of country which pervade the hearts of Pennsylvanians, at the present alarming crisis, will induce many to form themselves into volunteer corps, and immediately to march for Philadelphia. It is thus a proper spirit, to resist an intolerant foe, will be evinced and many difficulties obviated. The Governor promises himself the satisfaction of meeting there an host nerved with resolution to live free or die in defense of their liberties and their country. He will act with them in any capacity for which his talents shall fit him.

"Simon Snyder,

"*Governor of the Commonwealth of Pennsylvania.*"

—*Pennsylvania Archives, vol. xii.*

ing the point for several days after the officers and main body of men had gone by.

"General Orders.

"Fourth Military District Headquarters,

"Philadelphia, September 13, 1814.

"The militia of the counties of Northampton, Pike, Lehigh, Northumberland, Union, Columbia, Luzerne, Susquehanna, Wayne, Bucks, Montgomery, Chester and Delaware who have volunteered their services, and the militia who have been drafted, detailed and organized under the requisition of the President of the United States of the 4th of July last and general orders of the Commander-in-Chief of Pennsylvania of the 22d of the same month, will march with all possible expedition to Marcus Hook, equipped completely for the field. His Excellency the Commander-in-Chief of the militia of Pennsylvania will be pleased to designate the senior officers in the respective counties, and cause their names to be returned to the Adjutant-General of this district.

"Joseph Bloomfield,

"*Brigadier-General, Commanding Fourth Military District.*

"Entered in the Adjutant-General's office.

"William Duane, *Adjutant-General.*"

General and Staff Officers Montgomery County Volunteer Companies, 1812.

Henry Scheetz, major-general, commanding Second Division Pennsylvania Militia; Isaiah Wells, brigadier-general, commanding First Brigade, Second Division Pennsylvania Militia; Christian Snyder, Brigade Inspector, First Brigade, Second Division Pennsylvania Militia; Nathaniel B. Boileau, aide-de-camp to commander-in-chief.

Muster-roll of Captain Jacob Fryer's Company of Montgomery County.

Jacob Fryer, captain; Henry Houck, first lieutenant; Jacob Yost, second lieutenant; John Smith, ensign.

Sergeants.—Jonah Markley, Jacob Bortman, Jacob Wannemaker, Jacob Fryer.

Corporals.—Peter Burger, Peter Yost, John Yost, George Houck.

Trumpeter.—Henry Yost.

Privates.

George Kulp, Samuel Detwhiler, Lewis Jones, Abraham Neas, Samuel Esterline, Anthony Bitting, George Fryer, Henry Specht, Frederick Shafer, John Sweesholtz, Abraham Zern, John Smith (tailor), William Burger, Samuel Witman, Jonas Fetser, Henry Beikel, Daniel Houck, Daniel Yost, Leonard Shuler, William Brecht, Jacob Smith, Richard Bitting, Benjamin Smith, Henry Royer, George Mowrer, Henry Seehler, Daniel Ale, Peter Horlocher, David Hart, Peter Foust, Jonas Slouneiker (on receipt roll), Frederick Fox, George Burger, Adam Zarn, Jacob Fox, Jacob Huntzberger, John Dutterer, Michael Helbert, Barny Fox, John Small, Conrad Dutterer, Peter Art, Daniel Sheifly, Jacob Weidemier, John Hoofman, Peter Trace, George Reider, Jacob Wensel, Jacob Zepp, John Gouckler, Daniel Hoff, Henry Long, John Royer.

"A true muster roll of Captain Jacob Fryer's Company of Montgomery County, October 14, 1814. "Jonah Markley,

"*Sergeant.*"

A true list of Captain Grosscup's company,[1] of the Eighteenth Section of riflemen, commanded by Colonel Thomas Humphreys:

Sergeants.—Edward Thompson, Simon Campbell, William Grosscup, Benjamin Fries.

Corporals.—Jacob Kerper, Joseph McCally, Robert Bayl, John White.

Bugler.—John Gillinger.

Privates.

George Grafly, George Kupp, Jacob Wack, John Rickler, Isaac Bilger, John Katz, Adam Mink, William Francis, George Heydrick, Joseph Wigley, Joseph Serber, John Townsmen, Thomas Shepherd, Joseph Shepherd, Anthony Shull, Henry Shermer, Peter Dager, John Yost, James H. Welch, John Weant, William Grafly, Henry Bishing, Isaac Artman, Abram Shafer, George Shafter, Jr., Elijah Gold (from October 1st), Thomas Rhodeibagh, Nathan Keyser (from October 7), John Dager, George Shafer, John Dull, Raber Van Horn, Jacob Dager, Daniel Nail, Charles Francis, John Harris, Amos Thomas, Jacob Hentz, Peter Welch, John Tarrans, Henry Hoffman discharged from camp October 26, 1814.

"I do certify, on honor, that the company commanded by Captain John Grosscup is in the service of the United States, under the command of the general commanding the Fourth military district.

"Thomas Cadwallader,

"*Brigadier-General Commanding Advance L. B.*

"Camp Dupont, November 26, 1814."

Muster-roll of Capt. Holagate's company, in the Second Regiment Pennsylvania Volunteers, infantry, in the service of the State of Pennsylvania for three months, from the 12th day of August last; attached to the First Brigade, Second Division Pennsylvania Militia, at camp, Marcus Hook, commanded by Brigadier-General Samuel Smith, November 29, 1814:

William Holdgate, captain; Levi Evans, lieutenant; John Suplee, ensign.

Sergeants.—David Wilson, Thomas Davis, Jacob Ulrich, Henry Gilinger.

Corporals.—Enos Holdgate, Andrew Louden, George Tippen, William Sloan.

Musicians.—Matthias Haus, William Miller.

Privates.

Andrew Reed, John Cain, Roberts Roberts, George Willson, William Kirk, Robert Matson, Henry Megee, Robert Elliott, Jesse Carver, William Harrison, William Thompson, Benjamin Yates, Samuel Forder, John Mealy, Benjamin Smith, Jacob Linenbough, Henry Earnest, Samuel McCool, Jacob Ramey, Benjamin Ramey, Henry Hallman, Job B. Jones, Charles Brooke, John Evans, Wickard Levering, Alexander Enoshe Benjamin Levering, Jonathan Matson, William McAnall, Jacob Peterman, Jesse Childs, Joshua McMin, William Fryer, John Carr, Peter Davis, William Davy, John Harrison, Jonathan Clemmans, Jesse Cleaver, Thomas Graham, James Whitby, Jacob Lentz, William Lewellyn, George Streper, Joseph Martin, Jonathan Engler, Jacob Shade, John Woolf John Roberts, Lloyd Barr.

"Camp Marcus Hook, November 29, 1814.

"I do hereby certify, upon honor, that the above is a just and true muster-roll of Capt. Holdgate's.

"Louis Bache,

"*Colonel Second Regiment Pennsylvania Volunteers.*"

A correct muster-roll of Captain John Hurst's company of Montgomery Rifle Greens, stationed at Camp Boileau:

John Hurst, captain; M. Zilling, first lieutenant; P. Hoover, second lieutenant; Peter Beam, ensign; Jacob Weber, quartermaster.

Sergeants.—H. R. Brown, H. Smith, William Wanner, Enos Beam.

Corporals.—Thomas Deweese, Jacob Deweese, John Spare, Jacob Homsher.

Bugler.—David Thomas.

[1] "Governor Simon Snyder to N. B. Boileau.

"General Order.

"Philadelphia, September 17, 1814.

"To N. B. Boileau, *Aid-de-Camp:* The Pennsylvania volunteers who are now assembled in and near the city of Philadelphia, in pursuance of general orders issued on the 27th of August last, will be organized into battalions and regiments, as follows, to wit: The companies of volunteer riflemen commanded by Captains Robeson, Speer, Groscup, McClean and Wigton shall form one battalion, and elect one major. The companies commanded by Captains Purdy, Horn, Denkey, Rinker and Ott shall form one battalion, and elect one major; which battalions shall form a regiment, and elect one colonel and one lieutenant-colonel. The companies of volunteer light infantry commanded by Captains Holgate, McGlathery, Swenk, Mungesser and Reehle shall form a battalion, and elect a major. The companies of volunteer light infantry commanded by Captains Wersler, Vanarsdalen, Taylor and Grosh shall form a battalion, and elect one major; which battalions shall form a regiment, and elect a colonel and lieutenant-colonel. The captains composing battalions, respectively, shall meet at the City Hospital, between the hours of eleven and one this day, and then and there elect, by ballot, a major, and the regiments of riflemen and light infantry shall, respectively, on the afternoon of this day, between the hours of two and five, meet at the same place and elect, by ballot, one colonel and one lieutenant-colonel for each regiment. The elections, respectively, shall be conducted and certified by two judges, who shall be designated to preside at the election of majors by the captains belonging to the proper battalion, and for conducting and certifying the regimental elections. The captains of each battalion shall appoint one judge for their proper regiment, who shall, for their respective battalion and regiment, as the case may be, so soon as practicable after the elections are closed, make out returns and transmit them to the Governor, that commissions may issue. Captain Holbert and Captain Creigh's companies of infantry shall, until further orders, be attached to the regiment of infantry.

"Simon Snyder,

"*Governor of the Commonwealth of Pennsylvania.*"

"PHILADELPHIA, October 1, 1814.

"*Sir:* Your letter of the twenty-sixth ult. was this day received. There are in and near this city, in the counties of Philadelphia and Chester, a considerable number of companies of cavalry, completely equipped, and extremely anxious to be called into service. They all (like your company) have orders to hold themselves in readiness to march at a moment's warning. Your patriotism is much applauded, and deservedly so; but under existing circumstances, it is still thought most advisable that you shall not march for this place before you receive special orders. Tents and other equipments for the field cannot be procured suddenly. It would give the Governor much pleasure to see your company march as infantry for the defense of this important section of the State. In that capacity you could render much more important service. Impelled, as was your company, from pure patriotism to offer their services, the Governor entertains no doubt they will be willing to render it in any way likely to prove most efficient. You will find an answer to your enquiries relative to the right of admission from one corps to another in the fifteenth section of the militia law of this Commonwealth, passed the twenty-eighth day of March, 1814.

"N. B. BOILEAU, *Secretary.*"

[This letter is supposed to have been written to the commanding officer of the First Troop of Montgomery County.]

Montgomery County Troops Serving in the Philadelphia Riots of 1844.—The following is the official roster of field, staff, line officers and enlisted men called into the service of the State from Montgomery County who served during the riots in Philadelphia, or were on their way to "headquarters," under the proclamation of the Governor of the commonwealth and commander-in-chief, in the year 1844.

The citizen soldiers of Montgomery County responded promptly to the call of the Governor when the strong arm of the commonwealth was required to repress the lawless spirit that rendered the civil authorities and the city of Philadelphia powerless in the summer of 1844. The fire and smoke of burning churches and adjoining buildings in the alarmed city could be plainly seen from the hills in our county, and many of the living still remember the sense of fear that was felt in all the towns in the Schuylkill Valley. The military moved promptly to the scene of danger, and by their presence, discipline, courage and good conduct soon restored order and confidence in the city and surrounding country. The record of their public service is a part of the history of Montgomery County.

First Troop of Montgomery County Calvary.—The precise date when this volunteer company was organized cannot now be definitely determined, as there are no books or papers now in existence (as far as the writer knows) which would fix its organization. We, therefore, have to resort to the oldest inhabitants now living to get what we can from them with regard to its early history, and from information received we conclude that it was organized shortly after the war of 1812,[1] and may have been in existence even prior to that time. There is yet living a citizen who became a member in the year 1835, whose father had been a member many years before that, so that we may safely conclude that the time before mentioned is about correct. The troop was then under

pany from Northampton County, that their several companies are to form a battalion, to be attached until further orders to the regiment commanded by Colonel Thomas Humphrey, and that this afternoon, between the hours of four and six o'clock, the officers and privates composing said battalion are to meet at the new prison, and elect one major to command the same. The commanding officers of the said companies to select two competent judges to preside at the election, and make return thereof to the governor, that a commission may issue accordingly.

"SIMON SNYDER.

"N. B. BOILEAU, *Aid-de-Camp.*"

[1] The Montgomery Troop of Light Horse, commanded by Captain James Morris, Esq., paraded in the Grand Federal Procession, Philadelphia, July 4, 1788. (Scharf and Westcott "Philadelphia History," vol. i. p. 448.) This is believed by many to be the organization subsequently known as the "First Troop of Montgomery County."—ED.

the command of Captain John Mattheys of Norriton township, who was afterwards elected to the State Senate. It was known by the name of the First Democratic Troop of Montgomery County, and numbered about one hundred members. The uniform then was as follows: Black leather cap covered with bearskin, with a buck-tail on the right side; navy blue coatee, with scarlet breast facing, three rows of round silver-plated buttons about the size of a musket ball, one row in the centre and the other two on the outer edge of the scarlet facing, which was circular in form, silver braid around the collar; navy blue pantaloons with scarlet stripe one and one-fourth inches wide down the outer seam, black cravat, long boots, silver-plated spurs, white buckskin sword-belt, which passed over the right shoulder, extending down to the left side, with silver-plated hooks by which the sword was attached, silver-plated medal in front, bearing upon its face the device of a mounted trooper, and buckskin gauntlets. The horse equipments consisted of a double bridle, with silver-plated curb and snaffle-bits, breast-strap with silver-plated breast-plate the shape of a heart; saddle, plated stirrups, blue saddle-cover, covering the saddle and extending as far back as the hips of the horse, with a stripe of red cloth one and a half inches wide around the outer edge. The cost of this uniform and horse equipments at the time the writer became a member (1841) was about one hundred dollars; the sword and pistol holsters and other accoutrements were furnished by the State.

This troop outranked all other military organizations of the county. It may be proper to state in this connection that there was another military organization, known as the Second Troop of Montgomery County, having about the same number of members, but differing from the First Troop in politics. Notwithstanding this difference, a general good feeling existed between them. They formed themselves into a battalion and each company endeavored to excel the other in drill and military deportment. After the resignation of Captain John Mattheys, Jacob Scheetz, son of General Henry Scheetz, of Whitemarsh township, was elected captain How many years he continued in command is not known. Next in command was William Z. Mattheys, son of the former Captain John Mattheys, who was a brilliant officer, and the troop was in a high state of drill while under his command, which continued until about 1839. Then Robert Pollard was elected captain, but only served one year, when Dr. John A. Martin (who had been surgeon of the troop) was elected captain; Adam Hurst, first lieutenant; Henry G. Hart, second lieutenant; David Z. Mattheys, first orderly sergeant. The troop then numbered about seventy-five members, and there was a general attendance at every meeting for drill. They had a high regard for their captain, and he in turn took pride in teaching them the tactics and discipline of a soldier. There were some changes made in the membership: old members who had served as volunteers the required time according to the militia laws of the State would retire from the service and young men would fill their places, thus keeping the company up to the standard it had held for so many years. In the month of July, 1844, a serious riot broke out in the city of Philadelphia, which was beyond the control of the police force of the city, and the mayor called upon the Governor of the State for troops to quell the riot.

The first to reach the scene was a company from Germantown, who were badly handled by the rioters on Sunday night, some being killed and many wounded. On Monday, about noon, Captain Martin received orders from the Governor to proceed with the troop to the city, and, although the members lived scattered over the middle and lower section of the county, by eight o'clock of the same evening nearly every member reported for duty (many of them, being farmers, had to leave their crops unharvested). At one o'clock the next morning they commenced their march for the city, arriving at the outskirts about daybreak. Many of the rougher classes shouted at them as they passed on to the headquarters of General Patterson, who was in command of all the military, his headquarters being in the Girard Bank, on Third Street, near Dock. The troop was ordered to quarters at Douglass' Hotel, on Sixth Street, and were ordered to report at headquarters three times each day,—at nine in the morning, two in the afternoon and seven in the evening. They stood in line in front of the bank in the scorching sun of July, with the privilege of dismounting and standing by their horses, as it was expected every hour that an attack would be made at some point by the rioters. This routine of duty continued from Tuesday until Saturday night, when it was thought there would be no further disturbance of the peace. The troop was, therefore, at five o'clock dismissed to await further orders, but was not required to report at seven, as had been the custom. Consequently the members availed themselves of the opportunity of seeing something of the city, and were scattered about at different places. But about eight o'clock an officer from headquarters rode with orders to mount immediately and report to General Patterson, as there was an attack made at the Moyamensing Prison to release some of the prisoners. The alarm spread all over the city, and there was a rally for boots and saddles and mount, and in a very short time every member was in his place ready for service. As the troop reached Third Street they found the street packed with people in front of General Patterson's headquarters and extending up and down several squares. The sentinels in front of the bank were unable to keep the crowd back, but as the column pressed on, the people gave way, and a passage was cleared in front of the bank and the crowd began to diminish.

The next order was that the First Troop, together with Captain Archambault's troop from Bucks County, should proceed to the prison to ascertain the state of affairs there. When the prison was reached, some of the officers rode forward and found that it was a false alarm. The troops returned to headquarters and reported all quiet. They were then dismissed for the night, and, as there was no further outbreak, all were discharged on the following Tuesday and returned to their homes. At the commencement of the Mexican war Captain Martin proposed to offer the services of the troop to the government, but a number of members refused to accede to the proposition. Many withdrew, and shortly after Dr. Martin resigned and went to California. Lieutenant Hurst was elected captain, but the membership declined very much and was on the eve of disbanding when Dr. Martin returned from California. There was a proposition to re-elect him, when Captain Hurst withdrew altogether from the troop, which was then reorganized by the election of Dr. J. A. Martin, captain; H. C. Hoover, first lieutenant; and Jacob Hoover, second lieutenant. The uniform was also changed to the following: Beaver cap ornamented with horsehair plume and eagle in front, buff cord and tassels; blue coat, with buff collar, cuffs and skirt facings, oval buttons (yellow); sky-blue pantaloons, with a buff stripe down the outer seam one and one-fourth inches wide, black cravat, long boots, yellow spurs and white sword-belt with plate in front. The horse equipments were similar to the former, except yellow mounting was used instead of silver-plated. Many of the old members refused to equip themselves in the new uniform, but the ranks were soon filled by new members without regard to politics, as the Second Troop had disbanded, and, according to the fourth article of the constitution adopted, any white male person of good moral character between the ages of eighteen and forty-five would be eligible to membership, but must receive the vote of two-thirds of the members present at the meeting when proposed, provided a majority of the members be present at such meeting. The members were nearly equally divided politically, and the same military deportment characterized the membership which had always heretofore made it respected wherever it paraded.

Charles Thomson Jones, of Roxborough, captain of the Roxborough troop, extended an invitation to the First Troop of Montgomery County to participate in the unveiling of the monument erected in the Leverington Cemetery in memory of Virginia soldiers of the Revolutionary war who were surprised and bayoneted while asleep by a squad of British soldiers sent by a Tory. The troop accepted the invitation and participated in the ceremonies. General Patterson and several other prominent military men were present.

At the opening of hostilities of the civil war a meeting was ordered by the captain, and the question of offering the services of the troop was discussed. Several of the members concluded that it was impossible for them to leave their families and farms (and it was composed largely of farmers), and when the vote was taken it was a tie. It is but proper to state in this connection that this was not a party vote, but each member voted as he viewed his own private circumstances, and although the troop did not go as then organized, many of the single men volunteered in other companies and several lost their lives on battlefields. Owing to the continuation of the war and the members enlisting in other military organizations, the troop disbanded after an existence of about fifty years.

Fisher, Jeremiah Freas, Walton Freas, William Fratt, Alexander Fulton, William Gilmore, Charles Hallowell, George B. Hampton, Stacey Haines, George W. Henderson, William Hiltner, Jacob Hinkle, Septimus W. Jones, John P. Knapp, David Livergood, William M. Lukens, Isaac Markley, William Michener, Edward Preston, Ross Rambo, Reuben Y. Ramsey, Edward Rhine, Anderson Stewart, Charles Stewart, Mark Supplee, George W. Supplee, Thomas Tomlinson, Washington Ulrich, Charles Weak, Abram Wentz, Thomas H. Wentz, Mordecai Dehaven.

UNION GREY ARTILLERISTS.

Nicholas K. Shoemaker, (commanding), first lieutenant; George Lower, Solomon Katz, second lieutenants.

Non-Commissioned Officers, Musicians and Privates.

Samuel H. Aiman, Charles Aiman, Samuel Armstrong, Robert Arthur, John Bickel, Jacob Bisbing, Joshua Copelberger, Charles Donat, Christian Donat, Robert Francis, Charles Gerhart, Eli Hoover, Adam Hoffman, Stephen Haley, William Knipe, Joseph Kline, Christopher Keyser, Daniel Keyser, Edward Lower, Christopher Lower, Henry Lower, Joseph Mengesser, John Peterman, Edmund Stout, Peter Stott, Joseph Simmons, Charles Shaffer, Jonathan Shaffer, John Shaffer, Christopher Smith, Samuel Van Winkle.

THE FIRST NATIONAL DRAGOONS.

Daniel Fry, captain; Theodore Garber, first lieutenant; Dr. William B. Hahn, surgeon.

Non-Commissioned Officers, Musicians and Privates.

Abraham W. Beard, first sergeant; Frederick M. Graff, quartermaster-sergeant; Uriah Grubb, cornet; Henry Kline, musician; John H. Ashenfelter, Frederick Emery, Peter Fry, William S. Gilbert, John Razor, Ephraim A. Schwenk, Jacob Walt, Frederick Weideroder, Adam Yerger, William Evans, William Fisher, Rudolph Mauck, George Swell, Charles D. Smith, Charles Williams, John Wismer.

NEW HANOVER ARTILLERISTS.

Frederick Brendlinger, captain; Solomon Stetler, first lieutenant; Solomon Brendlinger, second lieutenant.

Non-Commissioned Officers, Musicians and Privates.

Peter Y. Brendlinger, James Harbst, Benjamin Bushong, Jacob Feather, Samuel Mowrer, Daniel Polsgrove, Jacob Binder, George Dengler, Henry Decker, Deiler Bushong, Henry Newman, George Miller, Solomon Kurtz, Isaac Saylor, Aaron Polsgrove, John Stichler, Philip Koons, Francis Garber, Thomas Stichler, Joseph Christman, William Egolf.

GOSCHENHOPPEN GRAYS.

Henry H. Dotts, captain; Martin Mager, first lieutenant; Samuel Welker, second lieutenant.

Non-Commissioned Officers, Musicians and Privates.

Daniel Urffer, Jonathan Gerg, Henry Mock, William Graber, John Hersch, Jonathan Roeder, Reuben Gerg, John Mock, Charles Nuss, Matthias Rummel, John P. Reifsnyder, John Dotts, Ezra Brey, Jesse Gerg, Jesse Pannebecker, William Hersch, Joseph Hersch, Jacob Hoffman, Edward Styer, George Seasholtz, William Sell, George Erb.

[In this return the name of Jonathan Roeder is returned as having served as a private. The services were performed by——Stahler, as will appear by the muster-roll made at the time of service. The reason for returning the name of Roeder is that he is a member of the company, and employed Stahler, who is not a member, as a substitute to serve for him, and the transaction being between themselves, the company recognized only Roeder; his name is returned for the compensation.]

WASHINGTON GRAY ARTILLERISTS.

Jesse B. Davis, captain; David Trucksess, first lieutenant.

Non-Commissioned Officers, Musicians and Privates.

Andrew Allebough, Adam Ashenfelter, John M. Bean, Jacob Burkimer, John Coulston, Cephas Davis, Albert Dehaven, Theophilus Deweese, Peter Fry, Abraham Foust, Henry W. Foust, Jacob Gotwals, William Gillis, Daniel Green, David Gouldy, Joseph Keel, James McBride, John Nungesser, George Niblo, Philip Peters, John Richardson, William Roberts, William Royer, Joseph Reese, William B. Shupe, Thomas Snyder, Francis A. Sperry, Bernard Streeper, William Smith, Henry Somers, William Wise, Peter Wagoner, Ezekiel Williams, Lewis Ulman.

MONTGOMERY GUARDS.

Henry Freedley, captain; Thomas W. Potts, first lieutenant; William B. Hahn, second lieutenant.

Non-Commissioned Officers, Musicians and Privates.

Ellis Aker, John Carl, Frederick Conrad, Isaiah W. Davis, John Erby Joseph Fulforth, Samuel Groff, Frederick Haas, Thomas Hastin, Spencer Hutnot, Luther Kennedy, John Keeler, George Keen, Philip S. Kirk, John K. Major, James Moyer, Edward Magee, James Mendenhall, Jacob Murry, Jonathan Poutzler, Benedict D. Potts, William Rapine, James W. Schrack, John Shanor, Lewis Sickel, Florence Sullivan, I. Lewis Worrell.

SUMNEYTOWN ARTILLERISTS.

John D. Apple, captain; Jesse Fenstermacher, second lieutenant.

Non-Commissioned Officers, Musicians and Privates.

Jacob Gilbert, George Gaugler, William Gilbert, Daniel Hefner, Charles Hersh, Henry Hersh, John Hummel, John Kepp, Henry Nace, John Royer, Christian Royer, Tobias Schuyler, John Schuyler, William Sheffer.

LAFAYETTE BLUES.

George I. Williams, captain; Charles Gerheart, first lietenant.

Non-Commissioned Officers, Musicians and Privates.

Daniel McClelland, first sergeant; George Nuss, second sergeant; Lewis Hollman, third sergeant; Joseph Stackhouse, fourth sergeant; Francis Kehr, Jesse B. Fisher, musicians; Joseph Booze, Gideon Beck, George Bowers, Thomas Betting, Nathan Barnes, George Brownholtz, Isaac Brant, Charles Brittain, George Cramar, Isaac Daves, William Frantz, John Foster, Joseph Hannabury, Daniel Heller, Richard Jackson, William Kesell, Azor Kerbaugh, John Matthias, Peter Miller, John Nuss, Frederick Nash, George W. Nanneth, Francis Ott, Lewis Ott, Patrick Rodgers, Samuel Seddinger, Samuel Snyder, Charles Smith, William Trexler, Jeremiah Trexler, Josiah Widener, William Winkler, privates.

[Joraim Engleman, second lieutenant of the company, marched with the company as far as Eighth and Market Streets, and then returned to his home. He was not reported at headquarters.

Isaac Daves had a severe attack of camp-fever after he returned home, and lay for many weeks in a very dangerous condition. John Foster was never well after his return. He died in the month of February.]

PENNSYLVANIA DEFENDERS.

Samuel Bradford, captain; Henry O'Neal, first lieuteuant.

Non-Commissioned Officers, Musicians and Privates.

Matthias Y. Sheffey, first sergeant; Isaac Arb, second sergeant; Josiah Christman, Jonas Yost, James Christman, musicians; John Rees, George Sheetz, Joseph Moyer, Joseph T. Miller, William Benter, George Benter, Isaac Linderman, Joshua Smith, Eli Shallkap, Oliver Kugler, John Smith, Jacob Hefflefinger, Benjamin F. Yost, Daniel Shallkap, William Boyer, Samuel Keeley, James Barlow, James Linderman, Reuben Moyer, Edward Kucher, Jerome Ruth, privates.

UNION RIFLE COMPANY, UPPER DUBLIN.

Robert Pollard, captain; Vincent P. Montanua, first lieutenant; Silas A. Cope, second lieutenant.

Non-Commissioned Officers, Musicians and Privates.

Jacob Hess, Thomas P. Bright, George Rushon, Frederick Green, Josiah A. Bright, Michael Dougherty, William George, Allen Thomas, George Shuster, William Acuff, Joseph Stillwell, Henry Shaffer, Jacob Shaffer, Abraham Lightcap, Martin Jones, William Neeman, James McAdams, Lewis Langdale, Daniel Gilbert, George A. Henk, Jacob Hoffman, Charles Stillwell, Samuel Evans, John Weeks.

The Mexican War.—There was no company or regimental organization from Montgomery County that took part in the Mexican war; no publication of the names of those volunteering from the county has been preserved. Among those who entered the service of the United States at the time from Montgomery County was Andrew H. Tippen. He was appointed and commissioned first lieutenant in the Eleventh Regiment of United States Infantry, and served with distinction. He survived the conflict, and served as colonel in the Regiment of Pennsylvania Volunteers during the great Rebellion. George Lower and his brother, Henry Lower, of Springfield township, served as volunteers.

Henry died the first day of the battle of Cerro Gordo of brain-fever, and was buried at "Plan Del Rio," or the River of the Plains. His remains were subsequently brought home by his brother George, and interred in the graveyard at St. Thomas' Episcopal Church, Whitemarsh. Joseph Cleaver and Michael Dougherty were enlisted in the Mountain Howitzer Battery. Cleaver is dead, and the present residence of Dougherty is unknown. Benjamin Ehler, of Montgomery County, enlisted in the Eleventh Regular Infantry, and still survives a resident of Springfield township.

Louis Monsert enlisted in the Second Pennsylvania

Regiment, and survives. He is at this time a resident of Norristown, Pa. Mr. Monsert enlisted from Reading, Berks County, Pa. Albert Arthur enlisted and served in the same command with George and Henry Lower. He also survives, and is at this date a resident of Montgomery township. There are doubtless a number of others who served their country in this war, from Montgomery County, but no record of them or their services is obtainable.

CHAPTER XVI.

THE GREAT REBELLION.

THE violent conflict of political opinion which culminated in a breach of the public peace on the 19th of April, 1861, was sectional in its character. The cause which evoked the long and acrimonious discussion involved a system of civilization with questionable commercial values, and the overthrow of domestic institutions to which the people of the Southern States had become attached by interest, inclination and climate. An "irrepressible conflict" suddenly became an "impending crisis," followed by the shock of arms. Northern statesmen of rare sagacity and long experience in public life were blinded by their delusive hopes, and predicted a short struggle and easy triumph over the insurgents. The haughty and impetuous spirit of Southern leaders underrated the sturdy manhood and marvelous resources of the North, and, with more zeal than prudence, precipitated hostilities, the magnitude of which awakened the civilized powers of the world to the importance of the conflict. Both sections sadly failed in their estimate of the relative strength and endurance of the combatants. The South obtained an early advantage in the first battles fought, and entitled themselves to the rights of belligerents, compelling the national government to treat with them as equals in war. The doctrine of a peaceable dissolution of the national government, intended by its founders to be perpetual, was strangely confounded with the rights of revolution, and dissenting minorities, to fatally obstruct the popular will as expressed by the national legislature, naturally took refuge behind the indefinite reserved powers of the States. A well-marked difference of opinion always existed in reference to the Constitution of the United States, and interpretations of the fundamental law by courts of last resort were not always accepted by the people as final. Early instances of the spirit of revolt, incident to all new forms of government, were experienced in the Shay Rebellion of 1784, in the Whiskey Insurrection of 1791, the Hartford Convention of 1814, and the attempted nullification of 1833. Slight wrongs, real or imaginary, such as induced violence and resistance to the existing government, readily yielded to wise councils and the prompt suppressive measures of the national government. But when a great evil, such as the enslavement of four millions of human beings, became a subject of political controversy, sectionalizing thirty millions of people; the North uncompromising in its hostility to the institution, the South wedded to it; the North insisting, by its majorities, upon union and universal freedom, the South fiercely maintaining the right to peacably secede and establish a rival republic,—these conflicting theories, agitated by astute statesmen through a formation period of fifty years, without significant or well settled precedent,—in view of such a contention, it will not, perhaps, be the subject of historical amazement that amicable adjustment defied the best efforts of political economists, and that brutal and terrible agencies of war were necessarily invoked to settle the dispute and vindicate the right.

The part taken by the people of Montgomery County during the four years' hostilities will possibly never be fully told. The novel and exciting experience of those who responded to the first call of President Lincoln for three months' troops was memorable, if not so important as that which resulted from the long terms of enlistments following the disaster at Bull Run on the 21st day of July, 1861. The great uprising of the North which quickly succeeded the fall of Fort Sumter was a national impulse, and the movement of men to the defense of the capital was through an excited and indignant populace. Great as the perils of war were known to be, they were extravagantly magnified at the time, and the anxiety and solicitude for those who were the first to march was shown by every household in the county. Few among those who witnessed the memorable scene of the departure of the Fourth Regiment of Pennsylvania Volunteers from Norristown, on the morning of April 20, 1861, will ever forget the event. The several companies from the borough had been hastily recruited to their maximum. Many of the members being residents of the rural districts, had hastened to town, signed the roll, and, returning to bid the dear ones good-by, thoroughly aroused the plain country-folks, hundreds of whom came trooping into town, "to see them off."

Fort Sumter had fallen, its brave defenders had gallantly resisted the skillfully devised preparations made for its reduction, the flag of our country had been shot down, and although not a single man of the garrison had been killed, yet the loyal manhood of the North felt that the great wrong and insult must be promptly avenged. No response to country's call was ever more promptly made by more patriotic men than those who filled the first quota of seventy-five thousand troops. True it is, in the light of the terrible struggle that subsequently ensued, the service now seems inconsiderable, but history will always accord to those who were first in the field of peril a

distinguished honor. Those who were present when the regiment was in line in front of the court-house surrounded by thousands of our best citizens and the families of those in the ranks, will recall the intense excitement that prevailed. The painful solicitude of the hour was deepened as the impassioned and eloquent words of the Hon. Daniel Smyser, then president judge of the district, fell upon attentive ears from the steps of the court-yard. The word *country* had a new and deeper significance for the men of that generation than was ever felt before. The beautiful flag presented to these gallant men by the ladies of the county was felt to symbolize hopes and interests paramount to all other considerations, and for the time being all difference of political opinion was subordinated to an exalted love of country. Men of all political opinions were requested to "put out their flags," and it is due to truth to say that in deference to public sentiment, that stood not upon trifles, the request was complied with. The youth and manhood of the county were well represented in the rank and file of the command, and after receiving the public assurance of magistrate and people that their conduct was commended, and come what might, they would receive the hearty support of their friends, they wheeled into column, and to the quick time of stirring martial music, amidst the ringing of bells, the cheers of thousands of men, and tokens of love and admiration of their devoted countrywomen, they marched through the town to Bridgeport, where they took the cars for Harrisburg. The following condensed statement contains the material facts of the short experience of the organization :

Fourth Regiment Pennsylvania Volunteers.—The Fourth Volunteer Regiment originated in the First Regiment, Second Brigade, Second Division of the State militia, organized under the militia act of 1858. It consisted of six companies and had a full regimental organization, the officers holding State commissions. In response to the call of the President, a public meeting was held at Norristown, Montgomery Co., on the 16th of April, at which the feeling of patriotic devotion to the cause of the government was emphatically displayed, and resolutions were passed pledging assistance to the families of such as volunteered. On the following day the services of the militia regiment were tendered to the Governor for the term of three months, and were accepted on condition that the command would report in Harrisburg within four days. The officers immediately commenced the enrollment of recruits, and at the expiration of the time appointed some six hundred men from Montgomery County and vicinity were ready to move.

The excitement and gloom incident to their departure can only be felt by a people unused to war. All business was suspended, and the whole population appeared upon the streets. Flags were provided by the ladies of Norristown, which were presented with appropriate ceremonies. On Saturday, April 20th, the command proceeded by rail to Harrisburg, and reached Camp Curtin at two o'clock P.M. It was the intention to have remained in camp till a sufficient number of men could have been procured from Montgomery County to fill the regiment to its maximum number; but the urgent necessities of the government rendered this purpose impracticable, and orders were issued to form a regiment immediately from such companies as were in camp. This order had the effect to change the command from a militia to a volunteer organization.

An election was accordingly held, which resulted in the choice of the same field officers as those holding the militia commissions, which were as follows: John F. Hartranft, of Norristown, colonel; Edward Schall, of Norristown, lieutenant-colonel; Edwin Schall, of Norristown, major. Charles Hunsicker was appointed adjutant.

Scarcely was the organization completed when marching orders were received. Leaving Camp Curtin on the evening of the 21st of April, the regiment proceeded by rail to Philadelphia, where it was ordered by General Patterson to report to Colonel Dare, of the Twenty-third. Taking one company of his own and the Fourth Regiment, Colonel Dare proceeded by rail to Perryville, Md., and took possession of the town, making such disposition of the troops as would prevent a surprise.

On the following day General Patterson ordered the regiment to proceed without delay to Washington. Immediate application was made to Colonel Dare for transportation by steamer to Annapolis, the route by Baltimore being then closed. Not feeling secure from capture, Colonel Dare only gave transportation for one wing of the regiment, which embarked under command of Colonel Hartranft. Arriving at Annapolis, the troops were disembarked and quartered in the buildings belonging to the Naval Academy, by order of Major-General Butler, then in command of the town. The left wing, under command of Major Schall, was detained several days at Perryville for the security of the port.

It was expected that the men would be fully clothed, armed and equipped at Harrisburg before marching. But when the urgent appeals came from Washington for troops, it was not the time for the patriotic citizen-soldier to hesitate, and the regiment marched without uniforms or equipments, the men being armed with muskets, and provided with ammunition, which they were obliged to carry in their pockets. Clothing was sent to the regiment on the 28th of April, but not until some time in June were proper uniforms supplied.

In pursuance of orders, the regiment proceeded, on the 8th of May, to Washington, and was quartered in the Assembly buildings and in a church near by. Transportation and camp and garrison equipage not having been supplied by the State or national government, the regiment was prevented from going into

GEN. JNO. F. HARTRANFT.

camp. The close confinement of the men in crowded quarters soon produced its legitimate results. Sickness, which, up to this time, had been scarcely known in the regiment, now began to prevail to a considerable extent. As soon as tents were received it was at once established in camp, about two miles from the city, toward Bladensburg. When the necessary equipage was furnished regimental drills and inspections were commenced, and vigorous measures taken to make the regiment effective. On the 24th of June it was ordered to Alexandria, in anticipation of an attack by the enemy, and was soon after placed in camp on Shuter's Hill, where the regular drills and inspections were resumed.

On Sunday, June 30th, at two o'clock in the morning, the pickets of the regiment, stationed on the old Fairfax road, under command of Lieutenant M. R. McClennan, were attacked by about thirty of the enemy. They were repulsed by our pickets, only three in number, who killed Sergeant Haines, previously a clerk in the Treasury Department at Washington. Three others of our pickets on the outer post, intending to go to the rescue of their comrades, came in contact with the enemy's force, in which Thomas Murray was killed and Llewelyn Rhumer was severely wounded. The third, dropping upon the ground, escaped without injury, the enemy, in the excitement and darkness, passing over him. The trails of blood, discovered in the morning, showed that they had likewise suffered in the encounter.

The evidences on every hand pointed unmistakably to an early advance of the army. Inspections were careful and minute. All surplus baggage was sent to the rear, together with knapsacks and overcoats, the men retaining only their blankets. The Fourth Regiment was assigned to the First Brigade, Third Division[1] of McDowell's army. The division moved from camp by the Fairfax road, reaching Sangster's Station on Thursday evening. The enemy set fire to his stores and retreated, as the column advanced. Firing was heard in the direction of Blackburn's Ford, occasioned by Colonel Richardson's reconnoissance in that direction. On Friday the division moved to Centreville, where the entire army of McDowell lay encamped. On Saturday, the 20th of July, the question of muster out was freely agitated, the term of enlistment expiring on the following day. Desirous of retaining the regiment in his command till the anticipated battle should be fought, General McDowell issued an order, making the following appeal:

"The General commanding has learned with regret that the time of service of the Fourth Regiment Pennsylvania Volunteers, is about to expire. The services of the regiment have been so important, its good conduct so general, its patience under privation so constant, its state of efficiency so good, that its departure at this time can only be considered an important loss to the army. Fully recognizing the right of the regiment to its discharge and payment, at the time agreed upon, the agreement of the government in this respect, the General commanding, nevertheless, requests the regiment to continue in service for a few days longer, pledging that the time of muster out of service shall not exceed two weeks. Such members of the regiment, as do not accede to this request will be placed under the command of proper officers, to be marched to the rear, mustered out of service, and paid, as soon as possible, after the expiration of the term of service."

Differences of opinion prevailed in the regiment upon the question of compliance with this request. While many were willing to re-enlist for two weeks longer, some were desirous of being mustered out in accordance with their contract with the government. When it was ascertained that unanimity of sentiment was not likely to be secured, it was decided by the commanding general that to break up the organization and to take a fragment of the regiment into battle would not be prudent; orders were accordingly issued for its muster out of service. Several causes conspired to create an aversion to remaining. The regiment had been subject, during its service, to hardships which are, perhaps, inseparable from new and hasty organization, but which bore somewhat heavily upon the men, a detail of which it is unnecessary here to give. It was at a time, too, when great activity prevailed in the organization of new regiments for the three years' service, the officers of this regiment having already taken steps for making new organizations, in which considerable strife was manifested to get the trained men. Their decision was, accordingly, made more with reference to their own advantage and that of their officers than to any ulterior results.

General McDowell, when he found himself defeated in the battle which ensued, looking about for some causes to which he could attribute his failure, towards the close of his official report drags in this regiment for a share of blame, to whose service he had no more rightful claim, and whose conduct he could no more justly censure, than that of the regiment a week or a month earlier discharged.

The subsequent history of the men composing this regiment dispels any doubt that may, at the time, have been raised of the rectitude of their intentions Under the command of the lieutenant colonel, it marched to Washington, from whence it was taken by rail to Harrisburg, where it was soon after mustered out of service. But measures were immediately taken for the organization of new regiments, in which the men immediately enlisted for the war, and fully attested on the bloody fields of Fredericksburg and Antietam, and in numberless hard-fought battles of the war, their patriotism and their valor.

The colonel of the regiment (since major general), John F. Hartranft, desiring to remain with the army of McDowell, offered his services, and was assigned to duty on the staff of Colonel Franklin, commanding the First Brigade. In the terrible ordeal to which the division of Heintzelman was exposed, and when the

[1] Organization of First Brigade Colonel W. B. Franklin, Third Division, Colonel S. P. Heintzelman (the three brigades of the division were commanded respectively by Colonels W B. Franklin, O. O. Howard and O. B. Wilcox).—Ricket's Battery of the First United States Artillery; Fifth Regiment Massachusetts Volunteers, Colonel Lawrence; Eleventh Regiment Massachusetts Volunteers, Colonel Clark; First Regiment Minnesota Volunteers, Colonel Gorman; Fourth Regiment Pennsylvania Volunteers, Colonel Hartranft.

regiments were broken and disorganized by the heat of the enemy's fire, Colonel Hartranft rendered invaluable aid in holding the men to their duty, and in rallying the regiments which had been thrown into confusion.

Captain Cook, of Company K, also remained, serving on the staff of Colonel David Hunter, and was officially commended for his gallantry.

FIELD AND STAFF OFFICERS.

Weland, Clarence W. Wills, William W. Wills, Jr., Abraham Wood, James Wood.

NOTE.—"Colonel Hartranft, of the Fourth Pennsylvania Regiment, . . . accompanied me to the field as *aid-de-camp*. His services were exceedingly valuable to me, and he distinguished himself in his attempts to rally the regiments, which had been thrown into confusion."—*Col. W. B. Franklin's official report, First Brigade, Third Division, series i. vol. ii., "Official Records of the Union and Confederate Armies," p.* 406.

For the greater convenience of reference, the history of the military organizations identified with Montgomery County will be continued in the chronological order of their formation and departure for the seat of the war. Where companies have been organized and become attached to regiments, it is due to those accredited to the county that an account of their services be related, as the same has been officially preserved in the history of the regiments of which they were a part. They appear as follows:

The Forty-Fourth Regiment (or First Pennsylvania Cavalry) entered the service for the term of three years. Company B was recruited in Montgomery County, and was trained for the distinguished service which it experienced by Colonel George D. Bayard,[1] a graduate of West Point United States Military Academy, class of 1856. He early distinguished himself as a fearless cavalry leader, and would undoubtedly have become a division and corps commander had he not fallen mortally wounded at the battle of Fredericksburg, Va., in December, 1862, while in command of a brigade of cavalry. Of the twenty-two regiments of cavalry organized in Pennsylvania during the great Rebellion, not one regiment was wholly recruited and accredited to a single city or county. Men volunteering for this arm of the service were of a class accustomed to the use of horses or had a fondness for them.

Some excellent troops were formed of young horsemen from our large cities and inland towns, but most of the companies were recruited in the country districts. As a general rule, the men of this arm of the service were of the best material and made excellent soldiers. But in the mass of men who were hastily recruited and sent forward as substitutes in the latter part of 1863 to 1865 there were many unfitted for the cavalry service. Under the rules and regulations of the War Department in force at the time, the maximum number of men for a troop or company of cavalry was one hundred. Twelve companies composed a regiment. These companies were further organized into squadrons of two companies each, and the six squadrons were formed into three battalions. Three regiments generally formed a brigade, though sometimes four and even five regiments were united in the same brigade, but this was only in cases where commands had become decimated. Two brigades generally formed a division, and the three divisions operating with the Army of the Potomac constituted the cavalry corps. This branch of the public service was first organized by Major-General Joseph Hooker when he assumed command of the Army of the Potomac in the winter of 1863.[2]

[1] George D. Bayard, appointed at large by the President a cadet to the United States Military Academy, West Point, July 1, 1852. Graduated July 1, 1856, and assigned to duty as second lieutenant, First Cavalry. Served on frontier duty, and in the Kansas disturbances; wounded in the face by a poisoned arrow in an engagement with the Indians near Bent's Fort, Col., July 11, 1860; assigned to duty at the Military Academy as assistant instructor of cavalry, March 16 to September 3, 1861; promoted first lieutenant, First Cavalry, March 16, 1861; captain, Fourth Cavalry, August 20, 1861; appointed colonel, First Pennsylvania Cavalry Volunteers, September 14, 1861; promoted brigadier-general, United States Volunteers, April 28, 1862; assigned to command of cavalry brigade, Army of Potomac; participated in all the operations of the army in front of Washington during the summer and fall of 1862, and fell mortally wounded at the battle of Fredericksburg, December 13, 1862. He died the following day, aged twenty-seven years.

[2] ORIGINAL ROSTER OF THE CAVALRY CORPS A. OF P.

Brig.-Gen. George Stoneman.

FIRST DIVISION.

Brig.-Gen. Alfred Pleasanton.

First Brigade (Col. Benjamin F. Davis).—8th Illinois, 3rd Indiana, 8th New York, 9th New York.

The artillery assigned to the cavalry were mounted and known as "Horse Artillery," and, with the exception of Martin's Independent Battery of New York, were detached from the regulars. The proportion of artillery was one battery to each brigade. The guns used were twelve-pounder Napoleons and the Griffin six-pounder rifled guns. Most of the latter were made at Phœnixville, Pa. The cavalry were armed with sabre, Colt's revolving pistol and Sharp's carbine. Many of the troops in 1864 were supplied with the Spencer carbine, "seven-shooters." They were the most destructive arm of the kind in use. In the campaigns of 1864–65 the cavalry frequently fought dismounted, and owing to the superior arms in use, they were uniformly victorious, inflicting a heavy loss of life upon the enemy. Company B of the First Pennsylvania Cavalry was the pioneer organization of horsemen from Montgomery County. It was composed of a class of men representing the intelligence and patriotism of the Schuylkill Valley, and left the county under the command of Captain Owen Jones, of Lower Merion. The regiment was one of the most distinguished of Pennsylvania Reserves, and always ranked among the best in the famous cavalry corps of the Army of the Potomac. The public service of the regiment from its muster in to the surrender of Lee at Appomatox was fully shared by Company B. It is therefore due to the men who composed it, and their descendants, that the essential facts of history connected with the regimental organization be preserved.

COLONEL OWEN JONES, who, from early manhood until his death, was one of the most prominent and honored citizens of Montgomery County and of the State of Pennsylvania, was a son of Jonathan and Mary (Thomas) Jones, and a descendant of Edward Jones, who was a native of Wales, and came thence to Pennsylvania nearly two centuries ago, settling on lands purchased from William Penn and which forms part of the estate that has been held in the Jones family from that time until the present. A larger portion of the property which descended through successive generations to Colonel Owen Jones came into possession of his ancestors through the marriage of a son of the original settler, Edward Jones, with a daughter of Thomas Wynne, Speaker of the first Colonial Assembly of Pennsylvania, who took up lands adjoining those of Edward Jones. By that marriage the Wynne and Jones lands became united in one estate, which, in honor of the Wynne family, received the name which it still bears,—Wynnewood.

In the Wynnewood mansion, on this estate, Owen Jones was born, December 29, 1819. On reaching the proper age, and having passed through a preparatory course of study, he entered the University of Pennsylvania, where, in due time, he was graduated, and commenced the study of law in the office of William M. Meredith, of Philadelphia. At the conclusion of his law course he was admitted to the bar in Philadelphia and soon afterwards (May 19, 1842) was also admitted to practice in Montgomery County. But having a preference for the pursuit of agriculture, rather than for the practice of his profession, he gave his attention chiefly to the former, becoming deeply interested in the raising of fine stock and in everything tending to the promotion of improvement in methods of farming. In 1845 he became the purchaser of property in West Philadelphia belonging to the Warner estate, which afterwards had a remarkable rise in value, and became known as the "drove-yard property."

In 1856 Mr. Jones received the Democratic Congressional nomination for the Fifth District, which then embraced Montgomery County and some of the northern wards of Philadelphia. He was elected and served in Congress from December, 1857, to March 4, 1859. Prior to his election to Congress he had served, under appointment by Judge Thomas Burnside, as member of a commission charged with the duty of adjusting the basis of State taxation for the district composed of the counties of Montgomery and Bucks.

On the breaking out of the great war of the Rebellion, in April, 1861, he immediately became prominent as one of the most earnest and active supporters of the government and the Union. Under the legislative act of May 15th of that year, providing for the formation of the "Reserve Volunteer Corps of the Commonwealth," to include one regiment of mounted men, he at once commenced the raising of a company of cavalry, which he recruited almost entirely at his own private expense. The company, which was made up of men of Lower Merion and adjoining townships, was soon filled and moved to the rendezvous at Camp Curtin, Harrisburg, where it became Company B of the First Pennsylvania Cavalry. It was afterwards designated as the Forty-fourth Regiment of the State volunteer forces and placed under command of Colonel George D. Bayard. Prior to this (August 5, 1861) Captain Owen Jones, of Company B, had been promoted to the grade of major. In Sep-

Second Brigade (Col. Thomas C. Devin).—1st Michigan (Co. L), 6th New York, 8th Pennsylvania, 17th Pennsylvania.

Artillery.—New York Lt. Art., 6th Bat'y.

SECOND DIVISION.

Brig.-Gen. William W. Averell.

First Brigade (Col. Horace B. Sargent).—1st Massachusetts, 4th New York, 6th Ohio, 1st Rhode Island.

Second Brigade (Col. John B. McIntosh).—3d Pennsylvania, 4th Pennsylvania, 16th Pennsylvania.

Artillery.—2d U. S. Artillery, Battery A.

THIRD DIVISION.

Brig.-Gen. David McM. Gregg.

First Brigade (Col. Judson Kilpatrick).—1st Maine, 2nd New York, 10th New York.

Second Brigade (Col. Percy Wyndham).—12th Illinois, 1st Maryland, 1st New Jersey, 1st Pennsylvania.

Regular Reserve Cavalry Brigade (Brig.-Gen. John Buford.).—6th Pennsylvania, 1st United States, 2nd United States, 5th United States, 6th United States.

Artillery (Capt. John M. Robertson).—2nd U. S. Artillery, Batteries B and L; 2nd U. S. Artillery, Battery M; 4th U. S. Artillery, Battery E.

Daniel Butterfield.

tember the regiment moved from Camp Curtin to Tenallytown, Md., whence, on the 10th of October, it crossed the Potomac River into Virginia. A few weeks later it first saw actual service in the battle of Dranesville, where it took a leading part in the attack, which resulted in the complete rout of the enemy.

On the 3d of January, 1862, upon the resignation of Lieutenant-Colonel Jacob Higgins, Major Owen Jones was advanced to the higher grade, and in the following May he was promoted to the colonelcy of the regiment, Colonel Bayard having been made a brigadier-general.

While under command of Colonel Jones the First Cavalry performed severe and continuous service, and fought gallantly in a great number of engagements, among the principal of which were those of Hartwood Church, Woodstock, Harrisonburg, Port Republic, Front Royal, Cross-Keys, Groveton, Robertson's River, Strasburg, Cedar Mountain, Chantilly, Second Bull Run, Falmouth and finally the great battle of Fredericksburg (December 11 to 13, 1862), where Colonel Jones, acting as brigadier-general, commanded a full cavalry brigade, occupying a position on the extreme left and in the advance of General Franklin's corps. In that battle General Bayard was killed.

In January, 1863, about one month after the battle of Fredericksburg, Colonel Jones, with his regiment, took part in the famous, but profitless, "Mud March" of General Burnside's army up the Rappahannock, and then, after three days of severest toil, along impassable roads, back to their former position. This was the last of the military operations in which Colonel Jones participated. On the 30th of January, 1863, he resigned his commission and left the service. To his country he had done his whole duty, and had done it well. From the officers and men who served under him he had won the full measure of that respect and love which soldiers always give to a brave, generous and humane commander. On all the muster-rolls of Pennsylvania, or of the great Union army, there could not be found the name of a truer patriot or a more gallant and conscientious officer than Colonel Owen Jones.

Returning from the army to his beautiful home at Wynnewood, Colonel Jones resumed the peaceful vocations which had been interrupted by his departure for the field of war. In these pursuits and in the enjoyments of domestic life he continued through a further period of nearly fifteen years, which brought him to the close of his honorable and useful career. Early in the evening of December 25, 1878, he set out from his home alone and on foot, intending, in company with his near neighbor, Mr. Wister, to spend the evening in a social way at the house of their mutual friend, Dr. George Gerhard. On leaving home he directed his coachman to call for him at the doctor's house at ten o'clock. At that hour the man went with the carriage, according to directions, but, on reaching Dr. Gerhard's, was told that Colonel Jones had not been there. He then proceeded to the house of Mr. Wister, where he inquired for the colonel, but received the same answer. A search was then made along the way that Colonel Jones was supposed to have taken, and about an hour later his body was found, lying face downward, lifeless and cold, within fifty yards of Dr. Gerhard's residence. His death had evidently been instantaneous and the result of apoplexy. The remains were interred in the family vault at Laurel Hill. The funeral was attended by a large concourse of people, among whom were a number of those who had been his companions-in-arms and many of the leading men of Pennsylvania. His death was deeply mourned by all who knew him, and by none outside the family more sincerely than by the worthy poor, to whom he had always been a friend and liberal benefactor.

Colonel Owen Jones was married, November 4, 1841, to Mary, daughter of Isaac W. Roberts. Their children were four in number,—Emily R., Owen Glendower, Annie and J. Aubrey Jones, the last-named being now the only survivor. He resides with his mother in the Wynnewood family mansion, where his father was born and which was his home during all the years of his life.

FIELD AND STAFF OFFICERS.

George D. Bayard, col., must. in Aug. 27, 1861; wounded at Dranesville, Va., Nov. 22, 1861; pro. to brig.-gen. May 5, 1862; killed at Fredericksburg Dec. 13, 1862.

Fifty-first Regiment Pennsylvania Volunteers.—Some time previous to the first battle of Bull Run Colonel Hartranft, who commanded a regiment in the three months' service, applied for and received authority to recruit one for the three years' service. Calling about him many of his old officers and men, the ranks of the new regiment were soon filled with a body rarely excelled for qualities essential to good soldiers. With the exception of a few enlistments, Companies A, C, D, F and I were recruited in Montgomery County ; E, H and K in Union and Snyder ; G in Centre ; and B in Northampton. The companies rendezvoused at Camp Curtin, and the regiment was organized by the selection of the following officers : John F. Hartranft, of Montgomery County, colonel ; Thomas S. Bell, of Chester County, lieutenant-colonel ; Edwin Schall, of Montgomery County, major.

On the morning of the 18th of November the regiment left Camp Curtin, and proceeded by rail to Annapolis, Md., where, beneath the venerable elms of Saint John's College, it was for the first time formed in line, its details made and its arms stacked. Burnside's expedition to North Carolina was now being fitted out, and the best drilled and most reliable of the volunteer regiments were selected for

that service. The Fifty-first Pennsylvania was early designated as one. Upon its arrival at Annapolis it was at first quartered in the buildings of the college, and subsequently went into camp on the old French burying-ground. On the 1st of December the camp was moved two miles beyond the city, and for six weeks it was subjected to continuous and laborious drill, during which its efficiency and discipline were rapidly improved, and a foundation laid for its future renown. In the final organization of the corps it was assigned to Reno's brigade.[1]

On the 6th of January, 1862, the regiment embarked, and on the 9th the fleet, in three squadrons, set sail from Annapolis, and with sealed orders passed out to sea. No sooner had it reached the open ocean than it was overtaken by a succession of violent storms. It semed as though a tempest had been lurking in the waste of waters ready to burst upon it the moment it should appear. For nearly two weeks, staggering beneath the giant waves, it was swept about at the mercy of the elements. Braving successfully the tempest, it finally passed Hatteras Inlet, and came to anchor in Pamlico Sound. On the morning of the 5th of February the flag-ship "Philadelphia" was anxiously watched as it moved, followed by the fleet, and it soon became evident that Roanoke Island was the destination. At early dawn on the 7th a landing was effected and the movement commenced. The enemy was found strongly posted in earthworks on the northwestern corner of the island, nearly surrounded by an impenetrable swamp, approached in front by a single causeway, which was swept by the guns of the fort. Upon arriving at the edge of the swamp, Reno's brigade was sent to the left to cut off the enemy's retreat south, while Foster was directed to penetrate the swamp to the right of the road, and attack the enemy upon that flank. Hartranft soon found his way completely blocked, and returned upon the track of Foster, leaving two companies of the Fifty-first, which had the advance, still groping in the mire. But before he had reached the lines Foster had already opened upon the enemy with infantry and artillery, and as the regiment came into position on the right of the line, Foster ordered a final charge, and the enemy was driven from his works, and fled in confusion. The demonstration upon the left seemed to heighten the confusion, as he anticipated that his way of retreat was effectually broken. A hot pursuit was immediately made, and the entire force, with numerous heavy guns and small-arms, was captured.

On the 3d of March the regiment embarked for the expedition to Newbern, and on the 4th changed its muskets for Enfield rifles. The fleet sailed on the 11th, and entered the Neuse River on the 12th, anchoring off Slocum's Creek, fifteen miles from Newbern, where, on the following day, the regiment debarked. A portion, under command of Lieutenant-Colonel Bell, was detailed to assist in moving the artillery. The rain was descending in torrents, and the roads were soon trodden into a stiff mud, which rendered the movement of the pieces next to impossible. Many of the men lost their shoes, and went into battle on the following day barefoot. But without faltering or pausing by the way, they toiled on over the weary miles, and brought up the pieces in time for the attack. For this important service General Burnside personally thanked Lieutenant-Colonel Bell. In the meantime Colonel Hartranft, with the remaining companies, pushed on with the advance column. Upon its arrival in front of the enemy's earth-works dispositions for attack were made, Foster occupying the right, Reno the left and Parke in support upon the centre. The enemy's line upon the left was masked by timber, and in the thick fog which prevailed the extent of his works was undiscovered. They proved to be of great strength, consisting of "thirteen finished redans" bristling with cannon, protected in front "by an almost impassable morass filled with fallen timber,"[2] and stretching away far beyond the railroad, where his right was supposed to rest. Foster attacked upon his left; but the enemy concentrating his strength, proved too much for him.

As soon as he could gain his position on the left Reno attacked, and the battle soon became general, raging with great fury for three and a half hours. The Fifty-first had been held in support, and though exposed to a severe fire had not been allowed to return a single shot. General Reno becoming impatient at the delay and at the losses he was sustaining, ordered up Colonel Hartranft for the decisive charge. Forming within a short distance of the rebel intrenchments, the regiment was led forward through the ranks of the Fifty-first New York, which cheered the column as it passed to a little hill beyond. General Reno in person, his face beaming with an expression seen only in battle, ordered the charge. With determined valor the regiment rushed down a ravine choked with felled timber, up the opposite bank and, without a falter, carried the redan in front, planting the old flag upon the ramparts. "All this," says General Reno, in his official report, "was gallantly executed, and the enemy fled precipitately from all their intrenchments. Some fifty prisoners were captured in these works, many severely wounded. Upon reaching the rebel intrenchments I was rejoiced to see our flag waving along the entire line of the enemy's works." After setting fire to the railroad bridge and a number of factories, the rebels abandoned Newbern.

[1] Organization of the Second Brigade (Brigadier-General Jesse L. Reno, of Burnside's Corps).—Fifty-first Regiment Pennsylvania Volunteers, Colonel John F. Hartranft; Fifty-first Regiment New York Volunteers, Colonel Robert B. Potter; Twenty-first Regiment Massachusetts Volunteers, Lieutenant-Colonel Albert C. Maggi; Ninth Regiment New Jersey Volunteers, Colonel J. W. Allen.

[2] General Reno's official report.

Detachments were frequently sent out by General Burnside to reconnoitre and hold important points upon the coast. One was intrusted to Colonel Hartranft, who moved with his regiment into the interior and acquired valuable information. On the 16th of April a force was sent out consisting of the Fifty-first Pennsylvania, Ninth and Eighty-ninth New York, Sixth New Hampshire and the Twenty-first Massachusetts, which proceeded by transports to a point four miles below Elizabeth City, where it landed. Pushing inland about twenty miles, the weary troops came upon the enemy strongly posted. Two companies of the Fifty-first, A and F, Captains Boulton and Hart, were considerably in advance of the main column, and when they had arrived within an eighth of a mile of the rebel line they were suddenly opened upon from the enemy's guns. They were ordered to shelter themselves as best they could and to hold their position. General Reno now led the Twenty-first Massachusetts and the balance of the Fifty-first Pennsylvania through the woods to the right, bringing them into position upon the enemy's left flank, where they immediately opened fire. In the meantime the Ninth New York had taken position on the enemy's left centre, and had prematurely charged upon his guns. The ground was open and, being fearfully exposed, the Ninth was repulsed with considerable loss. The Sixth New Hampshire advanced upon the left, and, with the two companies of the Fifty-first holding the road, kept the enemy well employed upon that part of the line. The Fifty-first had now turned his left flank and was pouring in most deadly volleys. "In the mean time," says General Reno, "the Fifty-first Pennsylvania and the Twenty-first Massachusetts kept up an incessant fire upon the rebels, who had now withdrawn their artillery and had commenced to withdraw in good order. The Sixth New Hampshire had steadily advanced in line to the left of the road, and when within about two hundred yards poured in a most deadly volley, which completely demoralized the enemy and ended the battle. Our men were so completely fagged out by the intense heat and their long march that we could not pursue them. The men rested under arms until about ten o'clock P. M., when I ordered a return to our boats, having accomplished the principal object of the expedition, conveying the idea that the entire Burnside expedition was marching upon Norfolk." The loss in the regiment was three killed and twenty-one wounded. The brigade was here commanded by Lieutenant-Colonel Bell, and the regiment by Major Schall. On the 30th of June the regiment embarked for Fortress Monroe, but was detained until the 5th of July, when it set sail with the rest of the command, and arrived on the 8th. Here General Burnside commenced organizing the Ninth Corps, destined to win an enviable place in the national armies, and the regiment was assigned to the Second Brigade of the Second Division, composed of the Fifty-first Pennsylvania, Fifty-first New York and the Twenty-first Massachusetts, commanded by General Edward Ferrero.

On the 12th of August Burnside hastened with his command to the support of Pope, and landed at Fredericksburg, whence he pushed forward two divisions to Cedar Mountain, where they formed a junction with General McDowell. The enemy had already made his appearance on the Rapidan, and Ferrero's brigade, under Colonel Hartranft, was sent to guard the fords from Mitchell's Station to Raccoon Ford. Lee's columns soon after arrived in force on the opposite bank, and began to press heavily to gain a crossing, when the brigade was withdrawn, and returning through Stevensburg, recrossed the Rappahannock at Kelly's Ford. Four companies of the Fifty-first were detailed for the rear-guard, and held the enemy at bay until so far separated from the main body as to excite serious apprehension for their safety; but they succeeded in bringing in the gun with which they were entrusted and crossed the river in safety losing only a few stragglers. Pope's army, manœuvring for several days, finally formed in line on the old Bull Run battle-ground. Kearny held the right, with Reno on his left. Several batteries were posted on a commanding ridge, and away to the right was a wood in which the enemy was concentrated in heavy force. The Fifty-first supported these batteries. On the afternoon of the first day of the battle, the 29th, Lieutenant-Colonel Bell, with a portion of the regiment, was detailed to advance to the picket line in Kearny's front, and remained in this position until the morning of the second day, when it rejoined the regiment, which had been withdrawn during the night. Towards evening our forces, having been driven back, began to move from the field. The line of retreat was along the Centreville road to the right of the position held by Graham's battery. This road was soon completely blocked with the artillery and trains, and much confusion prevailed.

It was a critical moment. The enemy, exulting in his successes, was pushing on to break in upon the column while impeded by its trains, and to crush it in its crippled condition by a single blow. Graham's pieces were admirably posted for its protection, and were already dealing their death-laden volleys upon the advancing foe; but should his supports fail him, his guns would be lost, and our whole left flank exposed. Ferrero saw the necessity of holding these guns at all hazards and of keeping them in full play. Undaunted by the masses of the foe hurled against him, he clung to the ground, and poured in double-shotted canister and rapid rounds of musketry until the enemy's lines were broken and driven in confusion. Again and again they returned to the contest with fresh troops and with renewed zeal; but no valor could withstand the shock of Ferrero's column, and the enemy finally retired, leaving our lines intact and our trains safe. Ferrero, with the Twenty-

first Massachusetts, now moved off, and had become separated from the rest of his brigade. The command of the two remaining regiments devolved on Colonel Hartranft.

Retiring across Bull Run, the two regiments filed into the fields to the right of the pike, and bivouacked for the night. In the morning they moved on to Centreville, and rejoined the army. It was soon after discovered that the rebels were in motion to strike the Union column by a movement upon its right and cut off its retreat. Reno's corps was immediately put in motion, with the cavalry in advance, and was soon joined by Stevens and Kearny. Hartranft had the rear of the column, and was moving with two batteries, though under no orders to support them, when he suddenly found himself confronting the enemy. The two armies were moving on divergent roads, and the lines were here first struck. Seeing that these batteries were in peril, he instantly ordered them into a commanding position on the left of the road, and drove back the foe. It was nightfall, and a terrible thunder-storm prevailed; but Kearny and Stevens and Reno, three impetuous leaders, immediately forming, moved upon the foe, and fought in the darkness. They knew nothing of his strength and little of the ground, and contended to a great disadvantage; but the enemy was beaten back, which was the principal point, though Kearny and Stevens both yielded up their lives.

At his own request Pope was now relieved of the command of the Army of the Potomac, and McClellan was restored. On the 3rd of September the Ninth Corps moved through Washington, and on the 11th reached New Market, on the Maryland campaign. The passage of the Monocacy was not disputed. On the 12th the command entered Frederick, and had a brisk skirmish with the Cavalry, which was covering the withdrawal of the rebel army, now concentrating in the passes of the South Mountain, which it was determined to hold. Before reaching the mountain Ferrero's brigade moved by a country road leading up to the summit on the left of the Sharpsburg pike. Upon encountering the enemy's lines the Seventeenth Michigan, a new regiment, full of enthusiasm, but little schooled in those cardinal virtues of the soldier imparted by veteran discipline, made a most gallant charge diagonally across the road from left to right, in the face of murderous fire, which swept the ranks at every step, and soon disappeared in the woods beyond. General Reno coming up soon after, and supposing that his regiment had established a line in the woods and was holding the ground it had so gallantly won, ordered Colonel Hartranft to lead his regiment across the open field in the rear of the supposed line, and close up to the edge of the woods. While the regiment was thus moving, and was stretched out upon the march unsuspicious of danger, the enemy suddenly opened upon it from the wood a most withering fire. The Seventeenth Michigan had advanced and driven the enemy, but had neglected to hold its advantage, and the rebels returning, had awaited until the Fifty-first was upon their bayonet ends, when they deliberately opened fire. The column was instantly drawn under cover of the wall that flanks the road, and soon after was deployed to the left of the road, under a fence that stretches at right angles to it. Fire was immediately opened upon the enemy, which was kept up until the ammunition was spent, when it was relieved by the Fifty-first New York, Colonel Potter, lying in close supporting distance. Returning again to the contest, fire was continued until the enemy, finding himself hard pressed on all sides and his position rendered insecure, fled under cover of darkness, and in the morning the columns advanced without opposition. General Reno was killed early in the contest.

The battle of Antietam opened on the afternoon of the 16th of September, General Hooker crossing Antietam Creek and attacking the enemy's left with great impetuosity and the most triumphant success, and was followed up on the morning of the 17th with even greater impetuosity by the commands of Mansfield and Sumner. In the mean time the left and centre of the Union line, stretching away towards the Potomac on the left bank of the creek, remained quiet spectators of the desperate encounter on the right. At nine o'clock on the morning of the 17th, when the struggle upon the right had been four hours in progress, General Cox, in command of the Ninth Army Corps since the fall of Reno, was ordered to advance and carry the stone bridge on the extreme left of the line, firmly held by the enemy. "The bridge itself is a stone structure of three arches, with stone parapet above, this parapet to some extent flanking the approach to the bridge at either end. The valley in which the stream runs is quite narrow, the steep slope on the right bank approaching to the water's edge. In this slope the road-way is scarped, running both ways from the bridge and passing to the higher land above by ascending through ravines above and below, the upper ravine being some six hundred yards above the bridge, the town about half that distance below. On the hill-side immediately above the bridge was a strong stone fence running parallel to the stream; the turns of the road-way were covered by rifle-pits and breast works made of rails and stone, all of which defenses, as well as the woods which covered the slope, were filled with the enemy's infantry and sharpshooters. Besides the infantry defenses, batteries were placed to enfilade the bridge and all its approaches."[1] Against this position, strong by nature, rendered doubly strong by art, the Eleventh Connecticut and Crook's brigade, supported by Sturgis' division, were ordered to the assault. As this force advanced up the open valley by the road

[1] General Cox's Official Report, Moore's "Rebellion Record," Docs. vol. v. p. 454–455

which leads along the river-bank to the bridge, it was exposed to so warm a fire from the opposite heights, alive with the enemy, that it was forced to halt and reply. Sturgis' troops reached the head of the bridge, and the Second Maryland and the Sixth New Hampshire charged at double-quick with fixed bayonets; but the concentrated fire of the enemy upon it forced them to fall back. After repeated efforts these regiments were withdrawn. Burnside, nettled at the failure of this attempt and the consequent delay of his columns, and knowing full well in whom he could trust, ordered forward the Fifty-first. General Ferrero dashing up to the regiment, said, "General Burnside orders the Fifty-first Pennsylvania to storm the bridge." Hartranft, avoiding the road by the river bank, led his men in rear of the heights overlooking the river until he arrived opposite the bridge, when he moved boldly down the slope for the crossing. The instant his men came into the open ground in the valley they received a withering fire from the enemy's well-posted infantry, and many fell. A fence skirting the road proved a serious impediment, and in crossing it the men were particularly exposed. Here fell Captains Bolton and Hart, severely wounded, a serious loss at this juncture. Unheeding the enemy's bullets or the obstruction, by the way, the column moved forward with a determined front, and made straight for the bridge. As they entered, a storm of missiles swept it, but no danger could stay that tide of living valor. Hartranft, who led the way, paused in the midst, and was hastening on the rear of his column when he was joined by Colonel Potter, with the gallant Fifty-first New York. With a shout that rang out above the noise of the battle the two columns rushed forward, and were soon firmly established on the thither bank. The bridge was carried!

A regiment was quickly advanced, and took position on the heights commanding the bridge and its approaches, driving out the enemy and rendering the crossing for infantry secure. The whole corps now advanced rapidly, took position on the heights above the bridge, and immediately advanced to the attack. The Fifty-first was posted on the second range of hills overlooking the creek, some distance below the bridge. Here it was soon hotly engaged with the enemy under cover of a stone wall and in a cornfield on its left. Its ammunition was soon exhausted, and a fresh supply failing to arrive as ordered, the men held their position with the bayonet until relief came. But all this struggle and costly sacrifice was vain. The enemy, relieved by the slackening of the battle on the left and the arrival of a fresh corps from Harper's Ferry, was enabled to concentrate an overwhelming force upon this single corps, and it was forced to yield. The loss of the regiment was one hundred and twenty-five. Among the killed was Lieutenant-Colonel Bell,[1] a most vigilant officer and most estimable man, and Lieutenants Beaver and Hunsicker. Of the wounded were Captains Bolton and Hart, Adjutant Shorkly, Quartermaster Freedly and Lieutenant Lynch. Upon the fall of Lieutenant-Colonel Bell, Major Schall was promoted to fill the vacancy, and Captain William J. Bolten, of Company A, was promoted to major.

Moving leisurely from the field of Antietam, the army crossed and again proceeded to the Rappahannock. General Burnside, now in chief command, determined to cross the river at Fredericksburg, and seek the foe beyond. Much delay was experienced in bringing up the pontoons, and when they were at length at hand, the enemy had concentrated in his immediate front, and stood ready to dispute the passage and contest the ground on the impregnable heights beyond. General Wilcox was now in command of the Ninth Corps, and on the afternoon of the 13th of December, the day on which the troops under Franklin had attacked on the left, it crossed the river upon the pontoons in front of the town, and advanced by the road leading to the left towards the heights. At a point intermediate between the heights and the town, the brigade, consisting of five regiments, under command of General Ferrero, was deployed to right and left under partial cover. Upon emerging from the town the troops were at once met by the enemy's fire. A steady fire was returned but with little effect, his lines lying close and securely behind his entrenchments. A lime-kiln marks the position where the brigade was deployed, whence it advanced gallantly, in face of a murderous fire, to a position on the left of the line occupied by the Second Corps. On the evening of the 14th, Sunday, one regiment, the Eleventh New Hampshire, was ordered forward on picket, and was hardly in position when Colonel Hartranft received orders to proceed with the remaining four regiments and relieve a division upon the skirmish line. On passing the neighborhood of a hospital some entrenching tools were discovered scattered about, and the men were ordered to take them forward. Arriving upon the

[1] "After crossing the bridge I took the regiment to the right and halted. When the regiment was re-formed I moved it from the bed of the road towards the creek, and rested while several other regiments passed up the road. Colonel Bell here came up to me, saying that more troops should be sent over. I replied, 'Well, go and see about it.' He went, but no farther than the bridge, and soon I saw him coming back on the bed of the road (which was now clear of troops), a few feet from the edge of the road nearest the water. When about thirty yards from the bridge I saw him struck on the left temple, as I at that time thought and now believe, by a canister shot. He fell backward and rolled off the road to within six feet of the water. He spoke freely, saying 'Never say die, boys;' 'Stand by the colors;' 'Take care of my sword.' He was immediately taken back to the Barn Hospital and examined by some surgeon (our own surgeons being at another hospital), who pronounced his wound not dangerous. Bleeding soon stopped. I directed Sergeant-Major Stoneroad to remain with him and take charge of his effects. I was under orders at this time to move forward, and could not leave the regiment. In little less than an hour after I received permission to go back to the hospital to see the colonel. I saw him (sergeant-major with him), but he did not recognize me. In an hour after he passed off calmly."—*Letter of General Hartranft.*

line they were directed to throw up a breast-work for their protection. This they at first refused to do, digging not having at this time become fashionable. The command was renewed and the men fell to work, and when they began to see the fruits of their labor they prosecuted it with a will, and by morning of Monday had a good line of works formed. This was the first experience of digging by the Fifty-first. Here the line was under a fierce infantry and artillery fire, and the men were obliged to hug closely their cover. But the enemy manifested no disposition to attack, and after remaining in position until the morning of Tuesday the brigade was withdrawn, and recrossed the river upon the pontoons, which were soon after taken up. The advantages in this engagement were all on the side of the enemy, the attacks in front of the town proving futile; but nevertheless the history of the war furnishes few instances where the mettle of the troops was more severely tested than in the blows aimed at the fastnesses of those frowning heights. The loss was twelve killed and seventy-four wounded.

On the 25th of March, 1863, the regiment was ordered to Fortress Monroe, where it joined the brigade, now consisting of the Fifty-first Pennsylvania, Fifty-first New York, Twenty-first Massachusetts and the Eleventh New Hampshire, and thence proceeded, with two divisions of the Ninth Corps, to Kentucky. At Cincinnati General Burnside met the troops, welcoming them to his new department and encouraging them to deeds of patriotic devotion. The regiment moved by rail to Paris, and was posted successively at Winchester, Lancaster, Crab Orchard and Stanford, principally engaged in holding the interior of the State against the invasions of the raiders Wheeler, Morgan and Pegram.

From Kentucky the corps, under the command of General Parke, was ordered to the support of Grant at Vicksburg. The Fifty-first broke camp on the 4th of June, and arrived in the rear of the great stronghold of the Mississippi on the 14th. Its camp was established in Mill Dale, where little of interest occurred until the 23d, when it was detailed to dig rifle-pits and cut away the woods for the protection of the rear against a rebel army under Johnston, now assuming a threatening attitude. Working-parties were relieved every two hours, and the duty was diligently prosecuted until miles of pits and field-works were constructed and whole forests slashed away. On the morning of the 29th the division was ordered to Oak Bridge, where it relieved a portion of McPherson's corps, and was again employed in fortifying. At ten o'clock on the morning of the 4th of July came intelligence of the fall of Vicksburg, and with it twenty one bags of mail matter for the division, of not less interest, for the moment, than the surrender.

The regiment accompanied Sherman in his campaign to Jackson, and on the 11th arrived upon the enemy's front. It was immediately placed in position on the left of the line in support of the Second Michigan, Colonel Humphrey. At eight o'clock on the morning of the 12th a heavy cannonade was opened on both sides, which was kept up during the entire day, the regiment suffering considerable loss. During the night the men were busy digging rifle-pits, at many points within a few yards of the rebel sentries. On the morning of the 14th, after three days and two nights of constant skirmishing and fatigue duty, the regiment was relieved and withdrawn to the rear of the Insane Asylum. On the 15th detachments from several regiments, embracing two companies, F and H, of the Fifty-first, all under command of Major Wright, of the Fifty-first New York, were sent to reconnoitre the left as far as the Pearl River, and ascertain if a crossing could be effected. By accident the command struck the river opposite to the point where the enemy's trains and reserved artillery were parked. The appearance of our troops in this quarter was reported to Johnston, who, supposing it to be a demonstration in force, and fearing for the safety of his army, at once commenced a retreat.[1] The city was occupied on the 18th, the regiment stacking arms in front of the State-House. Remaining two or three days to complete the work of destruction, Sherman marched back to Vicksburg.

The Ninth Corps now returned to Burnside's command, and went into camp in Kentucky, the Fifty-first leaving the railroad at Nicholasville, and taking post at Camp Nelson. Here it rested and refitted. The service in Mississippi had been very severe. Digging, felling forests and making forced marches under the burning suns of the south had broken down the health of many a strong man, and had induced fevers peculiar to that region. Colonel Hartranft fell a victim to their influence, and was for a long time prostrated. From Camp Nelson the regiment moved to Crab Orchard, where it received recruits, and thence marched across the mountains, *via* Cumberland Gap, to Knoxville.

Soon after its arrival it was ordered down the valley to Loudon, where preparations had been made for going into winter-quarters; but scarcely had it arrived when it was ordered back to Lenoir, where it remained several days. Here Colonel Hartranft, who had so far recovered as to take the field, rejoined the regiment, and immediately assumed command of the Second Division of the Ninth Corps. His arrival was opportune. Longstreet, cutting loose from Bragg at Chattanooga, was threatening Burnside with a force

[1] "All night Sherman heard the sound of wagons, but nothing that indicated evacuation, for the picks and shovels were at work till midnight; but at the dawn of day it became evident that the enemy had withdrawn across the Pearl River. The rebels had burned all the bridges in retreating and placed loaded shells and torpedoes on the roads leading out from the river. All the materials of war had been removed, in advance of the retreat, by means of the railroad running east."—"*Military History of U. S. Grant*," *Badeau, vol. i. p.* 396.

thrice his number, and had already arrived in the neighborhood of Loudon. Perceiving his advantage, the rebel chief pushed across the Tennessee, and put his columns in motion for Campbell's Station, a point where several important roads centre, with the design of reaching it in advance of Burnside's forces, and thus cutting off and capturing his whole command. In this he had the advantage of the shortest and most direct road. Burnside discovered his danger just in time to avert it. The Fifty-first was charged with moving Benjamin's heavy battery. The mud was very deep, and the roads, badly cut up by the trains, were next to impassable. All night long the regiment toiled through the mire to bring up the guns. The station was reached in advance of the enemy, and immediately proceeding out upon the Kingston road, Colonel Hartranft deployed his division across it, with his left thrown forward to cover the Loudon road, along which our army and trains were moving. Before these dispositions had fairly been made the head of the rebel column appeared. Held back for awhile by a few mounted infantry, Longstreet soon brought up heavy columns and opened a furious attack. This was met by a destructive and continuous fire from Hartranft's lines, which caused the enemy to recoil in confusion. Steadfastly holding his ground until the remainder of the army and all the trains had safely passed the threatened point, Hartranft withdrew his troops, regiment by regiment, and took position on the left of the new line of battle, which had been formed on a low row range of hills beyond the station. In the mean time Benjamin's battery, which had been brought safely in, took position and did most effective service, engaging and driving the enemy's artillery wherever it made its appearance. So much were the Union forces outnumbered, that the contest was waged with no hope of victory, but only to save the army and its material. Accordingly, successive lines of battle were taken up in advantageous positions, and each was held until forced from it, when the troops retired behind fresh troops that had occupied the next. In this way the enemy was held at bay until dark, when he rested, and Burnside's columns, under cover of darkness, were all brought off safely into Knoxville.

Here the troops were immediately put to fortifying. Ferrero, with the First Division, held the left of the line, with the river upon his flank, and Fort Sanders, an earth-work mounted with Benjamin's guns, in the centre. Hartranft held the right, his line crossing the principal road leading from Cumberland Gap to Knoxville. Upon his right was a mill fed by a small stream. Across this a heavy dam was built, which flooded the ground for a considerable distance around. Upon this lake the right of the line rested securely. For many days the work of fortifying was prosecuted without cessation. Fortunately, Longstreet delayed his attack until the works were completed and the army was secure. But the troops were exposed to a danger more imperious and fatal than rebel bullets. It was hunger. During all the hardships of the siege the men had been compelled to subsist on meagre rations of a quality hardly capable of sustaining life. The days were counted when even these would fail. Fortunately, before they were numbered, Grant, having relieved the army at Chattanooga from its toils, sent a powerful force under Sherman to the support of Burnside, and the siege was raised.

Trains soon after arrived with provisions, and pursuit of the enemy was at once commenced. In this the Fifty-first joined, and came up with the rebel rear-guard at Rutledge, in the valley of the Holsten, where skirmishing ensued. Here the pursuit was stayed, and the regiment retired to the neighborhood of Blaine's Cross-Roads, where it went into winter-quarters. Still only meagre supplies of food and clothing were received, and the troops suffered much. On the 5th of January the regiment re-enlisted for an additional term of three years, and received orders to commence the homeward march. Poorly clad and short of rations, the men braved the perils of a wintry march across the mountains of East Tennessee, and after enduring untold sufferings and hardships by the way, finally arrived at Camp Nelson, where abundant supplies of food and clothing were received. Pausing a few days at Cincinnati for the preparation of the company rolls, the regiment proceeded to Harrisburg, where it received a veteran furlough. Upon his arrival at Norristown, Colonel Hartranft and the five companies from Montgomery County received a flattering ovation, in which the speaker upon the occasion, Mr. B. E. Chain, said: "It is to you, colonel, that the regiment owes the character it bears. Your discipline in the camp, your foresight on the march, your coolness, bravery and judgment on the battle-field, have won the confidence and love of your men, and made them heroes in the fight. They knew that you never ordered where you did not lead."

So popular was the regiment at home that it was soon recruited to more than the maximum strength, and upon the expiration of the veteran furlough rendezvoused at Annapolis, Md., where the Ninth Corps was assembling. It was here assigned to the First Brigade of the First Division, consisting of the Fifty-first Pennsylvania, the One Hundred and Ninth New York and the Second, Eighth, Seventeenth and Twenty-seventh Michigan, Colonel Hartranft in command, Lieutenant-Colonel Schall leading the regiment.

Upon the opening of the spring campaign under Grant the Ninth Corps broke camp, and moving through Washington, where it was reviewed by the President, joined the army, and on the 5th of May crossed the Rapidan. It immediately moved to the front and took position between Hancock and Warren. Hartranft's brigade was upon the centre of the line, and it was with considerable difficulty that it could be got into position. Captain Hart, who was

now serving upon the staff of the colonel, was ordered to go forward until he found the enemy's skirmishers. Pushing through the thick growth of pines, the first intimation he received of an enemy's presence was a rebel bullet whistling by his ears. The brigade was now led in by regiments, the men creeping through the dense undergrowth as best they could. "The advance was made," says Colonel Hartranft in his official report, "with great difficulty, on account of the woods and underbrush, which were on fire. I formed my line, making nearly a right angle facing south and east. The enemy was in force in front of my left. While in this position I received orders from Major-General Burnside to advance and carry the enemy's works. I ordered the advance at ten A. M., holding the Second Michigan in reserve and directing the Seventeenth Michigan to watch well the right flank. The lines moved forward, and I carried the enemy's works and held them for a moment, until a panic seized the left, which brought the whole line back in confusion. I immediately advanced skirmishers from the Second and Seventeenth Michigan, also moved the Seventeenth more to the left, and on these regiments re-formed my line. In this charge many prisoners were taken from the enemy, but lost perhaps an equal number." In the afternoon the brigade again advanced, but encountered stern resistance, and lost many in killed and wounded. On the 7th the line was again moved forward, breast-works were thrown up and considerable skirmishing ensued.

On the morning of the 9th the brigade was withdrawn and moved to the Ny River, where the enemy was soon found. A crossing was effected on the 12th, and the rebels, after a stern resistance, were driven back. In this engagement six companies of the Fifty-first were deployed as skirmishers, supported by the remaining four, and gallantly carried the wooded heights in their front, compelling the enemy to burn a house in which he had taken shelter, and retire. To date from this battle, Colonel Hartranft was promoted to brigadier-general, Lieutenant-Colonel Schall to colonel, Major Bolton to lieutenant-colonel, and Captain Hart to major. From the 12th to the 18th the line of the brigade remained substantially unchanged, the enemy hugging closely their works, ready at any moment to repel an attack. Upon the withdrawal of the brigade from the position occupied on the 27th a few men, belonging to the Fifty-first, engaged upon the picket line, could not be brought in, and fell into the hands of the enemy. A succession of movements by the left flank brought the brigade to Cold Harbor on the 1st of June. At six o'clock on the morning of the 3d the brigade advanced with orders to retake the line from which the enemy had driven our troops on the previous day. Potter's division advanced at the same time on the right. In the face of a terrific fire of infantry and artillery, the lines rushed forward, routed the enemy, and were soon well established within two hundred yards of his main line, where, in a re-entrant angle of his own works, he had four guns. These proved of little value to him, as they were so closely watched by our sharpshooters that it was impossible for the gunners to work them. In this charge, at the head of his column, Colonel Schall was killed, and was succeeded in command by Lieutenant-Colonel Bolton. The loss here, as in the preceding battles of the campaign, was very heavy, but for want of data cannot be given.

Crossing the Chickahominy and the James, the Ninth Corps arrived in front of Petersburg on the 17th, and at once engaged the enemy. General Hartranft's brigade made a most gallant charge in face of a galling fire of the rebel artillery, suffering heavy loss.

On the following day it was again engaged upon the railroad cut in front of the locality afterwards selected for the mine, and gained a position in close proximity to the enemy's works, which was held and fortified. So close to the rebel line was this position that it required unceasing vigilance to hold it, and for seventeen successive days and nights an unceasing fire of musketry was kept up, one-third of the men being constantly employed. After a few days' respite it was again returned to the vicinity of its old position, where it remained until the explosion of the mine. On the day previous it was relieved and ordered to form part of the storming column. When the explosion took place it advanced, and two companies had reached the brink, when General Hartranft, who was in the crater, finding that more troops were already in than could be used, ordered it back. In this perilous advance Colonel Bolton was severely wounded, and the command devolved on Major Hart. The brigade was again put upon the line fronting the crater, where it remained for a few days, when it was relieved and passed to the rear out of harm's way. Here it remained in camp until the 19th of August, when it was ordered to the support of Warren, on the Weldon Railroad. Crawford's division formed the connecting link between Hancock and Warren, a distance of a half mile. Upon this the enemy fell in heavy force and captured the greater portion of it, making a dangerous gap, and exposing Warren to imminent peril. Hartranft, who was lying in supporting distance, and judging by the sound of battle that our forces had been dispersed, though not under orders, magnanimously moved to the rescue, and by interposing his brigade and by stubbornly holding his ground, saved the day. A permanent lodgment was thereby made upon the Weldon road, which had been one of the enemy's chief lines of supply.

In the subsequent operations of the brigade the Fifty-first, under command of Colonel Bolton, participated, engaging the enemy at Poplar Spring Church, at Ream's Station, at Hatcher's Run and in the final attack on the 2d of April, which resulted in the evacuation of Richmond. On the 27th of July, after four years of arduous service, extending over the whole

line from the Atlantic to the Mississippi, it was mustered out of service at Alexandria, Va.

FIELD AND STAFF OFFICERS.

John F. Hartranft, col., must. in July 27, 1861; pro. to brig.-gen. June 8, 1864; to brevet maj.-gen. March 25, 1865.

William J. Bolton, col., must. in Aug. 16, 1861; pro. from capt. Co. A to maj. Sept. 17, 1862; to col. June 26, 1864; to brevet brig.-gen. March 13, 1865; must. out with regiment July 27, 1865.

Thomas S. Bell, lieut.-col., must. in July 27, 1861; killed at Antietam Sept. 17, 1862.

Edwin Schall, lieut.-col., must. in July 27, 1861; pro. from maj. to lieut.-col. Sept. 17, 1862; killed at Cold Harbor, Va., June 3, 1864.

William Allebaugh, lieut.-col., must. in Aug. 16, 1861; pro. from capt. Co. C to lieut. col. April 23, 1865; to brevet col. March 13, 1865; must. out with regiment July 27, 1865.

Lane S. Hart, maj., must. in Sept. 2, 1861; pro. from capt. Co. F to maj. July 21, 1864; disch. Dec. 17, 1864, for wounds received at Weldon Railroad Aug. 19, 1864.

Joseph K. Bolton, maj., must. in Aug. 16, 1861; pro. from capt. Co. A to maj, Jan, 15, 1865; must. out with regiment July 26, 1865.

Daniel P. Bible, adjt., must. in Oct. 30, 1861; res. June 5, 1862.

George Shorkley, adjt., must. in Nov. 16, 1861; pro. from 1st lieut. Co. H to adjt. June 6, 1862; to capt. Co. H April 22, 1864.

Martin L. Schock, adjt., must. in Sept. 9, 1861; pro. from 2dl ieut. Co. E to 1st lieut. and adjt. May 2, 1864; disch. Nov. 2, 1864, for wounds received in action.

Jacob H. Santo, adjt., must. in Nov. 16, 1861; pro. from 2d lieut. Co. H to 1st lieut. and adjt. Jan 15, 1865; mustered out with regiment July 27, 1865.

Adam Wentzel, must. in Oct. 16, 1861; must. out with company July 27, 1865; veteran.
Howard Wilson, must. in Feb. 26, 1864; must. out with company July 27, 1865.
William S. Wicks, must. in Feb. 29, 1864; must. out with company July 27, 1865.
Jonathan Wisler, must. in Oct. 16, 1861; must. out with company July 27, 1865; veteran.
George D. Williams, must. in Oct. 16, 1861; must. out with company 27, 1865; veteran.
James Wyatt, must. in Jan. 25, 1865; must. out with company July 27, 1865.
Samuel D. Weidner, must. in Oct. 16, 1861; disch. by G. O. June 25, 1865; veteran.
Alexander Woodward, must. in Sept. 27, 1864; drafted; disch. by G. O. June 2, 1865.
Henry White, must. in Oct. 16, 1861; died at Washington, D. C., of wounds received in action, July 5, 1864.
Charles Wagoner, must. in Feb. 15, 1864; killed at Petersburg, Va., March 25, 1865; buried in 9th Army Corps Cemetery Meade Station, Va.
Mark Widger, must. in Oct. 16, 1861; disch. on surg. certif. Oct., 1862.
William White, must. in Oct. 16, 1861; disch. on surg. certif. Feb. 28, 1863.
William Workizer, must. in Oct. 16, 1861; trans. to regimental band, Nov. 16, 1861.
William Wise, must. in Oct. 16, 1861; died Nov. 1862.
Joseph C. Young, must. in Oct. 16, 1861; must. out with company July 27, 1865; veteran.
John M. Young, must. in Oct. 16, 1861; drowned by sinking of West Point, Oct. 26, 1862.

Below are the battles in which the Fifty-first Pennsylvania Veteran Volunteers participated from its first entrance on the field to its retirement from camp-life,—

Roanoke Island, February 7 and 8, 1862; Newbern, N. C., March 13 and 14, 1862; Camden, N. C., April 19, 1862; Bull Run, Va., August 29 and 30, 1862; Chantilly, Va., September 1, 1862; South Mountain, September 14, 1862; Antietam, September 17 and 18, 1862; Fredericksburg, December 12, 13 and 14, 1862; Vicksburg, Miss., June 16 to July 4, 1863; Jackson, Miss., July 8 to July 18, 1863; Campbell's Station, Tenn., November 16, 1863; Knoxville, Tenn., November 17 to December 5, 1863; Wilderness, Va., May 6, 1864; Spottsylvania, Va., May 12 to 14, 1864; Cold Harbor, Va., May 31 to June 8, 1864; Petersburg, Va., June 16 to August 18, 1864; Yellow Tavern, Va., August 19, 1864; Weldon Railroad, Va., August 21, 1864; Hatcher's Run, Va., October 27, 28 and 29, 1864; Petersburg, November 29, 1864, to April 2, 1865.

Skirmishes.—Kelly's Ford, 1862; Rappahannock, 1862; Warrenton, 1862; Sulphur Springs, Va., November 16, 1862; Sulphur Springs, August 24, 1862; Upperville, Va. 1862; Fairfax Court House, 1862; Big Black, Miss., July 6, 1863; Jackson, Miss., July 7, 1863; Loudon, Tenn., November 15, 1863; Lenoir, Tenn., November 15, 1863; Rutledge, Tenn., December 16, 1863; Blain's Cross-Roads, December 8, 1863; Poplar Grove Church, 1864; Bethesda Church, 1864; Peeble's Farm, 1864; Ream's Station, 1864; Weldon Railroad, 1864; besides a large number of minor importance, of which there are memoranda.

Below is a perfectly reliable statement of the distances traversed by the Fifty-first Pennsylvania Veteran Volunteers, by marches, transports and railway, as taken from a diary,—

From Bridgeport to Harrisburg, 95 miles; from Harrisburg to Annapolis, Md., 123 miles; from Aquia Creek to Fredericksburg, 15 miles; from Bealton to Culpepper Court House, Va., 15 miles; from Fredericksburg to Aquia Creek, 15 miles; from Baltimore, Md., to Paris, Ky., 778 miles; from Nicholasville, Ky., to Cairo, Ill., 508 miles; from Cairo, Ill., to Nicholasville, Ky., 508 miles; from Knoxville to Loudon, Tenn., 28 miles; from Nicholasville, Ky., to Bridgeport, Pa., 789 miles; from Bridgeport, Pa., to Harrisburg, Pa., 95 miles; from Harrisburg to Annapolis, Md., 123 miles; from Washington, D. C., to Harrisburg, 124 miles; from Harrisburg to Bridgeport, 95 miles: total by rail, 3311 miles. By transports from Annapolis to Fortress Monroe, thence to Roanoke Island, to Newbern, to landing at Albemarle Sound, back to Newbern, to Hatteras Inlet, back to Newbern, to Newport News, to Aquia Creek, to Baltimore, from Cairo to Vicksburg and back to Cairo, from City Point to Washington, from Washington to Alexandria: total, 5390 miles. By marches, total, 1738 miles; by water, total, 5390 miles; by railway, total, 3311 miles,—aggregate, 10,439 miles.

NOTE 1.— "HEADQUARTERS DEPARTMENT OF THE TENNESSEE,
"VICKSBURG, MISS., July 31, 1863.

"In returning the Ninth Corps to its former command, it is with

pleasure that the general commanding acknowledges its valuable services in the campaign just closed. Aiming at Vicksburg, opportunely taking position to hold at bay Johnston's army, then threatening the forces investing the city, it was ready and eager to assume the aggressive at any moment.

"After the fall of Vicksburg it formed part of the army which drove Johnston from his position near the Big Black River into his intrenchments at Jackson, and after a siege of eight days compelled him to fly in disorder from the Mississippi Valley.

"The endurance, valor and general good conduct of the Ninth Corps are admired by all, and its valuable co-operation in achieving the final triumph of the campaign is gratefully acknowledged by the Army of the Tennessee.

"Major-General Parke will cause the different regiments and batteries of his command to inscribe upon their banners and guidons 'Vicksburg and Jackson.'

"By order of

"MAJOR-GENERAL U. S. GRANT.

"T. S. BOWERS, *A. A. Adjutant-General.*"

NOTE 2.—A hidden fellowship always lurked under the blue and gray. The following episode between the pickets on the line of the Rappahannock by men of the Fifty-first illustrates the fact:

"The best of feeling was expressed by both parties, and if a stray hog should by chance come within sight both Reb and Yank would start off in pursuit of the porker, and catch and slaughter it, and then divide it equally between them with many jocular remarks about the mode of living that each army was subject to. The commencement of cessation of hostilities by both sets of pickets began with hallooing to each other, then with the poking up of heads above their rude breastworks, and then by exposing themselves outside of the works, finally feeling some confidence in each other, and no shots being fired along either line, they began by advancing towards one another. Between the two picket-lines flowed a stream of water; this was the Rappahannock of the two parties; when both parties met near the stream the following introductory remarks took place, the Rebs asking:

"'Hallo, Yanks, what regiment?'

"*Yank*—'The Fifty-first Pennsylvania.'

"*Reb*—'D— good boys, too.'

"*Yank*—'Say, Johnnies, what regiments?'

"*Reb*—'Eighty-eighth Tennessee, Second Georgia and Fourth Mississippi.'

"*Yank*—'We've met you chaps before.'

"*Reb*—'Yes, several times; come across the creek.'

"*Yank*—'Can't see it; will you reach your hand out?'

"*Reb*—'Yes, here; give us your hand; now, jump!' and over one went, and in a few minutes the Fifty-first boys were on the rebel side, and in return the rebels came over to our side, and all the civilities of an enlightened race were extended to one another.

"The pickets of both lines made a treaty between themselves not to fire a gun at each other during that relief, which would be until four o'clock the next morning, and with true faith was it carried out, although the flag of truce expired at 5 P.M. There was not a solitary shot fired until the next relief was put on the next morning."

Colonel Bolton made a farewell address to his command in the following order, as published to the regiment:

"HEADQUARTERS 51ST REGT. P. V. V.
"ALEXANDRIA, VA., July 26, 1865.

"*Officers and men of the 51st Regt. Penn. Vet. Vols.:*

"In a very few days this organization will cease to exist. Our mission has been fulfilled, the armed hosts of the enemy no longer defy us, our long, fatiguing marches and hard fighting and weary watching for the enemy, day and night, are things of the past. You have, by your patriotic devotion, assisted in establishing a country, one, grand, glorious and indeed free. For nearly four years I have been associated with you, and for over one year of that time I have had the honor to be your commander. I would not be doing myself or you justice without giving expression to my feelings. A thousand thanks are due to both officers and men for your prompt obedience to all my orders, and my love is increased by the remembrance of your bravery and gallantry, as you have so often displayed on many a bloody field. But, alas! many of our organization now sleep in the valley of the dead; they sleep in honored graves. And it is with pleasure that we can think of their many virtues, their valor in the field, and their cheerful voice in camp, and hope that they have received their golden reward in heaven. When all looked gloomy, you wore cheerful faces; and when orders were exacting, you always cheerfully obeyed. When fighting against overwhelming odds, and by superior numbers compelled to retreat, you have ever evinced that noble, praiseworthy characteristic of a good soldier, 'repulsed, but not whipped,' 'defeated, but not conquered.' I feel sad to part with you; we may never meet again. You are about to return to your homes, and assume the garb and customs of private citizens. I am a young man; there are amongst you many who are old enough, perhaps, to be my father; time has whitened your hoary locks. I cannot part with you without urging that if you have acquired bad habits, incidental to camp life, to make a firm resolve to break off at once, and show to your friends at home that you can be as good and law-abiding citizens as you have been good, brave and exemplary soldiers.

"I need not particularize separately your many deeds; they all have been fairly won. The record you bear on your silken colors have been honestly won by the blood of your companions and the deep scars many of you bear upon your persons. You need no marble shaft to commemorate your many valorous deeds; your scars, your sacrifices and the noble acts of gallantry you have displayed will be your monument. Posterity will applaud you as the redeemers of our country, the world will admire your self-sacrificing devotion to your country.

"I now bid you farewell, and when the war of this life is over with us, when we shall have performed our last earthly mission, may we all meet in heaven is the earnest prayer of the colonel commanding.

"With my kindest wishes for your future prosperity, I bid you farewell.

"WM. J. BOLTON, *Colonel Fifty-first P. V. V.*"

Fifty-third Regiment Pennsylvania Volunteers.—On the 21st of August, 1861, John R. Brooke, of Pottstown, Montgomery Co., was commissioned colonel of the Fifty-third Regiment. He had served as captain of the Fourth (three months') Regiment. Recruiting was immediately commenced, and on the 28th of September the first company was mustered into the service of the United States. Company A was recruited in Pottstown, B in Chester and Montgomery Counties, C in Blair and Huntingdon, D in Centre and Clearfield, E in Carbon and Union, F in Luzerne, G in Potter, H in Northumberland, I in Juniata and K in Westmoreland. During the period of its organization it occupied Camp Curtin, and while here did provost guard duty in Harrisburg. The following field officers were selected: John R. Brooke, colonel; Richard McMichael, of Reading, Berks Co., lieutenant-colonel; and Thomas Yeager, of Allentown, Lehigh Co., major. Charles P. Hatch, of Philadelphia, was appointed adjutant.

On the 7th of November it moved to Washington and encamped north of the capitol. On the 27th it crossed the Potomac, went into camp near Alexandria, and was assigned to a brigade commanded by General William H. French. It remained here during the winter of 1861–62, and was constantly drilled and disciplined in the routine of a soldier's duty, It participated in the general advance of the Army of the Potomac in March, 1862, arriving at Manassas Junction, which had been evacuated by the rebels on the 12th.

On the 21st it was marched to Warenton Junction to support a reconnoissance of Howard's brigade, which was being pushed towards the Rappahannock. The object having been accomplished, on the 23d it returned to Manassas and from thence to Alexandria. Upon the reorganization of the army

the regiment was assigned to the Third Brigade,[1] First Division, Second Corps. On the 3d of April it was transferred with McClellan's army to the Peninsula, and formed part of the reserve division during the siege of Yorktown.

The enemy having retreated, on the 4th of May the regiment marched to Yorktown, and late on the afternoon of the same day moved through a pelting storm of rain towards Williamsburg. It was ordered back on the 6th and remained until the 12th, when it was transported to West Point, at the head of York River. Later in the month it assisted to build the grape-vine bridge across the Chickahominy. The regiment took a prominent part in the engagement at Fair Oaks on the 1st of June, where, though surprised and thrown into temporary confusion, it rallied and in a short time forced the enemy from his line. Its conduct on this occasion was such as to elicit the commendation of the generals commanding. It suffered a severe loss in the death of Major Yeager, who was killed in the early part of the action while gallantly leading his men. The regiment lost ninety-six men in killed, wounded and missing.

It bivouacked upon the battle-ground and supported a battery in position on the York River Railroad. On the 27th it moved to the right, where a deadly conflict was raging, and was thrown forward to the assistance of Porter's troops. It crossed the Chickahominy and came under fire of the enemy at Gaines' Mill. Forming in line of battle, the command covered the withdrawal of the troops, and at midnight silently recrossed the Chickahominy. Here began the memorable "change of base," in which it was the arduous duty of Sumner's corps to cover the rear of the retreating army. The post of honor and of danger—the rear of the rear-guard—was assigned to the Third Brigade. At Peach Orchard, on the 29th, it participated in a fierce engagement, in which a number of casualties occurred, but none were killed. Immediately after the close of the action General Sumner rode up and complimented the regiment for its bravery, saying, "You have done nobly, but I knew you would do so." Moving to Savage Station, Sumner made another stand to check the enemy. The regiment occupied a position in a wood, parallel to the railroad, and was fortunately favored by the high-ranged shot and shell of the rebel artillery. After a short but desperate encounter the enemy withdrew, and at midnight the line of retreat was silently resumed.

The march now began to test the endurance of the troops, and the situation became one fraught with peril. One small brigade, standing fearlessly alone in midnight darkness, was holding in check, almost at the point of the bayonet, one-half the rebel army, while friends from whom no succor could be expected were swiftly moving to the rear. Silently the command plunged into the deep shadows of White Oak Swamp. At daylight the regiment reached White Oak Creek, beyond which was its corps in bivouac. Crossing the creek, it immediately began destroying the bridge. The advance of the enemy soon made its appearance, and commenced skirmishing, but was prevented from crossing the stream. Several of his batteries having been placed in position, opened fire and were very annoying. Although not actively engaged, the regiment had several killed and wounded.

Withdrawing at midnight, the Fifty-third arrived at Malvern Hill on the morning of July 1st, and was almost constantly under fire, although it did not participate in the engagement. The duty assigned to it, in the retreat from the Chickahominy to the James, was of such an important nature as to merit and receive the thanks of the commanding general as well as of the intermediate commanders, and Colonel Brooke was highly complimented for the skillful and soldierly qualities displayed in conducting his command successfully through so many perils. Arriving at Harrison's Landing the regiment remained until the 16th of August. Here the Sixty-fourth New York was temporarily attached to the Fifty-third for the purposes of drill, discipline and camp duty, all under command of Major Octavius S. Bull, who had been promoted to fill the vacancy occasioned by the death of Major Yeagher, Colonel Brooke being in command of the brigade and Lieutenant Colonel McMichael absent on account of sickness.

Moving *via* Yorktown to Newport News, it embarked for Alexandria, where it arrived on the 28th, and encamped on the following day at Lee's Farm, near the Aqueduct Bridge. The cannonade of the contending forces at Bull Run was distinctly heard, and the men were eager to again meet the foe. At two A.M. of the 30th, in light marching order, the command moved towards Centreville. But the battle had been fought, and Pope's army was retreating to the defenses of Washington. Reaching Centreville on the 31st, it was promptly deployed in line of battle, protecting the exposed flanks of the Union army. Here again Sumner's corps was interposed between the enemy and our retreating troops. Near Vienna the regiment, and one section of a battery were thrown forward on the Leesburg turnpike to guard the flank of the column against any sudden attack of the enemy. A force of rebel cavalry made a dash upon the Union troops between the pike and Chain Bridge, entirely separating the regiment from the main column. Colonel Brooke, seeing the danger and the difficulty of cutting his way through, moved his command at double-quick down the pike and thereby insured its

[1] Organization of the Third Brigade (Brigadier-General William H. French), First Division (Major-General Israel B. Richardson), Second Corps (Major-General E. V. Sumner).—Fifty-third Regiment Pennsylvania Volunteers, Colonel John R. Brooke; Fifty-second Regiment New York Volunteers, Colonel Frank Paul; Fifty-seventh Regiment New York Volunteers, Colonel Samuel K. Zook; Sixty-sixth Regiment New York Volunteers, Colonel James C. Pinckney; Second Regiment Delaware Volunteers, Colonel Henry W. Wharton; Battery B, First New York Artillery, Captain Rufus D. Pettit.

safety before the enemy discovered the manœuvre. On the 3d of September it rejoined the army at Tenallytown. On the 11th, General French, who had endeared himself to the troops of his brigade, was assigned to the command of a division, and was succeeded by Colonel Brooke.

The enemy was now marching into Maryland, and the Third Brigade moved rapidly through Washington to Frederick, and thence to South Mountain, where it was held in reserve during the battle. On the 15th it moved in pursuit, skirmishing during the morning with the enemy's cavalry, drove him through Boonesboro' and Keedysville, and encountered his army in strong force on the highlands beyond Antietam Creek. The following day was occupied chiefly in manœuvring for position, the regiment being under artillery fire and suffering some casualties. At four A.M. of the 17th the regiment left its position on the Keedysville road, and moving a mile to the right, crossed Antietam Creek at a ford. It occupied the extreme right of the division. In front was the "sunken road" occupied by the enemy's first line. His second line was protected by a stone wall on the hill beyond. To the right and rear was an orchard, immediately in front of which was the cornfield where, subsequently, the battle raged with great fury. It was important to drive the enemy from this position, and the Fifty-third was chosen for the charge. Changing front to the rear, and advancing at double-quick, in a short but desperate contest it drove him from his well-chosen ground. The regiment was subsequently engaged in the hottest of the fight and shared the varying fortunes of the day. The position gained was of great importance, and was held with tenacity until the regiment was ordered to the support of a battery. Lieutenant Weaver, of Company K, a brave young officer, was mortally wounded. The loss in killed and wounded was twenty-eight.

On the 22d it forded the Potomac at Harper's Ferry, and encamped on the following day on Bolivar Heights. Here the wasted energies of the troops were recruited, and full rations and clothing, which had been much needed, were furnished. On the 16th of October it participated, under command of Major Bull, in a reconnoissance to Charlestown, skirmishing with and driving the enemy and occupying the town. Captain Mintzer, of Company A, was appointed provost-marshal of the place, who at once instituted a search, and captured a number of prisoners. The object of the reconnoisance having been accomplished, the command returned to camp. Moving from Bolivar Heights on the 30th of October, it crossed the Shenandoah River, and proceeded down the Loudon Valley, participating in a skirmish with the enemy on the 4th at Snicker's Gap, driving him out and occupying it until the column had passed. It arrived at Warrenton on the 9th, when General Burnside assumed command of the Army of the Potomac, and projected the movement upon Fredericksburg. The regiment proceeded to Falmouth, where it arrived on the 19th, and performed provost guard duty until the 11th of December, when it left quarters and took position nearly opposite Fredericksburg in support of the batteries that were engaged in bombarding the town. Early on the 12th it crossed the river, and, forming a skirmish line, drove the enemy's sharpshooters out of the city, with the loss of one mortally wounded, when it was relieved, and rested for the night on the river-bank. Early on the morning of Saturday, the 13th, under a dense fog, the regiment marched into the city and halted for half an hour under fire of rebel artillery. The fight was opened at the front, near Marye's Heights, by French's division, which was repulsed. Soon after the Third Brigade, led by the Fifty-second, moved, amidst a shower of deadly missiles, by the right flank, up St. Charles Street, and formed in line of battle along the edge of the town. The rebel infantry, but a few hundred yards in front, was protected by a stone wall along a sunken road, while, immediately above, the hill-tops were bristling with cannon. At the word of command, Colonel Brooke, at the head of his regiment, led the charge, under a storm of shot and shell that swept the ranks with terrible effect. But, undismayed, they closed up and pressed steadily on till they reached a position within one hundred and fifty yards of the enemy's lines, which was held, despite every effort to dislodge them, even after their ammunition was spent. At evening, when the battle was over and the day was lost, what remained of the regiment retired silently from its position and returned to the city. It went into battle with two hundred and eighty-three effective men. Of these, one hundred and fifty-eight were either killed or wounded. Among the former were Lieutenants Cross, McKiernan and Kerr, and the latter, Captains Coulter and Eichholtz and Lieutenants Potts, Root, Hopkins and Smith.

The regiment now returned to its old position as provost guard to Falmouth. On the following week it formed part of a detachment, under command of Colonel Brooke, that crossed the river, under a flag of truce, for the purpose of burying the dead. During the two days occupied in this work nine hundred and thirteen were interred and six were dispatched to their friends. The rebel soldiers had stripped the bodies of the dead in a most heartless manner. In many cases fingers were cut off to get possesion of rings. The Fifty-third remained at Falmouth until February 1, 1863. While here three companies, under command of Major Bull, were detailed as provost guard at division headquarters. The major was assigned to the staff of General Couch, and remained successively with Generals Couch, Hancock, Hays, Warren, and again with Hancock in the Wilderness campaign, until the 18th of May, 1864.

On the 28th of April the regiment moved on the Chancellorsville campaign, and, crossing the Rappa-

hannock at United States Ford, for three days was actively engaged, suffering considerable loss. Upon the withdrawal of the army it returned to its old camping-ground near Falmouth. On the 14th of June the Fifty-third, which was now attached to the Fourth Brigade of the First Division of the Second Corps, left camp, and marched to Banks' Ford to watch the movements of the enemy, who was about entering on his Pennsylvania campaign. Withdrawing from the ford when it was found that the rebel columns had passed, the command moved forward with the army, and on the 20th made a forced march to Thoroughfare Gap, where it remained in position until the 25th, when the enemy attacked, driving in the pickets, and, as our column had now passed, the command was withdrawn. Marching rapidly towards Gettysburg, it arrived upon the field at eight o'clock on the morning of the 2d of July, and took position in rear of the line of the Third Corps, then forming. Later in the day it moved to the left, near Little Round Top, and at three o'clock P.M. became hotly engaged. A rebel battery, posted upon an eminence beyond a wheat-field, had become very annoying to our troops. Colonel Brooke led a charge, in the face of its destructive fire, to capture it or drive it away. At the word of command the men dashed forward, and, with loud shouts, drove the enemy, scattering his ranks, and gained the position. The lines upon his right and left had failed to advance as far, and, discovering that the enemy was taking prompt advantage of his fearfully exposed flanks, the colonel reluctantly ordered his men to retire to his first position, which was executed, but not without serious loss. On the 3d the regiment was under a heavy artillery fire, but was not actively engaged. In this battle the command was much reduced in number, three companies being still on detached duty, and the remainder having but one hundred and twenty-four men. Of this number, only forty-five escaped uninjured. Six were killed, sixty-seven wounded and six missing. Of the latter were Captains Dimm and Hatfield and Lieutenants Pifer, Shields, Root, Smith, Whitaker and Mann and Sergeant-Major Rutter.

Remaining upon the battle-field until noon of the 5th, the regiment marched in pursuit of the retreating enemy, and arrived on the 11th at Jones' Cross-Roads, near which the rebel army was in position. In the evening it advanced in line, driving back the enemy's skirmishers, and during the following night threw up breast-works. On the 14th it was deployed in line at right angles to the Williamsport road, and advanced cautiously, only to discover that the Rebels had vacated their works and fled. After remaining for a few days in Pleasant Valley, it crossed the Potomac, and, marching down the Loudoun Valley, made descents upon Ashby's and Manassas Gaps, passed White Plains, New Baltimore and Warrenton, and arrived on the 1st of August at Morrisville, where it went into camp. In the toilsome campaigns which followed, ending at Mine Run, the regiment participated, encountering the enemy at Rappahannock Station and at Bristow, and losing some men. It went into winter-quarters at Stevensburg, where the men re-enlisted, and on the 27th of December proceeded to Harrisburg, where they were dismissed for a veteran furlough. Upon their return to the army they again encamped near Stevensburg, in their old quarters, where they remained until the opening of the spring campaign.

On the 4th of May, 1864, the regiment broke camp, and, crossing the Rapidan at Ely's Ford, marched to Chancellorsville. On the following day it moved forward and confronted the enemy in his earth-works, and again on the 6th was engaged, but without serious loss. At evening of the 9th it moved forward to the Po River, which it crossed, and at once met the enemy, the contest being continued with spirit for several hours, resulting in considerable loss to the command, but, owing to the woods and undergrowth taking fire from the explosion of the shells, without any decided advantage. Late on the evening of the 11th, withdrawing from its position on the Po, it proceeded about six miles towards Spottsylvania.

There, on the following morning, it stood in column in readiness to join in the grand charge of the veteran Second Corps upon the strongly fortified position of the enemy. Advancing silently until within a short distance of his works, the well-formed lines rushed forward with wild hurrahs, and, in face of the desperate defense offered, carried the position, capturing an entire division. No more brilliant or decisive charge was made during the campaign than this. Captain Whitney and Lieutenant Foster were among the killed. Colonel Brooke was promoted to brigadier-general soon after this engagement, Major Bull to lieutenant-colonel, and Captain Dimm to major; subsequently, upon the muster out of service of the latter, Captain William M. Mintzer was made major.

The regiment remained in the vicinity of Spottsylvania, throwing up earth-works at different points and almost constantly under fire, until the 25th of May, when it crossed the Pamunkey, thence to Tolopotomy Creek, and on the 2d of June arrived at Cold Harbor. It was pushed close up to the enemy's entrenched line and immediately threw up breast-works. At five o'clock on the morning of the 3d a furious but futile effort was made to drive the enemy from his position. Two other gallant charges were made, wherein men never marched to death with stouter hearts; but all in vain. In these charges the Fifty-third suffered severely. General Brooke, commanding the brigade was severely wounded by a grape-shot in the hand and thigh. Captain Dimm and Lieutenant Pifer were also severely wounded.

On the night of June 12th the regiment marched, and, crossing the Chickahominy and James Rivers arrived on the evening of the 16th in front of Peters-

burg. In the afternoon a charge was ordered upon the enemy's strong works, which was gallantly executed, but was repulsed, the Fifty-third losing in this desperate struggle nearly seventy men, On the 22d an attempt was made to establish a new line, which proved alike unsuccessful. For several weeks digging and the construction of defensive works constituted the principal occupation of the troops.

On the 26th of June the regiment moved with the brigade to the right of the line, beyond the James River, and for two weeks was engaged in promiscuous skirmishing along the rebel works, after which it returned to the neighborhood of Petersburg. On the 12th of August the command again returned to the left bank of the James, where it skirmished heavily with the enemy until the 21st, when it recrossed the James and the Appomattox, and, passing in rear of the army to the extreme left of the line, commenced demolishing the Weldon Railroad, near Ream's Station. Five miles had already been destroyed when the enemy appeared in force, and a line of battle was hastily formed to repel his advance and protect the working-parties. His first charge was gallantly repulsed. But reforming and massing his troops in heavy columns, he again struck with overpowering force upon the Union lines, and was partially successful in breaking them. But his advantage was gained at a fearful cost, and he was finally forced to abandon the contest, and the Union forces retired to their lines in front of Petersburg. During the autumn and winter months the regiment was engaged in severe duty in the front lines before the besieged city. On the 18th of September, Colonel McMichael having been discharged upon the expiration of his term of service, Lieutenant-Colonel Bull was promoted colonel, Major Mintzer lieutenant-colonel, and Captain Philip H. Shreyer major. In November, upon the muster out of service of the colonel, Lieutenant-Colonel Mintzer was made colonel, Captain George C. Anderson lieutenant-colonel, and Captain George D. Pifer major.

On the 28th of March, 1865, the regiment moved on its last campaign, proceeding directly to the Boydton Plank-Road, where, on the 31st, it was briskly engaged. The Fifth Corps was now actively employed in pushing the enemy from his foot-hold about Petersburg, and in this the Second Corps was called to its aid. In the operations at Five Forks the regiment joined, charging the enemy's lines, driving him in confusion, and taking possession of a portion of the South Side Railroad. In this engagement Major Pifer led the Fifty-third, Colonel Mintzer having been placed temporarily in command of a detachment skillfully deployed to deceive a division of the enemy and prevent him from changing his position. For the success attained in this service Colonel Mintzer was promoted brevet brigadier-general. Following up the retreating enemy, the regiment participated in the capture of his wagon-trains at Deep Creek, on the 6th of April, and was at the front on the day of the surrender of the rebel army. Encamping for a short time near Burkesville, it proceeded from thence, through Richmond and Fredericksburg, to Alexandria, participated in the grand review of the armies at Washington, on the 23d of May, and was finally mustered out of service on the 30th of June, 1865.

FIELD AND STAFF OFFICERS.

John R. Brooke, col., must. in Nov. 5, 1861; pro. to brig.-gen. May 12, 1864; to brev. maj.-gen. Aug. 1, 1864.

William M. Mintzer, col., must. in Sept. 18, 1861; pro. from capt. Co. A to maj. June 2, 1862; to lieut.-col. Sept. 29, 1864; to col. Oct. 30, 1864; to brev. brig.-gen. March 13, 1865; must. out with regt. June 30, 1865.

Richards McMichael, lieut.-col., must. in Nov. 7, 1861; disch. on surg. certif. May 19, 1864.

George C. Anderson, lieut.-col., must. in Oct. 29, 1861; pro. from capt. Co. K to maj. Sept. 20, 1864; to lieut.-col. Nov. 10, 1864; must. out with regt. June 30, 1865.

Thomas Yeager, maj., must. in Nov. 7, 1861; killed at Fair Oaks, Va., June 1, 1862.

S. Octavius Bull, maj., must. in Sept. 18, 1861; pro. from capt. Co. A to maj. June 2, 1862; com. lieut.-col. May 17, 1864; col. Sept. 18, 1864; not mustered; must. out Nov. 1, 1864, expiration of term.

George D. Pifer, maj., must. in Oct. 10, 1861; pro. from capt. Co. I Dec. 13, 1864; must. out with regt. June 30, 1865.

Charles P. Hatch, adj., must. in Nov. 7, 1861; disch. on surg. certif. July 24, 1864.

Samuel H. Rutter, adjt., must. in Sept. 18, 1861; pro. from private Co. A to sergt.maj. Dec. 24, 1863; to lieut. and adjt. Sept. 5, 1864; absent on detached service in V. R. C. at must. out; veteran.

Jacob Rice, q.m., must. in Nov. 7, 1861; must. out Oct. 12, 1864, expiration of term.

Theophilus T. Davis, q.m., must. in Nov. 4, 1861; pro. from private Co. I to com. sergt. Dec. 24, 1863; to 1st lieut. and q.m. Oct. 31, 1864; must. out with regt. June 30, 1865; veteran.

John Fromberger, surg., must. in Nov. 7, 1861; res. Jan. 28, 1862.

M. J. McKinnon, surg., must in Feb. 15, 1862; res. Jan. 26, 1863.

George W. Jackson, surg., must. in Feb. 24, 1863; disch. on surg. certif. Aug. 12, 1864.

Charles W. Spayd, surg., must. in Oct. 1, 1862; pro. from asst. surg. Aug. 29, 1864; must. out with regt. June 30, 1865.

William B. Wynne, asst. surg., must. in Nov. 7, 1861; pro. to surg. 159th Regt. P. V. Oct. 29, 1862.

J. P. Burchfield, asst. surg., must. in Aug. 1, 1862; pro. to surg. 83d Regt. P. V. April 3, 1863.

Jacob C. Gatchell, asst. surg., must. in Oct. 17, 1864; must. out with regiment, June 30, 1865.

Daniel Barber, chap., must. in Nov. 7, 1861; res. July 7, 1862.

J. R. Taylor Gray, chap., must. in June 16, 1865; must. out with regiment, June 30, 1865.

Thomas Reifsnyder, sergt.-maj., must. in Nov. 7, 1861; pro. to 1st lieut. Co. D, Dec. 14, 1862.

G. W. Butterworth, sergt.-maj., must. in March 2, 1864; pro; from sergt. Co. G, June 12, 1865; must. out with regiment, June 30, 1865; veteran.

Levi J. Fritz, sergt.-maj., must. in Dec. 22, 1863; pro. to 2d lieut. Co. A. Oct. 8, 1864.

M. M. Brannock, sergt.-maj., must. in Dec. 22, 1863; trans. to Co. K, April 7, 1865; veteran.

Albert H. Hess, sergt.-maj., must. in Dec. 22, 1863; pro. to 2d lieut. Co. E, June 12, 1865.

Mahlon S. Ludwig, q.m.-sergt., must. in Nov. 7, 1861; pro. to 2d lieut. Co. B. March 1, 1863.

John S. Weand. q.m.-sergt., must. in Sept. 18, 1861; pro. from private Co. A, Nov. 1, 1864; must. out with regiment, June 30, 1865.

John W. Riley, q.m.-sergt., must. in Feb. 29, 1864; pro. from sergt. to q.m.-sergt. Dec. 23, 1864; trans. from 140th Regt. P. V.; disch. by G. O. June 6, 1865.

Lewis R. Bland, com. sergt., must. in Nov. 7, 1861; pro. to 2d lieut. Co. B, April 28, 1862.

Thomas E. Clark, com. sergt., must. in Sept. 18, 1861; pro. from private Co. A, Dec. 10, 1864; absent, on furlough, at muster out.

J. Wilson Barnett, com. sergt., must. in Nov. 5, 1861; trans. to 10th Regt. U. S. colored troops.

Benjamin J. Cushing, com. sergt., must. in Oct. 29, 1861 ; pro. to 2d lieut. Co. G, Sept. 21, 1864 ; veteran.

Henry H. Yarnell, must. in Feb. 25, 1864; must. out with company June 30, 1865.
John Y. Young, must. in Feb. 25, 1864; must. out with company June 30, 1865.
Henry Yeagle, must. in Nov. 1, 1862; drafted; died at Washington, D. C., Aug. 16, 1864.
Andrew Zerby, must. Oct. 10, 1863; drafted; must. out with company June 30, 1865.
John Ziegler, must. in March 16, 1864; captured June 22, 1864; absent at muster out.

Sixty-eighth Regiment.—The Sixty-eighth Regiment was recruited in the city of Philadelphia and in the adjacent counties of Montgomery and Chester during the summer of 1862, the first company being mustered in on the 4th of August, and the regiment completely organized and in the service by the 1st of September. The camp of rendezvous was established at Frankford, a suburb of Philadelphia. The following were its field officers: Andrew H. Tippin, of Philadelphia, colonel; A. H. Reynolds, of Philadelphia, lieutenant-colonel; Thomas Hawksworth, of Philadelphia, major. Colonel Tippin had seen service in Mexico as lieutenant in the Eleventh United States Infantry, where he was twice breveted for gallant conduct in the battles of Contreras, Cherubusco, and Molino del Rey, and had served as major in the Twentieth Regiment for three months' service. Captain Winslow, subsequently lieutenant-colonel, and others, both officers and men, were in service in Mexico and in the three months' regiments.

The defeat of our arms in Pope's campaign of Northern Virginia, concluding with Chantilly,

caused the national authorities to summon, peremptorily, troops which had been mustered, and the Sixty-eighth was ordered to move at once. Though above the minimum, its ranks were not up to the maximum standard, and the men were only partially uniformed and equipped. But responding promptly to the order, it broke camp on the evening of September 1st and proceeded to Washington. The army was just then falling back to the heights around the capital. The regiment was immediately ordered across the Potomac, and went into camp at Arlington Heights. Here it was armed, and furnished with a complete outfit for an active campaign. It was assigned to Robinson's Brigade of Stoneman's Division.

Soon after the battle of Antietam the regiment moved from camp, and passing through Georgetown, proceeded to Poolsville, arriving on the 10th of October, the day on which the rebel Generals Stuart and Hampton, with a force of cavalry, made their famous raid on Chambersburg, and a complete circuit of the Union army. Intelligence soon spread of the daring ride, and the regiment was marched rapidly to Conrad's Ferry, in expectation that the bold raiders would attempt to cross the Potomac, on their return into Virginia, at this point. But they made for a ford considerably lower down the stream, and passed over without opposition. After remaining several days in the vicinity of the ferry, it rejoined the brigade and proceeded southward with the rest of the army. While on the march the rebel cavalry under White suddenly dashed in upon the train moving with the brigade, and captured wagons belonging to the Sixty-eighth, containing officers' baggage, books, papers and camp and garrison equipage, overpowering and making prisoners of the feeble guard which had it in charge. About forty of the Sixty-eighth were taken, who were sent to Richmond and kept in confinement several months.

In the reorganization of the army, which was made upon the assumption of chief command by General Burnside, the regiment was assigned to the First Brigade[1] (General Robinson), First Division (General Birney), Third Corps (General Sickles). It was determined to offer battle at Fredericksburg. In the plan of operations it was arranged that Franklin, with the left grand division, supported by a part of Hooker's, should cross below the town and attack upon the left, while Sumner, remaining in front supported by the balance of Hooker's corps, should, at the opportune moment, cross and give battle upon the right. Accordingly, on the morning of the 13th of December, Franklin having forced a passage, attacked with the Pennsylvania Reserves, supported by Gibbon and Doubleday, and finding his attacking column too weak, at the last moment ordered forward Birney's Division. The Sixty-eighth had been encamped near Falmouth, but on the 12th broke camp and moved down to the heights overlooking the field where Franklin's grand division, on the opposite side of the river, had taken position, and remained there until the 13th. It was not until afternoon, and until the battle was in progress on the left, that the order to cross was given. When it finally came, the division moved at double-quick, crossed the bridge, and moved up under a heavy artillery fire, reaching the field just as the Reserves, under Meade, were forced back from the heights, followed closely by the triumphant foe. The Sixty-eighth was ordered to support Randolph's First Rhode Island Battery, which at this critical juncture was being rapidly served and doing fearful execution. The regiment remained in this position, exposed to the enemy's answering fire, and defending the guns from infantry attack, until the heat of the engagement was past. As soon as the cannonading ceased it was ordered into position in the first line with the brigade, close to the enemy's front. For two days it remained in this position, but beyond occasional picket firing was not further engaged. On the night of the 15th the brigade was relieved by the Second Brigade, which had been in the rear, and under cover of darkness recrossed the river. The loss was about forty killed and wounded. Major Hawksworth was mortally wounded and Lieutenant Joseph E. Davis among the killed.

In the movement upon Chancellorsville the Third Corps was at first marched down the Rappahannock to the point where Franklin had crossed in the Fredericksburg campaign, to make a demonstration as if to cross and offer battle at that point, while Hooker, with the main body of his army, crossed and effected a permanent lodgment some miles above. When this had been accomplished, General Sickles, who had succeeded to the command of the Third Corps, marched hastily away to rejoin the army concentrating at Chancellorsville. "We crossed the Rappahannock," says Colonel Tippin in his official report, "on the 1st of May, having left camp on the 28th of April, passing the intermediate time in the operations below Fredericksburg. On the evening of the 1st we were drawn up in column, with the brigade supporting a battery which had opened upon the enemy, that was soon replied to spiritedly with shells, one of our pioneers being wounded. Here we remained during the night. The next day we were moved into various positions, covering the line of skirmishers, in the operations against the enemy on the left. At evening we retired and remained in position with the brigade. Before the men were fully prepared the next morning the enemy made a vigorous attack on our left and

[1] Organization of First Brigade (Brigadier-General Robinson), First Division (Brigadier-General David B. Birney), Third Corps (Major-General Stoneman).—Twentieth Regiment Indiana Volunteers, Colonel John Van Valkenburg; Sixty-third Regiment Pennsylvania Volunteers, Colonel John A. Banks; Sixty-eighth Regiment Pennsylvania Volunteers, Colonel Andrew H. Tippin; One Hundred and Fourteenth Regiment Pennsylvania Volunteers, Colonel Charles H. T. Collis; One Hundred and Forty-first Regiment Pennsylvania Volunteers, Colonel Henry J. Madill.

front, and the position of my regiment was changed to the extreme right, so as to more fully cover the battery we were supporting, now firing rapidly. The onset, however, was so rapid and determined, and the front lines having broken and fallen back in some confusion, the regiment was forced to retire with the brigade. After retiring, the brigade was reformed, and with it we quickly moved again to the front in columns doubled on the centre. Deploying at the edge of the woods at the right of our first position, which the enemy now held, we entered and soon engaged him in his rifle-pits, which were charged and taken after a sharp and severe contest. My regiment acted with the brigade in this successful onset, capturing some thirty-five officers and men of the Tenth Virginia Regiment, its colors and color-guard. Being nearly out of ammunition, unsupported, and the enemy strongly pressing us on the right flank, we retired with the brigade, closely pursued by the enemy, back to our last position." "At daylight on Sunday," says General Birney, "the Third Corps, with my division bringing up the rear, commenced the movement ordered by Major-General Hooker, to take position on the heights in rear of the right of the Twelfth Corps, and to make dispositions to hold the plank-road. In making the movement my rear was subjected to a severe musketry fire, but the troops behaved admirably and withdrew by successive formations. I at once relieved, by Graham's brigade the brigade of the Twelfth Corps next to the plank-road, sent Ward's brigade to support Berry's division on the right of the plank-road and held Hayman's brigade as a reserve. The artillery of the corps was admirably placed, and I have never seen such terrible execution as it effected upon the hostile masses. The attack upon us was furious and in masses, but the Third Corps held its position until eleven o'clock A.M., when we were ordered to retire and take position in a second line of battle formed like a flattened cone, with flanks resting on the river. The position of my division in the new formation was at the apex. My division, as well as the corps, had suffered most severely, some four thousand eight hundred killed and wounded. Among the killed were Major-Generals Berry and Whipple and among the wounded Brigadier-General Mott." The loss in the regiment was very severe. Captains James Shields and John D. Paulding were mortally wounded.

At the opening of the battle of Gettysburg, on the 1st of July, the Third Corps was at Emmettsburg. Moving rapidly forward and quickening his steps as the sound of the terrible conflict became more distinct, Sickles reached the field at evening, after the fighting of the day was over and the discomfited troops of the First and Eleventh Corps were coming into position to the south of the town. As the column reached the field it went into position along a slight ridge extending diagonally across the open plain between the Seminary and Cemetery Ridges, connecting with Hancock on its right, with its left refused at the Peach Orchard, and stretching obliquely back through a wood to a rocky ravine in front of Round Top. The position of the brigade, now commanded by General Graham, fell upon that part of the line where, deflecting from the Emmettsburg pike, it stretches away to Round Top. The angle formed by this departure was at the point where the road leading from Little Round Top crosses the pike; and in this angle, near the house of John Wentz, in one of the most exposed parts of the field, the Sixty-eighth was posted. Open to a fire on front and flank, standing upon the most elevated part of the field, but not sufficiently so to be of any advantage in defense, it was a conspicuous mark for artillery for a long range around, and open to the charge of infantry. The enemy commenced skirmishing with the Sixty-third Pennsylvania, which had been deployed in front, at nine o'clock on the morning of the 2d, and the fire gradually increased in severity until the battle opened in earnest. Longstreet, who held the rebel right, opened with artillery at four o'clock in the afternoon, and followed up with infantry, putting in brigade after brigade, *en echelon*, commencing on his extreme right. It was some time before the infantry attack reached the Peach Orchard, where the regiment stood, but the artillery fire bearing upon it was terrific, carrying away men at every discharge. As this was regarded the key to the whole position, it was necessary to hold it at all hazards, and the only alternative was to stand and be shot down without the opportunity to reply. In the midst of the fight General Graham was wounded and borne from the field, and the command of the brigade devolved upon Colonel Tippin. "It was," says the latter, "a terrible afternoon, and all were anxious for the Fifth Corps to come up, as we were being decimated by their artillery. . . . In that orchard the lieutenant-colonel and major were wounded and ten other officers killed or wounded, leaving with me but four to bring the regiment out of the fight, having had in all but seventeen present for duty. Just at sunset the rebel infantry charged upon the position with great impetuosity, and the brigade, greatly weakened by its losses and exhausted by frequent manœuvrings, outflanked and vastly outnumbered, was forced to yield, but not in disorder, retiring slowly and contesting the ground inch by inch." At this critical juncture portions of the Fifth Corps came to the relief of Sickles, a new line was established and the disaster partially repaired. Near the close of the action General Graham returned upon the field and attempted to resume command; but, weak from loss of blood and unable to endure the trials of that desperately-contested field, unfortunately fell into the hands of the enemy. On the third day the regiment was held in reserve on the left centre of the new line, on the lowest part of the entire field, and was not engaged, though exposed to the terrible fire of artillery and losing some men. Colonel Tippin had his horse killed under him on this day. The loss

was about sixty per cent. of the entire number engaged. Captain George W. McLearn and Lieutenants Andrew Black and John Reynolds were among the killed, and Louis W. Ealer mortally wounded.

After the return of the army into Virginia, the regiment participated with it in the fall campaign, and was engaged at Wapping Heights on the 23d of August, and at Auburn on the 14th of October. In the sharp turn taken by Meade on the latter date to get back to Centreville, Colonel Tippin was taken prisoner and was confined in Libby Prison, where he remained for nearly nine months.

In the subsequent advance of the army the regiment, now under command of Lieutenant-Colonel Winslow, was engaged at Kelly's Ford on the 7th of November, at Locust Grove on the 27th, suffering severely, Captain Milton S. Davis being among the killed, and at Mine Run on the 28th. In this entire campaign the regiment was given little rest, being almost constantly on the move and suffering considerable loss by sickness and battle.

The regiment went into winter-quarters at Brandy Station, and early in January, 1864, a sufficient number of the regiment re-enlisted to entitle it to continuance as an organization and the veterans to the usual furlough. Not long afterwards the Third Corps was broken up, and the Sixty-eighth, with a considerable portion of it, was consolidated with the Second Corps, General Hancock. With the return of the veterans and the addition of a number of recruits, the regiment assumed proportions something like the original. On the 18th of April, 1864, the regiment, under command of Lieutenant Colonel Winslow, Colonel Tippin being still in confinement, was ordered to the headquarters of General Meade, where it was placed under the immediate command of Brigadier General Patrick, provost marshal general of the army, and employed in guard duty. In this position it remained until the close of the war. The duty was onerous and severe. With other regiments in the same service, it was subject to active duty when emergencies required, and, in several instances, at the critical moment of the battle, when the scale was so evenly poised as to be doubtful which way it would turn, the reserve was sent to the support of the wavering line and made victory secure. When infantry was required for duty with the cavalry, in toilsome and fatiguing raids, the reserve was ordered, or when regiments were taken from the intrenchments, these regiments were obliged to take their places in the works. While in front of Petersburg, half of the Sixty-eighth was on duty at General Meade's headquarters and the balance at City Point. On the 25th of June, Colonel Tippin was exchanged and resumed command of his regiment.

In the last charge made upon the enemy's lines at Petersburg, before the final move, the regiment, though employed in provost duty, was of the storming-party. In the sharp conflict which ensued Major John C. Gallagher was mortally wounded and a number of officers and men were lost.

After the capture of Lieutenant-General Ewell and his forces at Sailor's Creek, this regiment, in conjunction with others then constituting the headquarters' brigade, was detailed to guard the prisoners, and proceed with them to City Point.[1] The brigade was under the command of Colonel Tippin, and the order was faithfully executed without the loss of a man.

This duty done, the regiment returned to the headquarters of the army, having in charge about six thousand recruits that had accumulated at City Point. It had been but a short time with the moving column when General Meade ordered it to proceed, in company with the One Hundred and Forty-third Pennsylvania, to Hart's Island, near the city of New York, to have charge of rebel prisoners confined there. Here it remained until the 9th of June, when it was mustered out of service.

FIELD AND STAFF OFFICERS.

Andrew H. Tippin, col., must. in Sept. 1, 1862; prisoner from Oct. 14, 1863, to June 25, 1864; must. out with regiment June 9, 1865.

Anthony H. Reynolds, lieut.-col., must. in Sept. 1, 1862; disch. Oct. 14, 1863, for wounds received at Gettysburg, Pa., July 2, 1863.

Robert E. Winslow, lieut.-col., must. in Aug. 4, 1862; pro. from capt. Co. C to maj. Jan. 10, 1863; wounded at Gettysburg, Pa., July 2, 1863; pro. to lieut.-col. Nov. 12, 1863; to brevet col. and brevet brig.-gen. March 13, 1865; must. out with regiment June 9, 1865.

Thomas Hawksworth, maj., must. in Sept. 1, 1862; died Jan. 7, 1863, of wounds received at Fredericksburg, Va., Dec. 13, 1862.

John H. Magee, adjt., must. in Sept. 1, 1862; disch. on surg. certif. Nov. 26, 1862.

George G. Murgatroyd, adjt., must. in Aug. 16, 1862; pro. to capt. Co. A Sept. 1, 1863.

Franklin Glenroy, adjt., must. in Aug. 18, 1862; pro. from 1st lieut. Co. A Sept. 16, 1861; must. out with regiment June 9, 1865.

Charles A. Jones, q.m., must. in Sept. 1, 1862; res. Nov. 11, 1862.

George R. Clarke, q.m., must. in Aug. 25, 1862; pro. from 2d lieut. Co. H Oct. 1, 1862; disch. on surg. certif. Jan. 27, 1863.

Leml. P. Mountain, q.m., must. in Aug. 4, 1862; pro. from 1st lieut. Co. C July 1, 1863; must. out with regiment June 9, 1865.

Ambrose J. Herr, surg., must. in Sept. 22, 1862; must. out with regiment June 9, 1865.

John C. Wilson, assist. surg., must. in Aug. 4, 1862; res. Oct. 22, 1864.

Thomas M. Cursen, assist. surg., must. in Sept. 13, 1862; res. Dec. 27, 1862.

John F. McIlvain, assist. surg., must. in March 17, 1863; res. Sept. 4, 1863.

James Shaw, assist. surg., must. in Nov. 18, 1864; must. out with regiment June 9, 1865.

William Fulton, chaplain, must. in Sept. 1, 1862; res. Nov. 30, 1862.

Henry Mohn, sergt.-maj., must. in Aug. 23, 1862; pro. from 1st sergt. Co. D July 8, 1864; disch. by G. O. June 6, 1865.

Lewis W. Ealer, sergt.-maj., must. in Aug. 23, 1862; pro. to 2d lieut. Co. F Dec. 19, 1862.

[1] "The brigade," says Colonel Tippin, "was under my command. Among the prisoners were Lieutenant General Ewell, Major-Generals Custis Lee, Kershaw and other prominent generals of the rebel army, together with about six hundred officers of lesser grade. At a point on the route where we all rested for a short time, I received a dispatch that General Lee had surrendered. I communicated the intelligence to Generals Ewell and Custis Lee, but both doubted its truthfulness. They could not think it possible. In a very short time, and before leaving our resting-place, General Benham came up with his engineer brigade, and gave the terms of the surrender. Young General Lee dropped his head on his breast, and General Ewell threw up his arms, exclaiming, 'The jig is up.'"

Franklin Glenroy, sergt.-maj., must. in Aug. 18, 1862; pro. to 1st lieut. Co. A March 1, 1863.

John Reynolds, sergt.-maj., must. in Sept. 1, 1862; pro. from sergt. Co. E to sergt.-maj. Feb. 17, 1863; com. 2d lieut. Co. E Nov. 25, 1863; not must.; killed at Gettysburg, Pa., July 2, 1864.

Paul F. Whitehead, sergt.-maj., must. in Sept. 2, 1862; pro. to sergt-maj. July 1, 1863; to 1st lieut. Co. I July 11, 1863.

William H. Whyte, sergt.-maj., must. in Aug. 23, 1862; pro. to sergt.-maj. Aug. 1, 1863; to 1st lieut. Co. D Dec. 4, 1863.

Jonathán M. Hart, sergt.-maj., must. in Aug. 26, 1862: pro. to sergt.-maj. Aug. 16, 1863; to 1st lieut. Co. G July 6, 1865.

John C. Missimer, q.m.-sergt., must. in Aug. 25, 1862; pro. from corp. Co. H Aug. 1, 1863; must. out with regiment June 9, 1865.

John S. Sorver, q.m.-sergt., must. in Aug. 18, 1862; pro. to 1st lieut. Co. A March 16, 1865.

John H. Malsberger, com. sergt., must. in Aug. 25, 1862; pro. from sergt. Co. H Sept. 1, 1864; must. out with regiment June 9, 1865.

Davis H. Missimer, com. sergt., must. in Aug. 25, 1862; trans. to Co. H Aug. 22, 1864.

Samuel T. Schofield, com. sergt., must. in Aug. 18, 1862; trans. to Co. A Oct. 6, 1862.

John H. Stiles, com. sergt., must. in Aug. 4, 1862; disch. on surg. certif. Feb. 28, 1863.

James Tait, hosp. steward, must. in Aug. 23, 1862; must. out with regiment June 9, 1865.

John Green, prin. musician, must. in Aug. 25, 1862; pro. to prin. musician March 18, 1864; absent, on detached duty, at muster out.

John F. Miller, prin. musician, must. in Aug. 25, 1862; pro. from musician Co. H Aug. 25, 1863; disch. by G. O. May 22, 1865.

COMPANY H.

Recruited in Montgomery County.

William Auchenbach, capt., must. in Aug. 25, 1862; disch. June 1, 1863.

Benjamin M. Guest, capt., must. in Aug. 25, 1862; pro. from 1st sergt. to 2d lieut. Dec. 2, 1862; to 1st lieut. Aug. 20, 1863; to capt. Dec. 25, 1863; must. out with company June 9, 1865.

Hiram C. Feger, 1st lieut., must. in Aug. 25, 1862; disch. on surg. certif. Feb. 14, 1863.

David Albright, 1st lieut., must. in Aug. 25, 1862; pro. to 1st sergt. Dec. 2, 1862; to 1st lieut. Dec. 25, 1862; must. out with company June 9, 1865.

Ninety-third Regiment Pennsylvania Volunteers.—The following officers and enlisted men from this regiment were recruited in and accredited to Montgomery County. The regiment ranks among the veteran organizations of the State, and was among the best volunteer regiments in the service. There being no company organization accredited to the county, we omit the field and staff roster and the general history of the command. The regiment was organized at Lebanon, November 3, 1861.[1]

COMPANY E.

Samuel McCarter, capt.

COMPANY G.

Marshall McCarter, capt.; William A. Ruddach, 1st lieut.

Privates.

William Oldfield, William Booth, Charles Foreman, George. A. Garrow, Thomas Gash, Joseph Harper, Oliver A. Keisan, John Kester, John McCaully, John Piper, Charles Parker, Augustus Solomon, William Sutch, John Vanse, Dennis Oakes, Charles Thomas, Daniel Meenan, Jacob Weaver.

Ninety-fifth Regiment Pennsylvania Volunteers.—This command was organized as the Pennsylvania Zouaves, then as the Forty-fifth and finally as the Ninety-fifth. It was mustered into the service August, 1861, for three years. The regiment served in the Army of the Potomac from its organization to the close of the war, and its losses in the service are reported as the most severe experienced by any Pennsylvania troop in the field. The following officers and members of the organization were recruited from Montgomery County. A general history of this regiment will be found in Bates' "Pennsylvania Volunteers," vol. iii. p. 335.

COMPANY E.

William Foreman, lieut.; John S. Jeffries, sergt.; Theodore Selah corp.; George Kulp, corp.; Nathan Auner, corp.; John Burnett, corp

Privates.

Charles Auner, Joseph M. Linker, Mansfield Griffith, Franklin Beaver, John H. Bond, Albanus Brunner, Benjamin Banks, James A. Clayton, James Culp, William Garner, George W. Jeffries, Wilson S. Keeler, William J. Longsdale, Irwin Poley, Lewis Rapine, Isaiah Rhoads, George M. Sommers, Mills C. Williamson, John R. Williamson, William Fulmer, Augustus G. Famous, William Jamison, Benjamin G. Keyser, William B. Nungesser, Frederick R. Nungesser, John Rookstool, James J. Rookstool, Joshua Thompson.

One Hundred and Sixth Regiment.—This regiment was organized, with the exception of Company K, between the 14th of August and the 31st of October, 1861, in the city of Philadelphia. Company K was transferred to it from the Sixty-seventh Regiment on the 28th of February, 1862. A large proportion of officers and men had served in the Twenty-second

[1] See Bates' "Hist. Pa. Vols.," vol. iii. p. 284.

Regiment, and previously in the Philadelphia Light Guard, a militia organization of many years' standing. The following were the field officers: Turner G. Morehead, colonel; William L. Curry, lieutenant-colonel; John H. Stover, of Centre County, major.

Soon after moving to the front it was ordered to duty near Poolesville, Md., where it became part of a brigade[1] commanded by Colonel E. D. Baker, of the Seventy-first Regiment. While in this position drill and instruction were carefully attended to, and guard and picket duty performed. The battle of Ball's Bluff was fought on the 21st of October, in which Colonel Baker was killed and his regiment terribly decimated. Early in the day the One Hundred and Sixth was marched to the support of the troops engaged, but, for lack of means of transportation, was unable to cross, the men being compelled to stand upon the opposite shore and listen with impatience to the sound of battle where their comrades were rapidly falling, without the ability to render them any assistance.

During the succeeding winter it lay with the brigade near Poolsville, engaged in drill and guard and picket duty. General William W. Burns succeeded Colonel Baker in command of the brigade, and on the 24th of February the whole force broke camp and moved to Harper's Ferry. Two companies were left in command of Major Stover to garrison the place, while the army moved on towards Winchester. When arrived at Berryville the brigade turned back to Harper's Ferry, where it was joined by the detachment, and moving by rail to Washington, proceeded thence by transport to Fortress Monroe. The regiment participated in the siege of Yorktown, being principally engaged upon picket duty and in the trenches. Upon the evacuation of Yorktown it moved forward, and while the fight at Williamsburg was in progress stood ten hours in line of battle, in a drenching rain, eager to go forward and join in the contest, the sound of which could be distinctly heard, but in vain awaited the order to advance. On Wednesday, May 7th, the troops embarked upon transports and moved up to West Point, whence, after two days' delay, they marched to Brick House Landing. The movement up the Peninsula towards Richmond now commenced. The weather was unusually warm and much difficulty was experienced in obtaining suitable water for the troops to drink. At almost any point water could be obtained by digging from three to five feet; but this was only surface water, and its evil effects soon began to be apparent. Fevers prevailed, and the sick list throughout the army became very large. The regiment suffered severely from this cause.

[1] Organization of Philadelphia Brigade, Colonel E. D. Baker (division commanded by Brigadier-General Charles P. Stone), army of General Banks.—Seventy-fifth (California) Regiment Pennsylvania Volunteers, Colonel E. D. Baker; Seventy-second (Fire Zouaves) Regiment Volunteers, Colonel De Witt C. Baxter; Sixty-ninth Regiment Pennsylvania Volunteers, Colonel Joshua T. Owen; One Hundred and Sixth Regiment Pennsylvania Volunteers, Colonel Turner G. Morehead.

The battle of Fair Oaks opened on the 31st of May. Sumner's corps was resting at the time on the left bank of the Chickahominy, but as soon as the noise of the battle was borne to the ears of that intrepid leader he put his columns in motion for the bridge, and when the order came for him to move he was already on his way. With great difficulty could the artillery be got across, the river being swollen by recent rains. Kirby's battery, by the most persistent effort, was taken through the swamps, and finally brought into position where it dealt death and destruction upon the hitherto triumphant foe. Gorman's brigade and the Seventy-first and One Hundred and Sixth Pennsylvania were posted for its support, and with great gallantry and steadiness held the ground against the most determined efforts of the enemy to capture the guns. "Prisoners captured during the fight assert that Jeff. Davis was in the rear urging his myrmidons forward; and Magruder, who was with him swore a fearful oath, 'That's my old battery, and I'm going to have it,' alluding to Kirby's, which he, Magruder, formerly commanded."[2]

On Sunday, June 9th, while advancing the picket line, the command was attacked by a superior force of the enemy, and for the moment was compelled to retire. In this encounter Captain Martin Frost, while gallantly leading at the head of his company, was killed. On the following day Lieutenant-Colonel Curry, while visiting the picket post at early dawn, was taken prisoner, the pickets having fallen back during the night without his knowledge. He was taken to Richmond, and thence sent *via* Petersburg to Salisbury, where, in company with General Michael Corcoran and Colonel John K. Murphy, he experienced harsh treatment, but at the end of three months was exchanged.

"On Saturday, the 28th of June," says an officer of the regiment, "we received orders to strike tents as soon as darkness should hide our encampment from the view of the enemy. Our wing of the army had not participated in the disastrous battles of the preceding days. An order was read announcing victory on the day before. Our troops were buoyant in spirit, thinking we were breaking camp to move forward on the enemy. By eight o'clock the wagons were loaded and sent to the rear. The men, with knapsacks packed and haversacks well filled, were ordered to stack arms and rest in line. An hour passed—two hours—and yet no orders to march. At length at a little after dawn orders came but to move to the rear." At Peach Orchard dispositions were made to meet the enemy, as though expected to pursue. The One Hundred and Sixth supported Kirby's battery, but the enemy declining to attack directly, made some show of fight, while he moved his principal force past the front with the design of coming in upon the right flank. Divining this pur-

[2] Moore's "Rebellion Record," vol. v. p. 91, Docs.

pose, Sumner moved his force at double-quick to Savage Station, and was ready for the onset. The enemy approached on the Williamsburg road and formed his line in the dense forest on either side. Major Stover was ordered to advance with two companies of the One Hundred and Sixth and two of the Seventy-second to the edge of the woods, and uncover the rebel front. Moving at double-quick, Stover soon struck the timber and drew the fire of the skirmishers, driving them back to the main line. In the mean time General Burns, forming his line with the Seventy-second on his right, the One Hundred and Sixth in centre and the First Minnesota on the left, stretching from the forest and railroad to the Williamsburg road, pushed forward upon the heels of the skirmishers, taking position at a fence at the edge of the woods, which he stubbornly held, though exposed to a severe fire of musketry and artillery, and gallantly repulsed most desperate charges of the enemy. The action opened at five o'clock P.M., and lasted for two hours and a half, the enemy charging with desperation, and the right of the One Hundred and Sixth and the left of the Seventy-second at one time engaging in a desperate hand-to-hand struggle. At length the First Brigade, charging over the line of the Second, cleared the woods of the enemy, and the battle ended. "I found General Burns," says an eye-witness of the fight, "stretched under a lofty pine, and his warriors were slumbering around him painfully. His eyes were hollow and bloodshot, his handsome features pale and thin, his beard and his clothing were clotted with blood his face was bandaged, concealing a ragged and painful wound in his nether jaw. Grasping my hand, he said 'My friend, many of my poor fellows lie in those forests. It is terrible to leave them there. Blakeney is wounded, McGonigle is gone, and many will see us no more. We are hungry and exhausted, and the enemy—the forest is full of people—are thundering at our heels. It is an awful affliction. We will fight them, feeble as we are—but with what hope ?'"[1] Picket lines were immediately established and the brigade held its position, the rest of the corps moving on across White Oak Swamps, the brigade bringing up the rear.

In the battle of Charles City Cross-Roads, on the following day, the One Hundred and Sixth was ordered to the support of the Sixty-ninth, but just as it was moving General Hooker in person ordered it to the extreme left, where, during the entire engagement, it acted with the Excelsior Brigade, and whatever of credit is due to that brigade on that sanguinary field is equally due to this regiment. The ground was held until the commands of Sumner and Kearny had retired over the Quaker road, and until after daylight, when Hooker followed them. In the battle of Malvern Hill, on the 1st of July, the brigade was principally employed in supporting batteries and in moving to menaced parts of the field to insure the integrity of the lines.

After the return of the army from the Peninsula General Howard was assigned to the command of the brigade. On its arrival at Alexandria it was marched to the battle-field of Bull Run, but did not arrive in season to participate in the decisive part of the engagement. A reconnoissance was made by this brigade, which was followed by the retreat of the army to Centreville.

In the Maryland campaign General Sumner, who was in command of the corps, arrived on the south bank of the Antietam Creek on the 16th of September, on the opposite side of which the enemy was in a well-chosen position in readiness to give battle. Soon after sunrise on the following morning he crossed the stream and moved up to the support of Hooker, who was now hotly engaged. In the advance the regiment held a position on the right of the Sixty-ninth, and pushed steadily forward until its course was arrested at the crest, where the enemy was intrenched, and where he was at the moment receiving heavy reinforcements. Soon afterwards the troops upon the left gave way, and the brigade was forced to fall back. Major Stover, who was in command, rallied the regiment at a fence skirting a narrow meadow near the Dunker Church, and by a well-directed fire succeeded in checking the enemy. At this fence, in less than ten minutes' time, one-third of the entire regiment was stricken down, and at the conclusion of the engagement the dead lay in line as they had stood in the fight. Captain Timothy Clark and Lieutenant William Bryan were among the killed.

In the battle of Fredericksburg the division crossed the river soon after the laying of the pontoons, on the 11th of December, and two streets of the city were soon cleared. In the main battle, which was fought on the 13th, the regiment was formed for a charge, with the Sixty-ninth on its right and the One Hundred and Twenty-seventh Pennsylvania on its left, and advanced under a terrific fire of artillery to a position within about seventy-five yards of the enemy's works. From midday until nightfall, under a ceaseless fire from two lines of battle, it stood with a coolness and determination rarely paralleled, and though losing heavily, held the ground until darkness closed in upon the combatants and the sound of battle died away.

Retiring after the battle to its former camp, it remained, with unimportant exceptions, until near the close of April. At the opening of the Chancellorsville campaign the brigade was taken to Banks' Ford, where it was employed in driving out the enemy and protecting the engineers while laying a pontoon bridge. It was afterwards engaged in guarding the reserve artillery. On Sunday, the 3rd of May, the regiment crossed the river and advanced to the assistance of Sedgwick, in command of the Sixth Corps,

[1] Moore's "Rebellion Record," vol. v. p. 245, Docs.

who was struggling against overwhelming odds at Salem Church. Returning to the bridge, entrenchments were thrown up, and the position held until Sedgwick's corps had crossed, when it returned again to camp.

In the battle of Gettysburg, which opened on the 1st of July, the One Hundred and Sixth bore a conspicuous part, arriving with the corps upon the field at a little after midnight of the 1st, and taking position on the extreme left of the brigade, behind the low stone wall on the right centre of the line, in front of and to the left of General Meade's headquarters. The fighting commenced on the afternoon of the 2d, on the extreme left, where Sickles stood, but soon swept around until it enveloped the whole left wing of the army. Fighting in the open field without defensive works, Sickles' men, though contesting the ground with a valor unsurpassed, were forced back, and line after line was crushed. While the conflict was thus raging on the left the brigade was lying upon the ground in rear of the crest of the little hill which overlooked the field; but as the wave of battle rolled on towards the right, recognizing the danger to which the left wing was exposed, and seeing that there was a gap in the line to the left, General Webb, in command of the brigade, ordered it to march by the left flank, then by the right, and as it reached the crest beheld the enemy not sixty yards in front, marching on, elated by success, as to assured victory. "Fire! charge bayonets!" rang out from the voice of the commander. A crash as from a single piece was the response, and in the twinkling of an eye bayonets were fixed, and, with a cheer that betokened the determination which fired each breast, the line went forward, striking the enemy upon his extreme left flank, and hurling him back in dismay. The One Hundred and Sixth and two companies of the Second New York pursued the retreating foe as far as the Emmettsburg road. "Our regiment," says Lieutenant-Colonel Curry, who was in command, and who was afterwards killed at Spottsylvania, in a letter to a friend, written on the field, "opened fire and charged so determinedly, along with others, that we drove the enemy to their original lines, and would have spiked a six-gun battery had we not been ordered back. The carnage was terrible, the ground being covered with the dead and wounded. It was in this charge that Adjutant Pleis fell, being struck in the thigh by a piece of shell. I have fully made up for my capture (in June, 1862) as the regiment took a colonel, two majors, a number of captains and lieutenants and at least two hundred privates prisoners. We had more swords than we could use. I have one in place of the one taken from me at Richmond, and also a silver-mounted pistol." The regiment returned to its place in the line, but was scarcely in position when it was ordered to the extreme right, where the Twelfth Corps was engaged. It did not arrive, however, until the fighting at that point had subsided, and soon after it was ordered to Cemetery Hill to the support of the Eleventh Corps, where it went into position at ten P.M., on the right of the Baltimore pike, near Ricketts' battery, where it remained under the terrific cannonade of the following day, and until the close of the battle. It was among the first regiments to enter the town on the following day, and after advancing as skirmishers and reconnoitering, General Ames in command, finding the enemy still in force on the ridge beyond the town, returned again to its position on Cemetery Hill. Lieutenant William H. Smith was among the killed and Adjutant Pleis among the mortally wounded.

In the campaign which followed in the valley of Virginia the regiment shared with the brigade in the long marches and ceaseless vigilance required by the constant and sharp manœuvring of the enemy for an advantage, and in the action at Robertson's Tavern was actively engaged. After enduring great suffering from cold in attaining the position at Mine Run and in fortifying the purposed line of battle, it withdrew with the army when offensive operations were abandoned, and went into winter-quarters near Stoneboro'. During the winter a portion of the regiment re-enlisted. On the 4th of April, 1864, Colonel Morehead resigned, and Major Stover was promoted to colonel of the One Hundred and Eighty-fourth Pennsylvania, whereupon Captain John J. Sperry, of Company A, was commissioned major.

On the 3d of May the regiment broke camp, and after a severe march crossed the Rapidan, and arrived on the 5th on the Wilderness battle-ground. The fighting for three days in the tangled wiles of that ever memorable field was for the most part at close quarters and very severe. From the Wilderness the regiment marched towards Spottsylvania Court-House, but before reaching it encountered the enemy, and the contest was renewed. On the afternoon of the 11th the brigade withdrew from the breast-works in front of the court house, and marched with the corps to the left of the line, where, at down of the 12th, Hancock led his columns upon the enemy's works. Delivered in strong force and at an unexpected hour, the charge was successful, the works being taken with numerous captives and guns. The One Hundred and Sixth in this encounter suffered severely. Lieutenant Colonel Curry, in command, was mortally wounded, and Lieutenants Charles S. Schwartz and Joshua A. Gage were among the killed. The regiment was held upon the front line, where constant skirmishing was kept up until the 18th, when another attempt was was made to rout the enemy, which was unsuccessful. Again moving by the left flank, the corps encountered the enemy at North Anna and again at Cold Harbor. In the engagement at the latter place the brigade was ordered to charge and drive out the enemy from his intrenchments. The attempt was gallantly made, the line advancing boldly up the

open ground in front of his fortifications under a terrific fire. The works were too strong to be carried, and dropping upon the ground the men remained in their advanced position until night, when they threw up a breast-work, which they held. In this charge Lieutenant S. R. Townsend was among the killed.

Crossing the James River on the 14th, the regiment participated in the action before Petersburg, and a week later in a movement upon the Jerusalem Plank-Road, in both of which it sustained considerable loss. On the 27th of July the veterans and recruits were organized into a battalion of three companies, which was united for field service to the Sixty-ninth Pennsylvania. The remainder of the regiment was mustered out of service at the expiration of its term, at Philadelphia, on the 10th of September, 1864. The battalion remaining in the field participated in the actions at Ream's Station and Boydton Plank-Road and in the spring campaign which closed the Rebellion. It was mustered out of service on the 30th of June, 1865.

FIELD AND STAFF OFFICERS.

T. G. Moorehead, col., must. in Aug. 28, 1861; promoted to brevet brig.-gen. March 15, 1865; disch. by S. O. April 5, 1864.

William L. Curry, lieut.-col., must. in Nov. 16, 1861; died at Washington, D. C., July 7, of wounds received at Spottsylvania Court-House, Va., May 11, 1864; buried at South Laurel Hill Cemetery, Phila.

John H. Stover, maj., must. in Dec. 11, 1861; pro. to col. 14th Reg. P. V. April 13, 1864.

Ferdinand M. Pleis, adjt., must. in Aug. 28, 1861; died Aug. 2d of wounds received at Gettysburg, Pa., July 2, 1863.

John A. Steel, adjt., must. in Aug. 13, 1861; pro from 1st lieut. Co. B Aug. 29, 1863: disch. Sept. 10, 1864, exp. of term.

Ralph B. Clark, adjt., must. in Feb. 16, 1864; pro. from 1st lieut. Co. K Jan. 24, 1865; com. maj. June 23, 1865; not must.; must. out with batt. June 30, 1865; veteran.

Harry S. Camblos, q.m., must. in Aug. 28, 1861; res. June 30, 1862.

W. H. Stokes, q.m., must. in Aug. 28, 1861; pro. from 1st lieut. Co. E June 30, 1862; must. out with regiment Sept. 10, 1864.

Ellis Coder, q.m., must. in Aug. 28, 1861; pro. from private Co. F Dec. 1, 1864; must. out with batt. June 30, 1865; veteran.

Justin Dwinelle, surg., must. in Sept. 11, 1861; must. out. with regiment Sept. 10. 1864.

Philip Leidy, assist. surg., must. in Nov. 1, 1861; disch. by G. O. Sept. 6, 1862.

Hugh Alexander, assist. surg., must. in Aug. 6, 1862; disch. by S. O. Oct. 21, 1862.

Erasmus D. Gates, assist. surg., must. in Sept. 13, 1862; disch. by G. O. June 15, 1865.

Henry D. McLean, assist. surg., must. in Nov. 5, 1862; disch. by S. O. Dec. 5, 1863.

William C. Harris, chap., must. in Nov. 1, 1861; res. Oct. 31, 1862.

Theodore Wharton, sergt.-maj., must. in Sept. 28, 1861; pro. to 2d lieut. Co. I May 1, 1862.

James C. Briggs, sergt.-maj., must. in Oct. 31, 1861; pro. to sergt.-maj. May 1, 1862; to 1st lieut. Co. F Sept. 19, 1862.

William A. Hagy, sergt.-maj., must. in Aug. 28, 1861; pro. from 1st sergt. Co. I Sept. 19, 1862; to 2d lieut Co. G May 1, 1863.

James D. Tyler, sergt.-maj., must. in Aug. 27, 1861; pro. from priv. Co. D May 1, 1863; trans. to Vet. Res. Corps Jan. 15, 1864.

William H. Neiler, sergt.-maj., must. in Sept. 2, 1861; pro. from 1st sergt. Co. C May 1, 1864; disch. Sept. 2, 1864, exp. of term.

Edward J. Lathrop, sergt.-maj., must. in Aug. 14, 1861; pro. from sergt. Co. F Sept. 1, 1864; to 1st lieut. Co. K Jan. 24, 1865; veteran.

James C. Reynolds, sergt.-maj., must. in Aug. 28, 1861; pro. from sergt. Co. H Jan. 24, 1865; com. 1st lieut. Co. H June 8, 1865; capt. June 23, 1865; not must.; must. out with batt. June 30, 1865; veteran.

Samuel L. Hibbs, q.m.-sergt., must. in Aug. 28, 1861; pro. to 2d lieut. Co. I Oct. 23. 1862.

William M. Casey, q.m.-sergt,. must. in Aug. 17, 1861; pro. to q.m.-sergt. Sept. 6, 1862; to 2d lieut. Co. A March 1, 1863.

William M. Mehl, q.m.-sergt., must. in April 3, 1862; pro. from priv. Co. E March 1, 1863; disch. April 16, 1865; exp. of term.

Charles Rettew, q.m.-sergt., must. in March 7, 1864; pro. from priv. Co. K April 16, 1865; com. 1st lieut. Co. K June 8, 1865; not must.; must. out with batt. June 30, 1865.

Jacob Roop, com. sergt., must. in Aug. 28, 1861; must. out with regiment Sept. 10, 1864.

Fred. Weinderman, com. sergt., must. in Oct. 31, 1861; pro. from sergt. Co. H Nov. 1, 1864; com. 2d lieut Co. H June 8, 1865; not must.; must. out with batt. June 30, 1865; veteran.

Giles M. Coons, com. sergt., must. in Nov. 1, 1861; pro. from corp. Co. K Oct. 1, 1864; disch. Nov. 1, 1864, exp. of term.

Charles H. Weinert, com. sergt., must. in Sept. 23, 1861; pro. from corp. Co. F Oct. 10, 1864; com. 2d lieut. Co. F June 8, 1865; not must.; must. out with batt. June 30, 1865; veteran.

Lewis Grantier, principal musician, must. in Feb. 28, 1862; pro. to principal musician Nov. 1, 1863; disch. Feb. 28, 1865, exp. of term.

Hiram W. Landon, principal musician, must. in March 11, 1862; died at Bolivar Heights, Va., Sept. 24, 1862.

Charles Sims, principal musician, must. in Feb. 16, 1864; pro. from priv. Co. H June 13, 1864; must. out with batt. June 30, 1865.

Charles T. Whitcomb, principal musician, must. in Aug. 11, 1862; pro. from priv. Co K March 1, 1865; disch. by G. O. June 13, 1865.

COMPANY G.

Recruited from Montgomery County.

J. R. Breitenbach, capt., must. in Aug. 27, 1861; com. maj. July 8, 1864; not must.; pro. to brevet maj. and lieut.-col. March 13, 1865; must. out with company Sept. 10, 1864.

George T. Egbert, 1st lieut., must. in Aug. 27, 1861; res. Aug. 31, 1862.

Joseph Reed, 1st lieut., must. in Aug. 27, 1861; pro. from 2d lieut. 1862; disch. March 31, 1863.

William A. Hagy, 2d lieut., must. in Aug. 28, 1861; pro. from sergt.-maj. May 1, 1863; disch. by special order Dec. 14, 1863.

Amon J. Storms, 1st sergt., must. in Aug. 27, 1861; must. out with company Sept. 10, 1864.

William J. Clark, 1st sergt., must. in Aug. 27, 1861; disch. on surg. certif. July 25, 1862.

Alden S. Elliott, sergt., must. in Aug. 27, 1861; must. out with company Sept. 10, 1864.

Watson K. Hess, sergt., must. in Aug. 27, 1861; pro. to sergt. June 15, 1863: wounded at Cold Harbor, Va., June 3, 1864; must. out with company Sept. 10, 1864.

Francis Clark, sergt., must. in Aug. 27, 1861; disch. on surg. certif. Oct. 26, 1862.

Wm. H. Vandoran, sergt., must. in Aug. 27, 1861; disch. on surg. certif. Aug. 25, 1862.

David Jamison, sergt., must. in Aug. 27, 1861; trans. to Vet. Res. Corps Nov. 15, 1863.

Samuel Magargle, sergt., must. in Aug. 27, 1861; pro. from corp. March 1, 1865; killed at Wilderness, Va., May 6, 1864.

William H. Muir, sergt., must. in Aug. 27, 1861; pro. from corp. March 1, 1864; killed at Spottsylvania Court-House, Va., May 13, 1864; buried in Wilderness Burial-Grounds.

William H. Lott, corp., must. in Aug. 27, 1861; wounded at Gettysburg, Pa., July 3, 1863; trans. to Co. K, date unknown.

Jesse McCombs, corp., must. in Aug. 27, 1861; disch. on surg. certif, Aug. 30, 1862.

William H. Abrams, corp., must. in Aug. 28, 1861; captured at Petersburg, Va., June 22, 1864; trans. to Co. K, date unknown.

Privates.

Charles Archer, must. in Aug. 27, 1861; disch. on surg. certif. Sept. 10, 1862.

William Allen, must. in Aug. 27, 1861; died at Washington, D. C., Oct. 25, 1862; buried in Military Asylum Cemetery.

Jacob Baker, must. in July 17, 1864; drafted; trans. from 165th Regt. P. V.; must. out with company Sept. 10, 1864.

Josephus Baker, must. in Aug. 27, 1861; disch. on surg. certif. Feb. 20, 1863.

John Bisbing, must. in Aug. 27, 1861; disch. on surg. certif. March 21, 1863.

Samuel Brown, must. in Aug. 27, 1861; disch. on surg. certif. Feb., 1863.

James H. Bennett, must. in Aug. 27, 1861; disch. on surg. certif. Feb. 28, 1862.

Isaac Brown, must. in April 5, 1862; trans. to Co. K, date unknown; veteran.
John Bobb, must. in Aug. 27, 1861; killed at Fair Oaks, Va., June 28, 1862.
Thomas Bitler, must. in April 8, 1862; died of wounds received at Wilderness, Va., May 6, 1864.
William Bundick, must in Aug. 27, 1861.
William Caruthers, must. in Aug. 27, 1861; died at Harper's Ferry, Va., Nov. 18, 1863.
James Campbell, must. in Aug. 27, 1861.
Joseph Dickinson, must. in Aug. 27, 1861; must. out with company Sept. 10, 1864.
Bernard Dugan, must. in Aug. 27, 1861; must. out with company Sept. 10, 1864.
David Dungan, must. in Aug. 27, 1861; disch. on surg. certif. Dec. 29, 1862.
Solomon Dirk, must. in April 8, 1862; trans. to Vet. Res. Corps Sept. 16, 1863.
Benjamin Ehler, must. in Aug. 27, 1861; wounded at Antietam, Md., Sept. 17, 1862; absent, in hospital, at muster out.
Alfred M. Fields, must. in Aug. 27, 1861; must. out with company Sept. 10, 1864.
Michael Flanagan, must. in Aug. 27, 1861; disch. on surg. certif. Feb. 28, 1863.
Thomas Fagan, must. in Aug. 27, 1861; killed at Camp Observation, Md., Feb. 26, 1862.
John Flick, must. in Aug. 27, 1861; died at Washington, D. C., Jan. 5, 1863.
John C. Facher, must. in April 8, 1862.
Michael Gallagher, must. in Aug. 27, 1861; disch. on surg. certif. Feb. 17, 1863.
John F. Hale, must. in Aug. 27, 1861; wounded at Fredericksburg, Va., Dec. 13, 1862; absent, in hospital, at muster out.
Charles Heite, must. in Aug. 27, 1861; must. out with company Sept. 10, 1864.
John Johnson, must. in Aug. 27, 1861; must. out with company Sept. 10, 1864.
George Kilpatrick, must. in Aug. 27, 1861; must. out with company Sept. 10, '864,
George Krupp, must. in Aug. 27, 1861; died at Norristown, Pa., April 13, 1862.
John O. Kearney, must. in Aug. 27, 1861; killed at Gettysburg, Pa., July 2, 1863.
Harry Kinnear, must. in Aug. 27, 1861.
Christian Leoser, must. in Aug. 27, 1861; must. out with company Sept. 10, 1864.
Walter Leggett, must. in Aug. 27, 1861; killed at Antietam, Md., Sept. 17, 1862.
George Murray, must. in Aug. 27, 1861; must. out with company Sept. 10, 1864.
John F. Meeser, must. in Aug. 27, 1861; must. out with company Sept. 10, 1864.
John Murry, must. in Aug. 27, 1861; disch. on surg. certif. July 25 1862.
George W. Miller, must. in Jan. 17, 1864; drafted; trans. from 165th Regt. P. V.; trans. to Co. K, date unknown.
Bernard Muldoon, must. in June 15, 1864; trans. to Co. K, date unknown.
And. J. Manning, must. in Aug. 27, 1861.
Joseph McDonnell, must. in Aug. 27, 1861; disch. on surg. certif. Jan. 31, 1863.
Theo. McLaughlin, must. in Aug. 27, 1861.
Neil McDade, must. in Aug. 27, 1861.

Wilson Ritter, must. in April 8, 1862; killed at Spottsylvania Court-House, Va., May 12, 1864.
George W. Robbins, must. in Aug. 27, 1861; captured in action at Petersburg, Va., June 22, 1864; died at Andersonville, Ga., Aug. 21, 1864; grave 6321.
William Steward, must. in Aug. 27, 1861; must. out with company Sept. 10, 1864.
Clayton Super, must. in Aug. 27, 1861; disch. on surg. certif. Feb. 11, 1863.
William J. Storms, must. in Aug. 27, 1861; trans. to Vet. Res. Corps Sept. 26, 1863.
Joseph S. Sellers, must. in April 18, 1862; trans. to Co. K, date unknown.
Henry Smith, must. in Aug. 28, 1861; died at New York Dec. 1, 1862; burial record Nov. 14, 1862.
Josiah Schwenk, must. in Aug. 28, 1861; died at Yorktown, Va., May, 1862; burial record June 11, 1862; buried in National Cemetery, Section D, grave 206.
Abraham Stoltz, must. in April 8, 1862; died at Washington, D. C., Jan. 26, 1863.
Anthony Starr, must. in April 8, 1862; killed at Gettysburg, Pa., July 2, 1863; buried in National Cemetery, Section D, grave 16.
John Spicer, must. in Aug. 27, 1861.
William M. Stroud, must. in Aug. 27, 1861.
Robert Simpson, must. in Aug. 27, 1861.
Lewis I. Sickels, must. in Aug. 27, 1861.
Alexander Tippin, must. in Aug. 27, 1861; disch. on surg. certif. Oct. 26, 1862.
Ottis Travis, must. in Dec. 25, 1861; disch. on surg. certif. Feb. 4, 1863.
Wm. S. Townsend, must. in April 8, 1862; died at Philadelphia, Pa., May 30, of wounds received at Wilderness, Va., May, 1864.
Terrence Tobin, must. in Aug. 27, 1861; killed at Spottsylvania Court-House, Va., May 11, 1864.
George Trump, must. in Aug. 27, 1861.
Charles Winstanley, must. in Aug. 27, 1861; must. out with company Sept. 10, 1864.
Morgan Williams, must. in Aug. 27, 1861; disch. on surg. certif. Feb. 14, 1863.

One Hundred and Twenty-ninth Regiment Pennsylvania Volunteers.—Five companies of this regiment—A, B, E, G and H—were recruited in Schuylkill County, four—C, D, F and K—in Northampton, and one company, I, was recruited in Montgomery. They rendezvoused at Camp Curtin, where, on the 15th of August, 1862, a regimental organization was effected, with the following field officers: Jacob G. Frick, of Schuylkill County, colonel; William H. Armstrong, of Northampton County, lieutenant-colonel; Joseph Anthony, of Schuylkill County, major. Colonel Frick had served with credit as lieutenant in the Mexican war and as lieutenant-colonel of the Ninety-sixth Pennsylvania Regiment until the 29th of July, 1862. On the day following its organization, after having been hastily armed and equipped, it was hurried away to Washington, and on the 18th went into camp in the neighborhood of Alexandria. Company and regimental drills were early commenced, and by the active and intelligent efforts of its colonel the regiment rapidly attained a marked degree of efficiency. While the command was stationed here two companies were detailed to rebuild a bridge across Bull Run, where they remained as guard. On the 30th the remaining companies, after having been held for four days in constant readiness to march, proceeded as guard to an ammunition train to Centreville, pass-

ing on the way the corps of Fitz John Porter, in light marching order, bound for the front. The cannonading had been heavy throughout the day. Towards evening it rapidly came nearer, and at five P.M., after having safely delivered the train, the command was, for the first time, under fire, the rebel artillery throwing shells into the woods near Centreville, where it was resting. Proceeding on its return to Fairfax Seminary, it was brigaded on the 3d of September with the Ninety-first, One Hundred and Thirty-fourth, and One Hundred and Twenty-sixth Pennsylvania Regiments, commanded by General E. B. Tyler. Brigade, battalion and company drills were studiously practiced, and on the 7th its camp was changed to a point near Fort Richardson.

On the morning of the 14th the brigade started on the march through Maryland, arrived at the Monocacy on the 16th, where it was halted, and on the 17th resumed the march to the sound of heavy canonading, arriving early on the following morning on the field of Antietam. But the enemy had by this time retired, and the command soon after went into camp, where for six weeks, with the exception of an expedition up the Shenandoah Valley with the division, the regiment remained engaged in drill and unimportant picket duty. On the 30th of October the army commenced crossing into Virginia, and moving down the valley, continuing the movement, with a slight interruption at Warrenton, until it arrived opposite Fredericksburg, and Burnside's bloody but fruitless campaign was inaugurated.

Shortly after noon of the 13th of December the division crossed the Rappahannock, and proceeding through the town to a position in full view of the field, awaited the order to enter the fight. It was not long delayed, and again advancing by a main road, the brigade halted in low, open ground, where the men were ordered to lie down. Tempted by the easy range and unprotected situation of the brigade, the enemy opened a destructive fire from his batteries, by which Lieutenant Jacob Parvin, Jr., was mortally, and a number of privates severely wounded. Moving to the left of the road, the division was shortly after formed in line of battle on the crest of the hill, the brigade in two lines, the One Hundred and Twenty-ninth on the left front. In the hopeless and fruitless charge which followed, made under a ceaseless fire of musketry and artillery from the impregnable position which the enemy held, officers and men did everything that true soldiers could do, traversing in good order the lines of dead and wounded left in previous charges, and pressing forward in the gathering darkness until they attained position in advance of every previous charge, and from which it was impossible to go farther. In the brief space that it was in motion the regiment lost one hundred and forty-two in killed and wounded. The caps of some were subsequently found close up to the famous stone-wall, and an officer and seven privates of Company D were taken prisoners. Captain George J. Lawrence and Jonathan K. Taylor were mortally wounded. Captain Taylor was shot through the lungs early in the charge, but refused to leave the field, and retired with his command. Captains William Wren, Jr., Herbert Thomas, E. Godfrey Rehrer and Levi C. Leib and Lieutenant A. A. Lukenbach were wounded. Lieutenant Joseph Oliver was wounded and fell into the enemy's hands. The loss in killed was sixteen. General Tyler, in his official report of the battle, says: "Colonel O'Brien, One Hundred and Thirty-fourth, led the right front; Colonel Frick, One Hundred and Twenty-ninth, the left; Colonel Elder, One Hundred and Twenty-sixth, held the right rear and Colonel Gregory, Ninety-first, the left rear. These officers discharged their respective duties creditably and satisfactorily; their voices being frequently heard above the din of battle urging on their men against the terrible shower of shot and shell and the terrific musketry as we approached the stone wall. Of their conduct I cannot speak too highly. Lieutenant-Colonel Rowe, Lieutenant-Colonel Armstrong, Major Anthony and Major Thompson are entitled to great credit for their efforts and officer-like conduct during the engagement. Lieutenant-Colonel Armstrong had a horse shot under him. Adjutant Green exhibited great coolness in the discharge of his duty. It may not be improper for me to say that Captain Thomas, acting inspector-general on the staff of the division commander, having his horse shot, and thus prevented from serving him, joined his company in the One Hundred and Twenty-ninth, and was severely wounded while leading his men in the charge."

After dark the regiment was again marched upon the field for guard duty, but was withdrawn towards midnight. On the 14th and 15th it remained in the town, losing one man by the shot of a sharpshooter, and on the morning of the 16th, after having spent the night in throwing up a breast-work on the right of the town, recrossed the river and retired again to camp. The knapsacks which had been thrown aside before going into battle had been carefully guarded, but were not recovered. During the cold, rainy days preceding the 23d of December, when extra clothing and blankets were furnished to supply the place of those lost, the men suffered greatly from exposure, one dying and many being thrown into hospitals. Drill and picket duty, which was at times severe, the Mud March from the 20th to the 24th of January, 1863, and occasional reviews filled up the measure of its duty until the opening of Hooker's first campaign.[1]

[1] Towards the middle of January an order was issued through division headquarters requiring the men to draw dress coats. As they had warm underclothing, and had just been provided with two blouses per man, the dress coat did not seem to be needed. It would only be an incumbrance and a needless expense, and, moreover, their term of service would shortly expire. The officers sought to have their regiment relieved

The regiment marched with the corps on the Chancellorsville campaign, though the time of many of the men had already expired, and took part in the fighting of the 1st, 2d and 3d of May. In the principal contest, on the morning of the 3d, it was closely engaged in its place in the division line of battle in the wood in front of the Union batteries. After nearly two hours of sharp musketry firing the ammunition became exhausted, and the right flank of the division was turned. The command was given to face by the rear rank and retire, in order that the batteries might have full play upon the rebel columns coming in upon the flank. It was executed in as orderly a manner as the thickly-wooded ground would permit, but the One Hundred and Twenty-ninth, bringing up the rear, had not left the wood before the enemy closed upon it, and some spirited hand-to-hand encounters occurred. The colors were twice seized, but were defended with great gallantry and brought safely off. Lieutenant-Colonel Armstrong fell into the enemy's hands, but made his escape in the confusion caused in his ranks by the fire of the Union batteries. Major Anthony was shot through the lungs, but was assisted off the field, and still survives what was then considered a mortal wound. "The One Hundred and Twenty-ninth," says General Tyler, in his official report, "was on our left, and no man ever saw cooler work on *field drill* than was done by this regiment. Their firing was grand, by rank, by company and by wing, in perfect order." The loss was five killed, thirty-two wounded and five missing. On the 6th the regiment recrossed the Rappahannock and returned to its camp near Falmouth. On the 12th, its term of service having fully expired, it returned to Harrisburg, where, on the 18th of May, it was mustered out. The return of companies to Easton and Pottsville was marked by flattering and enthusiastic demonstrations on the part of the citizens.

FIELD AND STAFF OFFICERS.

Jacob G. Frick, col., must. in Aug. 15, 1862; must. out with regt. May 18, 1863.

W. H. Armstrong, lieut.-col., must. in Aug. 15, 1862; must. out with regt. May 18, 1863.

Joseph Anthony, maj., must. in Aug. 15, 1862; wounded at Chancellorsville, Va., May 3, 1863; absent, in hospital, at muster out.

David B. Green, adjt., must. in Aug. 15, 1862; must. out with regt. May 18, 1863.

William F. Patterson, q.m., must. in Aug. 15, 1862; must. out with regt. May 18, 1863.

Joseph Rossiter, surg., must. in Sept. 12, 1862; must. out with regt. May 18, 1863.

Otto Schittler, asst. surg., must. in Aug. 15, 1862; must. out with regt. May 18, 1863.

John G. Long, asst. surg., must. in Aug. 15, 1862; disch. Nov. 26, 1862.

William H. Rice, chaplain, must. in Aug. 16, 1862; must. out with regt. May 18, 1863.

Strange J. Palmer, sergt.-maj., must. in Aug. 15, 1862; pro. from private Co. G March 28, 1863; must. out with regt. May 18, 1863.

John S. Engle, sergt.-maj., must. in Aug. 15, 1862; pro. from private Co. G Aug. 15, 1862; to 2d lieut Co. H Dec. 1, 1862.

Franklin C. Stout, sergt.-maj., must. in Aug. 12, 1862; pro. from sergt. Co. C Jan. 1, 1863; to 2d lieut. Co. C March 28, 1863.

Henry C. Taylor, com. sergt., must. in Aug. 13, 1862; pro. from private Co. A Aug. 15, 1862; must. out with regt. May 18, 1863.

Henry Broughner, com. sergt., must. in Aug. 11, 1862; pro. from sergt. Co. G Aug. 15, 1862; must. out with regt. May 18, 1863.

John T. Bond, hosp. steward., must. in Aug. 14, 1862; pro. from sergt. Co. E Aug. 21, 1862; must. out with regt. May 18, 1863.

COMPANY I.

Frederick B. Shunk, capt., must. in Aug. 13, 1862; disch. on surg. certif. Dec. 6, 1862.

Benjamin F. Bean, capt., must. in Aug. 13, 1862; pro. from 2d lieut. Dec. 6, 1862; must. out with company May 18, 1863.

George Z. Vanderslice, 1st lieut., must. in Aug. 13, 1862; disch. on surg. certif. Dec. 10, 1862.

Henry H. Fetterolf, 1st lieut., must. in Aug. 11, 1862; pro. from 1st sergt. Dec. 5, 1862; must. out with company May 18, 1863.

John B. Roberts, 2d lieut., must. in Aug. 11, 1862; pro. from sergt. Dec. 10, 1862; must. out with company May 18, 1863.

Aaron Weikel, 1st sergt., must. in Aug. 11, 1862; pro. from sergt. Dec. 6, 1862; must. out with company May 18, 1863.

Jacob Rapp, sergt., must. in Aug. 11, 1862; must. out with company May 18, 1863.

Henry Longstreth, sergt., must. in Aug. 11, 1862; must. out with company May 18, 1863

Joseph Culp, sergt., must. in Aug. 11, 1862; pro. from corp. Jan. 1, 1863; must. out with company May 18, 1863.

William Heebner, sergt., must. in Aug. 11, 1862; pro. from corp. Jan. 1, 1863; must. out with company May 18, 1863.

Richard Moore, corp., must. in Aug. 11, 1862; pro. to corp. Jan. 9, 1863; must. out with company May 18, 1863.

Bethel M. Yerkes, corp., must. in Aug. 11, 1862; must. out with company May 18, 1863.

Edward F. Houser, corp., must. in Aug. 11, 1862; must. out with company May 18, 1863.

William K. Faust, corp., must. in Aug. 11, 1862; must. out with company May 18, 1863.

William Harley, corp., must. in Aug. 11, 1862; must. out with company May 18, 1863.

Eber H. Beaumont, corp., must. in Aug. 11, 1862; pro. to corp. Jan. 9, 1863; must. out with company May 18, 1863.

John H. Hartzell, corp., must. in Aug. 11, 1862; pro. to corp. Jan. 9, 1863; must. out with company May 18, 1863.

Michael S. Kelly, corp., must. in Aug. 11, 1862; died at Falmouth, Va., Feb. 19, 1863.

Enos Poley, musician, must. in Aug. 11, 1862; must. out with company May 18, 1863.

Privates.

William Alderfer, must. in Aug. 11, 1862; must. out with company May 18, 1863.

Dillman Bean, must. in Aug. 11, 1862; must. out with company May 18, 1863.

Cadwallader H. Brooke, must. in Aug. 13, 1862; must. out with company May 18, 1863.

William T. Clemmens, must. in Aug. 11, 1862; must. out with company May 18, 1863.

George W. Colehower, must. in Aug. 11, 1862; must. out with company May 18, 1863.

Edward B. Conrad, must. in Aug. 11, 1862; must. out with company May 18, 1863.

John T. Cox, must. in Aug. 11, 1862; must. out with company May 18, 1863.

Jacob Curry, must. in Aug. 11, 1862; wounded at Chancellorsville, Va., May 3, 1863; absent, in hospital, at muster out.

Joseph H. Cole, must. in Aug. 11, 1862; disch. on surg. certif. Jan. 14, 1863.

Nathan Davis, must. in Aug. 11, 1862; must. out with company May 18, 1863.

John Dechert, must. in Aug. 11, 1862; must. out with company May 18, 1863.

Benjamin F. Detra, must. in Aug. 11, 1862; must. out with company May 18, 1863.

---

from the operations of the order; but in this they were unsuccessful, and upon their refusal to obey the order, the colonel and lieutenant-colonel were summarily tried and dismissed from the service. They were, however, soon after reinstated and restored to their commands, the general officers who had preferred charges against them testifying upon their trial to their fidelity and gallantry.

William Dorworth, must. in Aug. 11, 1862; must. out with company May 18, 1863.
William Doubman, must. in Aug. 13, 1862; must. out with company May 18, 1863.
William Dunmore, must. in Aug. 11, 1862; must. out with company May 18, 1863.
Andrew Dunn, must. in Aug. 13, 1862; must. out with company May 18, 1863.
James K. Espenship, must. in Aug. 11, 1862; must. out with company May 18, 1863.
Henry D. Espenship, must. in Aug. 11, 1862; must. out with company May 18, 1863.
David Y. Eisenberry, must. in Aug. 11, 1862; must. out with company May 18, 1863.
Jonathan C. Evans, must. in Aug. 13, 1862; must. out with company May 18, 1863.
James W. Essig, must. in Aug. 11, 1862; died near Falmouth, Va., Dec. 29, 1862.
Henry H. Fretz, must. in Aug. 11, 1862; must. out with company May 18, 1863.
Samuel C. Foust, must. in Aug. 11, 1862; must. out with company May 18, 1863.
William Finger, must. in Aug. 11, 1862; must. out with company May 18, 1863.
Daniel W. Fisher, must. in Aug. 11, 1862; must. out with company May 18, 1863.
Sylvester G. Fretz, must. in Aug. 11, 1862; must. out with company May 18, 1863.
Benjamin Fudge, must. in Aug. 11, 1862; died near Falmouth, Va., April 18, 1862.
Albert L. Gehman, must. in Aug. 11, 1862; must. out with company May 18, 1863.
Levi Gotchall, must. in Aug. 13, 1862; must. out with company May 18, 1863.
James Grasy, Jr., must. in Aug. 11, 1862; must. out with company May 18, 1863.

Abraham Zollors, must. in Aug. 11, 1862; must. out with company May 18, 1863.

One Hundred and Thirty-eighth Regiment Pennsylvania Volunteers.[1]—Recruiting was commenced for the companies which ultimately composed this regiment under the call for nine months' service, but before it was completed an order was issued forbidding the acceptance of more men for a less period than three years, and the terms of enlistment were accordingly changed to three years. Companies A, C, I and K were recruited in Montgomery County; B and G in Adams; D, E and F in Bedford, and Company H in Bucks. The companies rendezvoused at Camp Curtin, the first company arriving on the 16th of August, 1862, and by the 26th their organizations were completed, and they were mustered into the United States service. Charles L. K. Sumwalt, of Adams County, was appointed colonel, and under his command, on the 30th, it moved to Baltimore.

[1] The facts embraced in this narrative are principally drawn from a neat volume of one hundred and thirty-eight pages, prepared by Osceola Lewis, and printed by Wills, Iredell & Jenkins, of Norristown, Pa.

It reported to General Wool, in command of the Middle Department, and was by him ordered to duty at the Relay House, the Washington Junction of the Baltimore and Ohio Railroad. Shortly after his arrival Captain M. R. McClennan, of Company A, was appointed lieutenant-colonel, and Captain Lewis A. May, of Company F, major. It was employed in guarding the railroad, to prevent mischief by secession sympathizers, and to prevent any interruption of communication with the capital. For this purpose Company A was stationed at Jessop's Cut, C at Dorsey's Switch, E at Hanover Switch, D at Elk Ridge Landing, G at Fort Dix, a small earth-work mounting six guns, commanding the Washington Viaduct, a handsome stone structure spanning the Patapsco River B at Ellicott's Mills, a detachment of I at Elysville, and the remaining four companies—F, H, I and K—at headquarters, near the Relay House. This was the original disposition, and the relative strength remained the same, though the companies were periodically changed to give all an opportunity for regimental drill. During the time of the Maryland campaign, which culminated in the battle of Antietam, this road was the scene of great activity, and the force at this point was strengthened by the addition of the One Hundred and Eighteenth New York and Battery B of the Fifth New York Light Artillery. After the campaign was ended the regiment was again left to perform the duty alone. Many deserters and stragglers from the Union army, and aiders and abettors of the enemy, were arrested and committed. The winter and spring of 1862–63 passed with little to change the regular routine of duty. On the 2nd of May, Lieutenant-Colonel McClennan was promoted to colonel, in place of Colonel Sumwalt, whose connection with the service was severed on 30th of March preceding.

On the 16th of June the regiment was ordered to active duty and proceeded to Harper's Ferry, where it was assigned to Elliott's brigade, a part of the command with which Milroy had in vain battled with the advancing columns of Lee's army, at Winchester, on their way to Pennsylvania. General French was in command at Harper's Ferry, with the brigades of Kenly, Morris and Elliott under him. The heights were strongly fortified, the trees in front were swept away, artillery was advantageously posted, strong picket lines were established and every precaution taken to give the foe a warm reception. But he wisely shunned this route, his bivouac fires and his long trains being visible in the distant valley as they passed and crossed the Potomac at Williamsport. Harper's Ferry was evacuated on the 1st of July. All munitions and stores that could not be removed were destroyed and the remainder was loaded on canal-boats and sent to Washington. Elliott's brigade was charged with guarding it and taking it through, the rest of French's division moving to Frederick. From Washington the brigade proceeded by rail, on the 7th, to Frederick, and rejoined the division, and on the following day joined the army in its pursuit of Lee, now fresh from the field of Gettysburg. General French assumed command of the Third Corps, in place of Sickles, who had fallen in the desperate fighting of the 2d, and General Elliott succeeded the former in command of the division, now attached to that corps. On the 16th the corps crossed the river at Harper's Ferry, and on the 23d encountered the enemy in a strong position at Wapping Heights, his infantry, screened by stone walls, making a determined resistance. He was finally dislodged by a gallant charge of the Excelsior Brigade, and was driven into the valley beyond. Elliott's brigade did not become engaged, though held under fire a considerable portion of the time during the engagement. At Warrenton the corps halted and remained until the 1st of August, when it moved out to the Rappahannock, the regiment being posted at Fox's Ford, charged with out-post duty. On the 15th of September the corps moved on to Warrenton, where it remained in comparative quiet, with the rest of the army, for nearly six weeks. In the mean time two corps, the Eleventh and Twelfth, had been detached from the Army of the Potomac and sent to the support of Rosecrans, cooped up in a precarious position at Chattanooga. Feeling that he could now with safety assume the offensive, Lee commenced a sudden flank movement by the right, and Meade, to save himself, retreated to Centreville. In this movement the regiment was divided, a portion being assigned as guard to the ammunition train and the remainder to the corps ambulances. At Centreville the movement of the two armies was reversed without coming into conflict, and Lee retreated and Meade pursued. On the 23d of October the regiment was relieved from guard duty with the trains and rejoined its brigade. After crossing the Rappahanock, and when within two and a half miles of Brandy Station, the enemy's rear guard was encountered. Elliott's division had that day the advance, and the One Hundred and Thirty-eighth Pennsylvania and the One Hundred and Tenth Ohio were immediately deployed, the former to the left and the latter to the right of the railroad, and with Berdan's sharpshooters and Company A of the One Hundred and Thirty-eighth thrown forward as skirmishers, advanced with supporting regiments to the attack. The fire of the enemy's artillery was severe. Early in the engagement a shell struck and exploded in the ranks near the centre of the regiment, mortally wounding Captain Lazarus C. Andress and carrying away the left arm of Sergeant Abraham G. Rapp. The missile burst as it struck the former, fearfully mangling his hip and thigh and shivering his sword. The hill was carried and the enemy barely escaped with his artillery. The loss was seven wounded.

At Brandy Station the army halted, and remained until the 23rd of November, when it set forward on

the Mine Run campaign. The Third Corps crossed the Rapidan at Jacob's Ford, and on the 27th came up with the enemy at Locust Grove. The Second Division was first engaged, and being hard pressed, the Third, now commanded by General Carr, was sent to its support and formed on its left, the One Hundred and Thirty-eighth being on the extreme left of the line. The fighting soon opened on its front, at close range, and buck and ball were hurled with telling effect against the advancing enemy. Colonel McClennan, while moving along the line encouraging his men and directing the fight, was stricken down and carried from the field. Captain Fisher had an arm shattered and Adjutant Cross was disabled. At dark, after having gallantly held the ground, and repulsed repeated charges, inflicting great slaughter, it was relieved by fresh troops, and rested for the night on the field. The loss in the engagement was seven killed, forty-five wounded and three missing. During the night the enemy withdrew to his fortified position behind Mine Run. After advancing to and reconnoitring his ground, it was decided to abandon the campaign, and the army returned to camp near Brandy Station, where the regiment was soon settled in comfortable winter-quarters.

Colonel McClennan, having measurably recovered from his wounds, returned to duty on the 13th of March, 1864, and was received in camp with demonstrations of warm regard. The smooth-bore muskets with which the regiment was armed were soon afterwards exchanged for Springfield rifled muskets. In the reorganization of the corps, preparatory to the opening of the spring campaign, the Third Division of the Third Corps became the Third Division of the Sixth, General Ricketts in command. The army moved on the 3rd of May, and on the 5th, soon after crossing the Rapidan, it was attacked in the tangled thickets of the Wilderness. It was near midday before Rickett's division was put in motion. Towards evening, after having marched and countermarched, the brigade, to the command of which General Truman Seymour had that morning been assigned, was detached and hurriedly led to a position on the extreme right of the corps, passing on its way the scene of a most sanguinary struggle, where the dead of both armies were thickly strewn on the wild wooded battle-field. At dark it was formed in two lines, the One Hundred and Thirty-eighth on the second line. It was thought that only a picket guard of the enemy's extreme left was in front, and in swinging around to envelop it the command was suddenly brought under a severe front and flank fire from strong columns. For two hours, with the most stubborn fighting, the ground was held, when on both sides the fighting gradually died away, and the lines rested on the field where they had fought. The casualties in the regiment were slight, Sergeant Biesecker, and John H. Ashenfelter, of the color guard, being killed. All night long the moans and the cries of the dying filled the air, and the ominous sound of the enemy chopping and fortifying in front and far out on the right flank was distinctly heard. General Seymour was apprised of these threatening indications, but the order of the previous evening to renew the assault in the morning was not modified, and at nine o'clock the brigade moved to the desperate work, and now the One Hundred and Thirty-eighth on the front line. The men were charged not to fire a shot until they had reached the enemy's works. Apprised by the clanking of arms of their approach, he was ready to receive them. The pattering fire of his skirmishers deepened into showers as they went, and finally a perfect storm of deadly missiles greeted them; but without wavering, the lines moved on until within fifty yards of his breast-works, where the flashes of his guns were plainly visible through the tangled wood. And now, when the moment for a final dash had come, impatient soldiers began to stop and to fire. Felled trees and tangled branches made it more and more difficult to advance. The momentum of the charge was lost, and the men, taking shelter behind trees, and lying prostrate upon the ground for an hour in the face of a most destructive fire of infantry and artillery hurling grape and canister, held their ground. Seeing that there was no hope of success, the brigade was finally ordered back to the position of the morning, unavoidably leaving many of the dead and wounded on the field. Late in the evening, while the men were preparing their coffee behind their hastily constructed breast-works, Shaler's brigade, which had been posted upon the right of Seymour, was suddenly attacked in flank and rear by a powerful body of the enemy under Gordon. Sweeping down upon the unsuspecting troops, as did Jackson upon the Eleventh Corps at Chancellorsville, Gordon scattered and drove all opposed to him. He was finally checked by reinforcements from other parts of the line, and the lost ground regained. General Shaler and Seymour, with numbers of their troops, were taken prisoners. Weakened by two fatal and unsuccessful charges, the brigade was in no condition or heart to resist, and the general who had refused to listen to the representations of danger in the early morning added another to the misfortunes which had attended his career at Charles City Cross-Roads, Fort Wagner and Olustee. The regiment lost in these engagements twenty-seven killed, ninety-four wounded and thirty-five missing, of whom twenty-six were known to be prisoners. Lieutenant John H. Fisher was killed, and Lieutenants H. C. Grossman and John E. Essick were wounded, the latter mortally.

On the 7th the contending parties acted on the defensive, operations being confined to skirmishing. On the night of the 8th the first of Grant's movements by the left flank began. In the fierce fighting which occurred about Spottsylvania, and in the subsequent movements during the month of May, the regi-

ment shared, and was frequently under fire, losing five wounded on the 12th, three wounded on the 13th, one killed on the 18th, one wounded on the 19th, two wounded on the 20th, and one wounded on the 31st, but did not become involved in the more desperate fighting.

On the 1st of June the troops from Butler's army of the James were met in the vicinity of Cold Harbor, and orders were given to prepare for an engagement. "A hasty disposition of these commands was made," says Lieutenant Lewis, in his narrative of this regiment, "skirmishers were advanced, the enemy's position partially developed, a plan of assault selected, and at five o'clock the attack was commenced. The Third Division, on the right of the corps, adjoining General Smith's left, moved forward in four lines of battle, and with great promptness.

"The front line of the Second Brigade consisted of the Sixth Maryland and the One Hundred and Thirty-eighth Pennsylvania, and these two regiments were the first to encounter a galling fire from the enemy's sharp-shooters and a difficult swamp which had to be crossed. These obstacles overcome, the rebel main line, situated on a ridge thickly wooded with pine, was found defended by strong numbers. The Sixth and the One Hundred and Thirty-eighth were the first troops to clamber over the works and break the rebel front, which was only accomplished by a solid rush and hard fighting. The confusion and flight of the enemy resulting from this breach in his line was quickly followed up, and in a short time the two above specified regiments had captured more prisoners than their own numbers. On other portions of the line our troops had not carried the works, and we, in our zeal to drive the enemy, soon distanced all supporting columns to the jeopardy of our own safety. At one period the men of our regiment drove the gunners from a battery; but when within a few yards of its position, and about to seize it, our scattered and weakened numbers became apparent to the enemy, who rallied heavily against us, returned to his guns, and checked our further advance by a raking charge of canister. We were hard-pressed, but the captured ground was maintained. The entire Third Division joined in the work with alacrity at the first onset, and to this command belongs the credit of being the only division of two corps to successfully accomplish the task assigned it in this battle." The conduct of the division drew from General Meade a congratulatory order, in these words: "Please give my thanks to Brigadier-General Ricketts and his gallant command for the very handsome manner in which they conducted themselves to-day. The success attained by them is of great importance, and if promptly followed up, will materially advance our operations." During the night the lines were reformed and the rebel works were reversed. On the 3d another assault was made, but without success, and the two armies fell to digging, which was continued until the 12th, when the Union army was quietly withdrawn and moved off towards the James. The loss was seven killed, fifty-four wounded and seven missing. Lieutenant Charles P. McLaughlin was among the killed.

After crossing the James, about the middle of the month, the Third Division moved up to Point of Rocks, and was assigned a position in the trenches at Bermuda Hundred, but subsequently rejoined the corps in front of Petersburg, and near the close of the month joined in the movement upon the Weldon Railroad, at Ream's Station, in which several miles of the road were destroyed.

On the 6th of July, Ricketts' division was ordered to City Point, and thence moved by transport to Baltimore. Cars were in waiting, upon which it immediately proceeded to Monocacy, and there awaited the advance of the enemy under Early, who, with a powerful division of Lee's army, was advancing on Washington. Line of battle was hastily formed, the troops of General Wallace, who commanded the department, occupying the right, which rested on a high fortified bluff overlooking the railroad and Monocacy Creek, and Ricketts' division, drawn up in two lines, the left, the whole in crescent shape, stretching across the railroad and the Washington turnpike. By ten on the morning of the 9th the skirmishing was brisk, and it soon became evident that the Union force was vastly outnumbered. To equal his front, Ricketts' division was stretched out in a single thin line, and against this the enemy came on in heavy force, rejoicing in his strength and confident of victory. The One Hundred and Thirty-eighth occupied a position on the unprotected left flank. To prevent this from being turned, which seemed to be the object of the enemy, the line was refused until it became impossible for him to execute his purpose without dividing his force. Foiled in this, he made a direct assault in three lines. As soon as he came within range a well-directed fire was opened, and rapid rounds were poured in with admirable effect. His first and second lines were broken, and the third advanced in their places; but still the division held its ground. At five P.M. the troops on the right gave way, and Ricketts was compelled to order a retreat to save himself from capture. The enemy was well supplied with artillery, which was admirably handled, while upon the Union side the few guns in play did little execution. Colonel McClennan commanded the brigade during the engagement and Major May the regiment. The loss was thirty-nine men wounded, twenty-one captured and eight missing. Captain George W. Guss was among the wounded and Captain Richard T. Stewart among the prisoners. The division retired to Baltimore and encamped at Druid Hill Park, and Early pushed on towards Washington; but here he was met by the rest of the Sixth Corps and driven ingloriously into Virginia. The Union forces joined in pursuit and pushed him to beyond Berryville, in the Shenandoah Valley, Ricketts' division having in the mean time rejoined

the corps. And now, for a period of nearly a month, during the intense heat of the season, marches and counter-marches between Washington and the Shenandoah Valley, over the soil of Maryland and Virginia, followed, apparently to little purpose.

Finally a new department was created and General Sheridan assigned to its command. His army was composed of the Sixth, Eighth and Nineteenth Corps, with a force of cavalry sent from the Army of the Potomac. Manœuvring at once commenced, by which the enemy was drawn from his stronghold at Fisher's Hill. On the 29th of August the cavalry, under Merritt, supported by Ricketts' division, met and defeated a body of the enemy near Smithfield. Encouraged by this success, at two A.M. on the morning of the 19th of September, Sheridan moved from his camp at Berryville to attack Early, resting on the line of the Opequan, six miles away. By daylight the stream was crossed, and dispositions were at once made for attack. The One Hundred and Thirty-eighth occupied the first line in the brigade, with the Sixth Maryland and Sixty-seventh Pennsylvania on its right and left. The first attack was made by the Sixth and Nineteenth Corps, in which a decided advantage was gained, but was lost by a fatal gap between the two corps, which, widening as they advanced, allowed the enemy to break through. Some confusion resulted; but the command was soon rallied, when the grand advance was made, and under a terrific fire of musketry and artillery it swept forward full upon his front, and at every point was victorious, the enemy retreating in precipitation and confusion. The pursuit was continued to Fisher's Hill, where he was found prepared to offer formidable resistance. Ricketts' division occupied a position in front of a strong rebel earthwork on the extreme right of the line, and when the Eighth Corps, under Crook, had, by a mountain-path, turned that flank, the whole line moved simultaneously upon the enemy and again drove him in utter rout, making extensive captures of prisoners, guns and small-arms. The loss of the regiment in these engagements was four killed, thirty-nine wounded and three missing. The army now moved on in pursuit, in three columns, preceded by a line of skirmishers, of which the regiment formed part, and in a rencounter near New Market with his rear guard suffered some loss in wounded. At Harrisonburg the pursuit was stayed, and the army soon after returned and went into camp at Cedar Creek, the enemy returning subsequently with reinforcements and taking position in his favorite stronghold at Fisher's Hill.

A little after midnight of the 18th of October the rebel army was led from its camp, and stealthily approaching the Union camp, at daybreak, turned the left of the line, where the Eighth Corps lay, and taking it in reverse, swept it back, the rout soon communicating to the Nineteenth Corps, which stood next. The Sixth Corps had time to rally, and offered some resistance, but was finally withdrawn to Middletown, where a new line was taken up and the corps effectively rallied. Here Sheridan, who had been absent in the early part of the day, joined them, and a general advance was sounded. The One Hundred and Thirty-eighth held manfully its place in the severe conflict which followed, and shared in the glorious victory which resulted. The loss was two killed and forty wounded. Lieutenants Samuel W. Cloward, John A. Gump, William B. Lovett and Martin S. Bortz were among the wounded, the two former mortally. At the opening of this campaign Colonel McClennan, debilitated by sickness, was obliged to leave the command, and the regiment was led throughout by Major May. On the 2d of November the One Hundred and Thirty-eighth, with other troops, was taken to Philadelphia, where it remained in camp until the 11th, when it returned to the army, now in camp near Winchester.

Early in December the corps returned to its place in the army before Petersburg, taking position between the Ninth and Second Corps, vacated by the Fifth. The One Hundred and Thirty-eighth was detailed to garrison Fort Dushane, an earth-work on the rear line of defenses near the Weldon Railroad. At Christmas a bountiful repast was provided by friends of the regiment in Montgomery County, and a beautiful stand of colors was presented, a gift from "Loyal Citizens of Norristown and Bridgeport, Pa." In acknowledgment of the latter gift, an elaborate address, breathing intense devotion to the national cause, was prepared and sent to the donors.

At midnight on the 1st of April the regiment joined the corps, and took position in the third line, a general assault having been ordered along the whole front upon the enemy's works. At four o'clock in the morning of the 2d the signal of advance was given, and moving forward under a raking musketry and enfilading artillery fire, through tangled underwood and ditches, the Sixth Corps carried the works in its front, sweeping everything before it. Pursuit of the flying foe was immediately given, the One Hundred and Thirty-eighth following up in a northwesterly direction for nearly two miles, making numerous captures.[1] Returning to the point where it first crossed the rebel works, it participated in the charge upon the rebel fort last taken by the division, suffering some loss. The losses in the operations of the entire day were sixteen wounded, Captain James B. Heebner and Lieutenant J. P. Iredell being of the number. Immediate pursuit was commenced, and at Sailor's Creek the corps came up with the enemy's main

[1] "Two men of Company F penetrated the country as far as the South Side Railroad, and tore up some of the track. While engaged in this work they encountered two rebel mounted officers, who demanded their surrender. Corporal John W. Mauk immediately shot one of the officers, and Private Wolford fired at the other, but missed, and the rebel escaped. The men then came back to the regiment and reported their adventure. It is supposed that the officer killed by Corporal Mauk was the rebel General A. P. Hill, as various reports give the circumstances of his death as similar to those of this case."—*Colonel McClennan's Official Report.*

body drawn up at a commanding position beyond the stream. Crossing this and the marshy bottom through which it courses, the First and Third Divisions assaulted in the face of a galling fire, and routed the foe, capturing prisoners in excess of their own numbers. The loss of the regiment was three killed and seven wounded, and here its fighting ended. Three days thereafter Lee surrendered, and the event was celebrated with every demonstration of rejoicing through all the camps. Two weeks later the corps made a forced march of a hundred miles to Danville, to the support of Sherman. But its co-operation was not needed, and it returned to Richmond by rail, and thence marched to the neighborhood of Washington, where, on the 23d of June, it was mustered out of service.

FIELD AND STAFF OFFICERS.

One Hundred and Sixtieth Regiment Pennsylvania Volunteers, Fifteenth (Anderson) Cavalry

(three years' service).[1]—This regiment was recruited

[1] "The Fifteenth Pennsylvania Cavalry (One Hundred and Sixtieth Regiment Pennsylvania Volunteers) was recruited by officers of the Anderson Troop, a company named after General Robert Anderson, the hero of Fort Sumter, which had been in service under General Buell.

"In the summer of 1862, Captain William I. Palmer, assisted by Ward, Verzin, Seeger and others of the old Anderson Troop, opened recruiting offices at Philadelphia, Pittsburgh and other points throughout the State.

"A peculiar feature at the recruiting station in Philadelphia (corner Third and Willing's Alley) was the requirement that recruits for the Fifteenth should furnish recommendations as to character, etc.

"It was stated at headquarters that the regiment was intended for special duty under General Buell, who was then in command of the gallant and successful Army of the Southwest.

"Applicants were numerous, and some of the best material of the State was thus secured.

"The men were measured for their uniforms at Rockhill & Wilson's Chestnut Street clothing-house, and purchased their heavy cavalry boots of Dickerman, Philadelphia.

"It was originally intended to increase the old troop to a battalion only, and it has been frequently urged that no sufficient authority was given for a greater number, but a full regiment was enlisted and placed in active service.

"The men were taken in detachments to Carlisle Barracks, in Cumberland County, Pennsylvania, and were drilled there by officers of the regular army, on duty at the barracks.

"It is asserted that there was some conflict as to the regiment between the War Department and the State authorities.

"At all events, there was some hitch or hindrance at some important point which resulted in trouble to officers and men, and occasioned considerable irregularity in the organization and equipment of the regiment.

"Acting Colonel Palmer was captured at Antietam, and was afterward succeeded in temporary command by Acting Lieutenant-Colonel Spencer.

"The officers, however, were only temporary, and orders were issued as mere 'temporary arrangements.' Men not above the grade of sergeants were in command of companies, while the men of the regiment had no voice in the selection of their non-commissioned or other officers.

"In this unfortunate condition, without equipment, without commissioned officers, and apparently without remedy, all efforts to secure a

in the autumn of 1862, by order of the Secretary of War, and was designed for special service. Captain William J. Palmer, who had previously organized an independent company known in history as the Anderson Troop, departed from the usual rule of permitting the enlisted men to elect the line and field officers, the recruits "having by their terms of enlistment waived their right to choose their own officers." The duty of selecting line, field and staff officers for a new regiment imposed a task of more than ordinary responsibility, and the men who patriotically waived the privilege, universally accorded to all Pennsylvania troops, subsequently learned by a painful experience that the selection of subordinate officers is attended with a measure of dissatisfaction not less marked than that which prevails where they are made the subject of popular choice. Home associations were not recognized in the organization of this regiment, nor in the appointment and assignment of line officers to duty. The promotion of line officers was not by company, as was the custom among Pennsylvania Volunteers. It was thought judicious to adopt the rule prevailing in the regular army, and promote by seniority throughout the regiment, the senior captain always being in command of Company A and the junior captain in command of Company M, and the same of lieutenants. The recruits were mustered into the service at Carlisle, Pa. Officers were assigned them who, by the aid of the post-officers of the regular army then stationed at Carlisle, commenced instruction and drill. The incursion of Lee into Maryland in the month of September, threatening Western Pennsylvania, induced great activity among all the troops then in process of organization, and this regiment, with those in camp at Harrisburg, were put in marching orders, and their first experience in the hardships of active service was realized in their native State. Their historian says, "The regiment was ordered to remain in the Cumberland Valley, and two hundred and fifty picked men, with three days' rations and thirty-six rounds of ammunition per man, were ordered to the front. They proceeded by rail to Greencastle, where the detachment procured horses for one hundred and fifty of their number, and with these they picketed all the public roads leading south, the enemy being in force at or near Hagerstown. The outposts came in conflict with the enemy on the 12th and 13th of September and acquitted themselves with credit. These troops were on duty during the battle of Antietam, and subsequently, on the 18th of September, Captain Palmer, who was to be commissioned colonel of the regiment, while in discharge of hazardous and difficult duty within the enemy's lines, was captured and sent to Richmond. Upon the retreat of Lee south of the Potomac the entire detachment returned to their camp at Carlisle, having returned to the good people in the neighborhood of Greencastle the horses used in their first campaign.

The capture of Captain Palmer at this critical juncture proved a great misfortune, as the command was left without a head. On the 1st of October, William Spencer, first lieutenant of the troop, was commissioned lieutenant-colonel, Adolph C. Rosengarten and Frank B. Ward, majors, and the regiment was organized in ten companies. A full list of company officers was presented to the proper authorities for appointment, but only eleven of these were commissioned. On the 7th of November the regiment moved by rail to Louisville, Ky., where, upon its arrival, it went into camp, and was mounted. A month later it was ordered forward to Nashville, where the main army, now under command of General Rosecrans, was assembled. At this time the command had seven field and staff officers, twelve line and about two-thirds of its complement of non-commissioned officers. On the 25th a detachment of two hundred and fifty men was sent out as guard to a foraging train, and while beyond the lines, on the Hillsboro' pike, was attacked, and one man killed; but the enemy was beaten back, and the laden train brought safely in.

The army was now upon the eve of advancing to meet Bragg in the battle of Stone River. On the 26th an order was issued for the regiment to advance with General Stanley's division of cavalry. Much dissatisfaction had prevailed previous to leaving Louisville on account of the want of officers and the lack of efficiency in the organization; but the men had determined to march to Nashville, and there lay their grievances before General Rosecrans, all appeals to Governor Curtin and to the Secretary of War having proved fruitless. Rosecrans was now busy with the movement of his forces, and could not be seen. With only a single commissioned officer to the company, the command was really in no condition to

change proving ineffectual,—a condition which naturally tends to produce demoralization and frequently leads to insubordination in any service, military or civil,—the regiment was, on short notice, hurried out of the grand old commonwealth of Pennsylvania, by Acting Lieutenant-Colonel Spencer, to Louisville, Kentucky, and from thence, wretchedly mounted and inefficiently equipped, to Nashville, Tennessee, whence, in a day or two, they were marched to the front, and under General Stanley, chief of cavalry of General Rosecrans, had the extreme advance at the battle of Murfreesboro'.

"The loss to the regiment in that battle was heavy. After the death of the gallant Majors Ward and Rosengarten and of the heroic Kimbes, General Stanley said, in a voice that rang like a trumpet :

"'I will take command of the Fifteenth Pennsylvania.' With that he drew his sword, shouted the command, 'Draw sabre! Charge! Follow me!' It was gallantly done and the regiment marched upon the foe.

"But alas! many of the brave and brilliant men of the Fifteenth, whose genius, dash and courage gave promise of distinguished and eminent service to the government were slain or crippled for life on that bloody field in the memorable Christmas holidays of 1862.

"The great delays in properly organizing the regiment and the lack of suitable supplies and equipments had culminated in widespread dissatisfaction, and troubles arose which for a time seriously threatened the organization.

"These, however, were afterwards happily adjusted.

"After the reorganization Orderly Sergeant Charles M. Betts rose rapidly to the colonelcy of the regiment, and its subsequent fine career under his efficient command was due in a great measure to his noble qualities as an officer and gentleman.

"ALEXANDER R. CUTLER,
"*Late Fifteenth Pennsylvania Cavalry.*"

move; but the order for it was peremptory. The officers, with about three hundred of the men, under the leadership of Majors Rosengarten and Ward, rendered prompt obedience. The remainder, to the number of about six hundred, stacked arms and refused to go. Stanley covered the right flank of the advancing army, and on the 27th came up with the enemy, when brisk skirmishing opened, and the enemy was driven back nearly five miles. On the 29th the command marched by a circuitous route to Wilkinson's Cross-Roads, where it encountered a body of rebel cavalry. Deploying skirmishers, the enemy was driven a mile, when a charge was ordered, and was led by Majors Rosengarten and Ward. Gallantly the command went forward, but soon encountered the enemy's infantry in overpowering numbers. The struggle was maintained with desperate valor, and at close quarters, the men using their pistols and clubbing their carbines. At the height of the encounter Major Rosengarten was killed, and Major Ward mortally wounded. The battalion was finally forced to retire. Major Ward, who had been helped to the rear, insisted upon another charge, though bleeding from several wounds. The attempt was made, but the command was again repulsed. The loss was thirteen killed or mortally wounded and sixty-nine wounded and missing. The command now devolved on Captain Vezin, and, with the First Tennessee Cavalry, it moved in pursuit of the enemy's horse, which had destroyed a Union wagon-train. All night long the march continued, but without avail. On the afternoon of the 31st it joined General Minty's brigade in a charge on Wheeler's cavalry, led by General Stanley in person, in which the enemy was driven in upon his supports. In this charge, Private Holt, of Company H, captured and brought off the colors of the Tenth Tennessee (rebel) Cavalry, on which was inscribed: "Death before Subjugation." At night the command was advanced and deployed in line of skirmishers, where it remained until the morning of the New Year. The enemy, who had gained a signal advantage in the morning of the 31st, routing and driving back the right wing of Rosecrans' army, had been stopped and signally repulsed at evening. There was little more hard fighting, the enemy retreating rapidly on the 3d, and leaving the field in the hands of the Union army. On the morning of the 1st the battalion, with the Third Ohio, was detailed to guard a train on its way back to Nashville, and was twice attacked, losing four killed and three wounded.

In the mean time General Mitchell, in command at Nashville, determined to compel the men who remained in camp to go to the front, and accordingly sent General Morgan, on the 30th, to execute his purpose. Upon the offer of General Morgan to take them to General Rosecrans they were soon in saddle, and all, save a detachment left in charge of the camp and the sick, were upon the march, under command of Colonel Woods, of an Illinois regiment, who had been detailed by General Morgan to command them. At Lavergne they were stopped by a powerful body of the enemy's cavalry, under command of Wheeler. Unable to cope with him, Colonel Woods was compelled to fall back. Famishing with hunger, neither men nor horses having had regular supplies for many days, one hundred of the number went into camp six miles from Nashville, and on the following day made their way to the front, but the remainder returned to their old camp near the city, from which they refused again to move, and on the evening of the 31st were sent by General Mitchell to the work-house. On the 20th of January, 1863, General Rosecrans sent them a proposition that if they would return to duty he would have them speedily reorganized and fully officered. As this was all that they were clamoring for, they accepted it. On the 7th of February, Colonel Palmer returned from captivity and resumed command, when everything began again to wear a cheerful aspect. Horses and a full complement of equipments were received, and the regiment was organized in twelve companies, with the following field officers: William J. Palmer, colonel; Charles B. Lamborn, lieutenant-colonel.

Much abuse was heaped upon the men who refused to march, and the wildest rumors prevailed concerning their motives. The rebel organs throughout the South proclaimed that the Yankee soldiers at Nashville were laying down their arms by regiments, in consequence of the issue of the President's emancipation proclamation; whereas, it is probable that not a thought of this proclamation ever entered their counsels. Charges of cowardice and disappointment at not being taken to duty at the headquarters of the commanding general were made, but the lack of organization and of officers, and want of efficient leadership, seems to have been the simple and only cause of their conduct. While the unfortunate situation in which they were placed must ever be deplored, and their refusal to march condemned, the conduct of the men who followed the gallant Rosengarten and Ward, even under the most discouraging circumstances, and met death in the face of the foe, will never cease to be regarded with admiration and gratitude.

Active operations commenced soon after its reorganization. On the 4th of April a detachment of three hundred, with infantry and artillery, all under command of General I. N. Palmer, scouted in the direction of Woodbury, the detachment having a brisk skirmish four miles beyond the town, and on the following day took some prisoners and released some Union conscripts near McMinnville. On the 7th it charged a body of the enemy near the Barrens, capturing eighteen of his men. Returning to camp near Murfreesboro', the regiment was reviewed on the 10th by General Rosecrans.

On the 24th of June the army moved forward on the Chickamauga campaign, when Companies B, H and K were detailed as escort to the general com-

manding, and the remainder of the regiment was employed for courier duty between the right and left wings of the army, under Generals McCook and Crittenden. The latter was required to obtain a knowledge of the topography of the country in advance of the army, requiring much activity. On the 24th, Companies E and L, while bearing dispatches to General Mitchell, at Rover, encountered a party of the enemy and dispersed it, killing two and capturing several, delivering the dispatches in safety. Again, on the 29th, nearly the entire regiment, under the command of Lieutenant-Colonel Lamborn, encountered a body of rebel cavalry north of Tullahoma, driving them in upon their intrenchments, and capturing fifteen. It soon after advanced with Thomas to Tullahoma, the enemy retreating. About the middle of August the army again moved forward, and until the opening of the battle of Chickamauga the regiment was kept busy in scouting the country and preparing maps for the use of the general commanding. During the first day of the battle, September 19th, the regiment was on duty at General Rosecrans' headquarters, guarding flank-roads, watching the movements of the enemy and carrying dispatches. When the right gave way, on the second day, Colonel Palmer was ordered by General Rosecrans to form the regiment so as to stop stragglers. The line was formed near the foot of Mission Ridge, west of the Crawfish road, and had stopped a larger number, when the regiment was ordered to the rear by General Sheridan, moving by the top of the ridge to the left. Following the rear of the wagon-trains and batteries to a point twelve miles south of Chattanooga, Colonel Palmer turned to the left, and formed his regiment across the valley, a mile south of where the trains debouched towards Chattanooga, and sent out scouting-parties in the direction of Pond Spring and Stevens' Gap. The smoke of Colonel Watkins' wagons, which the rebel cavalry were burning at Stevens' Gap, was here visible. Remaining until the cavalry of General Mitchel had come up, the regiment moved on with the rear of the train to Chattanooga. Company L, sent ten miles out on Lookout Mountain to watch the movements of the enemy, was cut off, but succeeded in making its way through his lines, and rejoining the regiment in Chattanooga.

Bragg closed in upon the army of Rosecrans, sending out his cavalry to operate upon his communications. The animals were soon reduced to a starving condition. Colonel Palmer was, accordingly, sent with his calvary into the Sequatchie Valley, thirty miles away, and encamped on Robinson's plantation, where corn and provisions were found in abundance, and from which supplies were sent to Chattanooga.

Soon after the battle of the 25th of November, which swept Bragg from his strongholds around the city, and gave light and life to the starving army of Thomas, Colonel Palmer was ordered to move to Kingston with his regiment, and join Sherman, now on his way to Knoxville to relieve the beleaguered army of Burnside. Sherman did not cross at Kingston, but kept up the left bank of the Tennessee, and Palmer, consequently, moved forward on the right bank, and was the first to report at Knoxville. On the day following its arrival General Burnside ordered it to Sevierville to meet a body of the enemy, in part Indians, from North Carolina, under Colonel Thomas. Sending a squadron under Lieutenant-Colonel Lamborn to demonstrate in front, Colonel Palmer led the main body, by night, across the mountains by a circuitous route, coming in upon the rear of the rebel force, and by a well-concerted action, attacking at daylight in front and flank, completely routed it, wounding seven and capturing two of the enemy, fifteen horses and twenty stands of arms, and burning the camp. Captains Charles M. Betts and George S. Clark were among the wounded in the engagement. Captain McAllister, with two companies, F and G, was sent in pursuit of the fugitives, but failed to overtake them. The regiment was now engaged in scouting on the left flank, and in rear of Longstreet's army, which was leisurely pursuing its way towards Virginia, extending along the French Broad River as far as Newport, having frequent skirmishes with rebel cavalry, and capturing prisoners from whom important information was gained. On the night of the 23d of December the command crossed the French Broad, and pushing up under cover of darknesss to the rear of the enemy's cavalry corps, captured a number of his pickets, thirteen horses and twenty-six head of cattle, and brought them safely into camp, though closely pursued. On the 24th the regiment participated in the battle of Dandridge, which was fought by the brigades of Sturgis and Elliott. After a sharp skirmish the enemy was driven, and in full retreat, but was timely reinforced by a brigade from Morristown, and was thus enabled to make a stand, before which the Union force was obliged to retire. In the fight a spirited dash was made by Colonel Palmer, with ninety of his men, before whom the enemy fled in confusion; but returning, he was fired on by a party in concealment, and ten of his men were dismounted and fell into the hands of the foe. Captain Washington Airey was among these, and for fourteen months endured the hardships and privations of imprisonment, being finally released to die of disease contracted thereby. The entire loss was seventy-five in killed, wounded and prisoners. On the 29th a sharp engagement occurred at Mossy Creek, and after a contest lasting six hours the enemy was handsomely repulsed. Two spirited charges were made by the Fifteenth, gaining and holding an important position on the field, for which it was complimented by General Sturgis. It lost one officer, Lieutenant and Acting Adjutant Harvey S. Lingle, killed, and five men wounded.

Longstreet having put his army in winter-quarters near Russellville, was sending his cavalry back to the

rich corn-fields of the French Broad Valley for supplies. The Fifteenth had become expert in scouting to ascertain the movements of the enemy and to harass his foraging-parties. It was, accordingly, posted at Dandridge, and charged especially with this duty. For two weeks it scouted the whole country on the enemy's flank, coming down upon him at the most unexpected moments, marching day and night, picking up prisoners and gathering stock almost within the limits of rebel encampments. On the 13th of January, 1863, while in camp opposite Dandridge, Colonel Palmer learned that Brigadier-General Vance, with a force of three hundred cavalry and dismounted Indians, with two pieces of artillery, had advanced from North Carolina, and entered Sevierville, twelve miles in Colonel Palmer's rear, capturing twenty wagons loaded with wheat, belonging to the army at Knoxville, and twenty prisoners. Though a brigade of rebel cavalry was in his front, threatenening an attack, Colonel Palmer determined to go in pursuit of Vance. Accordingly, heading a party of one hundred and twenty-five men, and leaving his pickets out to deceive the enemy in his front, he started on his daring mission. On the way he learned that Vance's forces had been divided, one party, including the Indians, going toward North Carolina, the other, headed by Vance himself, with the captured train, taking a back mountain-road towards Newport. After a march of thirty miles Palmer come up with the latter party at a point about eight miles from Newport, and by a bold charge with the sabre captured the general, two of his staff officers, a lieutenant, fifty men, one hundred and fifty horses, the general's ambulance filled with captured medical stores, recaptured the entire wagon-train and prisoners, and brought all back safely to Sevierville. For his gallantry in this affair, Colonel Palmer was strongly recommended by General Foster, in command at Knoxville, seconded by Generals Sturgis and Elliott, for promotion.

On the 24th, Colonel Palmer's command, temporarily reinforced by Colonel Brownlow's First Tennessee Cavalry, made an expedition into the enemy's foraging-ground, near the mouth of the Big Pigeon River, and captured a train of eighteen wagons, ninety mules and seventy-two of the enemy, including a captain and three lieutenants, losing one man killed. The country around had become very familiar to the men of Colonel Palmer's command, and full reliance was placed in them for information by which the movements of heavy bodies of troops were guided. They were kept constantly upon the move. The plan of the considerable engagement at Fair Garden, on the 28th, in which three steel guns and one hundred prisoners were taken, was based upon information of the enemy's position and strength furnished by scouting-parties of the Fifteenth. On the following day Colonel Palmer, by taking a flank trail in following the retreating rebels, discovered that they had been reinforced, and by timely warning to the main Union force saved it from disaster. The campaign having now ended, the regiment returned by easy marches to Chattanooga, where it arrived on the 11th of February, and was joined by a part of the regiment which had been left at the camp in Sequatchie Valley. During the three succeeding months the command was kept busy in scouting on the flank of the enemy holding position on Tunnel Hill, Buzzard's Roost and Dalton. In reconnoissances to Lafayette, Summerville, Alpine and Lookout Valley it gained important information and captured some prisoners.

By the hard service during the fall and winter the horses had become completely worn out, and on the 4th of May, as the army was about breaking camp for the spring campaign, the regiment was ordered to Nashville to remount and refit. It was August before the requisite horses, arms and equipments were obtained and the command was in readiness for the field. In the mean time the men had been kept busy in drill and target practice. Captain Betts had been previously promoted to major. On the 8th of August the regiment started for the front, but in consequence of the raid of Wheeler on Sherman's lines of supply, was stopped at Chattanooga, and scouted to Red Clay, Parker's Gap and Spring Place, and upon the movement of Wheeler north, followed him in force, returning finally to Calhoun, where it was employed protecting the railroad. On the 5th of September the regiment, about four hundred strong, was ordered to move north to prevent the return of a force of Wheeler's cavalry, which had been cut off at McMinnville, and was making its way, under Dibberel, to the Tennessee River, below Kingston. It accordingly moved to Sevierville, the enemy keeping up on the opposite side of the river, and finally joining Vaughan near Bristol, Va. From Sevierville, the regiment marched to Bull's Gap, and joined General Gillem in a movement towards Virginia. At Jonesboro', on the 3d of October, where the enemy was encountered, Colonel Palmer, who had the advance, was ordered to develop the enemy's strength and position. He accordingly charged the rebel rear guard, driving it ten miles to the Wautauga River, killing one and capturing eight, where he found Duke in force. On the 4th and 5th there was some skirmishing. But Burbridge was now in the enemy's rear, and he retreated rapidly towards Abingdon. Gillem did not pursue, as Forest was raiding into Tennessee, but returned to Knoxville. Colonel Palmer was, however, permitted, at his own suggestion, to make diversion in favor of Burbridge, and advanced, *via* Bristol, to Kingsport. Here a party of nine, with dispatches for Burbridge, who had withdrawn to Kentucky, was met. Taking seventy-five picked men, Colonel Palmer started to carry them through, and after five days' severe marching came up with Burbridge at Prestonburg, successfully eluding Prentiss' rebel cavalry, lying in wait for his capture, and at-

tacking one of Prentiss' scouting-parties, killing a captain and one man, and taking twelve prisoners and thirty horses.

In the mean time the remainder of the regiment, under Lieutenant-Colonel Lamborn, was attacked by Vaughan's forces, which had returned from Virginia. Lamborn held the ford of the North Fork of the Holston against Vaughan for one day, and at night, having no supports, retired towards Bull's Gap, losing in the skirmish one man wounded. On the following day, while crossing a difficult ford of the main stream, he was again attacked by a large force. The command was in column, along the river-bank, the enemy occupying a steep bluff commanding the ford and the road which led to it, over which the column was advancing. A company was sent to the rear of the attacking party, which, coming upon the enemy unawares, made a sudden dash, capturing three officers and eight men, and so disconcerting the entire party that it took to its heels, leaving the Union force, of only one hundred and twenty-five men, to cross and move unmolested to Bull's Gap. Upon their arrival in camp General Gillem complimented them, in an order, "for their action at Rogerville, October 7th, when in the face of a rebel force much larger than their own, they crossed the Holston River, capturing three rebel lieutenants and eight enlisted men, with no loss."

After this the main body of the regiment and the detachment under Colonel Palmer assembled in camp near Chattanooga, and for two months were engaged in scouting for a long distance on all sides, frequently meeting bands of the enemy. On the 20th of December, Colonel Palmer, with his own and detachments from other regiments to the number of six hundred men, proceeded to Decatur, whence he pushed forward, on the south bank of the Tennessee River, in pursuit of Hood's demoralized troops, now in full retreat from Tennessee, having been thoroughly defeated, in the battle of Nashville, by Thomas. Without attempting to give the details of this eminently successful expedition, its character may be judged by the following summary of results: The capture of two hundred prisoners, including two colonels, three captains and eight lieutenants, and the destruction of seven hundred and fifty stands of arms; the capture, on the night of December 28th, of two pieces of General Roddy's artillery, with horses and equipments; the capture and complete destruction, on the 31st, of the entire pontoon bridge, having seventy-eight boats, on which Hood crossed the Tennessee River, with two hundred wagons loaded with tools, ropes, engineering instruments and supplies; the capture, on the night of January 1, 1865, of a supply train of Hood of one hundred and ten wagons, while on its way from Benton Station to Tuscaloosa, and its complete destruction; the surprise and complete rout, on the Tuscaloosa road, below Moulton, of the rebel Colonel Russell's regiment of cavalry, Fourth Alabama, and the capture and destruction of his train, with the papers and baggage of the brigade; and the repeated defeat and route of Roddy's forces, causing their disbandment. The entire loss of the command was one man killed and two wounded. It successfully eluded largely superior forces of the enemy while on its return to Decatur, and brought all its captures safely in.

Upon its return the command was ordered to Huntsville for rest, but on the night following its arrival Colonel Palmer was directed to take all his available mounted men and intercept the rebel General Lyon at Fort Deposit. Failing in this, Colonel Palmer crossed the river in pursuit, came up with Lyon on January 16th, surprised his camp before daylight and routed his command, capturing his only piece of artillery and ninety-six prisoners, which were brought off. Lyon himself was taken, but succeeded in making his escape, after shooting the sergeant who had him in charge,—the only loss. Colonel Palmer led out another scouting-party, on the 27th, of one hundred and fifty men in pursuit of a guerilla band, under Colonel Meade, infesting the Cumberland Mountains, returning on the 6th of February with one captain, two lieutenants and twenty-three privates as prisoners.

Before starting on the spring campaign fresh horses were supplied and the command was completely refitted for active service. General Stoneman was placed in command of the cavalry, and Colonel Palmer, who had been promoted to brevet brigadier-general, was assigned to the command of the First Brigade of Gillem's division, whereupon Lieutenant-Colonel Betts, who had been promoted from major, took command of the regiment. Towards the close of March, Stoneman started on an important expedition towards North Carolina. On the 29th he reached Wilkesboro', on the Yadkin River, where he had a skirmish. Here he received intelligence which determined him to turn north towards the Virginia and Tennessee Railroad, which he fell to destroying, the Fifteenth being actively employed in this work. From this point Major Wagner, with four companies, made a demonstration to within sight of Lynchburg, Va., destroying two important railroad bridges. He rejoined the command, after an absence of ten days, near Salisbury, N. C., having sustained a loss, of one killed and eight wounded and captured. On the 19th of April a detachment of the regiment under Major Garner destroyed a railroad bridge ten miles north of Greensboro', N. C., after a brisk skirmish with the guard. At the same time Lieutenant-Colonel Betts, with ninety men, surprised the camp of the Third South Carolina Cavalry, near Greensboro', and charged upon it, capturing the commanding officer, Lieutenant-Colonel Johnson, four of his officers and forty-four men, with their horses, regimental wagons and camp equipage. On the following day a detachment under Captain Kramer met and defeated a superior force of

the enemy at Jamestown, destroying the depot and a truss-covered bridge at Deep River. On the 12th, Salisbury, N. C., was captured and immense rebel stores destroyed, when the command turned towards Knoxville. Towards the close of April, intelligence of the surrender of Lee and Johnson having been received, the division of General Gillem, now commanded by General Palmer, was ordered to proceed south for the capture of Jefferson Davis and train. Night and day, with the most untiring energy and skill, the pursuit was pushed. On the 8th of May seven wagons, containing the effects of the banks of Macon, were captured. "On the morning of the 8th, instant," says General Palmer, in his official report, "while searching for Davis near the fork of the Appalachee and Oconee Rivers, Colonel Betts, Fifteenth Pennsylvania Cavalry, captured seven wagons in the woods, which contained one hundred and eighty-eight thousand dollars in coin, one million five hundred and eighty-eight thousand dollars in bank-notes, bonds and securities, and about four millions of Confederate money, besides considerable specie, plate and other valuables belonging to private citizens of Macon. The wagons contained also the private baggage, maps, and official papers of Generals Beauregard and Pillow. Nothing was disturbed, and I sent the whole in by railroad to Augusta to the commanding officer of the United States forces, to await the action of the government." Two days after, Company G, Captain Samuel Phillips, captured General Bragg, his wife, staff officers and three wagons, which were sent under guard to the headquarters of General Wilson. On the 15th news was received of the capture of Davis and party by Colonel Pritchard, of the Fourth Michigan Cavalry, detachments from Colonel Betts' command being close upon his trail. The regiment now started northward, and on the 12th of June arrived at Nashville, where, on the 21st, it was mustered out of service.

RECRUITS FROM MONTGOMERY COUNTY.

Henry K. Weand, mustered into service Aug. 24, 1862; pro. to corp. Oct. 30, 1862; to sergt. Nov. 1, 1862; to 1st sergt. March 1, 1863; to 1st lieut. May 8, 1863; com. capt. Co. H, Feb. 20, 1865; must. out with company June 21, 1865.

Privates.

Jacob Fitzwater, Henry Cress, Chas. H. Cress, Robert Dager, Theodore F. Ramsey, Josiah C. Reiff, O. S. Spang, Fred. Spang, William Spang, Fred. S. Shrack, Abner Evans, John J. Shelmin, Andrew W. Wills, Edwin H. Hiltner, Nicholas F. Dager, Abraham Hartranft, Geo. W. Lukens, Courtland F. McCarter, Wm. Wills, Jr., David R. Conrad, Samuel F. Tyson, Joshua Johnson, Thos. B. Tucker, Harry Somers, J. R. Steinmetz.

Alexander R. Cutler, of the Philadelphia bar, now residing in Norristown, was a member of this regiment, Co. C; also John W. Eckman, present superintendent of the Montgomery Furnace, at Port Kennedy, and Joseph C. Weatherby, a resident of Norriton township, near Penn Square.

The One Hundred and Sixty-Second Regiment Pennsylvania Volunteers (Seventeenth Cavalry).—The organization of Company L, composed of men from Montgomery and Chester Counties, was attended with some unusual circumstances, which seem to require special mention. David B. Hartranft, proprietor of the Jeffersonville Hotel, Norriton township, received authority to recruit a cavalry company, under the call of President Lincoln, July 2, 1862, for three hundred thousand volunteers to serve for three years or during the war.[1] Hartranft had been an active member of Captain Leidy's Washington Troop, a volunteer organization in the days of peace, but which melted away, like almost all similar organizations in the country, when active service invited men of arms to the front. The period was favorable to enlistments. The Peninsula campaign, with that of General Pope in front of Washington, had closed in disaster. The ordinary channels of trade and business were paralyzed. The fact was painfully manifest that the struggle was still gathering fury, and, if the unity of the country was to be preserved, men of all classes would have to fill up the dreadful gaps resulting from the ill-fated battles fought in front of Richmond and Washington. Hitherto the young and unmarried men largely filled up the company and regimental organizations accredited to the county, but this call appealed to the patriotism of men of family and those settled in life. Fully fifty per cent. of the company were mounted men. The call was for three years' service or *during the war*, and the rough experience of those who were then in the field had dispelled all fancy notions of the glitter and pomp of war. Those who were now to march felt that it was a serious matter, and this feeling was fully shared by the families of the men and the public in general.

Among those recruited by Hartranft were fifty men in temporary camp at Zeiglersville, Frederick township. These men had been enlisted by John B. Adams, who was authorized to organize a regiment of infantry. Under the pressing exigencies of the public service, in the month of August, 1862, an order was issued by the Secretary of War to consolidate regiments in process of formation and forward them at once to Washington for assignment to brigades. In the execution of this order the men enlisted by Adams and Ellmaker were organized into the One Hundred and Nineteenth regiment of Pennsylvania Volunteers. Under this arrangement Peter C. Ellmaker was commissioned colonel. This gave offense to Adams, who failed to report the men in camp at Zeiglersville. Hartranft found these fifty men, who represented that the officer recruiting them had abandoned them, and they expressed their desire to join the company of cavalry then forming. They were accepted, fifty in number, and about the middle of August, 1862, the full company of one hundred men assembled at Zeiglersville, and, after a royal breakfast, provided by the kind-hearted people of the village, the company took carriages, furnished by the farmers and business men of the neighborhood, and

[1] Under the call, Pennsylvania was required to furnish three regiments of cavalry. The Sixteenth, Seventeenth and Eighteenth were organized. (See Bates' History, vol. iv. pp. 950, 1001, 1043).

drove to Pottstown, where they took the cars for Harrisburg. The company officers upon leaving the county were as follows: First Lieutenant, R. B. Rhoads; Second Lieutenant, Joshua Houck. Upon arriving at the State capital the company was marched to Camp Curtin, commanded by Captain Tarbutton, where it drew camp equipage and provisions. The men passed the usual physical examinations and were then tested in horsemanship, and duly mustered into the service of the United States on the 17th day of September, 1862, to "serve for three years or during the war." Theodore W. Bean was appointed first sergeant of the company. Clothing was issued to the men, and the work of squad and company drill was about to commence, when an order was received from the commandant of the camp to muster the men in the company street. The order required the men whose names were called to step two paces to the front. All the Adams recruits were called. They were declared under arrest, and escorted by the provost guard of the capital to quarters in the city of Harrisburg, there to await the further orders of the Secretary of War.

The fact now became evident to the officers of the company that all the Zeiglersville recruits had been regularly "mustered in" under the order of Adams, and the rolls returned to the Secretary of War under the order to consolidate, and that therefore their men belonged of right to Colonel Ellmaker's command. The manner in which these men were claimed was felt to be humiliating, and the officers and men remaining felt it due to themselves and those under arrest to investigate the facts, and, if possible, have them restored to the command. It is just to the great and good war-Governor Curtin and his Adjutant-General Russel to say that both offered every facility to fully investigate the facts and circumstances of the case. Theo. W. Bean was designated by the officers and men in camp and those detained to proceed to Washington to confer with the Secretary of War and Adjutant-General of the United States army. Governor Curtin and General Russel united in a strong appeal to the Secretary of War for the restoration of these men to the cavalry service, and the gentleman bearing the dispatches pressed the request of officers and men and the appeal of the State authorities in terms the most considerate his address could command. The matter was referred to Adjutant-General Thomas, U.S.A., who, in a personal interview, declined to change or modify their original muster-in roll, but at once relieved the men from the order of arrest, and directed them to be forwarded, under the command of a commissioned officer, to the regiment to which they originally belonged. Sergeant Bean returned from Washington and reported results to the men. They were promptly relieved from arrest, and accepted the situation without murmur or remonstrance. They were gallant and patriotic men, and their record in the noble regiment to which they subsequently became attached is highly creditable to themselves and their country.

LIST OF MEN NOT ON MUSTER-ROLL, COMPANY L, SEVENTEENTH PENNSYLVANIA CAVALRY.

Henry S. Acker, Jacob Antis, Joseph Auchy, Clem. Armbruster, Peter S. Boyer, Jonas Boyer, Henry Basler, Jacob Batzel, George Brosius, Wm. Dearoff, John Faust, John Freese, Mahlon Herbert, Henry Herbst, John Jenkins, Harrison Johnson, Jacob Johnson, John Kohl, Milton Krause, Aug. Keyser, Abr. P. Koons, Edwd. Kepp, John P. Koons, Fred. P. Koons, Philip Kline, Saml. S. Leidig, Albert Leidig, H. S. Longaker, John Lord, Lewis D. Miller, Adam Moyer, John G. Miller, John Neiman, John Neiffer, Daniel Puhl, John Pool, William D. Quigg, Oliver Rushon, John Sloop, Henry Styer, Elias Smith, Franklin Shuler, John Schnenk, Samuel Schlottern, Jacob Smith, James Smith, Arnold Ulmer, Joseph Underkuffler, Aaron Wick, Christian Wick, Henry Wolff.

This separation and loss of men disorganized the original company, in consequence of which Lieutenants Rhoads and Houck lost their positions, neither of whom accompanied the enlisted men to the One Hundred and Nineteenth Regiment. Captain Hartranft still had fifty men in camp, but under the altered circumstances could not be mustered. About this time Lieutenant John Rees, with fifty men from Chester County, reported to Captain Tarbutton; overtures were at once made for a consolidation of the two commands, and a new company organization was effected. The Chester County men were at once transferred to the quarters vacated by the Zeiglersville recruits, and an election of officers was immediately held, which resulted in the choice of the following gentlemen: Captain, David B. Hartranft; First Lieutenant, John Rees; Second Lieutenant, Theo. W. Bean. The non-commissioned officers were then appointed, and the work of dismounted drill and discipline began. By the latter end of September the quota for the three cavalry regiments was in camp, and the organization of twelve companies into the Seventeenth Regiment of cavalry was effected. Captain Hartranft was promoted first major; Lieutenant Rees succeeded to the captaincy; Second Lieutenant Theo. W. Bean was promoted to first lieutenant, and First Sergeant William H. Wright was commissioned second lieutenant; Edwin A. Bean, of Company L, was appointed regimental quartermaster-sergeant. The regimental organization[1] was effected on the

[1] There was an incident connected with the regimental organization which had such an important relation to its subsequent history that it deserves to be preserved. The election of field and staff officers was effected after an active canvass, and the choice made was accepted by all with great satisfaction. The roster was made up of colonel, lieutenant-colonel, three majors, adjutant, quartermaster and commissary. All vacancies in the companies occasioned by promotion to the field and staff were filled, and the papers at once forwarded to Governor Curtin for appointments and commissions. Upon the receipt of the roster at the executive office, the Governor carefully examined the same, and directed a reply to be sent to the officers of the regiment that he would appoint and commission all the officers named except the colonel, Daniel M. Donehoo, who had been captain of Company A. It should be added that none of the field or staff officers elected had experienced active service except Reuben Reinhold, the second major. The Governor's communication was couched in the most respectful terms, and his refusal to appoint and commission Capt. Donehoo colonel was based solely upon the fact of this officer's want of knowledge and experience for such a responsible position. The Governor's refusal created quite a breeze among the officers, and es-

2nd of October, and completed by the muster of its commanding officer, November 19, 1862. It immediately broke up its dismounted camp under Captain Tarbutton within the line of Camp Simmons, and established itself at Camp McClellan, about two miles north of Harrisburg, where the command received their horses, arms and equipments. A realizing sense of work and responsibility of the cavalry officer and soldier was perhaps here first experienced. The novelty was by no means worn away, nor had the men become accustomed to the care and management of their horses, when orders were received to report to the line of active service. Of the twelve companies voluntarily composing this regiment, A Company was from Beaver County, B from Susquehanna, C from Lancaster, D from Bradford, E from Lebanon, F ffom Cumberland, G from Franklin, H from Schuylkill, I from Perry, K from Luzerne, L from Montgomery and Chester and M from Wayne. The letters by which companies are denoted in cavalry regiments are not given until after the regimental organization is effected,—at least, such was the case in the late war among the volunteer troops entering the three years' service.

The reason for this is found in the order of assignment in the formation of squadrons and battalions. The twelve companies of a regiment of cavalry are formed into six squadrons of two companies each, and these six squadrons are consolidated into three battalions. As the right of each squadron and battalion is deemed the position of honor, it is sought after and is assigned by the commanding officer, first, with reference to senority of captains, and second, with reference to fitness to command. As the company organizations are complete when the regiment is formed, there are at least four promotions from the captains of the line, viz.: lieutenant-colonel and three majors. The companies from which these captains are promoted are therefore junior, and must go to the left of their squadrons.

The field officers were taken in the organization of this regiment from the following companies: Lieutenant-Colonel McAllister, Perry County; First Major Hartranft, Montgomery County; Second Major Reinhold, first lieutenant, Lebanon County (this was exceptional because of the service he had previously experienced in the Eleventh Pennsylvania Cavalry); Third Major Durland, Wayne County. The letters given are from

pecially the admirers and personal friends of Colonel Donehoo. Some of the hasty and impulsive gave vent to their indignation in terms more vigorous than polite, and others hinted at resignation. These "camp growls" found their way to the Governor's ear, and he was prompt in inviting a conference with all the commissioned officers. The day and hour were appointed; prompt to time the field, staff and line officers to the number of forty-four marched into the executive chamber, and received a cordial welcome. There were present his Adjutant General Russel and Brigadier-General Andrew Porter, of the United States army. The latter officer had been especially requested to be present and make a statement to the officers upon the subject of the interview. We regret that no copy of the remarks of the Governor and General Porter was preserved, but in substance the former said: "Gentlemen, I have invited this interview to fully and freely explain to each of you why I have refused to appoint and commission the gentleman you have elected as your commanding officer. I have no doubt of his patriotism or personal bravery, but I am informed that he has never been under fire nor had any experience in commanding troops in active service. I have been sadly admonished of my own mistake in appointing inexperienced and untried men as commanding officers of regiments, which has resulted in the unnecessary sacrifice of hundreds of gallant Pennsylvanians. In the first days and months of the war this may have been unavoidable, but now we have officers who have been trained for the profession of arms, natives of our own State, officers of experience, many of whom have been especially commended by their superior officers for distinguished conduct and capability in active service. And I have thoughtfully made up my official mind that I ought not, and therefore will not, appoint any man colonel of a new regiment about to enter the service for the period of three years who has not given the country some practical evidence of his fitness for the responsible office."

His manner indicated not less than his words his sincerity and determination, and when he had briefly stated his reasons he addressed General Porter, who was standing at his side, and requested him to advise the visiting officers upon the subject under consideration. The commanding presence of this distinguished officer, who was in full dress uniform, his age and pleasing address, and his words of wisdom resulting from many years of public service in the then impending and prior wars, induced the most respectful attention of every officer present. The possible and probable duration of the conflict between the North and South was referred to in such a manner as to dissipate all hope of a speedy end, however much it might be desired. He spoke of the several disasters to the Union arms, due to the incompetency of inexperienced field officers, and of the almost irretrievable disgrace which associates itself with the history of a regimental organization that suffers reverses, resulting from the incapability of its commanding officer. He impressed the importance of these considerations upon those present, and supported the Governor, especially because the cavalry arm of the service was then about to be brought to its highest uses, and concluded his advice by saying that it required greater skill to successfully command and direct the movements of a full regiment of cavalry in active service than a brigade of infantry, that they covered more ground in their formations, were more likely to be thrown into confusion and more difficult to withdraw in the hour of peril. The interview closed with a presentation of all the officers to the Governor and General Porter, and a free exchange of congratulations upon the first lessons of duty to our country. Captain Donehoo retired with the respect of his fellow-officers, and the Governor presented the names of a number of officers then in the service, all of whom were graduates of the United States Military Academy, and were Pennsylvanians by birth or residence. After some days of deliberation and inquiry, Josiah H. Kellogg, then captain of First Regiment United States Cavalry, was selected. The following facts will serve to illustrate the attachment of Governor Curtin to the volunteer troops of Pennsylvania. During the winter of 1862-63, and after the regiment had joined the army of the Potomac, the work of officers fitting themselves to intelligently perform their duties was rigidly insisted upon by Colonel Kellogg. Officers' school was instituted, and gentlemen were given to understand that unless they became proficient in the manual of arms and in the practical knowledge and execution of all necessary commands, and prompt in all the necessary duties of officers, they would be at once reported to the standing board of examiners. This was eminently proper, but seriously effected fully fifty per cent. of the field and line officers, who were brave men and willing to serve their country, but disinclined to apply themselves to study. The tasks were distasteful, recitations unsatisfactory and the commanding officer uncompromising. Resignations followed; the young and bright men of the regiment were promoted. At this time a vacancy occurred on the staff of the colonel. Lieutenant Henry M. Donehoo, commissary, was promoted to captain Company B, and it was learned the colonel had recommended for the office a sergeant from his old command, First United States Cavalry, and that the recommendation was then in the hands of Governor Curtin for commission. John P. Ross was at the time regimental commissary sergeant, and by rank entitled to the promotion. He at once presented his case to Governor Curtin, supported by a majority of commissioned officers of the regiment. The Governor, upon receipt of the sergeant's application, recalled the appointment recommended by Colonel Kellogg, and forwarded the commission of first lieutenant and commissary to John P. Ross. No further efforts were made by the commanding officer to import a foreign element into the staff, field or line of the regiment.

A to M inclusive, the letter J not being used because of the similarity in its form to letter I, and therefore liable to be confused with it in time of confusion or battle. The reader will therefore perceive that letters are assigned to companies not only as a convenient manner of denoting them, but also to give them their relative position in line. While it is of manifest advantage to have the company represented in the field and staff formation, it is generally attended with a sacrifice of position on the line. The first six letters designate the right of squadrons, and the remaining six the left, as follows:

1st Battalion: 1st Squadron, A, G; 2d Squadron, B, H.
2nd Battalion: 3d Squadron, C, I; 4th Squadron, D, K.
3d Battalion: 5th Squadron, E, L; 6th Squadron, F, M.

LIST OF FIELD OFFICERS AND BREVETS.[1]

Colonel James D. Anderson, Brevet Colonel Durland, Brevet Lieutenant-Colonel William Thompson, Brevet Lieutenant-Colonel Theodore W. Bean.

On the 25th of November the regiment moved to Washington, and was encamped for several days on East Capitol Hill, after which it was ordered to the front. On the 22d of December it reached the town of Occoquan, where Hampton's Legion was encountered, and after a sharp skirmish, was driven and pursued for some distance across the Occoquan Creek. Here three companies,—C, D and I,—under Major Reinhold, were detained to picket the creek from Occoquan to Wolf Run Shoals. They were much harassed by roving parties of partisan rangers, and on the 25th and 26th the right of the line was attacked by a superior force, which was repulsed and some prisoners taken. On the 27th the detachment was ordered to rejoin the regiment, which had, in the mean time, advanced to near Stafford Court-House, and moved early; but when nearing Neabsco Creek word was brought that the enemy had attacked at Dumfries, and that a column of cavalry and artillery was moving on the Telegraph road to Occoquan. Major Reinhold immediately countermarched, and taking position on the heights on the north bank, successfully foiled every attempt of the enemy to cross. On the following morning, having been reinforced by a detachment of the Second Pennsylvania Cavalry, it crossed the stream to reconnoitre, and fell in with General Stuart's command, which immediately attacked. Being overpowered, it was obliged to retire, and recrossed the creek. On the 5th of January, 1863, it rejoined the regiment near Stafford Court-House. The Seventeenth was here assigned to the Second Brigade of the First Cavalry Division, where it was associated with the Sixth New York, Sixth United States and Eighth Pennsylvania, commanded by Colonel Thomas C. Devin, in which it served throughout its entire term. On the 18th of February Companies C and I, Captain Spera, were ordered to escort duty with General Meade, commanding the Fifth Corps, where they remained until after the battle of Chancellorsville, and during the engagement were kept busy in the transmission of orders.

Only three regiments of cavalry, of which the Seventeenth was one, moved with the columns of Hooker on the Chancellorsville campaign, the major part having been dispatched under Averell and Stoneman to cut the enemy's communications and harass his rear. When, on the evening of the 2d of May, the enemy under Jackson had driven the entire Eleventh Corps, and was pushing on victorious to sever the Union army, and gain its only line of retreat, few troops were in position to stay his course. At this juncture General Pleasanton, who had been out in advance of the line on the centre, in support of General Sickles, then demonstrating upon Jackson's flank and rear, happened to be returning with the Eighth and Seventeenth Pennsylvania Regiments towards the centre, and had reached the breast-works just as hordes of Jackson's men, who were pursuing the routed Eleventh Corps troops, were approaching that part of the field. Divining the condition of affairs by the evidences of rout in the Union columns, Pleasanton ordered Major Keenan, of the Eighth to charge with all his force and with impetuosity, which he knew was an element of the major's nature, full upon the head of the rebel advancing column, though he knew that the execution of the order would involve the sacrifice of that gallant regiment. This he did in order that, by checking for a moment the rebel onslaught, he might gain time to bring his horse artillery into position, and thus interpose some more effectual barrier. "I immediately ran up," says General Pleasanton, "this battery of mine at a gallop, put it into position, ordered it unlimbered and double-shotted with canister, and directed the men to aim at the ground-line of the parapet that the Eleventh Corps had thrown up, about two-hundred yards off. Our artillery, as a general rule, overshoots, and I ordered them to fire low, because the shot would ricochet. I then set to work with two squadrons of the remaining regiment (the Seventeenth Pennsylvania) to clear this field of fugitives, and to stop what cannon and ammunition we could, and put them in position; and I managed to get twenty-two guns loaded, double shotted, and aiming on this space in front of us for about a quarter or half a mile, when the whole woods

[1] JOSIAH H. KELLOGG, appointed cadet at the United States Military Academy from Pennsylvania, July 1, 1855; graduated July 1, 1860; assigned to duty as brevet second lieutenant of dragoons July 1, 1860; served at the cavalry school for practice, Carlisle, Pa., 1860–61; promoted second lieutenant First Dragoons January 8, 1861; first lieutenant May 13, 1861; captain First Cavalry May 20, 1862; served through the Peninsular campaign and the Maryland campaign, and was appointed colonel Seventeenth Pennsylvania Cavalry Volunteers, November 19, 1862; breveted major July 3, 1863, for gallant and meritorious services at the battle of Gettysburg, Pa.; resigned volunteer commission December 27, 1864; on duty at the United States Military Academy as assistant professor of national and experimental philosophy, February 22, 1865, to August 23, 1866; "retired from active service February 6, 1865, for disability resulting from long and faithful service and disease contracted in the line of duty;" professor of civil engineering and military tactics at Rutgers College, New Brunswick, N. J., August 30, 1866, by the authority of the law of July 28, 1866.

appeared alive with large bodies of men. This was just at dusk. I was going to give the word 'fire.' I had ordered those pieces not to fire unless I gave the word, because I wanted the effect of an immense shock. There was an immense body of men, and I wanted the whole weight of the metal to check them. I was about to give the word 'fire,' when one of the soldiers at a piece said: 'General, that is our flag.' I said to one of my aids, 'Mr. Thompson, ride forward there at once, and let me know what flag that is.' He then went to within one hundred yards, and those people cried out: 'Come on, we are friends.' He then started to move on, when the whole line of woods blazed with musketry, and they immediately commenced leaping over this parapet, and charged on the guns; and at the same time I saw from eight to ten rebel battle-flags run up along the whole line. I immediately gave the order, 'fire,' and the fire actually swept the men away; and it seemed to blow those men in front clear over the parapet. . . . . We had this fight between musketry and artillery there for nearly an hour. At one time they got within fifty yards of the guns. . . . There were two squadrons of the Seventeenth Pennsylvania Cavalry left. This remaining regiment I had was composed of raw men, new troops, and all I could do with them was to make a show. I had them formed in single line, with sabres drawn, with orders to charge in case the enemy came to the guns. They sat in rear of the guns, and I have no doubt that the rebels took them for the head of a heavy column, as the country sloped back behind them, and they could not see what was back of them."[1] And thus was the mad onset of Stonewall Jackson's army checked by artillery, supported by a single line of raw cavalry. It was a trying position for the regiment, but the firm front presented saved the day, and enabled Hooker to reform his shattered columns, and once more present an unbroken line. Early in the evening Sickles' troops came up and took position in support of the guns, and the regiment was relieved. In a general order, issued immediately after the battle, General Pleasanton says: "The coolness displayed by the Seventeenth Pennsylvania Regiment in rallying fugitives and supporting the batteries (including Martin's) which repulsed the enemy's attack under Jackson, on the evening of the 2d instant, has excited the highest admiration."

Under Buford and Gregg, the cavalry, on the 9th of June, crossed the Rappahannock at Beverly and Kelly's Fords, and boldly attacked the enemy's cavalry, supported by his infantry. The battle raged during most of the day. At length, finding that the rebels were moving up an overpowering force, the Union cavalry retired. In this engagement the Seventeenth participated, and in the retreat was of the rear guard, where it was subjected to a heavy artillery fire. Two days after the battle the regiment was posted to picket the line of the river from Beverly Ford to Sulphur Springs, while the main body of the army was marching northward. It was not withdrawn until the 15th, when it rejoined the division. Early on the morning of the 21st it was formed in line half a mile west of Middleburg, and met the enemy, repulsing his attack, and driving him in the direction of Upperville. When arrived near the town it was ordered to charge the left flank of the foe, and in executing it was brought under a heavy fire of his artillery. He was finally driven in confusion.

As General Buford, who commanded the division, moved northward through Maryland and Pennsylvania, he was hailed with demonstrations of rejoicing, and as he entered Gettysburg was saluted with shouts and patriotic songs. On the night of the 30th he encamped near the grounds of Pennsylvania College, and on the morning of the 1st of July moved out by the Cashtown road. At a distance of a mile and a half from town he met the enemy in force. Dispositions were immediately made to resist his further advance, and for four hours, and until the arrival of the First Corps, Buford held at bay a third of the entire rebel army. "Buford, with his four thousand cavalry," says General Pleasanton, "attacked Hill, and for four hours splendidly resisted his advance, until Reynolds and Howard were able to hurry to the field and give their assistance. To the intrepidity, courage and fidelity of General Buford and his brave division the country and the army owe the field of Gettysburg."[2] As soon as the infantry in force had come up, the cavalry moved upon its flanks, and during the remaining part of the battle was active in preventing the movement of flanking columns of the enemy and in protecting the lines of communication with the base of supply. Buford's division retired to Taneytown on the evening of the 2d, Westminster on the 3d and Frederick on the 5th. On the 6th it encountered the enemy west of Boonsboro', and after a sharp fight drove him from his position. On the following morning he renewed the attack, but was again driven, the Seventeenth Pennsylvania and Ninth New York having a severe encounter while upon the skirmish line. Skirmishing continued daily until the enemy retired across the river, and the campaign was at an end.

The fall campaign was one of great activity for the cavalry. The part taken by the Seventeenth is reflected by the following extract from Captain Theodore W. Bean's manual of the regiment: "At Raccoon Ford," he says, "you left your horses under shelter, and rushed to the support of your brother comrades in arms (Fourth New York), who were gallantly struggling against fearful odds, and under a murderous fire of grape and canister from the

[1] "Conduct of the War," 1865, vol. i. pp. 28, 29.

[2] "Conduct of the War," Supplement, part 2, p. 9., *Pleasanton's Report.*

enemy saved them from capture, re-established the line, and held it until relieved by the Twelfth Army Corps, for which you received the special commendation of the division commander. In the subsequent movements of the same year, when the wily rebel chief proposed to flank the army of the Potomac, and thus gain possession of the capital, history will accord to the regiment an honorable association with the commands that beat back his advance at Morton's Ford, Stevensburg, Brandy Station and Oak Hill, where, holding the extreme left of the line, you skilfully changed front as a distinctive organization, by direction of your immediate commander, anticipating a well-intended surprise, and repulsing, with heavy loss, a reckless charge of cavalry, for which the enemy at that time were notorious. In the countermovements of the campaign, closing with the battles of Bealton Station and Rickseyville, the occupation of the line on the Rapidan, and the indecisive engagement at Mine Run, the regiment was present, bearing its share of the toils, and sustained its proportion of losses, and, with the command, went into winter-quarters on the battle-beaten plains of Culpepper."

The regiment was engaged during the winter in picket duty, holding a long line in the direction of James City. On the 27th of February, 1864, a detachment of two hundred men, under command of Captain Spera, was ordered to report to General Kilpatrick, who, with a force of five thousand cavalry, was about to start on a raid upon Richmond. The command moved on the following day, and at Beaver Dam Station, on the Virginia Central Railroad, the work of destruction was commenced. Here Hall's brigade, to which Spera's detachment belonged, was sent to operate on the Fredericksburg Railroad, and at Taylorsville met a superior force of the enemy, which it failed to dislodge; but near Yellow Tavern, on the Virginia Central, effected the destruction of rolling stock, and there rejoined the main column. Kilpatrick approached to within two or three miles of Richmond, carrying the outer works and throwing shells into the city, but found the forces opposing him too great to overcome, and retired by Meadow Bridge, where a sharp skirmish occurred. At New Kent Court-House the infantry of Butler was met, whence, some days later, the command returned by transports to Alexandria, and thence to its old camp near Culpepper.

At the opening of the spring campaign the brigade moved to Chancellorsville, and on the 6th of May was sent to the Furnace, on the left of the line, where it met the enemy and fought dismounted, foiling numerous attempts of the rebels to turn that flank, being heavily engaged during the entire day. On the following morning it relieved Gregg's division on the Spottsylvania road, where the enemy was driven with heavy loss, and at night encamped at Todd's Tavern. On the 8th the fighting was renewed, in which the Seventeenth, holding the Spottsylvania road, suffered severely. Repeated charges of the enemy were repulsed and the position held until relieved by the Fifth Corps. On the 9th, Sheridan led the cavalry on his grand raid towards Richmond. At Beaver Dam Station many Union prisoners were rescued and large amounts of rebel stores were destroyed. At Yellow House serious fighting ensued, in which the Seventeenth, dismounted, was of the charging column, and drove the enemy. At night the regiment was put upon the picket line stretching out towards Richmond, reaching near to the rebel fortifications. Meadow Bridge, which had been destroyed, was repaired by the First Division, and in the face of the enemy, with infantry and artillery, on the opposite side, the Seventeenth took the lead in crossing, and delivering a most determined charge, drove him from his works in confusion. While the battle was raging a severe thunder-storm set in, adding to the terror of the scene. Lieutenant Joseph E. Shultz was killed in the charge. He was shot through the heart, expiring almost instantly. Sheridan rejoined the Army of the Potomac near Chesterfield Station on the 25th.

Resting but for a day, the cavalry again moved forward, and crossing the Pamunky at New Castle Ferry, engaged the enemy, and after several charges drove him from his position. On the 28th two squadrons of the regiment were sent towards Hanover, encountering the enemy's skirmishers and driving them in, and on the 30th, while reaching out to open communication with the left of the army, brought on the battle of Bethesda Church. On the same day the regiment was engaged near Old Church Tavern, where Lieutenant John Anglun, regimental quartermaster, was killed, and Captain William Tice wounded. At Cold Harbor the regiment moved, dismounted, and in the charge there delivered held the left of the line. In its first advance it was repulsed and suffered severe loss, but renewing the charge, the enemy was routed and driven. He subsequently made repeated attempts to recapture his lost works, but was as often driven back with loss. At daylight of the 1st of June he made a desperate assault, determined upon victory. He was allowed to come within short range, when the artillery and repeating carbines were opened on him with terrible effect, the ground being covered with his slain. When relieved by the infantry, Sheridan led his cavalry in the direction of Lynchburg. On the 10th the regiment was sent to the Spottsylvania battle-ground, where, in a field hospital, thirty-five wounded Union soldiers were found in a famishing condition and brought away. On rejoining the column near Trevilian Station, Sheridan was found hotly engaged. The Seventeenth was immediately sent to the front, and during the 11th and the following day was hotly engaged, sustaining heavy losses. Finding the enemy in superior numbers, Sheridan returned. The Seventeenth was again engaged near White House Landing on the 21st, at Jones' Bridge on the 23d, and at

Charles City Court-House on the 24th, in each engagement sustaining considerable losses. On the 26th, Sheridan crossed the James, but a month later returned to the left bank and moved up towards Richmond. At Ruffin's House the enemy's videttes were found and driven upon his infantry supports. On the morning of the 28th the brigade, dismounted, was sent to dislodge the enemy's infantry from a strong position on commanding ground in front of Ruffin's. Difficult ditches had to be crossed, but pushing resolutely forward, it opened fire from the repeating carbines, and though losing heavily, drove him out and occupied his ground. On the following day Sheridan recrossed the James, and soon after retraced his steps for the purpose of misleading the enemy as to his real strength on the Richmond side. On the 30th he returned to the lines before Petersburg.

Early in August, Sheridan was ordered to the command of the army in the Shenandoah Valley, and two divisions of cavalry, the First and Third, were sent to his aid. Upon the arrival of the Seventeenth in the valley, Major Reinhold resigned and was honorably discharged, whereupon Captain Weidner H. Spera was promoted to succeed him. On the 11th of August the cavalry moved towards Newtown, driving the enemy, but at six in the evening found him in position, determined to dispute further advance. The Seventeenth was at the front and was immediately ordered to charge. The enemy offered obstinate resistance, but was finally dislodged and retreated rapidly up the valley. On the 16th the enemy attacked the pickets of the brigade near Front Royal, the Seventeenth holding the centre of the brigade line. The division was immediately put in motion and repulsed the over-confident foe, capturing two battle-flags and three hundred prisoners. General Devin, commanding the brigade, was wounded in this engagement. On the 25th the command moved forward to Kearnysville, where it came upon the enemy's infantry. Of the battle which ensued, General Sheridan says: "This attack was handsomely made, but instead of finding cavalry his (enemy's) infantry was encountered, and for a time doubled up and thrown into the utmost confusion . . . . This engagement was a mutual surprise, our cavalry expecting to meet the enemy's cavalry, and his infantry expecting no opposition whatever." The Union forces retired in the direction of Shepherdstown, and when near that place the enemy attacked Custer's division. For the purpose of diverting attention from Custer the Seventeenth was ordered to charge upon the enemy's flank. In column of fours it dashed down a narrow road, and drove a body of his infantry from a wood, creating consternation in his ranks. In this charge Lieutenant James Potter was killed. For three weeks almost constant skirmishing was kept up, the Seventeenth participating in the actions at Smithfield on the 29th, at White Post on the 1st of September, at the Berryville and Buncetown crossing of the Opequan on the 7th, in which Captain Martin R. Reinhold was killed, and at Bunker Hill on the 13th.

Sheridan was now about to assume the offensive. At noon of the 18th the cavalry at Bunker Hill was ordered to break camp and move quietly without sound of bugle, and at a mile east of Summit Point encamped for the night, drawing sixty rounds of ammunition per man and sending all regimental baggage and supply trains to Harper's Ferry. At one o'clock on the morning of the 19th reveille was sounded, and at two the cavalry moved towards the Opequan. Before daylight heavy firing was heard. The First Division moved on the road towards Stevenson Station, crossing the Opequan, and driving the enemy from his position at the ford. The fighting was now general along the entire line, Sheridan having moved to the attack with his entire army. Step by step the ground was disputed. When within half a mile of the Valley pike, near the station, the enemy was discovered massing his cavalry to dispute the advance of Averell. At this junction General Devin was ordered to charge with his brigade. With the Seventeenth in advance, the charge was made, and the enemy driven in great confusion towards Winchester, opening the way for a junction of Torber's and Averell's commands. Moving in line up the pike towards Winchester, the enemy's line was again charged and driven from its position. The fighting was very severe. General Sheridan says, in his report: "I attacked the forces of General Early over the Berryville pike, at the crossing of the Opequan Creek, and after a most desperate engagement, which lasted from early in the morning until five o'clock in the evening, completely defeated him, driving him through Winchester and capturing about two thousand five hundred prisoners, five pieces of artillery, nine battle-flags and most of their wounded."

After the battle the regiment was ordered to report for duty to Colonel Edwards, post commander at Winchester, and was employed in guarding against the attacks of guerillas and in keeping open communication with the base of supplies. On the 15th of October, Major Spera was sent with a detachment to Martinsburg, and while there was ordered to escort General Sheridan to the front,[1] and was with him in

[1] Early on the 18th of October, Major Spera, in command of a detachment of the Seventeenth Cavalry, while at Martinsburg, whither he had been sent on the previous day, was ordered to report to Major Forsythe, of General Sheridan's staff, then at Martinsburg, and was directed by him to hold his command in readiness to escort Major-General Sheridan, in company with Colonels Thorn and Alexander, to the front. The column left Martinsburg at nine A.M., arrived at Winchester at three P.M., General Sheridan stopping at post headquarters, Colonel Edwards, Thirty-seventh Massachusetts, commanding. The escort encamped for the night at Mill Creek, a mile south of the town, with orders to be in readiness to move at five on the following morning. Very early in the morning rapid artillery firing was heard in the direction of the front. At about eight A. M. General Sheridan came riding leisurely along, remarking that the artillery firing was no doubt occasioned by a reconnoissance which had been ordered for that morning. Shortly after

that ride rendered famous by the stanzas of T. Buchanan Read, taking part in the great battle which completely crushed the enemy in the valley, and returned to Winchester with dispatches on the 20th. Until the 27th the regiment remained on duty at Winchester, when it was relieved and rejoined the division. On the 19th of December, General Torbert led his command by Front Royal into the valley of Virginia, and on the 22d met the enemy at White's Ford, driving him, and again on the following day near Gordonsville, where, finding his infantry in heavy force, Torbert was obliged to fall back. The Seventeenth was of the rear guard in the retreat, and successfully held the enemy in check, who made repeated attacks. In repelling one of these, Lieutenant Alfred F. Lee was killed. Returning to the vicinity of Winchester, the regiment went into permanent quarters, and during the winter was employed in picket and scout duty, detachments being occasionally sent out against roving bands of the enemy. On the 27th of December, Colonel Kellogg was honorably discharged and Lieutenant-Colonel Anderson promoted to succeed him, Major Durland being promoted to lieutenant-colonel, and Captains Luther B. Kurtz and William Thompson to majors. On the 31st of December the Second Brigade was sent to Lovettsville, in the Loudon Valley, for the protection of the Baltimore and Ohio Railroad, and for guarding the citizens against lawless bands that were constantly committing depredations.

On the 24th of February, 1865, Sheridan led the cavalry in a grand raid upon the James River Canal and other rebel communications in rear of Richmond. At Staunton the head of the column began skirmishing with the enemy. On the 6th of March the command reached Scottsville, and the work of destruction commenced. Locks were blown up, and mills and rebel stores were destroyed. The First and Second Brigades went to Howardsville, cutting and demolishing the canal and destroying supplies destined for the rebel army. On the 8th the Second Brigade marched *via* Howardsville, Scottsville and Fluvanno Court-House to Columbia and thence to Goochland Court-House, returning during the night to Columbia, continuing the work of destruction. From the James River the command moved upon the Virginia Central Railroad, which was likewise rendered unserviceable, and on the 26th rejoined the army before Petersburg. "There perhaps never was a march," says Sheridan, "where nature offered such impediments and showed herself in such gloom as upon this; incessant rain, deep and almost impassable streams, swamps and mud were encountered and overcome with a cheerfulness on the part of the troops that was truly admirable. . . . To every officer and man of the First and Third Cavalry Divisions I return my sincere thanks for patriotic, unmurmuring and soldierly conduct."

Sheridan reached the army just as it was moving on its last campaign, and he at once took the van. At Stony Creek the cavalry became engaged, and the Second Brigade was hastened forward to the support of Davie's division, which was forced back, the Seventeenth losing a number wounded and missing in the engagement. At daylight of the 1st of April fighting was renewed, the Union lines charging the enemy in his works, the division capturing six hundred prisoners and two battle-flags. The loss in the Seventeenth was severe, Captain James Ham being among the killed, and Captains English, Donehoo, Reinhold and Lieutenant Anglun among the wounded. Rapid marching and hard fighting continued until the 6th, when General Ewell, with one wing of the rebel army, was captured. From that point the cavalry kept up a running fight with the enemy's advance until he reached Appomattox Court-House, where the whole rebel army was forced to lay down its arms. In securing this joyful result the cavalry, led by Sheridan, contributed largely, the Seventeenth sustaining its hard-earned reputation for gallantry to the last.

From the Appomattox the regiment returned to Petersburg, and after a week's rest marched to the neighborhood of Washington, where it remained in camp until its final muster out of service, on the 16th of June. A detachment of this regiment was consolidated with parts of the First and Sixth Pennsylvania Cavalry Regiments, forming the Second Provisional Cavalry, and remained in service until the 7th of August, when it was mustered out at Louisville, Ky. In his farewell order to the Seventeenth, General Devine says: "In five successive campaigns, and in over threescore engagements, you have nobly sustained your part. Of the many gallant regiments from your State, none has a brighter record, none has more freely shed its blood on every battle-field from Gettysburg to Appomattox. Your gallant deeds will be ever fresh in the memory of

passing Milltown fugitives from the field began to appear, giving another interpretation of the firing of the morning. All trains going to and returning from the front were at once ordered to be parked to the right and left of the road near Milltown. General Sheridan then ordered Major Spera to take twenty men with the best horses from the escort and follow him, as he was going to "move lively" to the front, the remainder of the escort being directed to report to General Forsythe, and Colonels Thorn and Alexander to do "what they could in stemming the tide of fugitives." On the way up the pike towards Newtown the crowds of men and wagons thickened, until the multitude became almost a jam, so much so that it was impossible to keep the pike, and General Sheridan struck to the left of the road, dashing through fields and over fences and ditches. He spoke to few, occasionally crying out, "Face the other way, boys!" A chaplain was met mounted on a mule, who seemed importunate to speak with the general, and beckoned him to stop; but the general told him to face about and ride along if he had anything to say. But the mule-mounted chaplain was soon left behind with his story untold. On arriving upon the field the general struck to the right of the road, where were Generals Wright, Getty and members of his own staff, one of whom remarked: "General, I suppose Jubal Early intends driving you out of the valley." "What!" exclaimed Sheridan, "drive me out of the valley, three corps of infantry and all my cavalry? I'll lick him before night." With a lion heart he set to work disposing his forces, and by nightfall he had redeemed his promise.

your comrades of the Iron Brigade and the First Division. Soldiers, farewell!"

FIELD AND STAFF OFFICERS.

William Yokum, must. in Oct. 13, 1862.
Martin Zindel, must. in Sept. 25, 1862; not on muster-out roll.

NOTE.—The following incident is vouched for by the editor, the facts having come to his knowledge since being mustered out of the service: During the winter of 1862–63, and while the regiment was encamped at and near Acquia Church, in Stafford County, Va., the commanding officer was required to keep the communication open to Dumfries, where was posted a regiment of infantry, it being an intermediate post between the lines in defense of the capital and the Army of the Potomac. The interval was frequently visited by Confederates in small numbers, such as light scouting-parties of fifty and sometimes in greater numbers. At first a battalion was used, and they would leave camp every night about half-past eleven, marching through to Dumfries, distance twelve miles, *via* the old Telegraph road, starting on the return about daylight. This routine was kept up for about a month, with only some slight skirmishes and bushwacking to enliven these dull and monotonous rides, and it was concluded that a squadron would do just as well as the battalion. The squadron was used for some weeks, when the number was reduced to a company, and nothing of a serious character occurring, the number was finally reduced to twelve men and a corporal, all under the care of a sergeant. During the month of March, 1863, on one occasion Sergeant Harry G. Hunter, of Company L, with the usual squad of twelve men, had reached Dumfries, reported to the officer, and at the break of day started on his return. When about midway between the outposts the sergeant passed through a dense woods, thence out into an open space. Just as the sergeant reached the clearing he observed a small party of horsemen some two hundred yards distant emerging from the woods through which the road ran, and approaching from the opposite direction. The sergeant was leading the party; the morning was cold and the road extremely muddy. The men rode by twos. Presently discovering that the approaching troops were clad in gray and evidently enemies, but without a hostile flag, he rode on. When within a few yards of each other, both being about equal in number, neither drew a sabre or raised a pistol, but coming still closer, the sergeant yielded half the road, the Confederates yielded the other half, the officers saluted each other, and the columns passed without a word of comment or hostility. Sergeant Hunter made the customary report at headquarters and the episode was kept a profound secret until the war closed, when the joke was related as a part of the unwritten history of the regiment. Sergeant Hunter is now principal of the High School, Birdsboro', Berks Co., Pa.

One Hundred and Seventy-Fifth Regiment Pennsylvania Drafted Militia (nine months' men).—This regiment was composed of eight companies from Chester and two from Montgomery County. The camp of rendezvous was in West Philadelphia, where the companies assembled in November, 1862, and a regimental organization was effected with the following field officers: Samuel A. Dyer, of Delaware County, colonel; Francis C. Hooton, of Chester County, lieutenant-colonel; Isaac McClure, of Chester County, major. On the 1st of December the regiment broke camp and moved *via* Washington to Fortress Monroe, and thence to Suffolk, Va., where it was made a part of the brigade commanded by Colonel Alfred Gibbs. After a month's incessant drill the regiment was transferred to the brigade of General F. B. Spinola, and moved, with other troops, during the closing days of the year, to Newbern, N. C., and went into winter-quarters. Spinola's brigade here became the First of the Fifth Division (General Henry Prince), Eighteenth Corps, (General Foster).

In March, 1863, when the enemy was threatening Newbern, the One Hundred and Seventy-fifth threw up a strong line of earth-works on the south side of the river Trent and joined in repelling the attack which was sluggishly made on the town. It also made several expeditions in search of Colonel Woodford's guerrillas, but never succeeded in inducing them to risk a fight. After retiring from Newbern the enemy proceeded to Washington, on the Tar River, and laid siege to the town. The defense was directed by General Foster in person, the little garrison consisting of only about two thousand men. From Newbern to Washington direct was about

thirty miles, but by water one hundred and twenty. Prince's division at once moved by water to the relief of Foster. Eight miles below the town Prince found his way impeded by obstructions in the river, here a mile wide, and by heavy guns in earth-works on either side.

A year before, when Burnside made his descent upon this coast, the enemy had driven three lines of piles across the stream and erected heavy bomb-proofs to command the passage. When the Union forces got possession they contented themselves with opening a narrow way through the piles and left the bomb-proofs unharmed. When the enemy came again he had but to occupy. An attempt was made by the gunboats to reduce these defenses, but, failing in this, the One Hundred and Seventy-fifth was put upon a transport, in tow of the gunboat "Whitehead," and, with other troops, moved up to run past the obstructions; but, before reaching them, it was signaled to retire.

Prince subsequently abandoned further attempts at relief and returned to Newbern. A force under General Spinola, of which the One Hundred and Seventy-fifth formed part, which moved overland with the same object, was alike unsuccessful, meeting the enemy in force at Blount's Creek. The enemy, finding all attempts to reduce the place fruitless, and seeing a heavy force under Foster, who had escaped from the besieged town, gathering for a descent upon his rear, raised the siege. Spinola's brigade was then ordered to Washington, and a part of the One hundred and Seventy-fifth, under Lieutenant-Colonel Hooton, was posted at Fort Hill, and the other, under Major Smith, Major McClure having previously resigned, at an earth-work at Rodman's Point, Colonel Dyer having been assigned to a temporary command in Little Washington, under General Prince. The regiment remained in this position for two months, and this being a malarious district, it lost many men by sickness, among them Lieutenants Evan Sheeler and John E. Miller. Near the close of June the regiment was ordered north, and upon its arrival at Fortress Monroe was designated to join in the force then organizing for a movement up the Peninsula. This order was, however, countermanded, and it was sent to the Upper Potomac to aid in intercepting the retreat of the rebel army from Pennsylvania. Upon its arrival at Harper's Ferry it was stationed on Maryland Heights, whence, after some delay and the final escape of Lee, it proceeded to Frederick, Md. It subsequently marched to Sandy Hook, where it was attached to Colonel Wells' brigade, of the Eighth Corps. With it the regiment assisted in laying a pontoon bridge over the Potomac to the town of Harper's Ferry, and, crossing, had a brisk skirmish with the Twelfth Virginia Cavalry, which was driven and the town occupied. Its term of service had now expired, and, returning to Philadelphia, it was, on the 7th of August, mustered out.

FIELD AND STAFF OFFICERS.

(There are no muster-out rolls of this regiment on file in the adjutant-general's office).

Samuel A. Dyer, col., must. in May 3, 1861; pro. from capt. Co. C, 30th Regt. P. V., to lieut.-col. Nov. 13, 1862; to col. Nov. 2, 1862; disch. Aug. 7, 1863.

Francis C. Hooton, lieut.-col., must. in Nov. 25, 1862; must. out with regiment Aug. 7, 1863.

Isaac McClure, maj., must. in Dec. 6, 1862; res. Feb. 24, 1863.

Joseph D. Smith, majt., must. in Nov. 4, 1862; pro. from capt. Co. A Feb. 24, 1863; must. out with regiment Aug. 7, 1863.

James T. Temple, adjt., must. in Nov. 16, 1862; disch. Jan. 8, 1863.

J. Keen Vaughan, adjt., must. in May 31, 1861; pro. from 1st sergt. Co. C, 30th Regt. P. V., Jan. 16, 1863; must. out with regiment Aug. 7, 1863.

Jesse M. Beam, q.m., must. in Nov. 25, 1862; res. Jan. 9, 1863.

Herman B. Linton, surg., must. in Nov. 13, 1862; res. Jan. 13, 1863.

Jeremiah B. Brandt, surg., must. in Sept. 16, 1862; pro. from asst. surg. 55th Regt. P. V. Jan. 31, 1863; must. out with regiment Aug. 7, 1863.

John F. Evans, asst. surg., must. in Nov. 25, 1862; must. out with regiment Aug. 7, 1863.

Thomas H. Phillips, asst. surg., must. in June 1, 1863; must. out with regiment Aug. 7, 1863.

A. Judson Rowland, chaplain, must. in Nov. 26, 1862; must. out with regiment Aug. 7, 1863.

John F. Roberts, sergt.-maj., must. in Nov. 5, 1862; pro. from private Co. C Nov. 22, 1862; not accounted for.

David Potts, q.m.-sergt., must. in Nov. 10, 1862; pro. from private Co. K, date unknown; not accounted for.

J. Seydon Worrall, com. sergt., must. in Nov. 6, 1862; pro. from private Co. F, date unknown; not accounted for.

Louis R. Brown, hosp. steward, must. in Nov. 10, 1862; pro. from private Co. K, date unknown; not accounted for.

COMPANY A.

Joseph D. Smith, capt., must. in Nov. 4, 1862; pro. to maj. Feb. 24, 1863.

Lewis Ramsey, 1st lieut., must. in Nov. 4, 1862; must. out with company Aug. 7, 1863.

Henry C. Hughes, 2d lieut., must. in Nov. 4, 1862; disch. Jan. 16, 1863.

John Graham, 2d lieut., must. in Nov. 4, 1862; pro. to 2d lieut. Jan. 31, 1863; must. out with company Aug. 7, 1863.

Jonas F. Gibson, sergt., must. in Nov. 4, 1862; not accounted for.

B. F. Mack, sergt., must. in Nov. 4, 1862; not accounted for.

Thomas C. Vansant, sergt., must. in Nov. 4, 1862; not accounted for.

Josiah Saylor, sergt., must. in Nov. 4, 1862; not accounted for.

Richard Raysor, corp., must. in Nov. 4, 1862; not accounted for.

Henry Edwards, corp., must. in Nov. 4, 1862; not accounted for.

Nathan Comley, corp., must. in Nov. 4, 1862; died at Washington, N. C., June 1, 1863; buried in National Cemetery, Newbern, plot 7, grave 131.

Amos F. Shantz, corp., must. in Nov. 4, 1862; not accounted for.

Samuel Marrias, corp., must. in Nov. 4, 1862; not accounted for.

Philip S. Reed, corp., must. in Nov. 4, 1862; not accounted for.

Theodore Kram, corp., must. in Nov. 4, 1862; not accounted for.

Privates.

George Alexander, must. in Nov. 4, 1862; not accounted for.

Mahlon Atkinson, must. in Nov. 4, 1862; not accounted for.

George Arp, must. in Nov. 4, 1862; not accounted for.

Daniel Burgess, must. in Nov. 4, 1862; not accounted for.

Benjamin Blatt, must. in Nov. 4, 1862; not accounted for.

Allen D. Bickings, must. in Nov. 4, 1862; not accounted for.

John Brown, must. in Nov. 4, 1862; not accounted for.

Lewis F. Bickings, must. in Nov. 4, 1862; not accounted for.

John W. Butcher, must. in Nov. 4, 1862; not accounted for.

John Camburn, must. in Nov. 4, 1862; not accounted for.

William Carney, must. in Nov. 4, 1862; not accounted for.

Isaac Davis, must. in Nov. 4, 1862; not accounted for.

Jacob Dotts, must. in Nov. 4, 1862; not accounted for.

James Deeds, must. in Nov. 4, 1862; not accounted for.

John Dine, must. in Nov. 4, 1862; not accounted for.

John Eastburn, must. in Nov. 4, 1862; not accounted for.

Jones Eastwood, must. in Nov. 4, 1862; not accounted for.

John Edwards, must. in Nov. 4, 1862; not accounted for.

Samuel Edwards, Sr., must. in Nov. 4, 1862; not accounted for.
William Evertz, must. in Nov. 4, 1862; not accounted for.
Samuel Edwards, Jr., must. in Nov. 4, 1862; not accounted for.
F. William Force, must. in Nov. 4, 1862; not accounted for.
Thomas Glass, must. in Nov. 4, 1862; not accounted for.
Samuel Greacy, must. in Nov. 4, 1862; not accounted for.
Joseph Gravel, must. in Nov. 4, 1862; not accounted for.
Milton Godshalk, must. in Nov. 4, 1852; not accounted for.
John Hart, must. in Nov. 4, 1862; not accounted for.
William Kenny, must. in Nov. 4, 1862; not accounted for.
Benjamin H. Love, must. in Nov. 4, 1862; not accounted for.
James F. Millegan, must. in Nov. 4, 1862; not accounted for.
William Miller, must. in Nov. 4, 1862; not accounted for.
Thomas McGraw, must. in Nov. 4, 1862; not accounted for.
William McIntire, must. in Nov. 4, 1862; not accounted for.
William McClure, must. in Nov. 4, 1862; not accounted for.
Frank Newberger, must. in Nov. 4, 1862; not accounted for.
John Perch, must. in Nov. 4, 1862; not accounted for.
James Quirk, must. in Nov. 4, 1862; not accounted for.
Washington Quig, must. in Nov. 4, 1862; not accounted for.
John Reed, must. in Nov. 4, 1862; not accounted for.
M. T. Rice, must. in Nov. 4, 1862; not accounted for.
John L. Smith, must. in Nov. 4, 1862; not accounted for.
Thomas Snyder, must. in Nov. 4, 1862; not accounted for.
John Stump, must. in Nov. 4, 1862; not accounted for.
Henry Summers, must. in Nov. 4, 1862; not accounted for.
Mahlon Schleeter, must. in Nov. 4, 1862; not accounted for.
William Story, must. in Nov. 4, 1862; not accounted for.
Samuel Stout, must. in Nov. 4, 1862; not accounted for.
Lafayette Willhour, must. in Nov. 4, 1862; not accounted for.

One Hundred and Seventy-ninth Regiment Pennsylvania Drafted Militia (nine months' men).—The troops composing this regiment were from the counties of Berks, Lancaster, Montgomery, Pike, and Wayne and the city of Philadelphia. They were organized in companies at periods ranging from the 23d of October to the 6th of December, 1862, and on the 8th of December a regimental organization was effected, with the following field officers: William H. Blair, colonel; Daniel M. Yost, lieutenant-colonel; William H. Yerkes, major. Colonel Blair was at the time serving as captain in the Fifty-first Regiment, and did not join his new command until January, 1863. Before leaving Philadelphia, Company E was detached and sent for duty to the Chestnut Hill Hospital, where, with the exception of a short period soon after the battle of Gettysburg, in which it had charge of paroled prisoners in camp near West Chester, it remained until the close of its service. Soon after its

organization the regiment proceeded to Fortress Monroe, and thence to Yorktown, where it formed part of the garrison at the fort, and was encamped within its walls. Upon assuming command, Colonel Blair commenced a thorough discipline of his men, with the most flattering results. Colonel Robert M. West, chief of artillery and ordnance at the fort, says of it: "It improved rapidly, and eventually became a first-class regiment, remarkable for its proficiency in drill, the cleanliness and good order of its camp, and the quiet, orderly demeanor of the men. I never saw improvement more marked and rapid than in this case." It did little else than garrison duty until the last of July, when it was called out to join in the movement made by General Dix up the Peninsula. "When the movement upon Richmond was made," says Colonel West, in the document above quoted, "by General Dix, in the summer of this year. I was in command of the 'Advanced Brigade' of the forces that moved up the Peninsula. It became necessary to strengthen my brigade with an additional regiment, and the commanding general authorized me to designate any one I chose. I immediately named the One Hundred and Seventy-ninth, and, accordingly, Colonel Blair reported to me with his regiment, and became a part of my command. During the march to White House, and thence to Baltimore Cross-Roads, where my brigade was engaged upon two occasions, Colonel Blair's regiment was prompt and ready, and always well in hand. A peculiarity about his command was that it never had a straggler. During the return march—the most severe, on account of a drenching storm, of any I ever performed—the One Hundred and Seventy-ninth crowned its reputation as a first-class organization by being always closed and promptly in its place, whilst other regiments were scattered for miles along the road."

Upon its return to camp it was ascertained that Lee had invaded Pennsylvania, and though its term of service was about to expire, by the unanimous vote of the men, by companies, their further services were tendered to Governor Curtin as long as he should need them for the defense of the State. This offer was accepted; but by the time the regiment had reached Washington, *en route* to the front, the rebel army had retreated to Virginia. It was, accordingly, ordered to Harrisburg, where, on the 27th of July, it was mustered out of service.

FIELD AND STAFF OFFICERS.

William H. Blair, col., must. in Dec. 8, 1862; must. out with regiment July 27, 1863.

Daniel M. Yost, lieut.-col., must. in Dec. 8, 1862; must. out with regiment July 27, 1863.

William H. Yerkes, maj., must. in Dec. 30, 1862; must. out with regiment July 27, 1863.

Charles L. Buffington, adjt., must. in Jan. 20, 1863; must. out with regiment July 2, 1863.

Daniel K. Kepner, q.m., must. in Dec. 8, 1862; must. out with regiment July 27, 1863.

Charles Styer, surg., must. in Jan. 13, 1863; trans. to 99th Regt. P. V., date unknown.

James R. Reily, surg., must. in Sept. 4, 1862; must. out with regiment July 27, 1863.

William S. Frick, assist. surg., must. in Dec. 17, 1862; must. out with regiment July 27, 1863.

James A. Richey, assist. surg., must. in Jan. 3, 1863; must. out with regiment July 27, 1863.

J. Hiram Champion, chap., must. in May 29, 1863; must. out with regiment July 27, 1863.

Henry Heydenreich, sergt.-maj., must. in Nov. 4, 1862; pro. from priv. Co. A Dec. 12, 1862; must. out with regiment July 27, 1863.

James T. Stackhouse, q.m.-sergt., must. in Nov. 8, 1862; pro. from sergt. Co. G Jan. 13, 1863; must. out with regiment July 27, 1863.

William Flower, com. sergt., must. in Nov. 8, 1862; pro. from corp. Co. G Feb. 23, 1863; must. out with regiment July 27, 1863.

Henry Ball, hosp. steward, must. in Nov. 13, 1862; pro. from 1st sergt. Co. D Jan. 8, 1863; must. out with regiment July 27, 1863.

COMPANY A.

Peter Faust, Jr., capt., must. in Nov. 4, 1862; must. out with company July 27, 1863.

David S. Harpel, 1st lieut., must. in Nov. 4, 1862; must. out with company July 27, 1863.

Amos K. Kepner, 2d lieut., must. in Nov. 4, 1862; must. out with company July 27, 1863.

Samuel P. Bertolet, 1st sergt., must. in Nov. 4, 1862; must. out with company July 27, 1863.

Aaron K. Kulp, sergt., must. in Nov. 4, 1862; must. out with company July 27, 1863.

Adam Schlonecker, sergt., must. in Nov. 4, 1862; must. out with company July 27, 1863.

Henry C. Grubb, sergt., must. in Nov 4, 1862; pro. to corp. Nov. 24, 1862; to sergt. April 1, 1863; must. out with company July 27, 1863.

Nathaniel Shide, sergt., must. in Nov. 4, 1862; must. out with company 27, 1863.

Henry R. Bertolet, sergt., must. in Nov. 4, 1862; disch. by G. O. Nov. 22, 1862.

Levi De Kalb, corp., must. in Nov. 4, 1862; must. out with company July 27, 1863.

John Decker, corp., must. in Nov. 4, 1861; pro. to corp. Nov. 24, 1862; must. out with company July 27, 1863.

David P. Herb, corp., must. in Nov. 4, 1862; must. out with company July 27, 1863.

William Grimly, corp., must. in Nov. 4, 1862; pro. to corp. Jan. 21, 1863; must. out with company July 27, 1863.

Washington H. Smith, corp., must. in Nov. 4, 1862; must. out with company July 27, 1863.

Eli R. Isett, corp., must. in Nov. 4, 1862; must. out with company July 27, 1863.

D. S. Levengood, corp., must. in Nov. 4, 1862; disch. Nov. 22, 1863.

H. Y. Schweinhart, corp., must. in. Nov. 4, 1862; disch. Nov. 25, 1862.

Joseph Lenhart, musician, must. in Nov. 4, 1862; must. out with company July 27, 1863.

Jonas Hauch, musician, must. in Nov. 4, 1862; disch. Nov. 27, 1863.

Privates.

George Andrews, must. in Nov. 4, 1852; must. out with company July 27, 1863.

Jesse G. Bitting, must. in Nov. 4, 1862; must. out with company July 27, 1863.

John Bender, must. in Nov. 4, 1862; must. out with company July 27, 1863.

Charles Blum, must. in Nov. 4, 1862; must. out with company July 27, 1863.

Henry Barnhart, must. in Nov. 4, 1862; must. out with company July 27, 1863.

William Blum, must. in Nov. 4, 1862.

John Beard, must. in Nov. 4, 1862.

William Buchby, must. in Nov. 4, 1862.

Augustus Brandenstine, must. in Nov. 4, 1862.

Samuel Biber, must. in Nov. 4, 1862.

Isaiah Christian, must. in Nov. 4, 1862; disch. by special order Nov. 25, 1862.

George Decker, must. in Nov. 4, 1862; must. out with company July 27, 1863.

John Dettera, must. in Nov. 4, 1862; must. out with company July 27, 1863.

Josiah Davidshiser, must. in Nov. 4, 1862; disch. by special order Nov. 24, 1862.
Querene Eckenfelt, must. in Nov. 4, 1862; disch. by special order Nov. 11, 1862.
Michael Fox, must. in Nov. 4, 1862; must. out with company July 27, 1863.
John Fitzgerald, must. in Nov. 4, 1863; must. out with company July 27, 1863.
John Gresh, must. in Nov. 4, 1862; disch. by special order Nov. 25. 1862.
William Hoffman, must. in Nov. 4, 1862; must. out with company July 27, 1863.
John W. Hartzel, must. in Nov. 4, 1862; must. out with company July 27, 1863.
John Hersh, must. in Nov. 4, 1862; must. out with company July 27, 1863.
James Hartzel, must. in Nov. 4, 1862; must. out with company July 27, 1863.
John Heinrich, must. in Nov. 4, 1862; disch. by special order Nov. 25, 1862.
Henry Heydenreich, must. in Nov. 4, 1862; pro. to sergt.-maj. Dec. 12, 1862.

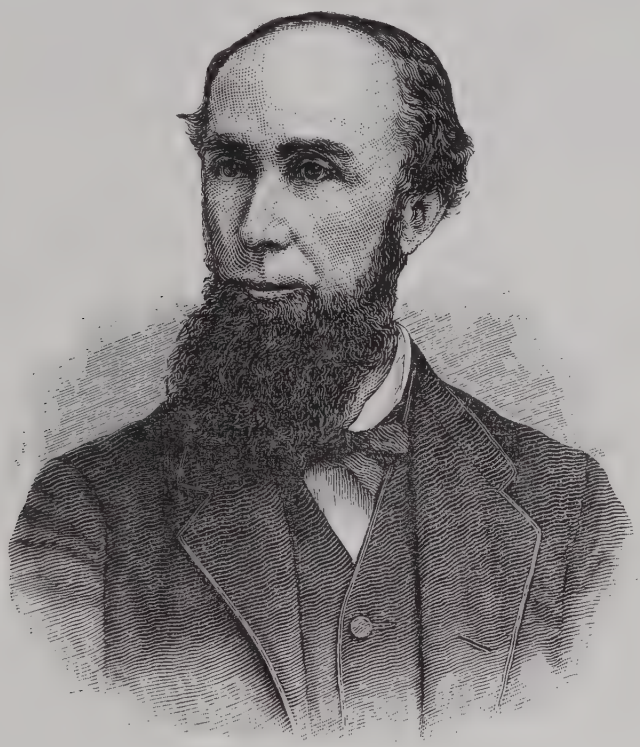
at Valley Forge during the winter of 1778–79 and participated in the engagements at Germantown, Brandywine and Stillwater, continuing in service until the close of the conflict. He married Rosina Berninger, whose surviving sons were Benjamin B. and Philip. The former, born on the 31st of December, 1787, was a soldier of the war of 1812, and filled the offices of commissioner and register of wills in his county. He married, on the 13th of November, 1813, Sarah Feather, whose children were Isaac F., Benjamin F., Sarah and Elizabeth. The first named was born March 2, 1815, in Pottsgrove, where his life has chiefly been spent.

He has been honored with the offices of county



D. M. Yost.

Col. Daniel M. Yost.—Philip Yost, born May, 1718, emigrated to America prior to the year 1740 from Nassau, West Germany, and settled in Limerick township, Montgomery Co. He subsequently removed to the Yost homestead, near Pottstown, in New Hanover township, which is still among the family possessions. To his wife, Veronica Dotterer, were born three sons, among whom was Philip, a native of Limerick township, whose birth occurred August 24, 1757. He served with credit during the Revolutionary war, having encamped with the army

auditor, county commissioner and associate judge, having been the last incumbent of the latter position. He married Rosina, daughter of Daniel Miller, of Pottsgrove township, and has children,—Daniel M., Benjamin M., Isaac M., Philip M., John R. and five daughters. Daniel M. Yost was born on the 27th of August, 1839, in Pottsgrove township, where he attended the public school of the district, and later received superior advantages of education at Washington Hall, situated at the Trappe. From 1852 until 1854 he varied the vocation of a teacher with

labor on the farm, and in March of the latter year accepted a position as clerk in a dry-goods store in Norristown, continuing thus occupied until the beginning of the war in 1861. On the 19th of April he enlisted for three months in the Fourth Pennsylvania Volunteers, and was during this period of service promoted to the position of first sergeant of his company. The following spring he embarked in business with J. H. Brendlinger, and during the fall of 1862, Colonel Yost again manifested his patriotism by raising a company during the emergency and immediately reporting for duty at Harrisburg.

Such was the spirit infused into this band of recruits by their captain that in thirty-six hours from the time of their enlistment they were *en route* for the State capital. Colonel Yost was promoted from a captaincy to the position of lieutenant-colonel of the Eleventh Pennsylvania Volunteers, which was the first regiment that crossed the line into Maryland and reinforced General Reynolds at Hagerstown. On his return from service he was commissioned lieutenant colonel of the One Hundred and Seventy-ninth Pennsylvania Volunteers, and while serving with his regiment was wounded at Baltimore Cross-Roads, near White House Landing, Va. In 1864 he resumed his business relations, and has since that date been one of the representative merchants of Norristown. Colonel Yost, was, in 1863, married to Hannah, daughter of Solomon Feather, of Norristown. The children of this marriage are Daniel F., Harry F., Walter, Maria R. and Ella. Colonel Yost has been largely identified with the business interests of the borough, as also of the county. A Democrat in politics, he does not participate in the various political movements of the time and invariably declines office. He is a member of Trinity Lutheran Church, Norristown.

ELEVENTH REGIMENT.

Organized Sept. 12, 1862; discharged Sept. 24–25, 1862.

FIELD AND STAFF.—Colonel, Charles A. Knoderer; lieutenant-colonel, Daniel M. Yost; major, Walter H. Cooke: adjutant, Gustavus A. North; quartermaster, Anthony G. Ely; surgeon, John B. quartermaster, John A. L. Tice; surgeon, Isaac Hughes; quartermaster-sergeant, Charles S. Atkinson.

COMPANY B.—Captain, Benjamin M. Boyer; first lieutenant, Charles Hunsicker; second lieutenant, William H. Snyder; first sergeant, William B. Maitland; sergeants, Hiram Lysinger, Samuel Rodenbaugh, Edward P. Benter, Lewis H. Bowman; corporals, Adam H. Fetterolf, Julius Hood, Josiah Christman, George Emery, Charles Sutch, Jacob R. Hunsicker, James D. Ash, Franklin March (pro. to adjt. Sept. 17, 1862).

Privates.—James C. Allabaugh, Jacob S. Aaron, Richard Bate, John Butcher, Samuel Brooke, Isaiah Bradford, Isaac Barton, John Colehouser, Jacob R. Custer, Isaac Cooke, John Deem, Henry Edwards, Samuel Edwards, Thomas B. Fisher, Edward Fagan, William F. Force, William E. Fulmer, Lewis Garner, John Garber, James Gotwaltz, Jacob M. Hensell, Robert S. Hood, John Holland, John Heddleson, David K. Humbert, John Hart, Elias C. Jones, Samuel Johnson, Jacob Kramer, Daniel C. Kepler, Henry W. Kratz, Henry Lehman, Preston Lewis, Laurence Larkins, Benjamin Lightfoot, Isaac C. Lysinger, Daniel Lysinger, Morris S. Longstreth, Henry C. Moser, Allen Martin, Edward Murray, Enos Major, Daniel Miller, James McGintey, John McCoy, Peel B. McCord, Jarret T. Preston, William W. Painter, Henry Quillman, George W. Rogers, Davis Ramage, Charles J. Royer, Joseph W. Royer, William R. Rittenhouse, Levi Rosenberger, Adam Rodebaugh, Samuel Rodebaugh, George Rodebaugh, George Seelah, John Shuttleworth, James Sloan, George W. Snyder, Peter H. Schaffer, Francis R. Shupe, Thomas Slutterer, Samuel Taylor, Reuben Taney, Samuel H. Treichler, Thomas White, Matthias P. Walker, Edward P. Zimmerman.

COMPANY G.—Captain, Harrison M. Lutz; first lieutenant, Henry C. Hughes; second lieutenant, Horatio Ogden; first sergeant, Charles S. Griffith; sergeants, Henry E. Newberry, James Hustler, William H. Shainline, Colbert Reiger; corporals, Isaac Ramsey, George W. Holstein, William H. Holstein, Charles D. Hess, Joseph Barrett, John Richards, David F. Skean, Frank Tomney.

Privates.—Henry Armstrong, John Broughton, Hugh Cassiday, Samuel Coats, Edward Delany, Jonas Eastwood, John Graham, Lewis Glenn, Charles R. Griffith, Frederick Goll, William H. Geiger, Joseph Harrison, Amos T. Holt, S. Hallman Hart, Hiram C. Hallman, John A. Keiger, James Keating, Robert Keller, Nathaniel Laver, Charles Lyle, Franklin Lyle, Henry Linley, William Millington, John A. Mitchell, John H. Mangle, William McCracken, Charles Pickup, Robert Patton, Joseph Russell, Walter B. Rambo, Morris Richardson, Christian F. Skean, Hiram Supplee, James Supplee, Benjamin Y. Shainline, Jonathan R. Supplee, Martin Stamp, Davis Sweeny, Elias Smith, Michael Sherry, William Swann, Jesse Updegrove, Squire Whitehead, Patrick Walters, Michael Wheeler.

NINETEENTH REGIMENT PENNSYLVANIA MILITIA.

Organized Sept. 15, 1862; discharged Sept. 27, 1862.

FIELD AND STAFF.—Colonel, Robert Klotz; lieutenant-colonel, Daniel Nagle; major, William H. Churchman; adjutant, Herman B. Graeff; quartermaster, Lewis W. Crawford; assistant surgeon, Daniel T. Batdorf; chaplain, Alfred A. Fisher; sergeant-major, D. Sylvester Stine; quartermaster-sergeant, William H. Bowyer; commissary sergeant, David H. McNair.

COMPANY E.—Captain, John H. Hobart; first lieutenant, George Rice; second lieutenant, Thomas C. Steele; first sergeant, William A. Dyer; sergeants, William S. Wells, Henry Potts, Jr., Franklin A. Yocum, Alexander Malsberger; corporals, William C. Beecher, Samuel R. Ellis, Charles Lessig, Miller D. Evans, George D. Meigs, Isaac Umstead, Daniel W. Davis, John Lord; musicians, George W. Morrow, Robert H. Hobart.

Privates.—Charles J. Adamson, Lyman Beecher, Robert Bice, Jerome B. Byar, Francis Bach, John S. Bachman, Mahlon R. Buchert, William J. Binder, Benjamin B. Brant, Harrison Bean, Horace A. Custer, John Corbitt, Marmaduke B. Casselberry, William Davis, Anthony Dunn, Samuel S. Daub, David D. Endy, Oliver Evans, Samuel Y. Eisenberger, Jonathan Fregh, Charles Frick, Henry F. Fogle, Jonas D. Fritch, Peter Good, Daniel F. Graham, Davis R. Hendricks, Nathaniel P. Hobart, Ephraim Hartranft, Josiah Huber, Luke Higgins, Nathaniel Harner, John W. Hollowbush, John Hause, John R. Hunsberger, John R. Irwin, Hiram C. Jones, William H. Johnston, Francis Jordan, Daniel H. Keim, James W. Keim, George T. Keim, Henry G. Kulp, Enos Keller, William H. Lachman, Michael Lessig, William H. Landis, Henry P. Leaf, Van Buren Missimer, Cornelius Mara, Cyrus W. O. Nyce, Lewis R. Neiman, Edmund E. Newlin, Joseph Potts, Jr., Joseph McKean Potts, Ephraim Reifsnyder, Peter W. Reifsnyder, Peter S. Reifsnyder, Henry P. Rutter, William I. Rutter, Jerome Ruth, Peter Ruth, John D. Rothrock, Henry A. Richards, Mark H. Richards, Christopher Shaner, Enos H. Shaner, Englebert Shaner, Augustus W. Shick, Henry B. Smull, Henry K. Stout, Oliver A. Shelladay, William B. Stranford, John Wagner, Lewis Ward, Harrison R. M. Whitman, John Weidner, George Wanger, William L. Williamson, Samuel Y. Weaver, Henry Walt, Jr., Matthias G. Yergy, Jacob C. Yost.

INDEPENDENT CAVALRY COMPANIES.

Organized Sept. 18, 1862; discharged Sept. 28, 1862.

Captain, Samuel W. Comly; first lieutenant, Joseph Longstreth; second lieutenant, Austin L. Taggart; first sergeant, William R. Wister; sergeants, Charles C. Longstreth, Charles C. Walton, John S. Wise, Thomas Bitting; corporals, George G. McNeill, John Donat, George F. Robeson, Christian Stout, Alfred J. Snyder, Thomas Patton

Privates.—Charles T. Aiman, Matthew Anson, William Bitting, William H. Boude, Benjamin E. Buzby, George W. Castner, Abraham H. Clayton, Enos Clayton, Hamilton Clayton, Charles Comley, Nathan Comley, Charles Culp, Jr., George W. Engleman, Isaac Fell, Manassah Fries, Andrew Gilinger, Harrison Goodwin, Elwood Gourley, William T. Harvey, Daniel Jones, Evan Jones, George M. Jones, Francis A. Katz, Elwood Kirk, Joseph Kirkner, Andrew Lightcap, Jacob F. Lukens, Elwood Paul, Enoch T. Parvin, Hiram Potts, Elias H. Potts, James Quirk, Philip S. Reed, Peter Rittenhouse, Ezra S. Shermer, Edward S. Stahlnecker, Jacob Stahlnecker, Charles Stout, Jonathan Thomas, William Tobid, Jr., Joseph E. Van Meter, David Wood, Frank Yerkes.

Organized Sept. 13, 1862; discharged Sept. 27, 1862.

Captain, Daniel H. Mulvany;[1] first lieutenant, J. Kurtz Zook; second lieutenant, A. Jackson Anderson; first sergeant, Frederick K. Haws, sergeants, E. Channing Potts, John S. Shearer, George Peckin, A. Brower Longaker; corporals, Thomas Humphreys, Solomon Gilbert, Archibald D. Thompson, Benjamin Custer, William W. Davis.

Privates.—Lewis K. Beerer, John Coats, Josiah Culp, Frank R. Deeds, Lewis H. Davis, Hugh Dehaven, Philip Daniels, John Grant, George Garrett, John Graham, Jacob Gaus, Leonard Hendricks, Nathan R.

---

[1] The following correspondence between Captain Daniel H. Mulvany and Governor Curtin recalls the period of anxiety and apprehension felt throughout Eastern Pennsylvania in the summer of 1863. It also shows the promptness with which the patriotic citizens of Montgomery County responded to the call of the executive in an emergency that was rife with peril to the commonwealth:

"HARRISBURG, June 15. 1863.

"Received June 15, 1863, 10 o'clock, 30 minutes A.M.

"*To D. Mulvany, Esq.*—Lee is moving in force on Pennsylvania. He has defeated our forces at Winchester and Martinsburg, and part of his army is now at Hagerstown. The President has called on Pennsylvania for fifty thousand volunteers to check the Rebel movement, the men so raised to serve for six months if not sooner discharged, to be clothed and paid by the United States, and to be accredited on the draft. Unless our people respond promptly a large part of the State will be laid waste by the Rebel invasion.

(Signature), "A. G. CURTIN,
"*Gov. State Pennsylvania.*"

Also the following letter:

"NORRISTOWN, Sept. 16, 1862.

"*His Excellency, A. G. Curtin, Gov. of Penna.*—SIR: I have the honor to report the troop of cavalry raised in this borough and vicinity as in readiness to march. We propose to mount our horses for Harrisburg on Thursday morning next. Please have the goodness to let me know by telegraph whether we may go at that time. Very respectfully your obedient servant. "D. H. MULVANY,
"*Captain Norristown Troop.*

"P. S.—Fifty-four members have positively agreed to march on Thursday, and some others would go to Harrisburg to join us in a few days."

The above is appended to a paper drawn up in the following terms:

"We, the undersigned citizens of Norristown and its vicinity, between 18 and 55 years of age, do hereby agree to form ourselves into a troop of cavalry, for such military service as the defense of our native State may in the present emergency require. The members will meet to organize at the office of D. H. Mulvany on Saturday next, at 7.30 o'clock P.M."

Hughes, Lewis Hagey, Alexander Hanna, Samuel F. Jarrett, David S. Kulp, George Keys, George Longaker, William B. Logan, John Leedon, Edwin Moore, David McClure, Davis Roudebush, John Rigley, Charles Razor, William Stillwagon, David M. Stacker, John S. Temple, Spencer Thompson, William N. Walker, John A. Woodhus.

Mustered in June 17, 1863; discharged July 30, 1863.

Captain, Samuel W. Comly, first lieutenant, Joseph C. Longstreth; second lieutenant, Austin L. Taggart; first sergeant, William R. Wister; quartermaster-sergeant, Thomas Bitting; sergeants, Enos Clayton, William G. Bosler, Joseph Kirkner, Jr., John S. Wise, Harry R. Brown; corporals, Charles Comley, Charles Stout, Ellwood Gourley, Benjamin R. Meyers, Jacob H. Michener, George W. Bush, George B. Rayner, David S. Grafly.

Privates.—Josiah Ambler, Wilmer Atkinson, Dager Bush, Marshall E. Battin, Jacob Y. Bates, John E. Bartholomew, Andrew N. Brice, Michael Bushey, Charles A. Brinton, Charles Culp, John Cross, Thomas M. Clayton, Edwin Claxton, Henry Cook, Walter H. Cook, William Cahill, John J. Dager, Robert P. Dager, Franklin Dewees, Henry C. Deckart, Joshua L. Fields, John E. Faurice, Charles E. Faurice, Harrison C. Green, William B. Hart, Nathan E. Hughes, Samuel H. Hough, John Jacobs, William Jones, Howard H. Jenkins, Ellwood Kirk, Abraham S. Kulp, Rader K. Kraft, Morris P. Kirk, Henry Z. Kibler, Hicks Lukens, Charles Longstreth, Samuel D. Moser, Patrick Murray, Richard Moore, William R. Myers, Patrick McGillen, George K. McMiller, Charles Newman, John S. Perry, Charles W. Patterson, Elias H. Potts, Clayton Phipps, Henry Reitabaugh, Jesse Roberts, Jr., William F. Sadler, George W. Stackhouse, Walter Scott, Joseph Stahlnecker, John W. Taylor, Carroll S. Tyson, Stephen Walton, Mahlon S. Walton, Lewis S. Whitcomb, William Weimar, Joseph J. Yocum, John Yerkes.

INDEPENDENT CAVALRY BATTALION.

Mustered in July 2–10, 1863; discharged Aug. 21, 1863.

COMPANY B.[1]—Captain, Frederick R. Haws; first lieutenant, George R. Pechin; second lieutenant, George P. Yocum; first sergeant, Harry C. Johnson; sergeants, George Pechin, Jr., Samuel F. Jarrett, David Schrack, John F. Anderson; corporals, Thomas W. Humphreys, Joseph H. Barrett, Archibald D. Thompson, John M. Stacker, Alexander Gotwalts, Peter Crouse, Charles P. Egbert, William H. Stillwagon; musicians, Hophin V. Johnson, John Q. Hunsicker.

Privates.—James Q. Atkinson, George W. Berry, William M. Bainbridge, Jacob Buckwalter, John Coats, Charles A. Cox, Benjamin Custer, Edwin Conrad, A. W. Cooper, William R. Cox, John Deal, L. Y. Eisenberry, Samuel Edwards, Hiram M. Fulmer, John Fulmer, Jr., Seth Fulmer, Edward Freas, Edward Gorgas, Theodore Gilinger, George L. Garrigues, Leonard Hendricks, George Hagy, Jesse Hutz, Ivins Hansell, Charles Hansell, Charles L. Haws, Charles C. Johnson, Augustus Huhn, Stephen T. Kirk, George W. Kibblehouse, Abraham R. Moyer, Edwin Moore, Hugh Mason, John C. Morgan, William H. Meigs, George W. Mancill, Henry Mavaugh, Josiah Note, William B. Nungesser, Enoch H. Parvin, E. Channing Potts, Cornelius Rhoads, Andrew S. Rahn, Atkinson H. Ritch, Reuben Y. Ramsey, Louis Styer, Charles Smith, Jacob Shaffer, Morton C. Streeper, Albert F. Shaw, John Spencer, Harry Sturgis, Thomas M. Snyder, Isaac M. Templin, Isaac W. Weirman, James C. Ward, John Wildsmith, Elwood M. Worrell, Nathan S. Woolf, James Wells.

The following company was recruited from Montgomery County, though it served in the First New Jersey Cavalry:

COMPANY A, FIRST NEW JERSEY CAVALRY.—Theodore Michenor, private, sergeant and second lieutenant; Joshua P. Kirk, corporal and sergeant; Samuel Waalton, private and sergeant; Algernon Waalton, sergeant; John P. Marple, corporal and sergeant; Cephas Ross, private, corporal and sergeant; Edwin Twining, sergeant; G R. Roberts, corporal and sergeant; William M. Shaw, private and sergeant; William Hollowell, corporal and sergeant; Harrison Megargee, private, corporal and sergeant; James D. Walton, private, corporal and sergeant; John D. Williams, private, corporal and sergeant; Ephraim M. Crosdale, private and sergeant; John C. Hobensack, sergeant; Isaac Jannett, private, corporal and sergeant; Theodore Johnson, corporal; Charles E. Wilson, private and sergeant; John F. Buck, private and sergeant; Thomas J. Hellings, private and corporal; David J. Walton, corporal and sergeant; Washington M. Raisner, private and corporal; Theodore Radcliff, private and sergeant; Lawrence Rush, private and bugler; Charles J. Shelmire, private and corporal; Charles B. Perkinpine, corporal; Edmund Scott, corporal and sergeant; Charles Myers, blacksmith.

Privates.—John Barker, James Bloomer, Joshua Boyles, Henry Cash, Charles R. Coffman, John Black, James Conn, Elias P. Hall, John H. Craven, Thomas M. Crosdale, Rush Griffith, Henry Hagerman, Harrison Johnson, Jonathan Johnson, Elwood Knowles, Joseph

[1] The following extract from a letter written by an emergency soldier of the summer of 1863 will call to mind the circumstances which at that period were deemed of unusual interest to the people of Montgomery County:

"At the time General Lee with his rebel hordes crossed the Potomac and was about to invade the soil of Pennsylvania the people of the Schuylkill Valley became very much alarmed. It was difficult to realize the fact that after the State had given over two hundred thousand of her brave young men to the public service that she should be the subject of an incursion, and her great harvest-fields devastated and whole regions laid waste. The farmers and business men of Montgomery County felt the emergency to be serious, and that more soldiers were necessary in order to resist the tide of invasion, and if possible to overwhelm Lee; we therefore, in a very few days, raised a company, known as the Norris Cavalry, and selected for our captain Frederick Haws, of Norriton township. The farmers had the hay about half made and the grain was nearly ready to harvest; but we thought better, if needs be, to lose our crops and march to the assistance of the brave men in the field. The sacrifice was felt to be very great, and the animating feeling of all was to do what we could for the country. On the 2d of July, 1863, a warm sultry morning, we left our homes and farms and assembled at Norristown, where we received our horses and equipments. At 10 o'clock A.M. we formed company and started for the seat of war. We marched over the Ridge pike, passing through village after village, and receiving the plaudits of men, women and children, all of whom seemed to feel the stern necessities of the time; we reached Pottstown, and there remained overnight, and were hospitably entertained by the good citizens of that place; many of the men felt jolted and sore, and keenly appreciated a short night's rest. By seven o'clock on the morning of the 3d we were on the march for Reading, reaching that place in good time; horses were groomed and the men turned in for a good night's sleep. On the morning of July 4th we were mustered into the State service for three months, unless sooner discharged; we then went into camp, and suffered all the discomforts of a rainy afternoon and night. The joyful news of the defeat of Lee came along in good time to rejoice our hearts, and in common with all, we felt a sense of relief and a desire to be where we could help to 'push things.' On the 5th we had our horses appraised and then took cars and proceeded to Harrisburg. The rain continued, and the conditions under which we marched to a piece of woodland beyond the town and went into camp were such as to induce 'camp growls' from the most patriotic. 'Camp Couch,' however, was established and Norris Cavalry pitched their tents, fed their horses, cooked their coffee, made their beds, began to realize what 'soldiering' really meant, 'turned in' for the night, dreamed of soft beds, new-made hay, and orange harvest-field and not the girls, but the kindly housewives we left behind us. We woke to the sound of neighing horses and the general racket of rain-soaked camp guards. At this camp we received our uniforms. As usual, they fit to a fault, and many of us, upon getting inside of them, felt almost as blue as we looked. The novelty of our woodland camp was wearing away and the situation was growing monotonous, when, on the 11th, we received orders to march. Our first duty was to take one hundred government horses to Chambersburg; this we did, and turned them over to officers there in command, and then moved on to Greencastle, where we encamped for the night. Next day we marched to a place called Clear Springs, in Washington County, Maryland, and encamped within about one and a half miles of the Potomac River. We were now in General Kelly's department, Camp Stahl. Here we were employed for some time in doing out-post and picket duty on the Potomac River. Lee having retired into Virginia, the danger to the State being over and our affairs at home pressing most of the men in the command, we returned to Harrisburg. On August 21st we were mustered out, and on the following day returned to our homes. Our experience was rife with incident, and although we were not engaged with the enemy, our presence on the line of operations was a guarantee of our willingness to do what the exigencies of the public service and those in charge of it might require of us at their hands.

Yetter, John Yetter.

One Hundred and Ninety-seventh Regiment (hundred days' men).—This regiment was recruited at Philadelphia and in neighboring counties by the assistance of the Coal Exchange Association of that city, to serve for a period of one hundred days, and was known as the Third Coal Exchange Regiment. It was organized at Camp Cadwalader on the 22d of July, 1864, with the following field officers: John R. Haslett, colonel; Charles D. Kenworthy, lieutenant-colonel; John Woodcock, major. Colonel Haslett had served as captain in the Sixty-sixth and subsequently in the Seventy-third, of which he had been for several months the acting major; Lieutenant-Colonel Kenworthy had served on the Peninsula, in the Third United States Infantry, where he was severely wounded; and Major Woodcock had just been mustered out of a nine months' regiment. A large proportion of officers and men were well-schooled soldiers. Soon after its organization it proceeded to Camp Bradford, at Mankin's Woods, near Baltimore, where it remained for two weeks. At the end of that time, and when well drilled and in full expectation of being led to the front, it was ordered to Rock Island, Ill.,

and upon its arrival there was charged with guarding a camp for prisoners of war. The guard provided was insufficient for the duty required, and the service bore heavily upon this regiment. At the close of its term it returned to Philadelphia, where, on the 11th of November, 1864, it was mustered out.

COMPANY F.

Harry H. Shantz, capt., must. in July 18, 1864; must. out with company Nov. 11, 1864.

E. M. Washburne, 1st lieut., must. in July 18, 1864; must. out with company Nov. 11, 1864.

Fr'k W. Carpenter, 2d lieut., must. in July 18, 1864; must. out with company Nov. 11, 1864.

George Scheetz, 1st sergt., must. in July 18, 1864; must. out with company Nov. 11, 1864.

RECAPITULATION OF COMPANIES ORGANIZED AND ACCREDITED TO MONTGOMERY COUNTY, PA.

Fourth Regiment, Companies A, B, C, D, E, I, K, 90 days' term.
Fourty-fourth Regiment (First Pennsylvania Cavalry), Company B, 3 years' term.
Fifty-first Regiment, Companies A, C, D, F and I, 3 years' term.
Fifty-third Regiment, Companies A and B, 3 years' term.
Sixty-eighth Regiment, Company H.
Ninety-third Regiment, Company G, 3 years' term.
Ninety-fifth Regiment, 3 years' term.
One Hundred and Sixth Regiment, Company G, 3 years' term.
One hundred and Twenty-ninth Regiment, Company I, 9 months' term.
One Hundred and Thirty-eighth Regiment, Companies A, C, I and K, 3 years' term.
One Hundred and Sixtieth Regiment (Anderson Troop), 3 years' term.
One Hundred and Sixty-second Regiment, Company L (Seventeenth Pennsylvania Cavalry), 3 years' term.
One Hundred and Seventy-fifth Regiment, Companies A and H, 9 months' term.
One Hundred and Seventy-ninth Regiment, Companies A and G, 9 months' term.

INDEPENDENT CAVALRY COMPANIES.

Captain Samuel W. Comly's company, organized Sept. 15, 1862; discharged Sept. 26, 1862.
Captain Daniel H. Mulvany's company, organized Sept. 13, 1862; discharged Sept. 27, 1862.
Captain Samuel W. Comly's company, organized June 17, 1863; discharged July 30, 1863.

INDEPENDENT CAVALRY BATTALION.

Company B, Captain Frederick Haws, organized July 2, 1863; discharged August 21, 1863.

PENNSYLVANIA MILITIA.

Eleventh Regiment, Companies C, D, G and H.
Seventeenth Regiment, Companies B and G.
Nineteenth Regiment, Company E.
Twenty-sixth Regiment, Company F.
Thirty-fourth Regiment, Companies B, C, E, H, I.
Forty-first Regiment, Company B.
Forty-third Regiment, Company I.
One Hundred and Ninety-seventh Regiment (one hundred days' men). Companies F and G.

SIXTH REGIMENT NATIONAL GUARD OF PENNSYLVANIA.

Headquarters located at Norristown.

John W. Schall, colonel; Perry M. Washabaugh, lieutenant-colonel; Thomas C. Steele, major; Thomas J. Stewart, adjutant; Frank B. Rhoads, quartermaster; Jos. K. Weaver, M.D., surgeon; William J. Ashenfelter, M.D., John A. Fell, M.D., assistant surgeons; Clement Z. Weiser, D.D., chaplain; Horace F. Temple, sergeant-major; Jacob B. Stauffer, commisary-sergeant; St. Julien Ozier quartermaster-sergeant; Huizinga C. Byers, hospital steward; L. D. Hyate, Charles H. Earl, principal musicians.
Company A.—Located at Pottstown. H. A. Shenton, captain; Horace Evans, first lieutenant; William E. Schuyler, second lieutenant.
Company C.—Located at Conshohocken. William B. Nungesser, captain; Franklin Morrison, first lieutenant; George W. Royer, second lieutenant.
Company F.—Located at Norristown. Henry Jacobs, captain; Henry R. Souders, first lieutenant; Eugene R. Hartzell, second lieutenant.

NOTE.—There is a large number of deceased and surviving soldiers who enlisted from and were accredited to Montgomery County, but not attached to the company organizations of the county. The names, rank and services of these men are not so recorded in the official records of the war as to be obtained for historical purposes. We sincerely regret that they are omitted, and trust that some means will yet be taken to preserve their names and honorable service. The official records of the Grand Army of the Republic will furnish reference to a large number of the survivors of this meritorious class of soldiers, but it will not reach the cases of our dead comrades in arms who fell in battle or died in the prisons of the South during the conflict. Among the number who fall within this class was Captain John Kline, of Company H, Thirteenth Pennsylvania Cavalry. He was killed at Haws' Shop, Va., May 28, 1864, and his remains repose at Barren Hill Church under a monument dedicated to his memory by his patriotic friends of Whitemarsh and vicinity. Henry Rosenburg, Company K, Forty-ninth Regiment Pennsylvania Volunteers, died at Andersonville Prison, Ga., March 24, 1864. Captain Thomas A. Kelly, Company G, Thirtieth Pennsylvania Volunteers. Captain John W. Moore, Company G, Sixty-sixth Pennsylvania Volunteers.

CHAPTER XVII.

THE GRAND ARMY OF THE REPUBLIC.

THIS society is believed to be the first organization of its kind effected in this country or elsewhere. It embraces within its membership all honorably discharged soldiers and sailors who have served in the army and navy of the United States. Army societies, composed of surviving commissioned officers and their descendants, followed the Revolution, one of which still exists, the Society of the Cincinnati; army and corps organizations of the war of 1812 and the Mexican war have existed for social and convivial purposes; but none of these have been based on the principle of mutual aid in time of need, or comprehended purposes so exalted as those embraced in the declarations of the Grand Army of the Republic, viz.: "Charity, Fraternity and Loyalty."

Like many popular movements, the inception or original organization is involved in some obscurity. It is clear, however, that its origin was in the West. Adjutant-General N. P. Chipman, in his report to the National Encampment at Cincinnati, in May, 1869, says that the originator of the Grand Army of the

Republic was Colonel B. F. Stephenson, and the first post was organized at Dakota, Ill., in the spring of of 1866. Posts increased rapidly among those who had then but recently returned to their homes, and with whom the associations of army life were fresh in mind. A State Department Encampment was organized in Illinois on the 12th of July, 1866. In the month of November, the same year, a National Encampment was organized at Indianapolis, with representatives present from Illinois, Missouri, Kansas, Wisconsin, New York, Pennsylvania, Ohio, Iowa, Kentucky, Indiana and the District of Columbia.

The exact time of the formation of the first post in Pennsylvania is a matter of dispute, and will likely so remain, four posts having claimed the distinction of being No. 1,—Posts 1, 2 and 19, of Philadelphia, and No. 3, of Pittsburg. The organization of the Boys in Blue, in 1866, brought many of the rank and file of the army together, but, as this movement had a partisan significance, it was found to be too narrow for the muster of comrades who, differing in political convictions, had fought side by side through the long conflict and were now desirable companions in the fraternal union of all loyal soldiers. Quickened by the martial friendships formed during years of warfare, it was natural that the survivors should come together to recount their remarkable experiences and unite in kindly offices towards each other. The Boys in Blue of Pennsylvania early learned of the organization in the West as the Grand Army of the Republic of the United States, concerning which they made due inquiry, and found its provisions ample for effecting a permanent society. The first charter was obtained from the national headquarters for Post No. 1, and bears date October 17, 1866; that of Post No. 2, October 29, 1866, granted by the Department of Wisconsin. An Order No. 1 was issued from headquarters Grand Army of the Republic, Springfield, Ill., November 22, 1866, establishing a Provisional Department of Pennsylvania and designating General Louis Wagner commander. Upon assuming command General Wagner issued circulars and forms of organization for posts, and the work of "mustering in" recruits was zealously commenced. Posts multiplied rapidly, and a membership of many thousands was enrolled. The transition from the Boys in Blue to the Grand Army was so sudden that many soldiers of strong political faith and convictions were unwilling to believe it was not the same exclusive order of men, having the same partisan object in view. The organization was, therefore, for a time, the subject of severe criticism, which, in some instances, was seemingly warranted by the injudicious utterances of thoughtless members. That the organization should suffer under these adverse circumstances was but natural, and for a time it lost its hold on popular favor with the old soldiers. But time and the devotion of those interested in preserving the spirit of comradeship soon convinced all of its usefulness and absolute freedom from partisanship in the public affairs of the country. Its purposes are declared to be

1st. The preservation of those kind and fraternal feelings which have bound together with the strong cords of love and affection the comrades in arms of many battles, sieges and marches.

2d. To make these ties available in works and results of kindness, of favor and material aid to those in need of assistance.

3rd. To make provision, where it is not already done, for the support, care and education of soldiers' orphans and for the maintenance of the widows of deceased soldiers.

4th. For the protection and assistance of disabled soldiers, whether disabled by wounds, sickness, old age or misfortune.

5th. For the establishment and defense of the rights of the late soldiery of the United States, morally, socially and politically, with a view to inculcate a proper appreciation of their services to the country, and to a recognition of such services and claims by the American people.

The organization numbers upwards of three hundred thousand in the United States, between thirty and forty thousand in Pennsylvania, with posts numbering from one to four hundred.

There are five posts in Montgomery County, viz.: General Zook Post, No. 11, located at Norristown; George Smith, No. 79, located at Conshohocken; Graham Post, No. 106, located at Pottstown; Lieutenant John H. Fisher Post, No. 101, located at Hatboro'; Colonel Edwin Schall Post, No. 290, located at Lansdale.

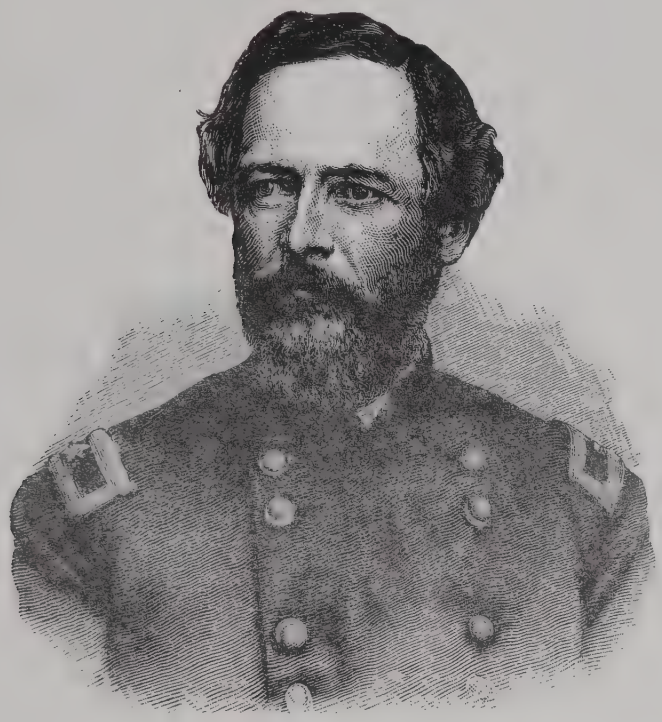
Posts never take the name of living comrades; this honor is paid the name and memory of those who fell during the war, or who have died since. Posts meet once a week or semi-monthly; their sessions are held with closed doors, guarded by sentinels, and their formula of business is conducted in accord with military usages. The officers of a post are commander, senior vice-commander, junior vice-commander, adjutant, quartermaster-sergeant, chaplain, officer of the day, officer of the guard and sentinels. The executive business of the post is referable to the council of administration, composed of three or five members. The State Department Encampment is composed of delegates from the several posts of the State, and the National Encampment is constituted by delegates elected by the several State Departments. The State Department Encampment assembles twice every year, and usually numbers about one thousand present. The semi-annual encampment is held under canvas, and usually assembles at Gettysburg, though sometimes at other places. This historic battle-field has many and enduring associations, and the surviving soldiery find pleasure and comfort in their visitations to it. The annual encampment convenes in the winter, and its sessions generally last for several days. Its proceedings are published in pamphlet form, and comprehend a summary of the history of the organization.

Decoration Day is universally observed by the organization. Previous to the ceremonial of decorating the graves of the dead each grave is marked with a minature national flag, and subsequently each grave is visited on the day named, and the laurel wreaths or spring flowers are laid upon them. These occa-

sions have been popular since their institution, and posts are followed to cemeteries and places of burial by large concourses of people. The exercises are generally accompanied by vocal and instrumental music, prayers, poems and orations. While they recall many sorrows and revive recollections of family affections rudely sundered, they also evince a State and national gratitude towards those whose patriotism and loyalty were equal to the demands of their country in its hour of peril.

General Zook Post, No 11, Department of Pennsylvania, G. A. R.—General Zook Post was instituted December 12, 1866, under Special Order No. 1, Provisional Department of Pennsylvania. Comrade William M. Runkle, Third Pennsylvania Artillery, mustered James Dykes and George N. Corson. At a special meeting held on the evening of December 14, 1866, William J. Bolton, Joseph K. Bolton, William Allebough, L. W. Reed, Samuel T. Pretty, James B. Heebner and Thomas C. Simpson were mustered; subsequently R. T. Stewart, Thomas J. Owen, Joseph M. Cuffel, Samuel M. Markley, Freeman S. Davis and H. S. Smith were mustered, and together constitute those designated the charter members of the post. The charter is dated December 1, 1866.

The post takes its name after Brigadier and Brevet Major-General Samuel Kosciusko Zook, who fell mortally wounded in the second day's battle at Gettysburg, July 2, 1863. This officer was born March 27, 1822, near Paoli, Chester Co., Pa. His father, Major David Zook, moved to Upper Merion township, Montgomery Co. near Port Kennedy a few years later, where the son grew to manhood on his father's farm. He received the advantages of a fair academical training. Among his early teachers were Allan Corson, Jonathan Roberts and Professor Maralettee. He concluded his studies in his twentieth year, and was appointed adjutant of the One Hundredth Regiment of Pennsylvania Militia, on the staff of Colonel James Mills, November 3, 1842. In 1844 he was appointed superintendent of the New York and Washington Telegraph Company, and conducted the construction of the first line established by that pioneer organization through the South and West. He took an active part in quelling the great riots in Philadelphia in 1844, and subsequently was transferred by the company referred to to New York City. In 1851 he was commissioned major in the Sixth New York Volunteers. In 1857 he was promoted to lieutenant-colonel of the same regiment. He served in



S. K. Zook

the same organization during the three months' campaign in 1861, and upon its return, after the battle of Bull Run, organized the Fifty-seventh New York Volunteers, a three years' regiment. He was commissioned brigadier-general November 29, 1862, and assigned to the command of First Brigade, Third Division, Second Corps, Army of Potomac. His brevet commission of major-general bears date of July 2, 1863, for "distinguished gallantry on the battle-field of Gettysburg." His remains are buried in the Montgomery Cemetery, and are marked by a suitable and enduring memorial shaft; a tablet is also erected near the spot were he fell on the battle-field at Gettysburg.[1]

[1] We recall from the memory of almost twenty years ago the alarming scenes and depressing influences by which we were surrounded on the evening of July 1st. The long, hot and discouraging day closed in martial gloom and sorrow. The position deemed important was lost. The gallant Reynolds was among the slain. Thousands of our comrades were captured, thousands more of our wounded and dying were from necessity left in the hands of the enemy. The devoted people of the town around which the conflict had been raging from morn till night were battle-shocked by the din and noise and horrid sights and scenes in their midst. The scene from the crest of the hill east of the town on that eventful eve as the sun went down in his summer splendor will never be forgotten by those who beheld it. The number and disposition of the enemy's troops, exposed to view by the open character of the country, betokened the renewal of the battle with increasing fury on the morrow. Burning buildings met the eye in every direction; flying, panic-stricken families from the wide area of the field of battle were met on every road, and the poor cattle of the fields seemed to share the general sense of fear and terror of their owners, bellowing and bleating as they browsed in strange pastures driven by moving lines of battle from farm to farm.

Bitter as the reverse of the day was felt to be, inhuman as were the harrowing scenes and incidents of the hour to the gallant troops who reached the crest and turned upon the flushed and pursuing enemy, holding him at bay in the hope that marching troops would soon be with us, there was a deeper sorrow, a profounder solicitude possessing the heart of the patriot soldier suggested by the possibility that the field of Gettysburg, where the greatest battle of the war was now impending, and from necessity must be fought, and fought to the bitter end, might be lost, with results upon the public mind in our own country, upon the cause for which so much had been sacrificed, and with probable effects upon the political powers of the earth, appalling to contemplate. It was the hour which preceded the midnight gloom of the Rebellion. This was the field of mortal combat on which far-seeing, courageous and sagacious men believed would be fought and lost or won the Union of our fathers. This was the bloody field of national peril to which troops were hurrying, among them the heroic Zook, to lay down his life in the whirlwind of the morrow.

The fall of General Samuel Kosciusko Zook on the 2d was among the most conspicuous events of the day's conflicts, occurring at a point on the line of battle where the struggle for the final advantage of the day and the field was most deadly. History furnished no example of more notable gallantry than that displayed by General Zook in leading his brigade into action on the day of his mortal hurt. The ground occupied by General Sickles' left was coveted by Lee, and he directed Longstreet to carry it. All who took part in the campaigns of the Army of the Potomac know the character of Longstreet's attacks. He was a "square fighter," and delivered blows of the most destructive character. His attack upon Sickles' left was characteristic of the man. "Although," says Meade, in his official report, "the Third Corps sustained the shock most heroically," its depleted numbers were unable to resist the renewed and increasing fury of his successive assaults. The troops composing the left of the Third Corps were giving ground. The Fourth New York Battery, placed in position to check the enemy's advance at the critical moment, having suffered severe loss in men and horses, was in imminent danger of capture; the line across the wheatfield to Little Round Top was wavering; the last regiment of the Third Corps was thrown to the front, and yet it was painfully apparent that unless reinforcements were hastened to the imperiled line all that had been contended for at a fearful sacrifice of life would be irretrievably lost.

PAST POST COMMANDERS.

William M. Runkle, December, 1866, to May, 1867.
William J. Bolton, May, 1867, to July, 1867.
William Allebaugh, July, 1867, to January, 1868.
James Dykes, January, 1868, to January, 1869.

TESTIMONY AS TO ZOOK'S HEROISM.

The following letter, placed in the hands of the writer on the 25th of July last (1882), while participating in the ceremonies incident to unveiling the shaft erected by the comrades of Zook on the spot where he fell, is historical in its details and conveys in pathetic terms the story of Zook's patriotic discrimination between sensibilities requiring obedience to orders and an enlightened comprehension of manly and heroic duty in the hour of supreme necessity. We quote the letter in the exact phraseology received, leaving the blanks to attest the modesty of the gallant author:

"NEW YORK, July 21, 1882.

"To the Commander of Zook Post, No. 11, G. A. R., Department of Pennsylvania.

"SIR: It having been brought to my attention by accident that your Post was about to unveil a shaft in comemmoration of General Zook, who fell at Gettysburg, I am unable to resist the opportunity to record, for aught I know for the first time, that which, in the interest of history, justice and heroic patriotism, is due to a deceased comrade whose memory should be honored among men. I did not personally know General Zook, and never met him but once, and that was a few minutes before his death. The brigade he was then commanding comprised the middle of the column of a division (Caldwell's) of the Second Corps which was moving towards the support of the Third Corps on the afternoon of July 2, 1863, when the battle of that day had been purposely precipitated by the latter corps to save the army from being fatally flanked. As the Third Corps did not have a single regiment at that moment in reserve, the prompt disposition of this supporting column of reinforcements was of vital necessity.

"A CRITICAL INTERVIEW.

"While Major ——, who was then attached to the Third Corps staff, was conveying an urgent message to Zook's division commander respecting the disposition to be made of this supporting column, he encountered the brigade which, on inquiry, proved to be Zook's. Seeking that officer at its head, the major asked General Zook where his division general could be found, explaining the urgency, which, indeed, was clear to every soldier in the column. It was apparent that before the major could ride to Zook's superior officer and have orders regularly conveyed back again to Zook, the latter's regiments would have passed beyond the point where fresh troops were instantly required. Zook was asked if under the circumstances, he would not immediately detach his troops from the column and move into action right where they were riding. He replied politely, but with soldierly mien, that his orders were to follow the column. Repeating the request, the major asked Zook to assume the responsibility of compliance, promising to protect him and to return to him, as soon as possible, with a formal order from the proper officer. Zook and the major were utter strangers to each other. It was a critical interview. There was no time to parley. The exhausted lines of Birney's division were stubbornly fighting a corps. It was obvious, too, that Zook, as well as the major, appreciated that neither the request nor compliance with it could be considered within the strict limits of regular military propriety. 'Sir,' said Zook, with a calm, firm look, full of significance, 'if you will give me the order of General Sickles, I will obey it.' 'Then,' was answered, 'General Sickles' order is, general, that you file your brigade to the right and move into action here.'

"ZOOK'S GALLANT RESPONSE.

"To the surprise and delight of Major ——, Zook promptly wheeled his horse out of the column, gave the command 'File right,' and gallantly marched his brigade into the battle-line and himself to his death. Few men would have acted as Zook did. Yet had he acted otherwise it might have changed the fate of the day. It was such acts that won Gettysburg. Indeed, history will record that it was the spirit of just such acts in every rank that began, continued, conducted and concluded the battle of Gettysburg, regardless, if not in spite, of orders. Zook gave little heed to the promise to send him ratified orders, but silently acknowledging the thanks tendered him, busied himself with his work in hand, in which he so speedily fell. Thus it was that a soldier of disinterested devotion, patriotic instinct, thoughtful courage and sublime comradeship met his death at Gettysburg. This is my only apology for intruding now among his more immediate comrades and friends.

"Yours very respectfully,

"HENRY EDWIN TREMAIN,

"*Formerly Brevet Brigadier-General and A.D.C. United States Volunteers.*"

J. J. Wright, January, 1869, to July, 1869.

Hiram Hansel, senior vice-commander, January, 1884.
William Ruddach, junior vice-commander, January, 1884.
J. K. Weaver, surgeon, January, 1884.
Henry Fulmer, quartermaster, January, 1884.
D. B. Rothrock, adjutant, January, 1884.
Charles Foreman, chaplain, January, 1884.
G. W. Evans, officer of the day, January, 1884.
George W. Holmes, officer of the guard, January, 1884.

Death of General Zook.

A writer in the Philadelphia *Sunday Transcript* of March 12, 1864, in describing the scene at this particular time, says: "When they reached the ground the disordered troops impeded the advance of the brigade. 'If you can't get out of the way,' cried Zook, 'lie down and I'll march over you.'" The men were ordered to lie down, and the chivalric Zook and his splendid brigade did march over them and into the deadly breach. Here, among the granite rocks and boulders of the wheat-field, in command of invincible troops, who had followed him in battle from Fair Oaks to Gettysburg, whose courage and endurance were never questioned, marching under a national flag to fill a gap in an imperiled line of battle, his conduct and that of his men involving results affecting the entire field of operations, surrounded by a brave and efficient staff, he was for the time being the most conspicuous man on the field and fell in the flood-tide of his truly distinguished and manly career. At or about three o'clock P.M. the fatal bullet went crashing through his body. Leaning forward on his horse, he was caught in the arms of Captains Favill and Brown, of his staff, to whom he said: "It's all up with me, Favill." He was carried from the field an object of sympathy, and died on the afternoon of the following day. He was cool and composed to the last moment of his life. About fifteen minutes before his death he quietly inquired of his attending physician how long he had to live, having previously requested his adjutant-general to ascertain and advise him how the battle was going. Just at this moment Captain Favill reported "that the bands had been ordered to the front, flags were flying and the enemy were in retreat." "Then I am perfectly satisfied," said the general, "and ready to die." In the hour of victory for the cause he loved and served so well, "satisfied" and "ready to die," his great and fearless soul went out from his suffering body, amidst scenes and sounds, joys and triumphs, thundered forth by the victorious Army of the Potomac, from Culp's Hill on the right to Round Top on the left.

An Unique Memorial Shaft.

Among the many memorials placed upon the battle-field of Gettysburg none is more original in design, pleasing in taste, inexpensive and, withal, so enduring as Zook's. A huge granite boulder, near the spot where Zook fell, rises out of the earth, measuring about nine feet in diameter at the soil line or base, rounded in irregular form to a cone or apex, about five feet from the earth's surface. Into the top of this rock-mound a blue marble shaft is sunk and wedged with the most durable material known to the art of masonry. The shaft is eight feet high, sixteen inches at the base, tapering in pleasing proportion to a rounded top. The blue marble is conspicuous in contrast with the prevailing gray tint of the rock, while at some distance rock and shaft seem the most prominent object upon the famous wheat-field. Here, on the 25th of July 1882, assembled the comrades of the lamented Zook, mingling with them companions of his boyhood from the hills of Valley Forge, to do honor to his distinguished service to the country and memorialize his untimely death. Here, to the charming melody and anthems of praise, deepened by the impressive voice of prayer, the spot was solemnly dedicated and made historic for all time to come.—Ed. Hist.

John Burnett, quartermaster-sergeant, January, 1884.
Joseph Hamilton, orderly sergeant, January, 1884.
Council of Administration,—Theodore W. Bean, William A. Ruddach, William A. Skean.
William J. Wells, post commander, resigned May 12, 1884.
Hiram Hansel, elected post commander May 19, 1884, *vice* Wells, resigned.
William A. Ruddach, elected senior vice-commander, *vice* Hansel, elected post commander.
William A. Skean, elected junior vice-commander, *vice* Ruddach, elected senior vice-commander May 19, 1884.
George W. Doub, elected chaplain, *vice* Charles Foreman, died August 26, 1884.
D. B. Rothrock, adjutant, resigned November 3, 1884.

COMRADES' NAMES.

Date of muster into the G. A. R.

William Allebaugh,[2] 51st Pa. Vols., must. in December 14, 1866.
Adam Autenreith, 90th Pa. Vols., must. in June 24, 1867.
Edwin S. Ahern,[1] 2d U. S. Inf., must. in May 1, 1871.
Samuel Aikins, 138th Pa. Vols., must. in September 8, 1871.
I. M. Akers, 95th Pa. Vols., must. in March 8, 1880.
Joseph Anderson, 51st Pa. Vols., must. in May 1, 1882.

Graham Post, No. 106, Department of Pennsylvania, G. A. R. (Pottstown, Pa.).—Graham Post was named in honor of two brothers,—Private Eli H. and Sergeant William H. Graham, who were members of Company A, Fifty-third Pennsylvania Regiment. The Graham brothers, who were from Warwick township, Chester Co., enlisted as privates in August, 1861, in Company A, and remained together, occupying the same tent, until that memorable Sunday morning, June 1, 1862, at Fair Oaks, when, while fighting side by side in their first battle with the rebels, Eli fell pierced by a rebel bullet. The contest on that portion of the field was a close one, and the soldier, a member of the Georgia regiment, who fired the fatal shot was seen, and a moment later a missile from the gun of William, the remaining brother, made him bite the dust. Eli's body was afterward interred at that place by his sorrow-stricken brother and comrades, he being the first soldier of Company A killed thus far during the war. His remains were afterward buried in the government cemetery on the battle-field, where they still rest. In writing to his parents about the sad affair William said: "Poor Eli is dead, and it is so lonesome without him, but it is God's will and we must submit." William was afterwards made corporal and then sergeant of the company. In December, 1862, at Fredericksburg, he received a serious wound in the head while fighting in the streets of that city, and was in consequence removed to a hospital, from whence he procured a thirty days' furlough to visit his parents. About the 1st of January, 1864, with his company, he re-enlisted, and came home on veteran furlough. He was with his company in all the battles in which they participated, meeting with many narrow escapes, until June 3, 1864, at Cold Harbor, when, while in command of his company, he fell, being shot in the thigh by a minie-ball, dying in the field hospital a few hours after. The testimony of his comrades was that he was a brave and honorable soldier and never shirked a duty. A younger brother, Daniel F. Graham, served as a private in Company F., Twenty-sixth Pennsylvania Regiment (emergency men), during the rebel invasion in 1863.

The first charter was granted to Graham Post, No. 106, G. A. R., on the 25th day of February, 1868, by A. L. Pearson, Grand Commander, W. B. Cook, Assistant Adjutant-General, dated at Pittsburg, Pa. Charter members, William M. Mintzer, Mark H. Richards, Horace A. Custer, George Scheetz, John Weand, John C. Root, Henry Potts, Jr., George Rice, Dr. M. A. Withers, Daniel Auchenbach, Abner Evans, Jr., William E. Schuyler, Newton S. Kinzer, Levi J. Fritz, M. E. Richards, William M. Hobert.

This organization was probably in existence for twelve years, when it was abandoned and the charter returned to headquarters. On April 10, 1880, application was made for another charter, which was granted with the following charter members: Samuel Yoder, John B. Boyer, Warren C. Missimer, S. E. Missimer, Jacob S. Charles, John Corbett, Henry E. Levengood, Isaac J. Decker, Samuel P. Bertolett, Mifflin A. Campbell, Wm. P. Bach, Jesse Deough, Daniel F. Graham, M. A. Withers, M.D., John Yergey, Jacob G. Endy, Wm. M. Mintzer, Rev. Geo. S. Broadbent, Henry Swoyer, William E. Schuyler, Elijah Dearolf, George L. Reifsnyder, Levi Miller, Hiram Iback, Thomas Knowles, Howard Kunkle, Rev. Daniel K. Kepner, Harrison Rigg, Hiram Jones, John B. Guest, James Henry, Isaac Hoyer, George W. Harner, M. M. Missimer, Abraham Dearolf, Horace A. Custer, John C. Leighter, Henry P. Davis, Charles Lachman, Thos. C. Steel, Samuel S. Daub, Samuel Fronheiser, John O. Burdan, Lewis R. Bland, Augustus B. Shirey.

This charter was granted by Department Commander Chill O. Hazzard, J. M. Vanderslice, Assistant Adjutant-General.

The post was active for a year, then weakened until its present Post Commander, D. S. B. Swavely, infused new life into the organization. In 1882 he rented a hall on his own account and collected the G. A. R. boys together. The room is well furnished and the post is prospering. The present membership is one hundred and fourteen comrades.

Under the original charter the post was influential, and its members were active in procuring the erection of a monument in honor of their deceased comrades, dedicated July 4, 1879, and in securing a burial-lot in the cemetery near the town.

Present officers, 1884: P. C., J. B. Swavely, M.D.; S. V. C., John B. Guest; J. V. C., Benj. F. Delcamp; Adjt, John A. Elliot; Q. M., Jacob G. Endy; Surg., S. B. Swavely, M.D.; Chap., John Corbett; O. D.,

Thos. C. Steel; O. G., Levi Miller; S. M., Adam Lessig; Q. M. S., John Yergy.

Lieutenant John H. Fisher Post, No. 101, Department of Pennsylvania, G. A. R. (Hatboro', Pa.), was organized April 28, 1884, by Thomas J. Stewart, assistant adjutant-general.

The post was named in honor of Lieutenant John H. Fisher, Company I, One Hundred and Thirty-eighth Pennsylvania Volunteers, who was killed in the battle of the Wilderness, May 6, 1864, while gallantly leading his men in a charge against a rebel battery.

He was a son of the Rev. P. S. Fisher, an esteemed cleryman of the German Reformed denomination of Sellersville, Bucks Co. Lieutenant Fisher was a bright, cultured, heroic patriot and military genius, and about twenty-one years of age when he was killed.

LIST OF MEMBERS.

Jonathan T. Rorer, commander, 31 months' service; bvt. maj. U. S. V.; capt. Co. I, 138th Pa. Vols.
Jonathan P. Iredell, senior vice-commander, 34 months' service; capt. Co. K, 138th Pa. Vols.
James Clark, junior vice-commander, 26 months' service; 2d lieut. Co. K. 13th Pa. Cav.
Edward Sprogell, quartermaster, 34 months' service; corp. Co. I, 138th Pa. Vols.
H. C. McIntosh, adjutant, 18 months' service; private Co. I, 213th Pa. Vols.
George R. Todd, chaplain, 9 months' service; corp. Co. L, 27th N. J. Vols.
Arthur D. Markley, M.D., surg., 12 months' service; asst. surg. bark "Release," U. S. N.
Charles Craven, officer of the day, 35 months' service; private Co. I, 68th Pa. Vols.
Jesse O. Fitzgerald, officer of the guard, 34 months' service; private Co. C, 138th Pa. Vols.
Rush Griffith, 35 months' service; private Co. A, 1st N. J. Cav.
Joseph M. Krewson, 10 months' service; private Co. B, 15th N. J. Vols.
William H. Mower, 50 months' service; corp. Co. C, 53d Pa. Vols.
George W. Emery, 39 months' service; private Co. G, 5th Pa. Cav.
William Miller, 39 months' service; private Co. L, 5th Pa. Cav.
William H. Watson, 34 months' service; private Co. I, 138th Pa. Vols.
George R. Palmer, 34 months' service; sergt. Co. K, 138th Pa. Vols.
Hiram M. Puff, 34 months' service; private Co. K, 138th Pa. Vols.
Jesse Wagner, 34 months' service; wagoner Co. C, 138th Pa. Vols.
Edwin Twining, 35 months' service; sergt. Co. A, 1st N. J. Cav.
William Raab, 9 months' service; private Co. H, 104th Pa. Vols.
Jacob Webb, 24 months' service; private Co. M, 2d Pa. H. Art.
David Firman, 12 months' service; 1st lieut. Co. K, 174th Pa. Vols.
Pierson Jones, 34 months' service; private Co. A, 82d Pa. Vols.
Joseph W. Levis, 37 months' service; private Co. A, 1st N. J. Cav.
Benjamin Propert, 34 months' service; private Co. I, 114th Pa. Vols.
Warren W. Corson, 35 months' service; 2d lieut. Co. K, 13th Pa. Cav.
Lewis Peze, 15 months' service; private Co. K, 186th Pa. Vols.
Isaac K. Mann, 32 months' service; private Co. K, 104th Pa. Vols.
Issachar Morgan, 9 months' service; private Co. G, 91st Pa. Vols.
Charles H. Fitzgerald, 34 months' service; sergt. Co. C, 138th Pa. Vols.

Post meets the second and fourth Monday evenings of the month at Fluck's Hall, York Street, Hatboro'.

Colonel Edwin Schall Post, No. 290, Department of Pennsylvania, G. A. R. (Lansdale, Pa.).—This post was organized November 10, 1882, in honor of Colonel Schall, who fell at the battle of Cold Harbor on the 3rd day of June, 1864, while gallantly leading the Fifty-first Regiment Pennsylvania Veteran Volunteers into action. It was mustered with eighteen charter members, from whom its first officers were elected, as follows:

William Ensley, post commander, Co. I, 138th Pa. Vols.
Reese E. Lewis, senior vice-commander, Co. G, 82d Pa. Vols.
Charles T. Miller, junior vice-commander, Co. F, 196th Pa. Vols.
H. L. Gerhart, adjutant, Co. F, 51st Pa. Vols.
George Hause, quartermaster, Co. H, 53d Pa. Vols.
Charles Johnson, surgeon, 6th Pa. Cav.
Charles Foy, chaplain, Co. A, 51st Pa. Vols.
George M. Lukens, officer of the day.
Abraham News, officer of the guard, 198th Pa. Vols.
Jacob Reed, sergeant-major, Co. F, 51st Pa. Vols.
John Ford, quartermaster-sergeant, Co. A, 3d Pa. Cav.
Charles Bouvette, Co. C, 9.th Pa. Vols.
Joseph Bowker, Co. E, 88th Pa. Vols.
John Wagner, Co. A, Indiana Battery.
John Diehl, Co. G, 3d Pa. Art.
William Wolschuh, Co. F, 28th Ohio Vols.
Frank Strasser, Co. F, 29th N. Y. Vols.
Samuel White,[1] Co. G, 119th Pa. Vols.
Jordan Cooper, Co. C, 104th Pa. Vols.
Andrew Grodwohl, Co. G, 91st Pa. Vols.
Howard Scarlette, Co. C, 2d Pa. Res. Corps.
Henry Cash, Co. H, 1st N. J. Cav.
William Ortner, Co. H, 96th Pa. Vols.
J. M. Boorse, Co. C, 179th Mil.
William Grosscup, Co. H, 28th Pa. Vols.
William B. Woodward, Co. B, 57th Wisconsin Inf.
Conrad Schaffer, trans. to Co. D, 53d Pa. Vols.
Ellison Stackhouse, Co. I, 1st U. S. Vol. Eng.
Garrett Mattes, Co. F, 105th Pa. Vols.
Christopher Ernst, Co. E, 27th Pa. Vols.
Christian L. Cook, Co. F, 104th Pa. Vols.
William H. Lukes, Co. C, 129th Pa. Vols.
John H. Carver, Co. C, 215th Pa. Vols.
David Scott, Co. H, 54th Pa. Vols.
Seth C. Smith, Co I, 138th Pa. Vols.
Martin W. Wireman, Co. G, 179th Pa. Vols.

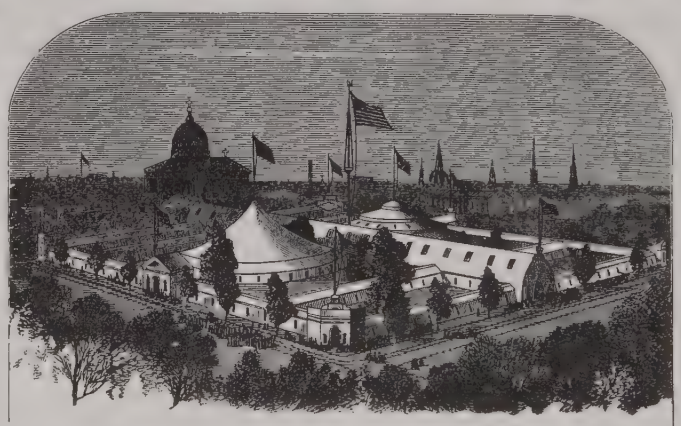
Present officers, 1884: P. C., Reese E. Lewis; S. V. C., Chas. T. Miller; J. V. C., Henry Cash; Adjt., H. L. Gerhart; Q. M., Geo. Hause; Surg., Chas. Johnson; Chap., Chas. Foy; O. D., Abm. News; O. G., Wm. Grosscup; S. M., Jacob Reed; Q. M. S., Ellison Stackhouse.

Lady Attendants Upon Hospitals.—Immediately upon receipt of the news of the battle of Antietam a call was made in behalf of the wounded who needed nurses and supplies of food and raiment. Among the first to respond from Montgomery County to the call were Mrs. Rachel P. Evans, of Bridgeport; Mrs. Alice H. Holstein, Mrs. Anna Carver and Miss Sallie L. Roberts, of Upper Merion; Miss Sarah Priest, of Bridgeport; and Miss Lizzie J. Brower, of Norristown. These patriotic and humane ladies freely gave their services to the sick and wounded men who fell in battle or were stricken with disease resulting from exhaustion and exposure. Many of the men of the Fifty-first Pennsylvania Volunteers received attention from the ladies named, who remained on the field of battle and near Sharpsburg for some two weeks. A number of the men of the One Hundred and Twenty-ninth Pennsylvania Volunteers were also cared for by them at or near the village named.

Mrs. Anna M. Holstein, who followed the example of these six pioneer and heroic women to fields of human horror, and who, with her husband, Major

[1] The first eighteen were the charter members.

William H. Holstein, remained in this sacrificial service until the close of the war, in 1865, thus refers to her sister co-workers in her "Three Years in Field Hospital:" "From our midst six women felt called upon to offer their services for a few weeks to nurse the wounded. Though strongly urged to make one of their number, I declined. The idea of seeing and waiting upon wounded men was one from which I shrank instinctively. But when my husband returned from the battle-field of Antietam, whither the six women had gone, with the sad story that men were dying for food, home comforts and home care, lying by the road-side, in barns, sheds and out-houses, I hesitated no longer." Although not among the first to enter this truly good service to the country and its defenders, once engaged in it, a conviction of duty detained both herself and husband in field and hospital duty until the conflict ended. Mr. and Mrs. Holstein followed the Army of the Potomac in its deadly and discouraging campaigns in Virginia, at Fredericksburg and Chancellorsville, at Gettysburg, accompanying it in its battles of the Wilderness, Spottsylvania, South Anna, Cold Harbor, south of the James River, Petersburg, Five Forks, and at the base of supplies, with acre upon acre of field hospitals, when the glad news of the surrender of General Lee at Appomattox was flashed over the wires to City Point, and from thence to a loyal and rejoicing North.



GREAT SANITARY FAIR BUILDINGS, PHILA., 1864.

Among the first six who are above mentioned, Mrs. Evans became very ill from over-work and exposure, and suffered long and dangerous illness. Her place was promptly taken by her sister, Miss Lizzie Brower, who remained with Mr. and Mrs. Holstein for the greater part of the three following years.

We may here say that among all the hundreds of self-sacrificing women who gave their time and services to the government during the long years of that cruel war, none have received the slightest practical recognition from the government they upheld and contributed so materially to save in its day of great peril.

The Women's Loyal League of Montgomery County.—The invasion of Pennsylvania in the summer of 1863 aroused the loyal blood of the women as well as the men of the State. The great battle of Gettysburg had been fought; the terrible loss of life, the waste and desolation and human anguish which resulted quickened the sense of patriotism felt by all those in sympathy with the Union army and the success of the national administration in its efforts to crush out the Rebellion.

From the commencement of hostilities to the close of the conflict the loyal women of Montgomery County were devoted to those who volunteered in defense of the country.

The world will possibly never know of all the friendly acts toward the men in the field and their families at home bestowed by the Christian and benevolent women of the country; to them is eminently due the liberal contributions to the Sanitary Commission from this vicinity, and from which the sick and wounded on the field and in hospitals received needed supplies of food and raiment through all the long and weary years of the struggle.

Many of these good women felt that this was not enough, but that their feelings should find public expression, and that their influence also should be unitedly exerted in sustaining a strong public sentiment in support of the government. To this end, in July, 1863, they formed a branch in the Loyal League, and published a declaration of purposes, viz.:

"DECLARATION OF PURPOSES IN ORGANIZING THE WOMEN'S LOYAL LEAGUE OF MONTGOMERY COUNTY.

"Believing that the women have it in their power to exert a very great influence in the destiny of this Nation, and being satisfied that more can be accomplished by united action than individual effort, we deem it expedient to form a Society to be called the Loyal League of the Women of Montgomery County.

"*Resolved*, That we will use every means in our power to aid in supporting the Government in its struggles for existence, by the developments of love for the Union and respect for the constituted authorities, and to this end we will constantly labor for the uprooting of all treasonable sentiments and the discouragement of those who are endeavoring to foster them.

"*Resolved*, That our efforts for the comfort and benefit of the soldiers in the field and in the hospital shall be unceasing, and that while endeavoring to soften the hardships they must endure, we will turn to them only the cheerful and hopeful side of everything, and we will strive to have brave hearts at home, in order that their hands may be strengthened, remembering we may yield up a few superfluities for the sake of those who have preserved to us our homes and other comforts.

"*Resolved*, That we will pledge ourselves to unite our best influence, not only toward the brave in the field, but to exert every kindly feeling toward the families at home; to build up their faith in the Government, and to give them every encouragement which woman only can give.

"*Resolved*, We will, while redoubling every effort, rely first upon our

only strength, and be earnest and untiring in prayer to God for the success of our cause, and the triumph of Truth, Justice and Liberty. We ask all to unite with us by signing their names, and contributing a small sum to maintain and carry out the objects of the League.

"Mrs. Jonathan Roberts,
President.
"Mrs. Robert Iredell,
"*Vice-President.*
"Miss Anna C. Yerkes,
"*Secretary.*
"Mrs. L. H. Jones,
"*Treasurer.*
"Mrs. C. Evans, Bridgeport.
"Mrs. B. B. Hughes, Bridgeport.
"Mrs. C. P. Harry, Norristown.
"*Executive Committee.*"

The members held their stated meetings in the rooms on the second floor of the old Washington Inn. They were rented by the gentlemen belonging to the "Loyal League" (not, however, the one organized by the ladies), and usually under the care of a janitor, and open at all times, especially during active campaign periods. It was general headquarters for all information touching army affairs. Files of newspapers were here kept, and general and special correspondence centred in the "League Rooms." It was a place of great public interest immediately after battles fought, as the people from all parts of the county would visit there to have the news from the front and obtain tidings from their personal friends in the different armies. In those days "war correspondents" flashed along the wires the long list of "killed, wounded and captured" always sure to follow a movement of the "Army of the Potomac," Sherman in the Southwest, or Sheridan in the Valley. Bright faces were often saddened, and trembling hearts here first heard news of victory or defeat, and with it the loss of those near and dear to them. The organization exercised a healthful influence during its existence, and dissolved by mutual consent upon the termination of the war.

CHAPTER XVIII.

REDEMPTIONERS—SLAVERY—THE UNDERGROUND RAILROAD.

Redemptioners.[1]—From the early settlement of Pennsylvania a considerable business was carried on, chiefly by ship-owners and captains of vessels, in importing from Europe persons who were desirous of emigrating to this country, and were too poor to pay for their passage or have a competency for an outfit in so long a journey. With this class, who generally came from England, Ireland and Germany, arrangements would be made, through agents, to contract and bring them over, furnish them with food during the voyage and perhaps some other necessaries, on condition that on their arrival in an American port they have the right to sell their time for a certain number of years, to repay the cost thus necessarily incurred, and be of some profit to those engaged in such ventures. With the growth and settlement of the country this business greatly increased, through the demand for laborers, and, perhaps, just before the Revolution attained its greatest height. However, on the return of peace it did not slacken much, even to the commencement of this century. Such a matter, of course, would also receive some attention from the government, and the special legislation thereon, upon which as yet but little has been written, will demand a brief consideration.

In the Charter of Laws agreed upon in England, and confirmed the 25th of April, 1682, by Penn, we find this mention in the twenty-third article: "That there shall be a register for all servants, where their name, time, wages and days of payment shall be registered." In the laws prepared on the 5th of the following month the proprietary wisely remarks: "That all children within this Province of the age of twelve years shall be taught some useful trade or skill, to the end that none may be idle, but the Poor may work to live, and the Rich, if they have become poor, may not want. That servants be not kept longer than their time, and such as are careful be both justly and kindly used in their service, and put in fitting equipage at the expiration thereof, according to custom." Penn, for the justice here displayed, certainly deserves credit. "The Great Law," passed at Chester, December 7th, contains this clause: "That no master or mistress or freeman of this Province, or territories thereunto belonging, shall presume to sell or dispose of any servant or servants into any other province, that is or are bound to serve his or her time in the Province of Pennsylvania or territories thereof, under the penalty that every person so offending shall for every such servant so sold forfeit ten pounds, to be levied by way of distress and sale of their goods." Strange to say, the aforesaid excellent enactments, on William and Mary reaching the throne, were abrogated in 1693. In the beginning of 1683 "A bill to hinder the selling of servants into other Provinces, and to prevent runaways," was passed by the Council. On the 29th of August the Governor, William Penn, "put ye question whether a proclamation were not convenient to be put forth to impower Masters to chastise their servants, and to punish any that shall inveigle any servant to goe from his master. They unanimously agreed and ordered it accordingly."[2]

The Assembly passed an "Act for the better Regulation of Servants in this Province and Territories" in 1700, which provided

"That no servant shall be sold or disposed of to any Person residing in

[1] By Wm. J. Buck.

[2] Colonial Records, i. p. 79.

any other Province or Government, without the consent of the said Servant and two Justices of the Peace of the County wherein he lives or is sold, under the penalty of Ten Pounds, to be forfeited by the seller. That no Servant shall be assigned over to another person by any in this Province or Territories, but in the Presence of one Justice of the Peace of the county, under penalty of Ten Pounds. And whoever shall apprehend or take upany runaway servant, and shall bring him or her to the Sheriff of the County, such person shall, for every such servant, if taken up within ten miles of the Servant's abode, receive Ten Shillings, and if ten miles or upwards, Twenty Shillings reward of the said Sheriff, who is hereby required to pay the same, and forthwith to send notice to the Master or owner, of whom he shall receive Five Shillings, Prison fees, upon delivery of the said Servant, together with all disbursements and reasonable charges for and upon the same. Whosoever shall conceal any Servant of this Province or Territories, or entertain him or her twenty-four hours without his or her Master's or Owner's knowledge and consent, and shall not within the said time give an account to some Justice of the Peace of the County, every such person shall forfeit Twenty Shillings for every Day's concealment. That every Servant who shall faithfully serve four years or more shall, at the expiration of their servitude, have a discharge, and shall be duly clothed with two complete suits of apparel, whereof one shall be new, and shall also be furnished with one new axe, one grubbing-hoe and one weeding-hoe, at the charge of their Master or Mistress."

This latter clause was abolished in 1771. The object of this undoubtedly was to encourage the removal of timber, that the land might sooner come into cultivation. An act was passed May 10, 1729, "laying a duty on foreigners and Irish servants imported into this province."

Masters of servants were regarded for the time being as holding property subject to taxation. The rate in 1776 was fixed at one and a half pounds each, which was increased in 1786 to ten pounds. The State passed an act March 12, 1778, making compensation to those masters whose servants or apprentices had enlisted in the army. Among those that were taxed in the county for holding servants in 1776, we find the names of John Bull, Esq., of Norriton, two servants; Robert Shannon, one; Henry Pawling, Jr., two; Jacob Miller, Cheltenham, three; Jacob Leach, two. In 1785 there were eighty servants taxed within the present limits of the county. The highest number was in Abington, 13; Providence, 10; Cheltenham, 7; Upper Merion, 7; Douglas, 5; Horsham, 5; Whitemarsh, 5; Moreland, 4; Montgomery, 4; and Lower Merion, 3. None were returned as being in the remaining townships. That they were diminishing at this time, like negro slaves, can be observed in comparing earlier lists. "The labor of the plantations," says the "Historical Review" (attributed to Frankin, 1759), "is performed chiefly by indented servants, brought from Great Britain, Ireland and Germany; because of the high price it bears, can it be performed any other way. These servants are purchased of the captains who bring them; the purchaser, by a positive law, has a legal property in them, and, like other chattels, they are liable to be seized for debts."

Servants from the Palatinate were disposed of in 1722 at ten pounds each for five years' servitude. Prior to 1727 most of the Germans who immigrated were persons of means. In the years 1728, 1729, 1737, 1741, 1750 and 1751 great numbers were brought hither. A shipper advertises in 1728, "Lately imported, and to be sold cheap, a parcel of likely men and women servants." On the other hand, it happened sometimes that those that had been well-to-do in the Fatherland, in their desire to immigrate, were taken advantage of in various ways by unprincipled men, their chests rifled or their property taken or put on board the wrong vessels, and in such cases, from their destitute condition on arriving in America, would be compelled to sell themselves as redemptioners to meet their expenses. It was also the practice for over half a century that those that had the means should be responsible, and pay the passage of their poorer companions, and thus reduce them to a common level of dependency or beggary.

They brought but little property with them, says Dr. Rush, in his account of the "Manners of the German Inhabitants in Pennsylvania," written in 1789. A few pieces of silver coin, a chest with clothes, a Bible, a prayer or hymn-book, constituted the chief property of most of them. Many bound themselves, or one or more of their children, to masters after their arrival for four, five or seven years to pay for their passages across the ocean. The usual terms of sale depended somewhat on the age, strength, health and ability of the persons sold. Boys and girls had to serve from five to ten years, or until they attained the age of twenty-one. Many parents were necessitated, as they had been wont to do at home with their cattle, to sell their own children. To be released from the ship the children had in some cases to assume the passage-money with their parents. Children under five years could not be sold. They were disposed of gratuitously to such persons as agreed to raise them, to be free on attaining the age of twenty-one. It was an humble position that redemptioners occupied. "Yet from this class," says Gordon, in his "History of Pennsylvania," "have sprung some of the most respectable and wealthy inhabitants of the State."

Robert Sutcliff, an English Friend, in his "Travels in America," thus speaks of the redemptioners in a visit he paid, in the summer of 1804, to his relative, William Bakewell, who was at the time residing on a farm of three hundred acres in Lower Providence township, opposite Valley Forge,—

"I noticed that the two female servants employed in the family had, both of them, been lately hired from on board a vessel lying in the Delaware, and which had recently arrived from Amsterdam with several hundred Germans, men, women and children, of that description of people called in America redemptioners. They are the people in low circumstances, who, being desirous of settling in America, and not having money to pay their passage, agree with the American captains of vessels to be taken over on condition of hiring for a term of years, on their arrival in America, to masters who are willing to advance ten or twelve guineas to be deducted out of their wages; and it not unfrequently happens that they agree to serve two or three or four years for meat and clothes only, on condition of their passage being paid. Yet, as wages in the general are rather high in America, it will easily be supposed that an active and clever person conversant in some business will make much better terms on landing than the old or the infirm, or those who come over ignorant of any business. I noticed many families, particularly in Pennsylvania, of great respectability both in our Society and amongst

others, who had themselves come over to this country as redemptioners, or were children of such. And it is remarkable that the German residents in this country have a character for greater industry and stability than those of any other nation."

We have here the admission that even among Quakers some had come over as redemptioners to near the beginning of this century.

Redemptioners frequently ran away from their masters, and advertisements appeared in the newspapers of this period of rewards being offered for their arrest and recovery. A sample is here given of three who were residents of the county. Mathias Holstein, of Upper Merion, gives notice, in the *Pennsylvania Gazette* of January 29, 1750–51, that "an English servant man, named Christopher Major, about thirty years of age, tall and slender and pock-marked, run away on Saturday, the 20th instant. Whoever takes up and secures said servant, so as his master may have him again, shall have forty shillings reward and reasonable charges paid. He had a pass from his master to go to Philadelphia on the 19th instant, to return the 26th, which it is supposed he altered." Jacob Paul, of Abington township, offers, in the *Evening Post* of February 15th, 1776,—

"Three dollars reward.—Ran away on the 28th of January, 1776, from the subscriber, an apprentice lad, bound, by the name of Robert Mans, of a slender make, about nineteen years of age, near five feet six inches high, and whitish hair. He had on, and took with him, one home-made light-colored country coatee lined with striped linsey, an upper jacket, a pair of buckskin breeches, two home-made shirts, two good pairs of yarn hose, of a dark mixed color, one pair of strong shoes and a small-rimmed hat, made at Germantown. Whoever takes up the said apprentice and secures him in jail, so that his master gets him again, shall have the above reward and reasonable charges."

William Stroud, keeper of the prison at Norristown, has this advertisement in the *Pennsylvania Packet*, under date of October 7, 1789,—

"Was committed to the goal of Montgomery County, a certain George Sharpe, who says he is a servant to Patrick Story, in Sussex County, State of New Jersey. His master is desired to take him away in three weeks from this date, or he will be sold for his fees."

The aforesaid advertisements, from the varied information furnished, are admirably calculated to give us an insight into the system of servitude as it formerly prevailed here, fully confirming the harshness of the act passed in 1700, and was still practically enforced, though almost a century had passed away since its adoption. Respecting Jacob Paul, we know from the assessor's list of said year that he was the owner of a farm of two hundred and eighty-eight acres, kept at least two grown negro slaves, seven horses, seven cattle, and a riding-chair. It may therefore be possible from the system that prevailed, that the said lad of nineteen years of age was forced to live and be treated on a level with those slaves. As passes were required to go abroad, we see here how easy it was to arrest such on mere suspicion, and if no owner came, to sell them for charges. Through brutal treatment the round might be kept up, and thus end at least his best days in a degrading state of bondage. We find that though the system was diminishing, German redemptioners are mentioned in our statutes in 1817 and 1818. A law was only passed February 8, 1819, "that no female shall be arrested or imprisoned for or by reason of any debt contracted after the passage of this act." With the final abolition for the imprisonment of debts the institution had necessarily to die out without any special enactment or repeal, so slow has ever been the advancement and regard for popular rights, even in this great commonwealth and enlightened age.

In connection with this subject, interesting stories have been told that border on romance. For the following narrative we are indebted to a descendant, the family ranking now among the most respectable in Lower Salford. George Heckler was a native of Lower Alsace, on the Rhine, where he was born in 1736. At the age of fifteen he was apprenticed to learn the tailoring trade, and at eighteen became free from his master, when he was compelled to go on his "wanderscraft" for three years as a journeyman ere he could be permitted to set up for himself. This determined him to flee to America, and he arrived in Philadelphia, September 30, 1754, in the ship "Neptune" from Rotterdam. Such was his poverty that he was unable to meet his expenses, and in consequence was sold by the captain to serve three years as a redemptioner. His purchaser was John Steiner, a German farmer, residing in Coventry township, Chester Co., opposite the present borough of Pottstown. The sum paid was equivalent to forty-eight dollars of our currency. After the expiration of his service he obtained employment in Lower Salford, where he married Christiana, daughter of Peter Freed, a substantial yeoman. Such was his industry and frugality that in 1785 he purchased his father-in-law's farm of two hundred and forty-three acres for two thousand pounds. His surplus products he generally conveyed to the Philadelphia market on horseback. He survived until August 28, 1816, at his death being eighty years of age, leaving an estate valued between thirty and forty thousand dollars.

The late Joseph J. Lewis, of West Chester, in 1828, wrote an amusing account of the "soul-drivers," a name given to those men that drove redemptioners through the country with a view of disposing of them to farmers. They generally purchased them, in lots of fifty or more, from captains of ships, to whom the redemptioners were bound for three or more years of service in payment of their passage. For awhile the trade was brisk, but at last was relinquished by reason of the numbers that ran away from those dealers or drivers. These ignominious gangs disappeared about the year 1785. A story is told how one of these was tricked by one of his men. The fellow, by a little management, contrived to be the last of the flock that remained unsold, and traveled about with his master. One night they lodged at a tavern, and in the morning the young fellow, who was an Irishman, rose early, sold his master to the landlord, pocketed the money,

and hastened off. Previously, however, to his going, he took the precaution to tell the purchaser that though tolerably clever in other respects, he was rather saucy and a little given to lying; that he had even been presumptuous enough at times to endeavor to pass for master, and that he might possibly represent himself as such to him.

Though the system of servitude possessed its advantages, especially to a people residing in a new and unsettled country, it had its attending drawbacks, It was a relic that originated in the long past of Europe, and, like slavery, was continued and enforced on the colonies. That it was also the means of bringing here numbers of vagrants, paupers and convicts there is no doubt. The evils of this system Dr. Franklin, in his paper, the *Pennsylvania Gazette*, of May 9, 1751, sarcastically attacked, where he says, that in return, as a proper exchange, we should furnish rattlesnakes, to be distributed through the parks and haunts of the British courtiers and office-holders, especially for the ministers, nobility and members of Parliament. With servitude has now gone its kindred evil, the indentured apprentice system. The laws, as well as the sentiment that upheld these, show, from the power conferred, that in the hands of the cruel, arbitrary, oppressive and avaricious they must have been often abused, to the deterioration of the morals of both parties.

Slavery.[1]—The early history of slavery as it existed within the limits of Montgomery County has perhaps not heretofore been treated. It is a subject now so at variance with existing ideas that like servitude, it becomes only the more interesting from the diversity it presents in denoting the changes going on in our social and domestic life. There is no question, but as established in Pennsylvania, it was of a rather milder character than that of the other colonies. It was a forced institution, continued and upheld by the British government as long as they possessed the authority, which an eight years' war and independence only checked. The blood shed at Brandywine, at Germantown, and the suffering at Valley Forge was also for the benefit of the African, and for which he should also be grateful, for even before the return of peace Pennsylvania had made provisions for his emancipation.

Judging from the legislation here on slavery, the importation of negroes must have commenced soon after the arrival of Penn. In the famous protest from the Germans at Germantown, the 18th of Second Month, 1688, to their fellow-members of the Society of Friends, they say,—

"Here is liberty of conscience, which is right and reasonable, here ought to be likewise liberty of the body, except of evil-doers, which is another case. But to bring men hither, or to rob or sell them against their will, we stand against. In Europe there are many oppressed for conscience sake; and here are those oppressed which are of a black color. Ah! do consider well this thing, who do it, if you would be done in this manner? and if done according to Christianity. This makes an ill report in those countries of Europe that the Quakers do here handle men as they there handle the cattle, and for that reason have no inclination to come hither. And who shall maintain this your cause, or plead for it? Truly we cannot do so, except you shall inform us better hereof, that Christians have liberty to practice these things. We who profess that it is not lawful to steal, must likewise avoid to purchase such things as are stolen, but rather stop this robbing and stealing, if possible. Have not those negroes as much right to fight for their freedom as you may have to keep them slaves? We desire and require you hereby lovingly that you may inform us herein that Christians have such a liberty to do, and satisfy likewise our good friends and acquaintances in our native country, to whom it is a terror or fearful thing that men should be treated so in Pennsylvania."

From the importance of this document and the proceedings connected therewith, we regret from its length in not giving the whole. Suffice it to say that it was duly signed and transmitted to the Monthly Meeting, from thence assigned to the Quarterly Meeting at Philadelphia, and lastly to the Yearly Meeting held at Burlington, the 7th of Fifth Month, 1688, with this result on their minutes:
